Reference to any bill of complaint will be prefaced by the number of the ground of the bill and followed by the designation by letter above set forth; e.g., 5-B-M means Ground 5 Bill filed by the appellant Chicago, Milwaukee & St. Paul Railway Company; 5-A-O means Ground 5 of the Answer filed in the case of Chicago, St. Paul, Minneapolis & Omaha Railway Company.

The first set of figures following any reference to either bill or answer states the page of the printed record; and where this is followed by a dash and still other figures this reference is to the page of the typewritten transcript.

OPINIONS OF LOWER COURTS.

The lower courts tried these six cases together and decided them with a single opinion reported as follows: District Court, 282 Fed., 364; Circuit Court of Appeals, 297 Fed., 710. (Also M. 75; R. 249).

JURISDICTION OF THIS COURT.

The judgment to be reviewed is dated the 18th day of March, 1924. (R. 265-267; M. 358-359; O. 235-236; P. 303-304; S. 283-284; N. 293-293). Appealed, May 31, 1924. (R. 267).

The bills allege that the South Dakota drainage statutes are in contravention of the due process clause of the Fourteenth Amendment to the United States Constitution, and complainants are not afforded the equal protection of the law, in contravention of the Federal Constitution. (R. 15-20; M. 15-21; O. 15-21; P. 14-21; S. 13-19; N. 13-20).

That more than $3,000.00, viz.: the amount of the threatened assessment is involved. (R. 13-20; M. 14-20; O. 14-20; P. 13-19; S. 9-13; N. 13-19).

The Court ruled that there were substantial Federal questions involved. (R. 253-255).

That more than $3,000.00 was involved in each case, and sustained the order of the trial court granting the injunction, thereby preventing the appellants from ever making an assessment against appellees as apportioned, or at all, and therefore, there is now more than $1,000.00 involved. (R. 247-248).

These appeals are brought under authority of Judicial Code, Section 241.

Butte & S. Copper Company vs. Clark-Montana Realty Company, 249 U. S., 12; 39 Sup. Ct. Rept., 231.

American Sugar v. New Orleans, 181 U. S. 277.

Howard v. U. S., 184 U. S. 881.

Union Pacific v. Harris, 158 U. S. 326.

One of the appellees, to-wit, the Northern States Power Company, moved in this Court that the appeal in its case be dismissed. It involved a situation identical, on this head, with the other five appeals. Said motion was by this Court overruled.

PREFATORY STATEMENT AS TO THE NATURE OF THE CONTROVERSY.

I.

At the outset there is question whether this Court does not lack jurisdiction because the District Court lacked it.

Five of the six appellees have diversity of citizenship. They also raised federal constitutional questions. If there is in truth more than three thousand dollars exclusive of interest and costs in controversy, the District Court may had jurisdiction. The sixth appellee, the City of Sioux Falls, does not have diversity. But without reference to that, it is claimed each of the six appellees had the right to enter the District Court if a substantial question as to the application and construction of the Constitution of the United States was presented, and we concede that if appellees had the right to enter the federal court at all it is immaterial what happened after they entered, and concede there was power to determine all questions presented even though the decision on a substantial federal question was adverse to those who entered the court. The District Court, found that the attack on the statutes of South Dakota for being in violation of the Constitution of the United States was not tenable. And it is conclusively shown that this ruling is correct. The Circuit Court of Appeals affirmed this but with the statement that it was not necessary to determine the constitutional question. In other words, that there should be an affirmance even though it be true that said statute did not violate the Constitution. Both lower courts held that the federal questions presented were substantial. It is, therefore, obvious that whether the District Court had jurisdiction depends, for one thing, as to each of the appellees and

upon whether a substantial federal question was presented and as to all but the appellee, the City of Sioux Falls, on whether this court shall conclude the federal question pleaded was not a substantial one and upon whether there was the requisite amount in controversy.

Our position is, first, that no substantial federal question was presented; second, that though it be conceded that appellees were threatened with an assessment in more than three thousand dollars, the amount of benefits apportioned was but tentative and subject to later equalization, and that, therefore, the question of the amount involved was based purely upon speculation as to what the amount would be when finally fixed, and that therefore these suits were premature; and no sufficient amount in controversy is exhibited.

Related to this, is our contention that there was no jurisdiction on the equity side because at most, nothing is exhibited but the mere possibility of being subjected to an illegal tax. Injunction will not lie even when an illegal tax is actually sought to be enforced and it does not lie, in any event, where there is a mere possibility that there will be such an assessment and thereafter an enforcement. We therefore submit that though it is true an injunction may be granted where coupled with an attempt to exact an illegal tax there are other necessary elements to support chancery jurisdiction viz. fraud, casting cloud on title, or multiplicity of suits, these cases have no such elements.

The fraud upon which the lower courts fasten is the claim, in four of the bills, that in the guise of repairing established ditches which appellees claim the appellant board had built badly, it pretended to establish a new drainage project with the purpose of thus obtaining money in an unauthorized way for the repair and maintenance of the old ditches. The appellees Omaha and Milwaukee conceded, in the Circuit Court of Appeals, that this was not so. There is no allegation of fraud on part of the other four appellees except the said claim. We contend that this is not a sufficient pleading of fraud, in a collateral action, but if this be treated as such, there

is no proof sustaining it.

II.

As seen, it was the holding below, from which no one has ever appealed, that the drainage statute of South Dakota, and all that was done, do not violate the Constitution of the United States. But there is a casual remark in the opinion of the District Judge to the effect that something done denied the equal protection of the laws. On giving the opinion reasonably full consideration it becomes plain that what is meant is that the Court found that the procedure of the board was arbitrary, because (a) some of the territory in which the appellees have property should not have been included in the area of the new drainage project; (b) of apportioning benefits by what is called the unit method; (c) discrimination in favor of agricultural lands; (d) because appellees were either receiving no benefit or were threatened with an assessment grossly disproportionate to the amount of benefits received.

As to this, it is our position that none of these contentions are sustained by the proof, but even if they were, that is immaterial because those were all questions to be presented to and in the first instance determined by the board, and, if need be, on appeal to the regular courts of the State, that no one may enter any court, in the first instance, to have these matters determined there on application for an injunction; and that in collateral attack such as the one at bar it is not permitted to enter any court to raise such questions as the above before having exhausted the tribunals provided by valid statutes for determining those very questions.

III.

The complainants allege that there were many instances of failure to comply with the statutes of South Dakota. For instance: (a) that no order was made establishing the new drainage project; (b) that none was made giving it the designation now asserted for it; (c) that there was no resolution fixing the route, etc.,

of the ditches; (d) that certain things required to be filed were not filed; (e) there was a failure to act by resolution in ordering surveys, or providing for the fixing of benefits; (f) that things required by statute to be transmitted to the state engineer were not transmitted; (g) that things required to be recorded or indexed were not recorded or indexed.

We contend the proof does not sustain any such claims made, but that it is immaterial whether it does or not. This, because the highest court of the State has had before it this very drainage project and in construing the statutes of the State and the acts of the board held that there had been such substantial compliance with them as that jurisdiction was acquired. (Gilseth case).

IV.

The Court held that the new project was not for the purpose of draining agricultural lands, and we must concede that the project included property not used and in instances not usable for agricultural purposes. As to this the courts below held the board lacked all authority because while the Constitution of South Dakota gives the legislature power to provide for drainage other than that of agricultural lands the legislature has not exercised such power; that, therefore, there is no power in the board to establish drainage for what is merely "a public use" — that drainage for such public use as distinguished from draining agricultural lands can be initiated only by distinct corporate entities created for so establishing.

It is our answer that both Constitution and statute gave this board power to do just what it did and that the highest court of the State in construing the Constitution and statutes of the State so ruled, in what is known as the Gilseth case, 46 S. D. 374; Tile case, 47 S. D. 101; McMacken case, 31 S. D. 507.

V.

The appellants urged various estoppels based on what they allege the conduct of appellees to have been. For illustsration, that appellee City of Sioux Falls was one of the signers of the petition upon which the construction of the project at bar was based. The Circuit Court of Appeals held that though said acts had been done, this constituted no estoppel.

When we reach the argument of case required by division (d) of rule 25, we shall, in so far as we deal with the foregoing matters, give page reference to the printed record.

We now proceed to a somewhat more extended presentation of the scope of the controversy at bar.

The Appellants Risty and others constitute the Board of Commissioners of the County of Minnehaha in South Dakota. Other appellants are respectively the Auditor and Treasurer of that county. The appellant board in 1916 entered upon a drainage project known as "Drainage Ditch No. 1 and 2", and practically completed it. It issued drainage warrants in approximately $250,000.00 which were issued to defray the expense of said construction. The intervenors are the holders of those warrants. When the said project was practically completed, except some minor adjustments, the Board proceeded to make an apportionment as to benefits alleged to have accrued from said construction. This apportionment was in a sense merely tentative because opportunity was afforded to have said estimate of apportionment of benefits revised at a hearing appointed on notice given for the purpose of equalization. It could not be definitely known how much any property owner would be assessed in dollars and cents until after said equalization had been completed. No assessment to collect for alleged benefits received has yet been made,

nor attempt made to collect any of the cost of construction.

At a time when the drainage project had been completed, except some minor adjustments, and paid for by warrants and when as yet there had been no equalization, and though there was neither assessment nor attempt to collect same, the appellees in July, 1921, instituted six separate actions in the district court of the United States for the District of South Dakota, in which they assert that said proceedings on part of the Board were void, *first,* because the drainage laws of the state under which the Board had proceeded were violative of the due process clause of the Fourteenth Amendment, and of the guaranty of the Federal Constitution that no one should be denied the equal protection of the laws; *second,* that said proceedings were violative of the provisions of the constitution of the State of South Dakota; *third,* that if the statute laws of the State were constitutional so far as the constitution of the United States is concerned, the statute law under which the Board was proceeding was void because the Constitution of the State gave no authority for such statute law; *fourth,* that if said statute law violated neither constitution, the Board had so neglected and failed to proceed according to the statute law as that it never acquired jurisdiction in the premises, and *fifth,* that there was such disregard of the statute and such irregularity on part of the Board as that therefore it acquired no jurisdiction.

Both lower courts held that the project at bar was a subterfuge resorted to to get money that might be raised for a new ditch, for use in merely repairing an existing ditch and that there had been no compliance with the Statutes governing the repairing of existing ditches. Held, that only old territory was assessable and the attempt to bring in new property was void. (M. 90). This holding was made even though appellees Omaha and Milwaukee conceded that the project was the creation of a new drainage project, and even though, as appellant contends, the undisputed testimony shows that the project was a new and independent drainage

system.

The petition alleges that unless the district court enjoined, the Board would assess; that appellant county auditor would spread such assessment upon the record; that defendant county treasurer would collect said tax; that this situation gave the district court jurisdiction on the Chancery side, *first,* because the threatened proceedings would cast a cloud upon the title of the property owned by appelles; *second,* that such proceedings would cause a multiplicity of suits; *third,* that as against all this appellees have no speedy, adequate and plain remedy at law, at least, none on the law side of the Federal court.

The relief prayed was that each defendant and his agents, servants, employees, attorneys and successors in office be enjoined from proceeding further in the making of an apportionment of benefits upon the property of plaintiff for the construction of said drainage project; from proceeding in any manner under the "purported" statute law of the State of South Dakota; from any act looking toward the apportionment of benefits for any work heretofore done on said project; from doing any act tending towards the making of an assessment for the cost of any such work before done; that defendant county auditor be enjoined from making any apportionment of benefits for such work and from making any assessment therefore and from certifying any assessment thereof to the county treasurer; that the defendants, members of the Board of Commissioners, and their successors in office be enjoined from fixing any apportionment of benefits for the construction of said drainage system upon the property of plaintiff, and enjoined from making any assessment against plaintiff or its property or against the property of any other property owner in the area of the project for the costs of said work; that defendant county treasurer and his successors in office be enjoined from filing any assessment or collecting one against the property of the plaintiff or the other property owners named in the notice which the defendant

board had given.

It is further prayed that "the said purported statute of the State of South Dakota" be adjudged and decreed to be unconstitutional and void; that all acts of said board and of the state engineer of the state heretofore done on said project be adjudged and decreed to be illegal and void; that it be adjudged and decreed that no benefits have resulted to plaintiff from the construction of said drainage project, and be adjudged and decreed that no apportionment of benefits or assessment of damages be ever made against the plaintiff or its property, therefor. (M. 22-15, 16, 17-22, 23, 24; O. 16-17-22, 23, 24; R. 15, 16, 17-22, 25; P. 15, 16-21, 22, 23; N. 14, 15, 16-21, 22, 23; S. 14, 15-20, 21, 22).

The District Court granted the said injunction as prayed, but in doing so found that the drainage statutes of the State were not in violation of the Federal Constitution; it also found, that while this was so, the claim that there was such violation of the Federal Constitution was a substantial one.

There was a motion to dismiss, presenting grounds, among others, that the Court had no jurisdiction because the administrative proceedings provided by the laws of the State had not been exhausted prior to instituting these actions, and that full notice and opportunity to avail of that procedure had been given. (R. 209-318; R. 210-319; R. 254-382). Said motion was overruled pro forma. (R. 210-319).

From the decree these appellants perfected an appeal to the Circuit Court of Appeals from the Eighth Circuit. That court affirmed, generally, but in dealing with the constitutional question, it declared it was not necessary to determine whether there was a violation of the Federal Constitution and that there should be affirmance even though the statute law of South Dakota did not contravene that constitution. It, however, re-iterated the finding below that the said questions were substantial federal questions.

The proceeding at bar is an appeal from the said decision of the said Circuit Court of Appeals.

STATEMENT OF MATTERS MATERIAL TO CONSIDERATION HERE.

AS TO AMOUNT IN CONTROVERSY.

Section 8463, Revised Code, South Dakota for 1919, provides that "after the establishment of the drainage and fixing of the damages, if any, the board shall fix the proportion of benefits of the proposed drainage among the lands affected". It further provides that "the proportion of benefits which any * * * * * city * * * * and the proportion which any railroad company may obtain for its property by such construction shall be fixed and equalized together with the proportion of benefits to tracts of land".

By Section 8464, it is provided that "after the equalization of the proportion of benefits, the board may make an assessment against each tract of property affected in proportion to the benefits as equalized".

The Circuit Court of Appeals finds that on June 10th, 1921, the board by resolution fixed a proportion of benefits in units which it had decided to be a fair method of arriving at these benefits. (R. 251). This apportionment of benefits is found on (M. 19; R. 19; O. 19; N. 19; S. 17; P. 19). Thereafter a resolution passed fixing the time and place of equalizing and it provided for lawful notice of the proposed equalization. (M. 48, 49; S. 36, 40; N. 36, 37, 38, 40, 41; P. 37, 38, 41, 42; R. 37, 38). Before the equalization was entered upon the present suits were brought. The District Judge states in his opinion that no assessment can be made or any tax made effective until the benefits have been ascertained and equalized. (M. 79, 80). The defendants allege they have no knowledge of the total in dollars that will finally be equalized and assessed against the property of each of the appellees. (N. 37; S. 36; P. 38; R. 38).

The opinion of the District Court finds that it is

only after the proportional benefits are finally determined that the Auditor spreads the tax, and it becomes a lien on the property benefited. (M. 79,80).

The Circuit Court of Appeals agrees with appellants that a future undetermined, unequalized, and unspecified tax cannot be taken into consideration as to the amount in controversy — that the Court cannot engage in speculation as to such taxes (R. 262), but it affirms the holding below that a sufficient amount was in controversy, thus:

> "As the proportion of benefits had been fixed subject to change by the board only if appellee should convince them that their conclusion was erroneous, and in view of the claim in apparent good faith in each of the bills that the amount involved exceeded the jurisdictional amount, we hold, from a careful survey of the entire record, that the necessary amount existed in each case to give jurisdiction to the federal court." (R. 263).

It said further:

> "It is suggested that the Board may so equalize benefits that the jurisdictional amount will not be involved, but as the matter stood when the case was brought, each appellee was threatened with the levying of a tax for more than the jurisdictional amount, and some of the necessary steps had already been taken." (R. 263).

As already shown, the only steps that had been taken were merely preliminary to what might by possibility later become a tax for an amount greater than three thousand dollars, to-wit: fixing the proportion of benefits and notifying of time and place when the equalization of the benefits apportioned would be entered upon.

The City of Sioux Falls does not have diversity, and unless it presented a substantial federal question had no right to enter the federal court, assuming it had the right to enter at all, no matter how much was in controversy.

IS THERE A SUBSTANTIAL FEDERAL QUESTION.

We do not have the question whether the statute law involved was violative of the federal constitution. The District Court finds it was not. It declares it finds that all of the (constitutional) objections center about the criticisms that no notice is provided the owners of land affected by the drainage ditch, except the general notice, and in fact, no personal notice until the date fixed by the board for the equalization of proportional assessment for the various tracts of land benefited by the drainage. (M. 79, 80). It finds that the attack on the validity of the statute law is not tenable. (M. 80, 81, 82, 83). Of course appellants are satisfied with this holding and have never made it the subject of an appeal, and appellees have neither appealed nor cross appealed. What is now to be determined then is not whether the South Dakota statutes are unconstitutional but whether the appellees were in reason justified in their claim that they were. In other words, whether the finding of each of the lower courts that a substantial federal question was presented is sustained by the record. (M. 83; R. 263). At this point we merely state, we claim it was so thoroughly settled in the law that the South Dakota statute law in question violated no provision of the federal constitution as that any claim that it did so violate is unsubstantial and insufficient to give jurisdiction. It is obvious that elaboration on this has no place in this statement and that the proper place for it is in the argument and possibly in the brief. It will be elaborated later.

It is not amiss, however, to say here that in a way one objection to constitutionality was that the board had proceeded in an arbitrary and discriminatory manner, and that possibly it was intended thereby to claim that thus the constitution of the United States had been disregarded. We answer that no such objection was sustained in either of the lower courts. True, the Rock Island does plead that the equalization is so arbitrary and discriminatory as to violate constitutional provisions

(which provisions not stated) against depriving of property without due process of law and forbidding denial of the equal protection of the laws; (15 — 21); wherefore we answer as to at least five of the appellees that if it can be held (and we deny it) that such claim was made in pleading that neither of the lower courts sustained such an objection; that neither held the federal constitution had been violated in any respect, and that moreover the record establishes conclusively that there was neither arbitrary conduct nor improper, if any, discrimination. Our view is that the lower courts found there was arbitrary conduct and improper discrimination and that this deprived the board of authority without any reference to whether such arbitrary conduct and discriminatory action constituted a disregard of the federal constitution. With this holding and the evidence upon it we will deal in another place in this statement.

CHANCERY JURISDICTION AND PREMATURITY.

The trial court held that its equity side had jurisdiction and the Circuit Court of Appeals affirmed this.

The bills allege that the threatened apportionment of benefits would cause multiplicity of suits. (S. 13, 14; N. 13, 14; P. 14, 15; R. 15; O. 15, 16; M. 15). Issue on this allegation was joined. (M. 22, 23; R. 23, 24; O. 23; N. 22, 23; S. 21; P. 23, 24).

Another allegation is that this apportionment would cast a cloud on the title of appellees to their real property. (S. 13, 14; N. 13, 14; P. 14, 15; R. 15; O. 15, 16; M. 15). Issue was joined on this. (S. 36; M. 38; P. 38; N. 37; O. 38).

Another allegation is that if this apportionment is carried out, plaintiff will suffer immediate and irreparable injury. (S. 13, 14; N. 13, 14; P. 14, 15; R. 15; O. 15, 16; M. 15).

Finally it is alleged that if this apportionment is carried out, plaintiff will be without plain, speedy, and adequate remedy at law. (S. 13, 14; N. 13, 14; P. 14, 15; R. 15; O. 15, 16; M. 15).

The defendants pleaded in bar that the plaintiff does have such remedy at law. (M. 22, 23; R. 23, 24; N. 22, 23; P. 23, 24; O. 23; S. 21, 22). — And that the bill states no matter of equity entitling plaintiff to the relief prayed for, because it has such remedy at law. (M. 22; P. 23; S. 20; O. 22; N. 22; R. 23).

The trial court held that it conclusively appears on the face of the pleadings there is no speedy or adequate remedy at law, and that the remedy at law must be on the law side of the federal court and not a remedy in the state court, because the non-resident is not required to subject himself to the jurisdiction of the courts of the State in order to obtain relief. (M. 83).

While the court says there is allegation of a lawful ditch, it declares that the board are mere tresspassers

(M. 84), because the new ditch was in fact and in law never established (M. 89, 90), it holds that if either plaintiff was compelled to pay this tax no action to give them relief would lie on the law side of the federal court. (M. 83).

The Circuit Court of Appeals concedes that injunction will not lie where all that is presented is an illegal tax. (R. 261). It rightly states that where in addition to the illegality of a tax there exists one or more of the grounds upon which equity takes jurisdiction, the jurisdiction may be entertained even though one thing involved is the existence of an illegal tax. It states, as we contend, erroneously, that the said general rule does not apply where it is involved that the proceedings concerning the tax were without authority. (R. 252, 253). It states further, again erroneously, as we contend, that the jurisdiction will attach merely because there is threat of an illegal tax. (R. 259, 263).

We concede that equity has jurisdiction where there is exhibited either irremediable injury, multiplicity of suits, vexatious litigation, or the casting of a cloud upon title. The bills did make claim that these conditions existed and the Circuit Court of Appeals found that the contention was sustained. (R. 259). — And at this point we contend that the record does not sustain this finding, so far as the chancery heads other than fraud is concerned.

AS TO THE ASSERTION OF FRAUD.

The pleading is a charge on information and belief that less than thirty-five per cent of the total expenditure was for the purpose of constructing ditches and to straighten out the channel of the Sioux River, and that less than five per cent was expended for any purpose legitimately connected with the construction or maintenace of the old ditches. (P. 12; N. 9, 10, 11; R. 10, 11; S. R, 10). — And that by the filing of the petition the board acquired no jurisdiction to assess for the cost of the necessary repairs and maintenances of the old ditches. (M. 14, 15; O. 14, 15). It is further alleged that the change in the channel of the Sioux River and its going through the outlet of the old ditches at a point north of the city of Sioux Falls would, if permitted to become permanent, have operated to relieve the lands drained by the old ditches, and lands adjacent thereto, of surface water, and that all that was necessary was to permit the water to flow unhindered through the old ditches into the river and to allow the new river channel to be drained by the natural course of the water flowing through them. (M. b8, 10; O. 8; — Denials M. 30; O. 30).

The defendants plead that when the new project was entered upon they immediately reconstructed the spillway and outlet to the old ditches in a more substantial manner under the supervision of the state engineer and at a cost of more than $100,000.00. (M. 35; O. 34, 35, 36; S. 32, 33, 34, 35).

In effect the issue on the face of the bills is whether the project at bar was a mere subterfuge because all the board was authorized to do was to repair and maintain the old ditches and, instead of doing this, used but a very small part of the total expenditure for that alleged lawful purpose.

We find that both the lower courts greatly broadened this issue. The trial Judge found that everything

done came to merely giving the old ditches a new name; (M. 89); that the assessment upon plaintiffs was a mere afterthought. (M. 91).

The Circuit Court of Appeals found that the proceedings were a mere subterfuge because there had never been an abandonment of the old ditches, and that all that was done could be lawfully done only on statutes governing procedure in case of abandoned ditches. (R. 253). At the same time it found that on April 8th, 1916, a petition was filed asking among other things that the old spillway be closed and abandoned and the course of the old ditch extended in a southerly direction, *and that the board passed a resolution that said ditch be permanently closed above the present spillway or outlet thereof.* (R. 250).

Another basis for its finding that here was a subterfuge is that some of the appellees had no property in the original ditch area, while others did have, and that the appellees who have no property within the original area were brought into a new district and made liable for further assessments for maintenance and repair of ditches. (R. 252, 262). It is not made clear whether the flaw lies in bringing a party into the new district or in the fact that there is a claim they were brought into a new district where there was but a pretense of an independent project when in truth nothing was to be done or done except to maintain and repair ditches in territory in which the party brought in had no property.

It concedes that the original system became so defective in 1916 as to threaten great and irreparable injury and that it was this the board took steps to remedy; also, that the board proceeded to establish the so-called new drainage system upon a petition which had for caption: "To reconstruct and improve drainage ditches No. 1 and 2 (the old ditches) and to construct a new spillway or outlet to said drainage ditches and to pay therefor by an assessment upon the property, persons, and corporations, benefited thereby". (R. 254).

It is further declared that the water of the Sioux

River breaking through into laterals and threatening a change of its course and the possible destruction of state lands, led to no act in relation to the drainage of agricultural lands, but all done was prompted by the failure of the ditches, because of their inadequate or imperfect construction to carry the increased flow of water — and that if the project were an entirely new one, this will not avail because it was not for the drainage of agricultural lands. (R. 257).

The trial Judge held to the same effect, and is expressly affirmed. (M. 85; R. 249, 250).

The conditions of the drainage system existing when the new project was initiated are fully set out in the bills on O. 8, 9; M. 8, 9; P. 8, 9; S. 7, 8; R. 9; N. 8, 9. Also fully set out in the answers which are in substantial agreement with the allegations of the bills. (M. 26, 27, 28, 29; R. 28, 30, 31; S. 26, 28, 29; N. 27, 28, 29; P. 28; O. 27, 29, 30).

It was the view of the trial Judge, in effect, that what the board engaged in was not to create an independent drainage project but to pretend to do so in order to obtain means sufficient to cure its own default in not having constructed the original ditches properly. For illustration, it is said in its opinion that if the spillway had been properly constructed originally, and if it had not proven inadequate, there would have been no cause for action by the board in the year 1916. (M. 93; and see M. 85, 86).

The trial Judge held the board was responsible for the threatened ravages and it was its duty to maintain the old ditches and stop the ravages of the water, and it was this that caused them to construct the spillway in a more substantial way and to dike and to do other things. (M. 86, 87). And that the action of the board was influenced by the thought that the board having conducted the water down into these ditches and because of the inefficient manner in which they had constructed the ditches and built the spillway and the threat

of all resulting damages, it was the opinion of the board that plaintiffs were necessarily to be damaged. (M. 88).

The trial Court concedes that in 1916, the river cut through into the ditches and the latter became clogged in places and not wide enough in others and that the spillway was washed out by the force of the water which was being conducted down the ditch, that there was cutting the bluff, that large areas of land were being washed away and other dangers were threatened; but it holds that still the only proposition presented to the board was on maintenance or taking care of the waters that the board had conducted down the old ditches. (M. 88).

It ruled that nothing but repair and maintenance of what they had established confronted the board, and they should have prevented the danger threatened by the waters they had conducted through the old ditches through the hill into the river. (M. 86, 87).

The trial Judge points out forcibly how great the danger was in 1916 and how radical steps of protection would have to be, but still holds that all that was in fact entertained was a scheme to maintain and take care of the waters that were being conducted by means of the old ditches. (M. 86, 87, 88).

Another reason assigned by the district Judge is that the board had no authority to proceed, first, because it did not act under the statute dealing with abandoned ditches (M. 89, 90), and, second, that the board were mere trespassers because the alleged new ditch project was in law never established and in law has no existence (M. 84, 89, 90), — that by not following Section 8489, the abandonment statute, the board acted absolutely without authority, right, or color of right. M. 89, 90).

One basis on which the district Judge held that the project was a mere subterfuge is to assume it was nothig but a scheme to repair and maintain the existing ditches and upon that assumption to declare the proceedings void because there had been no compliance with

statutes which gave authority for repair and maintenance, statutes that are the only authority for a project that has no object except to repair and maintain an existing drainage system. (M. 87, 88). In like case is the opinion of the Circuit Court of Appeals in making one ground for finding subterfuge by assuming that the old ditches were not abandoned though perhaps a small portion was. (R. 256). And on that assumption it bases a ruling that the proceedings are void because the one statute which is alone authority for dealing with abandoned ditches had not been followed. It even sets out the statute that alone is authority for what it is assumed was done. (R. 255, 256).

Before entering into the state of the proof on these heads we submit that whether this was or was not a subterfuge is not now an open question because, first, appellees had the opportunity to present their claim that they might not rightfully be assessed because no independent project was being formed and could have appealed to the courts of the state if the board had held against them, and having failed to take advantage of this opportunity are now foreclosed on this head; second, the highest court of the state, speaking in the Gilseth case, has ruled that this was in truth a new and independent drainage project and that jurisdiction had been acquired by the board by following the statute relevent to the establishment of new drainage systems.

If not overlooked by the Circuit Court of Appeals, there is a disregard of the fact that the appellees Omaha Railway and Milwaukee Railway concede in their brief in that court that the board resorted to no subterfuge and that it constructed a drainage system which was new and independent and made no effort, in the guise of establishing a new project, to raise money wherewith to repair and maintain existing ditches.

Coming now to the evidence, it appears that in July, 1916, one Thompson and others in due form asked the board to permanently close and abandon the southern end of one of the ditches about a mile in length and including the site of the destroyed spillway and to establish a new outlet for it through Covell's Lake and thence back into the river. (R. 224 to 229). The petition of the City, F. L. Blackman and others, was presented on August 3, 1916, and prayed the establishment of a new and enlarged drainage district with suggestion that the old ditches be enlarged and improved. It prayed that the canalizing of the course of the river adjacent be a part of the new project. It suggested the enlargement of the assessment area so as to include about ten sections of land additional. (R. 42).

This is the petition upon which the new drainage project was established. (R. 51).

Waite says that he asked Rettinghouse in regard to the watershed in this drainage area, and he thinks he said it was 4500 square miles. This was the whole watershed. (R. 179).

There is in evidence the commissioner's report, 5 pp. 562, 563, in which it is recited that the board had resolved that the width of the old drainage ditch No. 1 be and is fixed at forty feet at the bottom, with a side slope of one and a half feet to one. (M. 119). The same is shown by drainage ditch record A. pp. 121 to 123, inclusive, and with reference to old drainage ditch No. 2. (M. 159).

Risty testified the new ditch is in the neighborhood of eighty to one hundred feet wide as far north as Renner. (M. 266; R. 165).

The work of construction was upon plans approved by the state engineer. (R. 164; R. 204). Risty says that after the filing of the Blackman petition in 1916 and when it was decided that the spillway was to be repaired the board employed engineers to investigate it; that at this time about a year and a half before all the

preliminaries were cared for, and before the board went to actual excavation; it employed a competent engineer to lay the plans.

Rettinghouse says the ditch was constructed for the prime purpose of draining this section of the country, and inlets have been made at various points, at roads and intervening points, to permit this surface water to drain into the ditch (R. 237), — that through said Section 2 the ditch runs in the lowest part of the country east of the river and serves the purpose of a drainage ditch as well as one to care for overflow and it was put in for the double purpose of serving both ways. (R. 237).

Risty says if there are heavy rains on the lands adjoining the ditch running north and south it will flood the lands on either side of it and it was the intent and purpose that the ditch should take care of such flood water — that the real purpose of the ditch as he understood it is to take the water from the river in flood times and conduct it down to the spillway into the river at the mouth of the spillway and to prevent overflow to a great degree from spreading over the farm lands. (R. 209).

Thompson says the intake of the spillway at the lower end of ditch No. 1 is rip rapped, then there are two gates leading into a hole that goes down through the ground about 40 feet. The shaft is perpendicular for about 40 feet. At the lower end of it a channel is run out towards the river towards the east sloping downwards so that it comes out just above the river level on the lower end. (R. 204).

Rettinghouse says the discharge capacity of the ditch at its lower end was something like three thousand feet of water per second. (R. 243). And thinks a majority of that water came out of the river during flood stage. (P. 294).

Barlow says his understanding is that the spillway is designed for 2000 second feet and could take an over-

load of 500 more, making a total of 2500 feet. (R. 170, 171).

There is a very great amount of testimony showing so much work and kind of work as to demonstrate that here was no mere plan to repair. (R. 161, 164, 204; R. 165; R. 231, 237, 238, 241; M. 261, 262, 266, 342, 362).

The Circuit Court of Appeals found that the total original cost was only $127,706.29. (R. 185; R. 224 to 229).

The cost of old drainage ditch No. 1 was $46,600.10. (M. 155); that of old drainage ditch No. 2 was $81,-106.11, making a total of $127,706.21. (M. 202, 203).

The cost of the new drainage ditch was $309,221.40. (M. 18).

The effect of canalizing the river and enlarging the ditch, of constructing and installing wiers, dams and controlling works and a substantial spillway was to create a double and more perfect system of drainage. (R. 41).

The object of the new project was to establish a more perfect drainage system with more substantial controlling works and equipment and to create ditches of more than double the capacity of the original one. (R. 19).

By handling more water than the original ditches could the new area was proportionally increased to cover all the land described in the notice of equalization. (R. 19).

Thompson says the old spillway was washed out in 1916. (R. 204). — And the present spillway was finished in 1918. (R. 204).

Risty says that where the board diked, the ditch had taken the channel of the creek where there had not been enough dirt taken out to make a dike, and when the floods came the waters backed up on the farm lands to the west; that the board diked there probably five or

six feet high thus protecting these lands after that. (R. 165).

Rettinghouse says the ditch takes one-third of the water carried by the river on as close an estimate as is humanly possible and it may be more. (R. 241).

The original course of the Big Sioux River adjacent to these ditches was very crooked. (Map R. 185).

Risty testified there are pipes here and there around the ditch to let water in when the bottom land overflows, and it has been proven these ditches drained the bottom lands because there are farms all along, and it has lowered the water in their wells to a very considerable extent since the ditch was dug — and "they proposed" to have the gates in the embankments so that when the pressure was from the inside it would close the gates, and if from the outside would open them within this pipe. (R. 208, 209).

The trial court disregarded the issue tendered by the defendants that plaintiffs are not entitled to the aid of a court of equity because they have neglected and refused to tender or offer the amounts of such benefits as actually did accrue to them. (M. 49; S. 15; O. 22).

The contention that the project was without authority because it was not intended for the drainage of agricultural lands.

This divides into (a) whether the property of appellees is agricultural land and (b) whether if it be not, whether the establishment of the drainage system at bar was as to these appellees without authority.

It is alleged in various ways that the nature and location of the property of the plaintiffs is such as that it has never been used for agricultural purposes, and is suitable for nothing but uses other than agricultural. (P. b-8, 7; R. 8; M. 13; O. 13; S. 7; N. 7, 8).

Woods testified that a very small part of the Mil-

waukee right-of-way acreage, is taken up by round house grounds and yards near the ice house and most of it is right-of-way, but if there were no railroads through it the most of it could be used for agricultural purposes. (R. 197).

And Bassett, a witness for the plaintiffs, says he knows of no reason why if the tracks were not on the right-of-way and station grounds those premises could not be used for agricultural purposes, except those station grounds that were right on to the rock; that sections 27 and 31 can be used for agricultural purposes but that the track section does not have any soil to amount to anything. (R. 191).

Pilcher, the agent of the Rock Island, testified he knows of no reason why the land of that road could not be used for agricultural purposes were it not covered with railroad tracks; that it has agricultural land as a basis. (R. 183).

Next it is alleged that the work done was not done to bring about the drainage of agricultural lands. (O. 8, 9; M. 8, 9). Denials (M. 30; O. 30). It was further alleged the new ditches were not needed to drain agricultural lands because the old ditches had sufficient capacity for that purpose. (M. 7; O. 7). Denials (M. 28; O. 28).

But there is much testimony that the railroad company appellees have no agricultural lands within the district and nothing but property which is used exclusively for railroad purposes. (Omaha, R. 167; Rock Island, R. 177, 182, 183, 196; Milwaukee, R. 196; Great Northern, R. 184). This, though it is testified that these companies had approximately 340 acres of agricultural land as defined in *Milne vs. McKinnon*, 32 S. D. 627, within the drainage area, which is subject to assessment as such, viz rights-of-way, station grounds, parks, pumping stations, streets, and power plant. (M. 271, 276, 286, 295, 303; R. 196).

As to the Power Company it is testified that all the

land it owns can be described as a large pile of stone here and there in topsy turvy condition and that there is not soil sufficient to be used for cultivation of crops. (M. 246). And that the property north from the dam to the hydro-electric plant is mostly granite. (M. 244, 245).

As to the City — One witness says Phillips Park cannot so be used; that neither the land in Phillips Park or Sherman Park can be used for agricultural purposes. (R. 183).

Hardimon adds that no part of Sherman Park is agricultural land and that Phillips Park is not — is quite broken and is not used for agricultural purposes. (R. 200). Charnock testifies to his belief that Sherman Park "was run in by the acre somewhere near like agricultural land"; that the streets were assessed about the same as the property where the streets were located; that he did not call city lots agricultural lands, though they were assessed as such. (R. 234, 235).

One witness who had testified that the parks were not agricultural lands (Spellerberg) testified also that an acre and a half or two in Phillips Park can be tilled or turned into pasture and made to produce after a fashion, but that one would have to wait until after the flood had gone and that it was a late crop proposition (R. 184), that there are fifty-two or fifty-three acres in Sherman Park of which about twenty or twenty-five acres are on the lower level, and if this land were not used for park purposes it would not make good pasture because there is not enough grass; that while some land around there is used for pasture it is higher than the park land, and while it is true that the land north of the park is used somewhat for cultivation of crops, it was taking chances. (R. 185).

It was admitted in answer that the property of the plaintiffs was not being used for agricultural purposes and that it was the kind of property described in the bill, e. g., right-of-way, railroad tracks, the power plant

to generate electric current, and city parks. (P. 29; R. 29; M. 38; O. 38; S. 27; N. 28).

Upon this it is contended (R. 14, and M. 15), that the Constitution of South Dakota gives no authority to provide any drainage except for the drainage of agricultural lands.

In the opinion of the trial Judge it is said:

"These plaintiffs were not attempted to be assessed in any manner contemplated by the statute, for the payment of the costs of draining agricultural lands". (M. 91).

"The Constitution provides that the drainage of agricultural lands is especially declared to be a public purpose and the legislature may provide therefor, and may provide for the organization of drainage districts for the drainage of lands for any public use, and may vest in the corporate authority of counties, townships, and municipalities, the power to make special assessments upon the property benefited thereby according to the benefits received".

"Pursuant to this provision of the Constitution the Legislature has provided for the drainage of agricultural lands, but nowhere is there any statutory enactment under which drainage districts may be formed for the drainage of land 'for any public use'." (M. 79).

"It may be said that to remedy these wrongs constituted a public use, as referred to in the Constitution of the State. Admitting that that is true, we are confronted with the proposition that there has been no legislation conforming with the provisions of the Constitution, authorizing the legislature to provide for the establishment of drainage ditch districts, and the naming of officers with the

powers therein referred to. If, therefore, any claim were made that the commissioners were acting under this authority, independent of the provisions of law with reference to the drainage of agricultural lands, the answer is that the provision of the Constitution is not self-executing, and that no legislation has been provided carrying this provision of the Constitution into effect". (M. 93, 94).

While we concede that if the District Court had jurisdiction at all it could pass upon the question here presented though same is not a federal question, we contend that the lower courts have at this point misconceived what the provisions of the South Dakota Constitution and statutes are, and, passing that, it has been determined by the highest court of the State in the case of Gilseth, 46 S. D. 374, that the very project at bar was authorized by the Constitution and laws of the State.

The Circuit Court of Appeals puts it thus:

> "We are satisfied that under Section Six, Article Twenty-one, of the South Dakota Constitution, drainage of lands for any public use other than the drainage of agricultural lands, must be carried out by drainage districts, and no legislation at the time of these proceedings had been provided for the establishment of such drainage districts. Which ever way, therefore, the matter is viewed, the board was acting without legal authority in its apportionment of benefits and threatened assessment of taxes". (R. 257).

In other words, the only authority the board has is to establish drainage districts to provide drainage which constitutes a public use provided that that public use consists of drainage agricultural lands.

THE PREMATURITY OF THE SUIT.

The record shows without dispute that the statute requires, first, a tentative apportionment of benefits, and then provides for a hearing at which this tentative assessment may be equalized, i. e., raised or lowered. Despite this the Circuit Court of Appeals ruled that though suit was brought before any equalization as to the benefits apportioned to these plaintiffs was had, it was not premature (R. 263); ruled that though when the suits were brought it was not known what the final proportion of benefits would be, that these suits were not premature because it was definitely known what the total expenditure was, wherefore, it was merely a deduction in mathematics to arrive at the assessment that threatened each appellee. (R. 262). The opinion of the District Judge declares that under Section 8463 the apportionment takes place before it is known what will be the actual amount of money expended and then holds that suits brought at that stage were not premature. (M. 78). Though there cannot be a final assessment until after the construction of the project has been completed, and though these suits were brought before its completion and, therefore, before any assessment could be or was made, yet the district court ruled that these suits were not premature. (M. 78, 81). Though no assessment could be spread by the auditor until the benefits were finally fixed and though there was not even an assessment to be spread when these suits were brought, still the District Court ruled that they were not prematurely brought. (M. 78). These suits which were held to be not prematurely brought, were instituted before any tax had been levied and, therefore, of course before it became effective or there was any attempt to enforce it. (M. 80, 81).

AS TO PROPERTY NOT BEING INCLUDED IN THE AREA OF THE NEW DRAINAGE DISTRICT.

There is allegation that nothing described in the notice given was included in the property assessed for the construction of the new drainage ditch. (R. 6; P. 6; N. 6); Denials (N. 26, 27; P. 28; O. 27; S. 26; M. 26). Alleged, that no property of the plaintiffs is within the area of the new drainage district. (N. 6; P. 6). Denials (N. 26, 27, 28; P. 28). Further, that, at all events, the board had no power or jurisdiction to include any of the property of plaintiffs within said drainage district. (M. 6; P. 3). Denials (N. 26, 27, 28; P. 28. 29).

As to the allegations of fact, there was no evidence to sustain them. On the contrary the Blackman petition and original notice published, describe the appellees property within the drainage district in the same manner as all other property included therein. (R. 47-70, 59-89). As to the allegation that power to include was lacking, that is answered by the law, and by the holding of the Gilseth case which is binding on this court. And here again, it is not amiss to add that the point is not available in this suit because the plaintiffs had opportunity to have this corrected in the tribunals provided by the statutes for that purpose.

ALLEGED FAILURE TO COMPLY WITH THE STATUTE.

Many such failures are put in issue. Before entering upon presenting these, it is proper to repeat that the Gilseth case has bindingly determined that the statutes were so substantially followed as that the board acquired jurisdiction. This determines that none of these complaints are well taken. Moreover, jurisdiction having been acquired, the omission to present these complaints to the proper tribunals provided by statute foreclosed the right to now urge them in this collateral attack.

In view of what has just been said, we will not undertake to particularize as to each and every one of these numerous attacks. But will select a few that are typical.

It is complained that a number of things were not effected by means of the adoption of resolutions. One of these is that there was no such resolution with reference to the proceedings initiated by the petition upon which the project is founded. (M. 56, 57). It appears that Exhibit "16" is a resolution adopted for that very purpose. (M. 320; R. 212; O. 200; N. 257; S. 248; P. 260). Though it was denied, resolution was adopted establishing the new drainage project. (M. 323, 324; R. 215, 216; O. 203, 204; N. 260, 261; S. 251, 252; P. 263, 264) — indeed, the Circuit Court of Appeals so found. (R. 250, 251). Though it is denied, the Circuit Court of Appeals finds that there was resolution adopted after the surveyor's report was filed to fix the line and width of the proposed ditch. (R. 250, 251). And there *was* resolution adopted fixing the exact line and width of the ditch and the time and place for hearing the petition. (M. 57, 58). There *was* resolution adopted for straightening the ditch and straightening the river cut-offs. (M. 327, 328, 331; R. 219, 223; O. 207, 211; N. 264, 267; S. 255, 258; P. 267, 271).

There *was* order that the Backman petition be filed and that a copy of it be transmitted to the state engineer; and it was filed in the office of the auditor on August 3rd, 1916. (M. 50, 56; R. 42, 48; O. 42, 48;

N. 42, 47; S. 41, 46; P. 43, 49).

There *was* surveyor's report made under direction of the state engineer. (R. 212; O. 200; N. 257; S. 248; P. 260). The Circuit Court of Appeals found that report of survey was made and filed by the engineer in charge. (R. 250, 251). The survey *was* ordered and made. Some of the bills themselves so allege. (S. 11; N. 12; R. 12; M. 12, 13).

The Circuit Court of Appeals found the Blackman petition was transmitted to the state engineer and that thereupon a survey was ordered (R. 250); and the letter of transmittal is found on. (R. 212; O. 200; N. 256; S. 248; P. 259).

There *was* inspection by both the board and the state engineer. (R. 162, 238). The resolution on which it was done is found on (M. 57; R. 49; O. 49; N. 49; S. 48; P. 50).

AS TO THE COMPLAINT OF BUILDING WITHOUT COMPETITIVE BIDS.

It suffices to say that as to this the statute was followed. Bids were received. But the statute authorized rejecting all of them and proceeding to construct under the supervision of the board and on contract on its part. The bids were rejected and the work was performed under a cost plus contract. Aside from this last fact there is not even a hint that rejecting the bids and proceeding to build for itself was even improvident, to say nothing of fraudulent or improper.

THE CLAIM OF ARBITRARY ACTION.

It has already been pointed out to be the settled law of this case that there has been no infraction of the federal Constitution. What the Circuit Court of Appeals rules is that there was conduct so arbitrary as to invalidate the proceedings, without reference to any constitutional aspect.

Roughly, what the appellees contend is that the arbitrary conduct consists (a) of discriminating against appellees in favor of the owners of agricultural land within the drainage district area; (b) that the apportionment of benefits as a whole and as to all affected by the drainage project was by an unreasonable method and without any rational basis; (c) that in truth no benefits accrued to these appellees from the proposed drainage project — at any rate, greatly less than the amounts they were threatened with assessment for.

We think it proper to say again, that if all these contentions were well made appellees cannot be heard upon them in this collateral suit; that these were all matters to be presented to the board and if necessary on appeal from its refusal to give relief asked. — That, so,

appellees are now foreclosed to raise these points.

SPEAKING, FIRST TO THE ALLEGED DISCRIMINATION.

It was ruled below that the method of apportioning benefits was an arbitrary method, that the standard of approportional assessment adopted could not obtain even approximately correct general results, and that there was discrimination as between these plaintiffs and property owners who were to be assessed for the drainage of agricultural lands. (M. 84, 90, 91, 92). Until the argument *in extenso* is reached it would serve no useful purpose to elaborate beyond this statement, and so of the testimony on the point. It must suffice at this stage to point out types.

Rettinghouse, the engineer of the board, testified that in reducing the valuation down proportionately the method was alike in dealing with railroad or ranch property and that no discrimination would appear after the equalization. (R. 242).

Defendant Risty, that the board compared the benefits arrived at as to the Power Company and dealt with it on the unit basis of the benefit to the one acre tract of agricultural land, the acre that had been selected as the unit. (R. 257).

Risty says the board used this $25.00, the actual benefit to the unit, in determining the apportionment of benefits which each of the various classes of lands aside from farm lands should be assessed, and did this in regard to farm land (R. 166); that as to comparing the alleged benefits to railroads to the unit, he does not remember what value the board placed on it, that they had the value of agricultural unit fixed and also the apportionment of benefits (R. 154); that in all cases the board tried to take into consideration the right of way, the value of the lands as compared with adjacent lands, and the benefits that might be drived from the drainage project as to the maintenance of tracks and

bridges and so on (R. 153); that in dealing, throughout, the method was to ascertain what in the judgment of the board was the benefit which it thought was right and proper. Then it divided by the benefit to the agricultural unit to get the number of units apportioned to the City, and based its judgment in part on the fact that most of the members were farmers and knew the price land was selling at. (R. 255).

Charnock says the board placed a value on the land selected as a unit without the ditch and another with the ditch, and in its judgment found the difference to be $25.00 and applied that unit to all the lands and used the same method of determining the number of units of benefit to all of the lands affected (R. 232); — that the same process was used on all property taken. (R. 233).

It appears most clearly that in all it did, the Board exercised its honest judgment and made necessary investigation — that if there is any criticism to be made it could not be more than that there was honest mistake in judgment. (R. 233, 234, 255, 256, 258).

AS TO DISCRIMINATION IN FAVOR OF AGRICULTURAL LANDS.

Rettinghouse testifies that lands were assessed on the basis of 30 or 40 out of a hundred depending on the amount of the benefits received taking the unit as one hundred, and there were lands assessed as high as three hundred and three hundred fifty. (R. 259).

Risty says that as to the manner of determining the benefit of the unit of agricultural land the board made an estimate of what that land was in its judgment worth and how much more it would be worth after the benefit of the ditch (R. 255); that the engineer spread the amount the Milwaukee would be benefited on the same basis as the farm land adjacent. (R. 163).

Charnock says the agricultural land had a value placed on computation by the acre (R. 233), that the engineer showed the board what the benefit would come to in money and thus the $25.00 benefit unit as to farms was arrived at. (R. 234).

Rettinghouse says that as to the Milwaukee there was considered its right of way, on the acreage basis, which was estimated in proportion to the adjacent land. Charnock, that in applying the unit to the Milwaukee, the board first considered the acreage belonging to it and assessed that practically the same as abutting lands. (R. 232).

Risty says that when the railroad property and other properties were reached, the board considered the benefits they would derive annually and capitalized that. On considering how much the average annual benefit would be to these properties, say a certain piece of railroad, and having that amount fixed it took the benefit which this unit of farm is supposed to receive and divided the benefits of the railroads thereby. To illustrate, if the benefit to the unit of farm land was twenty-five dollars, the board would make the apportionment of benefits 25 per cent. When it came to placing the unit on other property it, after exercising its judgment and making necessary investigation, arrived at a certain amount. It divided that by 25, the benefit to the farm unit, and that gave the number of units for assessment. (M. 256).

AS TO DISCRIMINATION AGAINST THE CITY.

Charnock testified that as he remembers it the streets of the City were taken at about the same value as the property abutting, though the lots were not figured by the acre and the City was not dealt with on the acreage basis (R. 234), — and that no difference was made resting on whether the property belonged to the City or to individuals (R. 233); that the streets were assessed along about the same as the property where the streets were located, and that one would not call city lots agricultural land. The streets were not assessed as agricultural land. (R. 235).

One of the defendants said only the north end of Phillips park was taken in and it was assessed the same as was all the City property or any of the property. (R. 235).

Risty said for one thing that in comparing the benefits to the property of the City with agricultural units, the board took into consideration the public highways that would be annually overflooded and proceeded as in all other cases. That in all cases the board tried to take into consideration the right of way and the value of lands as compared with adjacent lands (R. 153); — that in comparing the benefits of the property of the City with agricultural units the board took into consideration the public highways that would be annually overflowed, had in mind as road builders what damage that would do to such roads and in its judgment fixed the damages to be what it thought was right, and thus fixed a number of units on a piece of property and then proceeded in like manner as to all other cases (R. 256); that the board compared the apportionment as to parks, water systems, streets, and highways, with the agricultural unit (R. 256); and that with reference to parks, water systems, highways, and streets, in the city, the board based its determination on the same facts used with reference to all other property, and estimated according to its judgment and based its action on an investigation of the benefits to the public and the loss

there would be if the foregoing things in the city were annually overflowed. (R. 255).

THE CLAIM OF ARBITRARY ACTION.

The basis for asserting that the action of the board was arbitrary seems to be, first, that the proportion of units out of the total of 32,549.62, tentatively fixed, was:

Chicago, Rock Island & Pacific Railway Co.,	839.45
Chicago, Rock Island & Pacific Railway Co.	1681.
Chicago, St. Paul, Minneapolis & Omaha Railway Co.	839.45
Northern States Power Co.	5351.63
Great Northern Railway	613.85
City of Sioux Falls	3147.95 (R. 251)

Related, the tentative proposed assessment, in dollars and cents, to-wit:

Great Northern,	$ 5,800.00	(13)
Power Company,	51,000.00	(13)
Rock Island,	4,974.00	(13)
City of Sioux Falls,	29,905.52	(12)
Omaha,	7,500.00	(13)
Milwaukee,	15,000.00	(13)

The same subject is attempted to be covered by testimony, say, that the Rock Island owns a little less than thirty acres in a drainage district designed to drain upwards of 20,000 acres of agricultural land (R. 6-177); and, say, that the Milwaukee owned nothing but its right-of-way.

Those who helped make and did make the proportional assessment became witnesses:

Risty testified that while it might seem arbitrary, say as to county highways, the board knew pretty well what it would take to keep such roads in good passable condition, both when there was no overflow and in sea-

sons when there was (R. 258). It is pointed out that the appellees at no time appeared before the board and thus it was denied making what might have been deemed a more satisfactory appraisement. Risty testifies it was the judgment of the Board that the real benefit to lands should be computed on the basis of a profit unit and that when this was determined it proceeded to equalize and fix the proportion of benefits among the other property. (R. 262). To show how much it all was all a matter of judgment and opinion, Risty illustrates with the case where a basement is filled with water and says that it might well be that the estimate by the board would vary from one made by the owner, and that neither might be right. (R. 256). He says the board made an estimate of damages that might accrue to highways and streets overflowed and based its estimate on its best judgment. (R. 256).

DISCRIMINATION CONCERNING THE RAILROADS.

Risty testified on cross examination by the appellees that as to the Rock Island, Omaha, Great Northern, Milwaukee, the City of Sioux Falls and the Power Company the board took into consideration the value of the right-of-way, compared the right-of-way with adjacent lands and considered what protection from water would bene fit these properties and the saving it would be in the upkeep of the railroad track, bridges, etc. (R. 256, 257).

Charnock testified that in assessing the railroads the board considered the land owned by them, the railroad itself and the culverts and the bridges (R. 233): and in applying the unit to the Milwaukee there was first considered the acreage belonging to it, and that was assessed practically the same as abutting lands. (R. 232). It is testified that with reference to the Milwaukee in fixing its proportion to be 1678 units the, board took into consideration what it would damage these tracks if washed out and the expense of rebuilding; the board assumed that were it not for the spillway those tracks would wash out and be under water for a certain period;

that witness himself had seen that railroad under water for eight or ten days and compelled to turn trains around and run them over other railroads; that these tracks were on lands subject to overflow, and that in this connection the board considered the distance the Milwaukee property was from land that had overflowed; that in this territory floods occurred often. It was testified further that the personal experience of the engineer of the board gave him a very good idea of what the cost periodically would be for washouts and his estimate was as close as possible as to what would be saved if there were none, and this was capitalized. (R. 160).

As to the Rock Island, Risty says the board considered inthe apportionment the damages that might be done to its tracks, grades by high water. (R. 258).

Charnock says the board took into consideration the benefits to the grades of the Milwaukee, the culverts that could be done away with and bridges that could be abandoned or shortened by reason of the drainage system. (R. 232). Risty says, that the board considered the bridges of the Milwaukee in arriving at its benefits. (R. 260).

The engineer of the board testifies that the Great Northern had 2.4 acres of right-of-way which the board considered benefitted; also a one-fifth of a mile of track, two bridges that would be protected and approximately 315 feet of bridge that might be abandoned. (R. 241).

As to the Omaha he says it had two and one-fourth miles of track 27 acres of right-of-way, two bridges that might be protected, and 405 lineal feet of bridges that might be abandoned by reason of the drainage project (R. 242); that the Milwaukee has 170 acres of right-of-way, 14.2 miles of track, two bridges that would be protected, one bridge that might be shortened one hundred feet, and another bridge 176 feet long that might be abandoned. (R. 241). Risty says, that there was a certain number of bridges on the Omaha that were protected by the drainage. (R. 263). According to Char-

nock the board considered how many bridges could be saved by the diversion of the water. (R. 233). Engineer Rettinghouse, testified as to Bridge P. 129 on the Omaha the Bridge P. 130 which were west of the city and east of the river, that he believed the drainage project would enable the company to abandon these bridges (O. 233); that on the Rock Island there were two bridges, which could be shortened 230 feet, that on the bridge southwest of town there could be a shortening of 120 feet, and the one in town could be shortened 110 feet, taking out one span. (R. 242). Risty testified that it was considered the bridge could be built smaller and that grades could be substituted for trestles. (R. 258). Rettinghouse, that the board considered the benefit to bridges, the possible shortening of same and the betterment or saving in the maintenance of the road bed. (R. 162).

On the other hand, Basset testified there would be no benefits from shortening bridges because the same openings would have to be left, and, therefore, whenever the Great Northern planned to shorten a bridge it did not take into consideration the existence of a drainage ditch. (R. 189).

Barlow says that if the evidence did disclose that from one-third to one-half of the water that comes down the river was diverted, yet it would not be a reasonable conclusion that at least part of the bridges could be done away with. (R. 170). Waite, if the bridge in the city were eliminated or shortened and a span taken out leaving the bridge 197 feet it would be something he would not dare to do (R. 178); that he would not consider it was reasonable engineering to eliminate any of this bridge (R. 179); and that he was willing to say this, though he has no information as to how much water the river carries, the slope of the land or the difference in its height. (R. 179). Hardimon, testified that in his judgment it would be unsafe to change the length of the railroad or other bridges in town. (R. 203). Bassett, that it would not be good engineering or safe to shorten the bridge which is now 615 feet long by more than 50

feet, under any conditions. (R. 190). Perkins, testifies the span could not be safely shortened, which he bases on the fact that he has had to enlarge openings several times (R. 182); but Barlow concedes that a former chief engineer of the Omaha did at one time consider the shortening of the bridge just east of the city. (R. 170).

The assessment was proceeded with under the advice of the engineer. Charnock says, the engineer figured the benefit to the road bed, culverts and the land owned by the railroads (R. 234); that all the various elements that the engineer had suggested as to the Milwaukee were taken into consideration in fixing the benefits as to that railroad (R. 163); that the engineer figured out for the board the saving to the bridges. (R. 234). The engineer advised the board that certain of the bridges could be shortened by having the water by-passed through the ditch (R. 162); and Risty says the board took into consideration that the Rock Island might build a shorter bridge. (R. 258).

AS TO THE POWER COMPANY.

Charnock says that in dealing with the Power Company there was considered the dam at Schodjt's which the board had put in to control the river water and also the gates or wiers at Thompson's, and cut-offs. (R. 232, 233). Risty, as to the plant the board considered the overflow at high water that would clog up the turbines and put them out of working order for a time, and the board had in mind the overflow in 1881 which spread out over the lumber yards in the territory of the Power Plant and took out a mill at the foot of the falls (R. 264); that there was considered several river cut-offs which had been put in in the river north of the city, and in determining the benefit to the power company there was considered the effect and influence of these cut-offs in hastening the water and shortening the time of floodage as to the Power Plant (R. 264); that the board considered high water backing up and filling up the gorge below the plant which resulted at certain

times the water power would not be serviceable and that it would cost more for fuel and other items (R. 259) — that the Power Company would be given a uniform flow in dry seasons and be protected at overflow seasons. (R. 159).

AS TO THE CITY.

Risty says that as to the streets and basements that flooded each year an estimate was made on how much it would damage a basement to have it filled with water (R. 158); that in dealing with streets and basements flooded yearly the board made an estimate as to how much it would damage the basement if filled with water (R. 158); and so of streets and parks. (R. 158). He again points out that all this might have been better adjusted if the assessed parties had ever come to a hearing. (R. 158). It was testified the board considered that one benefit to the city was keeping the water off and thus benefitting streets as well as abutting property. (R. 234). It was figured that if the water was kept off the road this made a benefit in so many dollars — and this was the basis of dealing with streets; they were not dealt with on the acre basis but on lot valuation. (R. 134).

Risty says that with reference to parks, water systems, highways and streets in the city, the board based its determination on the same facts it used with reference to all other property and estimated according to its judgment and on investigation of the benefits to the public and the loss it would suffer to highways, streets, parks and water systems suffered from annual overflow. (R. 155, 156).

AS TO THE UNIT METHOD.

The engineer of the board says that in arriving at the benefits to highways there was considered that a certain amount of annual maintenance was required and that it was greater under flood conditions; that the difference in the estimated cost of maintenance would capitalize to represent the benefit in a certain sum and the result was considered a real benefit, and after obtaining this result and making a great many calculations the board took into consideration the various locations and thus it was determined that some were benefitted more than others.

The board decided on its inspection trip with the engineer to select as a unit tract of land lying about three miles noth of the city and between the river and the ditch (R. 232); that in going over the territory he fixed on the location of a local particular unit as illustrative as could be found and therefore recommended the above unit. (R. 238). One member of the board testifies this unit was one acre of agricultural land. (R. 233). It was decided on the inspection trip that the acre adopted as a unit was worth $100. before the improvement and would be worth $125.00 afterwards. (R. 238, 239). The board determined that in its judgment this unit was benefitted twenty-five per cent or twenty-five dollars. (R. 162). After determining the value of this unit as aforesaid the board proceeded to equalize and fix the proportion of benefits among the other properties. (R. 162).

AS TO BENEFITS.

Risty testified that the Milwaukee extended almost the full length of the ditch and was adjacent to it; that in some places its track was right along the ditch and in others it runs pretty close, possible eighty rods distant where the ditch crosses the river at Renner. (R. 163). Nelson, that there was a place on the section of which he was foreman where the ditch is just outside of the Miwaukee right-of-way and he thinks it was diked four feet just outside of the right-of-way (R. 192); that from a point about four miles south of Baltic the ditch is on the west side of the Milwaukee and from that point down to Renner it runs close to the track, between the railroad and the river, both ditch and river being on the west side of the track. (R. 192). Bassett, that the Great Northern enters the city of Sioux Falls at a point about a mile and one-half from the mouth of the spillway. (R. 184).

Risty says the engineer explained to the board that the embankments, tracks and road beds of the Milwaukee were benfitted by being made more substantial and requiring less upkeep. (R. 163). Rettinghouse, that from his experience as a railroad engineer and the facts and data he has been able to gather, the benefits are direct benefit to the railroad company and their properties (R. 242); and so as to the Power Company. (R. 242). One thing the engineer advised the board was that some of of the bridges would be protected. (R. 162).

The engineer says that one element of benefit was the straightening of the river to a large extent between the upper end of the section clear down to a point near the Great Northern tracks and that this greatly increased the velocity of the water flowing through the river, thereby shortening the flood period. (R. 221).

Nelson says the flood in 1897 covered all the east side of the Milwaukee track and went through the track (R. 193); that in the flood of 1916 the flood water washed out a part of the track but not at the place where

the bridge is. (R. 193).

The engineer testifies that before this improvement was constructed the wells in the city were flooded by surface water and made unsanitary; witness recollects that notice was sent out that water should be boiled because not suitable for drinking, while another was sent out by the health officers that the water was perfectly sanitary and healthy. (R. 279, 280).

Hardimon admits Sherman park overflows pretty near every year. (R. 200). He says the city owns this park and it is kept for park purposes but it practically overflows every spring and that the water does not need to rise but a little, because the land is very low and the river forms a letter "S" just around it (R. 202); that possibly anything that tends to divert a portion of the water coming down the Sioux Valley and keeps it out of the river as it goes down the valley and as the river goes through Sherman Park would be a benefit to that park (R. 202); that another item considered was the benefit to the city water works (R. 243); that during flood conditions these works were out of commission and the board estimated that this was so a certain number of days in each year. (R. 242).

He says that it was taken into consideration that the city had about fourteen miles of streets and the benefits that would accrue to those and as well to county and town roads. (R. 242). He testified the river runs around the city some miles beyond the outlet of the spillway and it was a direct benefit and the same benefit that was received by lands further up the river to bypass this water on adjacent lands, starting at the north end of the city limits and around the city and going on until the ditch dumps the water back into the river (R. 242, 243), — and that from the diversion of the flood waters the annual maintenance of parks would be reduced. (R. 242).

Bassett testified for plaintiffs that on the Watertown and Sioux Falls line, a part of the Great Northern

system, they are flooded just south of the City pumping plant and at the top of the hill, that there the water comes out of a ditch and comes over the track and has done so every year since witness has been in Sioux Falls. This water gets to be probably six inches over the top of the track and stands in there sometimes for probably ten days. (R. 190).

The witness Nelson says that in 1916 at a point four miles south of Baltic the dam went out of the river and the river let the water in the ditch; that the ditch couldn't carry it and it went over the bank and washed out the dike; that a few miles further south it washed the track and let all the water out over the farms around, flooded them, and then washed back on the track; this water came from the ditch; the ditch is constructed with a dike and the water broke through the dike. The water that came into the ditch from the river went out and washed all the tracks as well as flooded the ground. (R. 192).

Knodt says there was a flood in 1897 that stopped taking trains out because the tracks were damaged on the west Sioux river bottom, just west of the city so that they could not cross; that the water was up to the rails most all the way on that side of the river; that there was one place in the road bed where an opening had washed out and the ties were hanging on the rails. a few ties were gone and it was quite difficult even to walk across; that there were two smaller bridges where the road bed was washed out, and ties hanging on the rails and that the track remained impassable for trains for ten days or two weeks. (M. 339).

At times water has been high enough around the penitentiary, where the Great Northern track runs, to flood this track some inches of water every year. (R. 192).

And Nelson says the points at which the ditch protects the Milwaukee track is about a half a mile south of Thompson's bridge, that the ditch comes to the right-

of-way at this bridge and runs nearly four miles down the track and the water comes into the ditch where this bridge is built. (R. 193).

There are many allegations, in effect, that the project did more harm than good (R. 9; N. 8; S. 8, 9; P. 9; M. 8; O. 8), and issue was joined on these in answer (S. 8, Denial 27; P. 8, Denial 29; O. 14, Denial 38).

The trial Court found that as a matter of fact no direct benefits to the property of the railroads within the City are shown. (M. 90, 91).

One witness considers there is great danger that the spillway as now constructed will work that the ditch must be closed and the water turned back into the original channel (R. 189); and Nelson says that if the dikes were raised a foot or so they would keep more water in than they do now. (R. 193).

Another witness says that since the construction he has lost more crops than he did before, and that his losses have been considerably more, since. (R. 204).

The City has practically abandoned Lien's Park as a Park since the spillway was built, though before the building of it the City had started to improve this Park, on account of flood conditions when the river overflowed from the spilway. (R. 183. And Hardimon speaks practically to the same effect. (R. 201).

In the opinion of Bassett, no benefit has resulted to the right-of-way, tracks, bridges, embankment and station grounds from the construction of the drainage project including the spillway. (R. 189). In the judgment of Link the Power Company would absolutely not be justified to expend any money for the ditch and spillway on the basis of benefits to the plant, and in his opinion there is no appreciable benefit to the plant. (R. 206).

Lots 5 and 9, inclusive, in block 25, of Phillips's

addition is used by the Rock Island for round house, and turntable, and this property is on the west bank of the river, eighteen or twenty feet above the surface of the water. (R. 196). Hardimon says that as you leave Sherman Park the most of the shore line is fairly level on one side but the other was higher and goes farther from the river and for several miles there was a high plain on the right hand side as you go down the river and the banks on the left side are fairly high in places. (R. 199). Spellerberg testified the high water does not affect Phillip's Park to amount to anything, that the Park is practically on high ground except a small flat area at one end at which point the ditch overflows and comes down to Covell's Lake. One witness admits that while at one point near the Great Northern bridge in the City of Sioux Falls, the banks of the river are well defined, that as the river goes through the town confined in a deep channel there is a greater chance of danger; that the channel is widened and banks not so steep. (R. 184). One witness says the tracks were on an elevation above high water mark. (R. 189). Another speaks to like effect concerning banks and embankments and tracks. (R. 177, 189, 191). At one point twenty feet, and about eight feet above level of Cherry Rock. (R. 183).

Link says the Power plant was designed to take care of maximum flood conditions and designed and constructed before the drainage ditch was, and it was built to take care of any flood condition, regardless of any drainage (O. 196); even against a flood as severe as the one of 1881. (R. 297, 298; R. 205, 206).

Holt testified that as against a flood "this ditch would be simply a wrinkle in the valley", that the ditch is useless against floods because when flood waters were highest they would cover up the ditch. (R. 198). And Link says it is his opinion that this ditch and spillway should not be taken into consideration at all as a means of resisting possible floods. (R. 208). But he concedes the improvement relieves flood water conditions to a certain small extent in certain stages of the river. (R.

207).

According to Reed, the Power Company plant was carefully designed to preserve the property against flood water of the Sioux River. (N. 244, 245). Another witness, speaking generally, testifies that in locating a line of railroad through the Sioux River valley the engineer would necessarily have in mind as one element of the cost of construction the making of embankment high enough to be safe from flood waters. (R. 197). And Nelson that the Milwaukee protected itself by putting in rip rap. (R. 193).

Holt says that in making the location it is part of the duty of the engineer to find the height of the flood waters of the various streams he crosses, and the grade line is usually established with reference to high water; he gets as much information as he can in regard to the elevation that the high water reaches in the valley, gets this partly from those who live there and partly from his observation of the high water marks; he then determines the height of the grade from experience as indicated by such information. (R. 196, 197).

Thompson says there was nothing that prevented all of the water that was gathered by these ditches 1 and 2 at the outlet or spillway from going over the hill. (R. 204). Geelan, that he cannot say there is any particular noticeable difference in regard to the water conditions at the bridge in the city of Sioux Falls before and after the construction of the new spillway. (R. 172).

One witness thinks the ditch had no effect. (R. 180). Another, that it does not drain "this section down here", at all. (R. 207). Still another says that matters are the same as they were before — that water has come out of the ditch every year since the spillway was put in, and that at a level side of the Great Northern the water has come out over its tracks through the dikes and the ditch; and at the City pumping plant. (R. 191). Still another says that it has made no appreciable difference in the flow of the river. (R. 192). Still an-

other, that there is no apparent difference as regards to flood waters of the river with reference to the line of the Omaha west of the City and east of the river, very little noticeable difference in water conditions along the Omaha line — and while he declines to say there has been more water in the bottoms west of the City and north of the Omaha track than there was before, to his knowledge, there is fully as much. (R. 172).

One witness gives it as his understanding that the construction of this project has worked no decrease in the section force employed which he says would be the determining factor in the saving of maintenance account. (R. 171).

There was a flood in 1916 but as against 10,000 per second feet in 1881 the water that came down the river in 1916 did not exceed 6,000 or 6,500 cubic feet per second. (R. 206, 207). But Nelson testified that in 1916 the old spillway went out and there was high water. (R. 193). Spellerberg, that in 1919 and 1920 the river came to the highest it had been to his knowledge and that the overflow condition continued longer than in any prior year. (R. 183).

The manager of the Power Company testified that the gorge north of the power house was full of water in 1919 and 1920. (M. 247).

Geelan says that the river never was any danger either before or after the construction of the spillway excepting in the year 1881, that that year an ice gorge formed in the southeastern part of the city and the gorge held the water back and when the gorge broke there was a flood which flooded the track of one of appellee's railroads about at the location where at present it has its station. (R. 172). Link, that in 1881 was probably the maximum as to floods and probably reached 10,000 feet a second (R. 206, 207); that he was up on the ground quite a number of times in 1920 and that then water was over the track of two railroads and there was a flood down almost to Russell street and from there

down to Covell's Lake (R. 200); that the water went over Minnesota Avenue although at this point not enough to amount to anything; it merely took a few loads of cinders to patch it up. (R. 200).

According to Nelson, the water in 1916 did not cover the abutting lands before going through the track and did not cover half as much ground as the one of 1897. (R. 193).

An agent of the Rock Island testified the river has never been out of its banks in the City since 1890. (R. 183).

Hardimon says the high water except that of '81 has done no damage to speak of that he knows of to City property (R. 200); that they have abandoned Lien's Park on account of the water which has practically cut out the park. It is a little north and east of the penitentiary and just a little west of the spillway (R. 202); that when this flood came through the city in 1881 it took all the bridges except one and swept the mills and the lumber yards on the east side, the only thing left on the east side was the Omaha railroad bridge; but that this flood was caused by the ice gorge. (R. 198). But none of Covell's Lake park was subject to overflow except a little piece which is by First Street bridge which he thinks would not cover more than one whole acre (R. 202); that in one place, except what was done by the flood of 1881, he knows of no damage to speak of done to City property. (R. 200). But he also testifies that the water around the City electric light plant and the pumping station was greater in 1920 than anywhere prior to that year except 1881 (R. 200); that during 1919 and 1920 the water in the river was the highest he can recall, and especially so around the city water plant and electric light plant, except 1881. (R. 203). He never saw the water on the west Sioux Falls road higher than in 1920 except in the flood of 1881. though at this point each street is two and one-half or three feet above natural ground; that in that year the water went up to First about where it would go over

and then the bridge carried it down. (R. 200).

Several witnesses say between them that neither track or embankment or bridges or right-of-way, have in the past been fooded, and that in the past these have not been troubled with high water. (R. 177, 191, 203). Some of these qualified it by saying that this is so so far as they know. (R. 179, 180, 189, 194). Another qualifies by saying that if the water has ever crossed the right-of-way the witness does not remember it. (R. 180).

Olsen has worked for the Milwaukee continuously since 1887 and has noticed no injury to railroad property from being covered by water during that time, and there was no such covering in Sioux Falls. (R. 193).

Pilcher, the local agent for the Rock Island at Sioux Falls, says that the Rock Island had never been washed by the river; that its right-of-way never had any water standing on it from the Sioux River ever since witness came there, since 1890. (R. 182). Another witness testified no water has ever been on the embankment or right-of-way of the Rock Island, to his knowledge. (R. 182). Still another speaks to the same effect. (R. 181). Perkins testifies that from January 1st, 1913, to June 1st, 1920, there never was any high water that ever threatened to damage the two Rock Island bridges. (R. 182).

Nelson never saw any water standing in the ditch along the side track of the Milwaukee track, on the ice house side (R. 194); that while in 1919 and 1920, water came out of the ditch in several places there was not enough to hurt the track, that the water went up the track and came to its bottom but didn't cut in much or wash. And there was none on the east of the Milwaukee track. And it was not injured in 1920. R. 193).

Dean was here in the high water of 1911, and there was no damage done that he knows of. (R. 181). But he also says that if the water were increased fifty per cent he does not believe the bridges would stand it. (R 181). Waite testifies that while he does not know what

would be the effect on the bridges in town if the water flowing down the river should be increased thirty to fifty per cent, he thinks that even then the bridge east of town would be all right, but is not sure about the one in town. (R. 179, 180; O. 280). And Holt, that if subsequent to the time he had a high water mark something was done to increase the spread of water at a certain point he would have to take that into consideration. (R. 198).

There is testimony that witnesses know of no damage being done by high water in a described addition of the City of Sioux Falls near the round house or east of it. (R. 194).

Woods is familiar with some of the lots involved which are near the railroad round house south and east of the town and now used for new yard tracks, he says the main line lies between the trackage of this yard and the river and these tracks are lower than the main track which was built in 1879. It has never been disturbed by high water. (R. 196).

Spellerberg testifies that only a very small part on one end of Phillip's park and about a half of Sherman's park and about one-half of Lien's park, situated a little east of the spillway, are affected by the high water. (O. 182, 183).

Shea says that after water goes over the Milwaukee tracks it would not take out the entire railroad bed, but just break through and make opening similar to what the company now has by means of arches and that this water going over the track would not necessarily take out the entire embankment; that usually it only cuts out a short piece, to the extent of what is necessary to carry the overflow from one side of the track to the other. (R. 193) — that on his experience and observation he thought the water standing along and against grades had no effect on their maintenance or on the stability of the track (R. 193); that even where the embankment is twenty years old or older no additional expense of up-

keep is occasioned by having water standing against it. (R. 195). Both the engineer, Rettinghouse, and Mr. Barlow, a witness for the defense, take issue on this, and the latter says that the water along an embankment which supports railroad tracks has a tendency to weaken that embankment and this necessarily requires a greater outlay to keep the bank in solid form, and that as a general proposition the more there is of the standing water the more of such effect it has. (R. 239, 240; R. 169, 170).

It is, however, also said that as to the Omaha embankment there would be no such effect because its embankment is very wide and deep, heavily overgrown with vegetation and sod and that in the vicinity of the river course where any washing has ever taken place there is thorough protection by rip rap. (R. 170, 171).

AS TO LACK OF BENEFIT TO THE POWER COMPANY.

Reed thinks the hydro-electric plant is about a half mile from the mouth of the spillway. (G. 245).

One witness says no part of the property owned by the Power Company has been flooded since 1900 and that at the time this ditch was first constructed no part of said property was flooded. (N. 244). Another says that during the flood of 1921 there was never a day that the Power Company did not go on as usual and during all that time it ran at full blast. (N. 246, 247).

Link prefaces all he says as to the Power Company lacking benefit, with "under present conditions". (P. 197, 198). On this premise he says that no diversion which would lower the flood level in the tail-race would increase either the capacity of the plant or the amount of power it could produce (P. 197, 198); that the generators could not pull any more load no matter what the wheels might or might not do because the generators have a fixed capacity which cannot be exceeded without burning them up. (R. 196). With said limitations he says no benefit arises to the plant from the diversion of

flood water from it. (R. 196).

Anderson says that the diversion of water by the drainage ditch is a benefit to the Power Company plant in that the arrangement of the turbine wheels in connection with the tail-race is such that the company gets the maximum benefit of the draft tubes or pipes at this stage in the tail-race, as exists in times other than flood times. (P. 295, 296). Rettinghouse testifies one element of benefit to the Power Company was that through the diversion of part of the waters through the ditch, estimated at some twenty-six hundred to three thousand feet a second, as against flood conditions running six to ten thousand feet per second, water was taken from the tail-race and the lowering the available head was avoided; in saying this witness is largely guided by a report of Link and on information and investigation by Shenehon who designed the spillway, and the lay of the land opposite the plant is such that all the flood water after passing over the dam must pass through the tail race. (R. 240, 241).

It is the opinion of Link that by-passing at a time of maximum flood would have no appreciable effect upon the "out put" of the plant and that operation could be maintained constantly. (P. 296, 297). He cannot see that the river or ditches would have any effect on the flow of the river to the Power Company plant at normal stages of the river, nor any effect from straightening. (P. 296, 297; R. 195). But Rettinghouse testifies that through the by-passing of the flood waters the Power Company would have a constant aggregate output of hydro-electric power, while, in other than flood seasons, the controlling works and dams would keep all the waters in the river that should be there and pass it to the Power Company's turbines, thus insuring a constant flow even at a low stage of the water in the river (R. 241); that the increased velocity of water flowing through the river produced by the straightening of the river, caused the total of water collected at the initial point of the cut-offs to hasten down the river past the Power Com-

pany plant. (R. 241).

Risty says several river cut-offs were put in the river north of the City, and in determining the benefit to the Power Company there was considered the effect and influence of these cut-offs in hastening the flood water and shortening the time of floodage on the power plant (R. 164); — and the board based the Power Company benefit, for one thing, on the fact that there was a stream to give a steady flow around the bend so that the water did not go over the spillway. (R. 159).

According to Link, all that had been done, including the controllers at Thompson bridge merely maintained the level of the water and would prevent the river water going into the ditch under a certain height, to-wit, when flood condition is reached, but all that this comes to is that it increased the head and so merely conserved water but without increasing the output — that all it came to was to conserve what the Power Company had a right to have — to give it the water which the ditch had taken away. (R. 250, 251).

Rettinghouse testified that his opinion as to benefits is based on the assumption that it is cheaper to produce current from a hydro-electric plant than from a steam plant and that therefore the company was benefited by the increased head. (N. 243). The manager of the Power Company says that when the water is low the company cannot put it over their turbines and must therefore produce it with steam; that there were times in the year when the water was not sufficient to produce current and it cost more to run by steam than by water as a motive power; that when the water has not sufficient capacity it is necessary for the company to have a steam plant to supply the demands of the city for current. (N. 246).

There was a plea of estoppel by way of affirmative allegation in each of the answers. (See O. 39; M. 44;

S. 39; N. 38; P. 39; R. 39). This affirmative plea was never met by a denial in pleading, if indeed met at all.

It is pleaded that stated things were done by the board, with notice to and actual knowledge, acquiescence, approval, and consent of the plaintiff City, its officers, agents, and servants, and of all others like situated; that appellees had during all the time the ditch, river cut-off, and spillway were being established, constructive notice and actual knowledge that payment was to be made by special assessment against the lands and properties of the plaintiffs affected thereby; that they had such notice and knowledge that there was no other provision or method of making such payment; that neither appellee took any steps to stop or prevent the establishment of or performing work upon said ditch, river cut-off, or spillway, or to stop the issuance of drainage warrants therefor, though they had actual notice and knowl edge that these warrants were to be taken up and paid only by said special assessment; and that the appellees are now and since 1918 have been receiving large and continuous benefits to their lands and properties affecten by reason of said reconstruction and construction of said drainage ditch, river cut-off, and spillway.

The things, the doing of which is so urged as an estoppel, were, among others, having knowledge that copy of the petition was transmitted to the state engineer; that there was inspection of the proposed route of the drainage project; that the board caused a survey to be made by a competent surveyor under the supervision of the state engineer; the making and filing of said report; the determination of the board of the exact length. line, and width, of said drainage improvements; the order and resolution of the board fixing time and place for hearing on the petition and the giving of notice as to such hearing; the establishment of the district by resolution and order upon said hearing; the giving of subsequent notice to all parties interested of the final establishment; having knowledge of all work done and performed on said ditches and river cut-offs, and of the

establishment and construction of said spillway.

It is averred that the City is estopped because it was one of the signers of the Blackman petition, the one upon which this improvement was constructed. (N. 39; M. 30, 31, 32, 33; O. 35).

The Rock Island delivered cement after there had been discussion whether the company was able to deliver freight to the place where the contract for the construction was being carried out. (R. 237). Boyce made arrangements with the officers or agents of the Milwaukee and of the Great Northern to have freight spotted or delivered at or near where the spillway was being constructed and several car loads of such freight were delivered near the spillway. (N. 275). He says he had certain steel reinforcing material delivered for the work. Some of it came in on the Milwaukee and some on the Great Northern. (N. 275). Some of the work was done with a machine shipped in over the Great Northern, and Larson arranged with the agent of the Great Northern to have it spotted. (R. 231). There was an arrangement with the Great Northern to deliver cement, the delivery to be made at the spillway. It was so delivered and the Great Northern was paid for the service. (R. 231). The Milwaukee delivered another machine and was paid for the freight. The ditch was about one thousand or fifteen hundred feet from the Milwaukee right-of way. (R. 231). On arrangement with its local agent the supplies were to be or, perhaps, were delivered along its track at the Schodjt's dam. The witness Jensen had a talk with this agent about the ditch and told him the board needed some assistance at the ditch and along the river. (R. 279). The Milwaukee transported men to this work, on arrangement with its agent. The agent was told help was needed and permission was gotten to make it possible to stop between stations. For all this transportation, bills were rendered the board for the tickets and these were paid with county warrants. (R. 279, 280).

One defendant had a talk with the superintendent of the Milwaukee and the latter looked over the water situation because a lot of track had washed out north of the city and told witness the latter could get anything he wanted to help control this water. (R. 280).

Pilcher, who was working for the Rock Island railroad in 1916, 1917, and 1918, then knew about this new ditch going in, saw the publication in the newspapers and saw the spillway in the course of construction. (R. 183).

The assistant engineer of the Great Northern saw the repairing of the ditch and the throwing up of embankments. He saw them building the spillway in 1917 and has been watching it. (R. 191).

During the construction of the spillway in 1917 and 1918, the electrical power used in construction was furnished by the Power Company, and its agents made the connections. The company rendered statements from time to time, these were presented to the board and paid by warrants to the Power Company. (N. 276).

The manager of the Power Company asked permission of one of the defendant members of the board to put in a dam to keep the water from going into the river from the ditch. (R. 280). He asked this member if the Power Company could not put in a temporary dam at Schodjt's and keep the water there; said the Power Company was losing, and the board did put in such a dam. Later, the manager asked for a longer one, and in 1919 and 1920, the board put in a dam together with the Power Company, and its manager drove in piling with a pile driver he had, and the board furnished some planks. They got teams and scrapers afterwards and filled up the dam and made it about 60 feet on the bottom and 40 feet on the top. (R. 280).

The mayor of the City and the auditor on authority from the City were signers to the petition that initiated this very project. (R. 210, 211). The mayor attended one of the meetings when these proceedings were institut-

ed and knew of the building of the spillway. (S. 245). The City furnished water for the construction of the spillway and put in a meter, and all water bills presented were paid by the board by warrants. (N. 275). The City commission was present in the fall of 1917 when work was going on. (N. 276).

While the Circuit Court of Appeals quite fully sets out what estoppel the appellants pleaded and gives some space to mentioning what actually occurred, it does very little with the question of what the effect of those acts should be. One illustration is the statement that it is claimed the City is estopped because of the action of its mayor and auditor in signing the petition which initiated this project. (R. 264). — Nothing further is said on this specific head.

The issue of estoppel is disposed of, mainly, on the ground that the various appellees had no notice at the time the acts constituting the alleged estoppel occurred that appellees were to be affected by the drainage construction or be assessed for the cost thereof, and therefore, the claimed acts of agents and officers of appellees did not constitute an estoppel. (R. 264).

All else that is said is an attempted distinction between those whose property was and those whose property was not within the area of the old ditch project. It is not indicated how it matters that one who by acquiescence should be estopped is not just as much estopped though he did not have property in the area affected by the old ditches. (R. 264).

OBJECTION TO JURISDICTION.

It is submitted that the District Court in which these suits were brought lacked jurisdiction and that, therefore, this court should reverse and direct said Court to dismiss the suits.

This, on the following grounds:

(a). Five of the six appellees had diversity of citizenship, but the amount in controversy was not high enough to give jurisdiction on that head.

(b). All of the appellees raise constitutional questions and made attack on the ground that there had been violation of the constitution of the United States. The trial court overruled these attacks. The circuit court of appeals limited itself to a holding that it was unnecessary to pass upon those attacks and that there should be an affirmance, even if there was no violation of the Federal Constitution — and both courts held that the Federal questions presented were substantial. But appellants submit that the record does not sustain this finding; nor the finding that the amount in controversy was more than three thousand dollars.

SPECIFICATION OF ASSIGNED ERRORS INTENDED TO BE URGED.

(Figures in parenthesis, following A. refer to the number, of the basic assignment of errors — and the figures following these refer to the print page).

I.

Contrary to the interpretation by the highest court of the state of the statutes governing the very project at bar the circuit court of appeals based affirmance on holding that the statute law of South Dakota did not authorize the board to establish and construct a new drainage ditch over the line of two older ditches, though the new project contained a materially larger area than the combined area of such old ditches, and required cleaning out, widening, deepening and diking said older ditches and

doubling their former capacity, the construction of river cut-offs to accelerate the flow of water therein, and the installation of a new and larger spillway, all at a cost of more than double that of the original ditches. (3, 4-A; R. 269).

(1-a). The Circuit Court of Appeals gave the construction of the Constitution and statutes of South Dakota an interpretation opposed to that given them by the highest court of the state, since the District Court gave its decision. (1 A; R. 266).

II.

It was error to hold that such a new project was not authorized by statute; and the testimony shows without dispute that the proceedings of the board were such as were sufficient under the statutes to establish and construct such new drainage project and make an apportionment of the benefits for the payment of the costs thereof. (5 A; R. 269).

(2-a). It has been settled by the highest court of the state in construing the Constitution and statutes of the state, and in a way that is binding on federal courts, that appellant acted on full authority and complied with the requirements of said Constitution and statutes. (R. 273).

(2-b). There is no evidence that the board ever did anything other than what it was authorized to do by the statutes and Constitution of the State. (18 A; R. 273).

III.

There is no evidence of any fraud or subterfuge on part of the board or of anyone in establishing the new ditch. (4 A; R. 268-269). Which applies also to Power Company, City of Sioux Falls, and Great Northern.

IV.

Though appellees, City of Sioux Falls, Milwaukee Railway Company and Omaha Railway Company concede that the project at bar was the creation of a new

ditch and was a new project and though the highest court of the state has so declared, the circuit court of appeals held there should be an affirmance because there had been no compliance with statutes regulating the maintenance and repair of the ditches already established. (6 A; R. 269-270).

(4-a). Not only did said three appellees concede that this was a new and independent project and not a continuation or the repair of the old drainage ditch No. 1 and the old drainage ditch No. 2, but the highest court of the state in interpreting the statutes of the state has determined that these authorized the board to construct this very ditch at bar, and that corporate drainage districts therefore were not necessary. (10 A; O. 241).

V.

Though the testimony shows without dispute that the project entered upon was such new project as was authorized by statute dealing with new projects and was entered upon and carried on in accordance with such statute, the Circuit Court of Appeals held that the proceedings were in fact for repair and maintenance only. (5 A; R. 269; 4 A; as to O and M).

(5-a). The court disregarded the fact that the project was entered upon and carried out in compliance with relevant statutes; and based affirmance on the assertion that statutes not relevant had not been complied with. (6 A; R. 269-270).

VI.

The notice of date September 15, 1916, gave legal notice of the proposed formation of the new project and that it was about to be established, and advised of a hearing to be held on October 16, at which appellees could resist the project — and appellees waived such hearing with full knowledge that they were bound by subsequent action of the board that necessarily followed in the premises. (19 A; R. 273).

(6-a). There is no evidence that either appellee

was prevented from making a full and fair defense to the establishment upon the notice given; and unless so prevented the mere statement now that this project was established by and as a subterfuge cannot avail in this collateral attack. (4 A; R. 269. — Which applies to Power Company, City, and Great Northern.

VII.

What was sustained was an enjoining of what was in effect legislative action by delegation when there should have been no injunction had it been direct legislative action. The only difference between the two being that the board in exercising the delegated legislative authority was required to give certain notices and to grant a hearing before any assessment could become a lien, with which requirement the board, according to the undisputed testimony, complied. (9 A; R. 270).

VIII.

Though it is the construction of the Constitution and statutes of South Dakota by its highest court that such board as the appellant is are not limited in establishment of or an assessment for the drainage of agricultural lands, the Circuit Court of Appeals held that their power was thus limited. (2 A; R. 268).

(8-a). Even if it were the law that the power was thus limited it is the undisputed testimony that one object of the project at bar was to drain agricultural lands. (3 A; R. 268).

IX.

The court of appeals disregarded the fact that the proceeding at bar is one *in rem* for the purpose of taxation; that dealing with such proceedings involves rules of property as to which the courts of the state are final authority, and that, therefore, both resident and nonresident property owners must, at least in the first instance, exhaust the remedies provided by the statutes of the state in state tribunals to review controversies as to such proceedings, before they may enter either state

or federal courts, at all. (11 A; R. 270).

(9-a). It disregarded that while in cases where a resident may enter the courts of his state, one who has diversity and a controversy that involves more than $3,000. need not submit himself to the state courts but may enter the federal courts, yet in a proceeding *in rem* such as a drainage project, even the resident must first submit to administrative review provided by such statutes before he may enter the courts of the state — wherefore, the non-resident may not disregard the said statutes providing for such administrative review and may not enter the federal court before exhausting them — in other words a non-resident may enter the federal court in the first instance only in the cases where both a resident and a non-resident have the right to so enter the state court. (12 A; R. 271).

X.

The court disregarded that the notice of date September 15, 1916, and the hearing held pursuant thereto on October 2, which was notice to and opportunity to be heard on the formation of the new project, on whether appellee's property should be or was included in or was subject to the assessment of benefits, and to contest the establishment of the project, its legality, necessity, character, and purpose; and disregarded that there had been no appeal from the determination of the board had on such hearing — and it should have held that there having been no such appeal appellees are bound by said determination. (8 A; R. 270).

(10-a). The court disregarded the fact that the board was by statute given authority to determine the purpose and character of this project; that it had after notice and hearing determined that the same was for the benefit of the public health, welfare and convenience and was necessary and practicable for the drainage of agricultural lands; that from this determination no appeal was taken and that the highest court of the state has, in construing the statutes of the state, held that

where there is no appeal such determination is final. (7 A; R. 270).

XI.

The argument that appellees should not be compelled to appear at the hearing because it was before a body that had no authority to act, and that one should not be compelled to submit to a hearing before a mere trespasser disregards, first, that naked assertion the board was so without authority does not justify failing to appear at the hearing before it, and, second, it disregards the decision of the highest court of the state that the board was acting on full authority; that fact also being made to appear by the undisputed testimony. (13 A; R. 271).

XII.

If, as construed by the Circuit Court of Appeals the board so acted without authority as to be a naked trespasser, that very fact gave an adequate remedy at law in either federal or state courts, to-wit, to sue in trespass. (16 A; R. 272).

(12-a). If the board was not a trespasser and acted wholly within the law, then appellee was not entitled to any relief either in law or in equity. (16 A; R. 272).

XIII.

Assuming for the sake of argument that appellee had the right ever to enter the federal court, then it had a plain, adequate and speedy and complete remedy at law in that court by removing the entire controversy to the federal court. (17 A; R. 272-273).

(13-a). Appellee had at all times a plain, adequate, and complete remedy at law, by appeal to the Circuit Court of the State, and to the highest court of the state and ultimately, if need be, to sue out writ of error to the Supreme Court of the United States — or by another route through removal to the Federal court. (19 A; S. 291).

XIV.

The fact that appellees have failed to appeal and thus lost the ultimate remedy of writ of error to this court does not give original jurisdiction by injunction, because the failure to avail of a right which would give a remedy at law, if exercised, does not make a basis for chancery jurisdiction. (17 A; R. 272-273).

XV.

The hearing enjoined was for the purpose of equalization of a merely tentative estimate of benefits by the board; additional acts were required after such hearing before any tax assessment or servitude could become operative (14 A; R. 271-272); which means it can not be known how much was then in controversy.

XVI.

Appellees make no case under any head of chancery jurisdiction, and in essence based claim for relief upon the assertion that they were threatened with the exaction of an illegal tax. Any application for equitable relief was here premature and there could be no warrant for it until such time, if ever, as the threatened tax was about to be collected out of the property of the appellees. Up to then no more could happen than a threat to collect money on an illegal tax — and for such threatened wrong there is (if it be assumed it is needed) adequate remedy at law, either in the state or federal court or both. (15 A; R. 272).

XVII.

The Circuit Court of Appeals erred in holding that the proposal to hold such a hearing could cast a cloud on title; for other acts after the hearing were necessary before so much could be done as to finally fix an amount as being a tax, assessment or servitude. (R. 271-272).

XVIII.

The court erred in holding that the acts of the Board

could cause a multiplicity of suits against appellees; and on that point it is irrelevant that new suits might have been brought by other parties. R. 271-272).

XIX.

It disregarded that there was no testimony that irreparable injury to appellee would so arise.

XX.

Disregarded as to the City and the four Railway Companies appellees that this is so, because even if an assessment had been made and a tax had been levied, it would have created no lien on their property. (14 A; R. 271-272).

XXI.

As there was notice and opportunity to be heard and a waiver by not appearing, and as appellees stood by and without making objection to any of the proceedings, saw the expenditure of over a quarter million dollars with knowledge that same must be met out of the benefits apportioned on property which included that of the appellees, and as they actively aided and abetted said work as it progressed and made no protest — it was error to hold that appellees are not estopped from questioning the legality of said proceedings. (19 A; R. 273).

(21-a). And it was error to give the City of Sioux Falls the relief given it, because it was one of the signers of the petition — and not to hold that it was estopped to object being assessed in contribution to the cost of the construction and to challenge the project on the ground of unconstitutionality, or to assert that the laws of South Dakota had not been complied with — for it asked all to be done that was done. (21 A; S. 292).

XXII.

The District Court reserved from its decree such property as appellee Milwaukee and Omaha had within the assessment area of the old ditches and failed to

make the same reservation as to the property the City of Sioux Falls had in the same area. — And the Circuit Court of Appeals erred in affirming without modification making the same reservation as to the City of Sioux Falls. (22 A; S. 292).

XXIII.

The lower courts erred in holding that these suits were not prematurely brought.

XXIV.

It should have been held below that appellees had no right to be entertained on the chancery side of the court because they had failed to tender such amount as was due in any view.

XXV.

Aside from the fact that there was no right to entertain the complaints made by each of the plaintiffs because they declined to avail themselves of the administrative tribunals provided by the laws of the state, the sustaining of these claims was error because there was no evidence to support the complaints and it appears affirmatively and by the undisputed testimony that as a question of fact the said complaints were without foundation.

ARGUMENT.

AMOUNT IN CONTROVERSY.

It is elementary that jurisdiction will not be sustained unless it is affirmatively shown that the jurisdictional amount in controversy exists.

Johnson v. Wilkins, 7 Sup. Ct. Rep. 600.
Washington Railway v. District, 13 Sup. Ct. Rep. 64.
Green v. Fisk, 14 Idem, at 1193.
Citizens' Bank v. Cannon, 17 Idem, at 90.

While it will not suffice that the bill asserts that more than the jurisdictional amount is in controversy, it is certainly true there is no jurisdiction where the bill makes no fact allegation tending clearly to show that the amount is large enough. Here, there is first an allegation that as to this drainage project there was a design to drain 20,000 acres of agricultural land. It is not even said there were that many acres in the district, but we assume for the sake of the argument that this much *is* said. But when that is admitted it is still true there is no statement describing the quality of this land or what, if any, value it had. (M. 5; R. 6; N. 5; S. 5; P. 5; O. 5). True, there is testimony that in dealing with the railroads and with the Power Company the board took into consideration the value of rights-of-way, and compared these with adjacent lands (R. 256, 257); that in assessing it considered the land owned by the railroads, the railroad itself, and their culverts and bridges. (R. 253). It is shown what property of the railroads the board found would be benefited (R. 241, 142), — but that is all, and shows nothing as to amount in controversy.

In *Johnson's case*, 6 Sup. Ct. Rep. 600, one thing stressed is that the value of the lot is not stated in any of the pleadings beyond statement in petition for removal saying it is worth more than Five Thousand Dollars. In *Washington Railway v. District*, 13 Sup. Ct. Rep. 66, it is stressed, for one thing, that the number of

the company's cars is not shown except for the years 1883 and 1884.

It would not have helped if there had been, as there is not a statement as to what said lands and the other property in the district was worth — and the value of neither is the subject of the controversy.

In *Green v. Fisk,* 14 Sup. Ct. Rep. 1193, it is said:

> "There has been no order even for an accounting, and as yet we are not advised there ever will be one; much less that, if it should be made, a balance would be found due from the appellant sufficient to make the value of the matter in dispute, on an appeal by him, such as our jurisdiction requires. As the appellant, to sustain his appeal, must show affirmatively that more in pecuniary value than our jurisdictional requirement has been adjudged against him, he has failed to make a case for us to consider."

In *Washington Ry. v. District,* 13 Sup. Ct. Rep. 66, appeal was dismissed where the bill alleged complainant had refused to pay a certain tax, and that if same be held to be a lawful tax "the amount which would probably be computed and charged against the complainant by the said municipal authorities would reach nearly if not quite the sum of $5,200. besides interest, fines, and penalties".

Speaking to when a possible tax becomes a finality it is ruled in *Milheim's case,* 43 Sup. Ct. Rep. 698, that while some step is still to be taken such tax cannot be treated as finally adopted. The amount cannot be based upon any contingent loss including what may result from the probative effect of an adverse judgment however certain it may be that such loss may occur. — Ross, 3 How. 771, New England Co. v. Gay, 12 Sup. Ct. Rep. 816. — And as to the prematurity of attack upon proposed taxation it is held in *Western Union v. Howe,* (C. C. A.) 180 Fed. 53, 54, that there may not be relief

"against anticipated injury consequent upon anticipated assessment before the assessment was completed".

Starting with the premise then that the jurisdictional amount must be affirmatively shown, how can it be said that this was done here.

The appellant board established a drainage district and confessedly had power to raise the cost of its construction by assessment. As authorized by valid statutes it made a tentative apportionment of benefits. After this was done notice was required, and was given, of a hearing to be had on equalizing this tentative apportionment. These suits were begun after this notice was given, and as a result the appellant board was enjoined from proceeding further and thus restrained from having a hearing as to the equalization. This means that when these suits were begun it could not be known how much the proposed assessment would finally be; and appellants allege in their answer that they have no knowledge of the total in dollars that will be finally equalized and assessed against the properties of these appellees. (N. 37; S. 36; P. 38; R. 38). It may be conceded for the sake of argument that even if the proposed equalization had been had the appellees would still have been found subject to taxation in *some* amount; but it is not the affirmative showing required by law to indulge a presumption that after equalization the proposed assessment of the appellees would have exceeded three thousand dollars.

It is the settled law of the case as well as of the state of South Dakota, that no assessment can be made (and of course no tax can be made effective) until the benefits have been ascertained and equalized. The trial Judge so ruled. (M. 79, 80). The plain language of Section 8464, Revised Statute, is that there is first to be an apportionment of benefits and that this is tentative. It is beyond question that under this statute there is no real apportionment until after equalization. From which it follows that even the possibility of an assessment does not come into being until after the equalization had been made.

The trial Judge says in his opinion: "This statute seems to provide for this hearing for fixing the proportion of benefits before the ditch is constructed and before it is known what will be the actual amount of money expended". (M. 78).

Despite all this the Circuit Court of Appeals ruled that these suits were not prematurely brought. (R. 263).

Unless something which is purely tentative is final, no one could tell at the time these bills were filed how many dollars would ultimately be assessed against either appellee.

It is a truism to say that if it be demanded of one to show affirmatively how many dollars are in dispute he does not meet that demand by saying that he does not know how much, that there has been an estimate as to what amount may by possibility be later exacted, demanded, and disputed, but that still another step must be taken before it can be known what will become of the tentative estimate.

II.

The most that can be claimed by the appellees is that when they entered the federal court they were threatened by a potential undetermined and unequalized tax, which both before and after equalization constituted but a threat of the ultimate exaction of an illegal tax. We must speak elsewhere on whether there was jurisdiction in chancery because of such threat of such a tax. It suffices to say at this point that the right to entertain in chancery is not an important thing because so long as the *status* consisted merely of such threat there was no right to enter the federal court, either on the law or chancery side — that while this remained the *status* these suits are prematurely brought — the present point being, however, that there being no more than such threat it cannot be known what amount is in controversy.

Now, while the Circuit Court of Appeals rules with

us on the premises we have just stated it declines to follow them to the deduction that must inevitably be drawn upon them. The court holds that a future undetermined, unequalized and unspecified tax cannot be taken into consideration as to the amount in controversy, because the court may not engage in speculation as to such taxes. (R. 262). But it rules further that the jurisdictional amount existed because there is a mere threat that equalization may not lower the proposed assessment below the jurisdictional amount; and that as the tentative apportionment in the case of each appellee was in a sum larger than three thousand dollars there was such possibility, despite equalization, that each appellee will ultimately be assessed in a sum greater than three thousand dollars, as that there was sufficient certainty when the bills were lodged that the amount in dispute was above three thousand dollars. (R. 262, 263). We thus have a ruling that under the law the amount in controversy could only be arrived at by the *forbidden* method of indulging in speculation as to the amount of a yet unascertained tax, and, yet, that it affirmatively and effectively appears *by speculation* as to how much the tax may finally be; that when these suits were begun more than the jurisdictional amount was in dispute.

Our view of the law is endorsed and then disregarded by the Circuit Court of Appeals. Fortunately the law which the Circuit Court disregards, is generally affirmed and also followed:

> "A suit to restrain the collection of taxes not exceeding two thousand dollars in amount is not within the jurisdiction — and future taxes which may be affected by the decision cannot be included in determining the value of the matter in dispute." — *Holt v. Indiana Co.*, 20 Sup. Ct. Rep. 272.

> "It will not do to assume on a showing what taxes have been in certain years that they were for similar amounts in the years in question; the requirement to make jurisdiction affirmatively appear

in the bill is not supplied by such a conjecture." — *Citizens' Bank v. Cannon,* 17 Sup. Ct. Rep. 90.

"In the same case it is said that where a bill seeks to restrain certain tax officers from collecting taxes for specific years, if the amount of such taxes does not confer jurisdiction it is from the nature of things impossible for a court to forsee what, if any, taxes may be assessed in the future; and a mere conclusion of the pleader that the taxes assessed exceeded the jurisdictional sum will not suffice. Unaccrued or unspecified taxes cannot be included upon conjecture to make up the requisite amount. — Washington Railway v. District, 13 Sup. Ct. Rep. 66. So of hydrant rentals which had not yet accrued but might subsequently accrue. — City v. Farmers Loan Co., 12 Sup. Ct. Rep. 817. And the effect on future taxation of a decision that the particular taxation is invalid cannot be availed of to add to the sum or value of the matter in dispute." — *Holt,* 20 Sup. Ct. Rep. 273.

The Circuit Court of Appeals says:

"It has also been held that where the complaint alleges the amount in controversy to equal the jurisdictional requirement and the contrary does not appear to a certainty from the evidence that the jurisdiction will be sustained". — Citing Maffet v. Quine, 95 Fed. 199; Von Schroeder v. Brittan, 93 Fed. 9. (R. 262) — and

"If the proportion of benefits had been fixed subject to change by the board only if each appellee should convince them that their conclusion was erroneous, and in view of the claim in apparent good faith in each of the bills that the amount involved exceeded the jurisdictional amount, we hold, from a careful surfey of the entire record, that the necessary amount existed in each case to give jurisdiction to the federal court". (R. 263).

Coming to the cases cited by the court and some citations in the citations, we find that in the *Maffet* case, there *is* a statement the court is satisfied it is enough to sustain the jurisdiction that the complaint shows the amount in controversy to exceed in value the sum of two thousand dollars, and that the contrary of this does not appear to a legal certainty from the evidence. (95 Fed. 200). The most this comes to is a statement that where the bill *does* exhibit facts to sustain the jurisdiction, then jurisdiction is established unless the contrary is made to appear by the evidence, to a legal certainty. To say the least it admits of grave doubt whether the mere fact that a bill asserts the necessary jurisdictional facts will sustain the jurisdiction where the allegation remains unproved — whether the bill suffices unless the defendant takes the burden of overthrowing its allegations. Be that as it may, we repeat that, at any rate, the *Maffet* case cannot apply where, as here, the complaint *does not* exhibit the jurisdictional facts. It is added in the *Maffet* case that the jurisdiction need not depend upon said alleged rule, although its application is decisive of the question — a statement that alone makes all said by the court bald *dictum*. Not only this, another reason why the *Maffet* decision is *dictum* on what makes sufficient amount, is it appears that one of the things involved, to-wit, the value of a flume is in itself $2,000 (201), and it was admitted that at least $10.00 in addition to this $2,000. would be needed for repairs. And the court points out that the suit being in tort, exemplary damages might be awarded. Thus it was shown to a certainty that amount in controversy *was* above two thousand dollars. Where it is manifest that a sufficient amount is in fact in dispute, remarks as to what will create a sufficient amount, are not *decision*. Another case referred to by the Circuit Court of Appeals on this point, that of *Van Schroeder v. Brittan*, 93 Fed. 11, involves a finding that "from this testimony it appears to the court that the suit really and substantially involves a dispute or controversy in an amount properly within the jurisdiction of the court" — and the finding

is abundantly sustained by the record. The relief sought was a tearing down and re-building of a wall on defendants land alleged to encroach upon plaintiff's building on the enjoining land, which wall was out of repair, and recovery for injury caused to this complainant's building. Issue was joined on plea. It was proved that the removal and rebuilding of the wall would cost not less than nine hundred dollars, and complainant proved the damages to be at least $2,700.00 — it is held that in the absence of evidence showing the claim as to amount to be colorable or fictitious, the matter in dispute exceeded two thousand dollars.

In a word — if the evidence shows more than the required amount is actually in controversy the court has jurisdiction — something that, of course, there is no quarrel about.

Another reference, in the *Maffet* case is to *Barry v. Edmunds*, 116 U. S. 558, which simply holds that the court is not at liberty to dismiss a suit merely upon personal conviction that the amount involved is less than that required to give jurisdiction unless the facts on which the conviction is based are such as to create a legal certainty for the conclusions reached. It is added that in the case then before the court there was no conviction on part of the trial Judge resting on deduction from the evidence in the case that the amount in controversy was less than the jurisdictional amount; that the action of the court was based solely on the fact that the evidence failed to establish the allegation of the complaint as to the value of the subject-matter of the suit. What the decision comes to is that dismissal should not rest on personal conviction, and it is error to rest decision upon a failure of the evidence to establish the jurisdictional allegations where the record proves affirmatively that the amount in controversy was beyond the jurisdictional one. In the *Barry* case, the answer admitted the value up to the amount of two thousand dollars, and there was testimony tending to show that the property in controversy together with other property

had previously been sold for eight thousand dollars — and it is said it is a suit to restrain the commission of a tort and therefore, one in which exemplary damages might be allowed. It is added in the *Maffet* decision that the same doctrine is written down in *Wetmore v. Rymer,* 169 U. S. 1125.

III.

Now, it may be said that if this is so as to the right of appellees to enter the federal court the same trouble confronts us in entering this court. It is to be answered, first, that two statutes are independent. The three thousand dollar one deals with the situation when the suit is begun, the one thousand dollar statute with the situation when appeal to this court is taken. It is obvious there might be one thousand dollars involved at the time appeal is perfected though there is not three thousand dollars when the bill was filed. But passing that, it is plain on this record that so far as the present appeal is concerned there is more than one thousand dollars in controversy. The test now is how much has been adjudged to these appellees. — *Green v. Fisk,* 14 Sup. Ct. Rep. 1193. It is admitted no assessment has yet been made and not a dollar of tax as yet collected; there has been an expenditure of over $250,000; drainage warrants for that amount are outstanding, and they must be paid if at all by collecting the assessment that this injunction stopped. The tentative apportionment against the appellees is roughly, $112,000. (Page 13 in N.. P., R., S., O. and M.). But on the point under discussion little attention need be paid that fact. There is at this time more than One Thousand Dollars in dispute no matter how this $112,000.00 is treated. Be it tentative or final the appellants will never receive any part of it, if there be an affirmance. We might well claim that this fact alone supplies the jurisdictional sum for this appeal. But this $112,000 can be eliminated from consideration and there will be still more than One thousand dollars involved. The drainage project has been practically completed at a cost of something over $250,000.00. It has

all been financed by drainage ditch warrants in the hands of intervenors. No part of these warrants has been paid. The only way in which they can be paid is by assessment. No matter whether any part of this assessment falls on the appellees, the board must still raise above $250,000. If there be an affirmance it will be settled against appellants that the drainage project at bar has no standing in law and that, therefore, no assessment to pay for its construction is authorized. Whether or not there be now the right to assess these appellees is at this point unimportant because it is definite and certain that, unless there be a reversal, the decision of the Circuit Court of Appeals has taken from the appellant board the power to raise by assessment, or at all, the sum expended, or $250,000. It is obvious, therefore, that by reason of said decision there is now more than One Thousand Dollars in controversy, no matter how much or how little was in dispute when these suits were begun.

In addition to what has just been said we are fortified by the decision of this court in *Butte v. Clark*, 39 Sup. Ct. Rep. 233. In that case this court said that an averment that more than $50,000 was involved was explicit and that it may assume this averment had a purpose — and adds:

> "But appellees do not wish to be taken at their word. The confidence they thought and expressed when invoking the power of the court in the first instance — and providing, we may assume, for review in case of an adverse decision — they now recant, and urge that it should not be used to question or disturb their success or become an avenue of relief to their antagonist. This is not unusual and counsel has cited prior examples and the action of the court therein".
>
> "The principle of decision which the court then announced is familiar. It is that the ground of

jurisdiction in the District Court and ultimately in this court on appeal from the Circuit Court of Appeals, is the statement of the suing party of his cause of suit".

It will be noticed that the decision in the Clark case says not only that the statement of the suing party of his cause of suit is the test for entering the Supreme Court on appeal, but also that it is the test of the jurisdiction in the District Court. This latter is *obiter*. The question before the court was not what amount would permit entering the trial court but the amount necessary to enter the Supreme Court on appeal. There was no occasion to argue and there was no presentation upon the conditions precedent to the jurisdiction of the trial court. And in the teeth of the statute and very many decisions in this court it can hardly be claimed seriously that it was intended to hold in the Clark case that the District Court of the United States obtained jurisdiction merely because some one brought suit for more than three thousand dollars and stated as a conclusion that more than that sum was in controversy. Indeed, this is made clear because the court says in the Clark case that of course there must be more than mere verbal assertion. While *we* may raise that there is no substance in the claim that more than three thousand dollars was in controversy when the suits were brought, of course it does not lie in the mouth of appellees to say that their allegation as to value was not made in good faith and lacked substance. What the Clark decision *decides* is that a victorious appellee who has at all times asserted that more than three thousand dollars was in dispute is estopped to deny that assertion when the defeated party appeals to this court; that the victor cannot treat his statement of claim merely as something that permits him to appeal if he encounters an adverse decision; that he may not so use his claim, and then "recant and urge that it should not be used to question or disturb their success, or become an avenue of relief to their antagonist".

We submit the District Court lacked jurisdiction be-

cause it not only is not affirmatively shown that when suit was brought there was more than $3,000 in dispute — but it appears affirmatively that at said time it could not be known how great a sum *was* involved in controversy.

We submit further that when these appeals were allowed and perfected a sum greater than one thousand dollars would be gained if there be reversal and lost if there be affirmance.

III-1

IS NOT A CONTROVERSY OF MORE THAN THREE THOUSAND DOLLARS REQUIRED EVEN IF A CAUSE DOES PRESENT A CASE ARISING UNDER THE CONSTITUION OR LAWS OF THE UNITED STATES.

We have first to consider the first section of the Act of March 3, 1887, as corrected by the Act of August 13th, 1888. (25 Stat. 433, c. 866). It gives the trial federal courts jurisdiction of all suits of a civil nature where the matter in dispute exceeds a stated sum providing they are suits "arising under the Constitution or laws of the United States". As to this, *Holt v. Indiana Company,* 20 Sup. Ct. Rep., at 273, 274, construes *United States v. Saywards,* 160 U. S. 493, to hold, "that the sum or value named was jurisdictional; and that the Circuit Court could not under the statute take original cognizance of a case arising under the Constitution or laws of the United States unless the sum or value of the matter in dispute exclusive of costs and interest, exceeded (the required sum)". It is said in the *Holt* case, that the *Sayward* decision was reaffirmed in *Fishback v. Telegraph Company,* 161 U. S. 96, 99.

So far then as the act of March 3, 1887, corrected by the Act of August 13th, 1888, is concerned, the District Court had no jurisdiction unless in addition to a case arising under the Constitution or laws of the United States more than three thousand dollars was in controversy.

It is true the Act of March 3, 1891, "was to do

away with any pecuniary limitation on appeals directly from the Circuit Courts to this court". So says the *Holt* case, 20 Sup. Ct. Rep. 274. It is obvious that the Act of 1891 applies only where there is direct appeal from the trial court to the Supreme Court. Wherefore, the *Holt* case rules that the Act of March, 1891, does not change that in all cases where there is not a direct appeal from the trial court to the Supreme Court it is still necessary to the federal jurisdiction that there be first a substantial federal question in a case arising under the Constitution or laws of the United States, and that in addition the amount in controversy be above the required sum.

True, there are constitutional and statute provisions regulating what will be entertained in the Supreme Court of the United States on writ of error to the highest court of the state. But it is self-evident that these provisions can have no application here.

It follows that if here there was not the required amount in dispute it will not save the jurisdiction if it be assumed the case presented a substantial federal question.

But we submit that at all events there was no such question though the lower courts found there was — which will be elaborated later — and we submit further, that if the fact that the South Dakota statute law was unconstitutional were a material fact here, that they are not violative of the Constitution. — Which brings us to the question:

III-2

DO THE RELEVANT STATUTES VIOLATE THE DUE PROCESS CLAUSE OF THE FEDERAL CONSTITUTION?

So far as violating the due process clause is concerned, surely no elaborate presentation is demanded of us. It was for the appellees to obtain an affirmative holding that the Dakota statutes were unconstitutional. Instead, as will presently appear, the trial court ruled that these statutes did not conflict with the due process

provision and the Circuit Court of Appeals found it unnecessary to say whether this was or was not true. No one has appealed from this particular ruling of either the trial court or the Circuit Court of Appeals, and the appellees have against them a finding of the trial court that they had not sustained their claim of unconstitutionality; and were not relieved by anything that the Circuit Court of Appeals says. At the very best for appellees, they have up to this time failed to secure a finding that their assertion of unconstitutionality was tenable, and not having appealed are in no position to have that fatal condition of affairs remedied.

Coming then briefly to the substance of the question, we have to say Section 8461, Revised Code of South Dakota, 1919, has the following provisions:

> "The Board shall fix a time and place for the hearing of the petition and giving a described notice of the hearing."
>
> "The notice shall describe the route of the proposed drainage and tracts likely to be affected, in general terms."
>
> "This notice is to advise all affected to appear at the hearing and show cause why the proposed drainage project should not be established and constructed."

The trial court so held (M. 77), and it declared:

> "We find that all of the objections center about the criticism that no notice is (therefore) provided the owners of land affected by the drainage ditch except the general notice, and in fact, no personal notice until the date fixed by the board for the equalization of proportional assessments for the various tracts of land benefited by the drainage" (M. 79, 80).
>
> "In my judgment the South Dakota statutes, enacted in the light of that provision of the Con-

stitution of the State providing for the drainage of agricultural lands, is constitutional". (M. 83).

We respectfully submit that the drainage statute of South Dakota does not in fact violate the due process clause, and that, moreover, it is the settled law of the case that they do not.

(Citations for this will be put into the summary of the argument, which will follow the argument).

IV.

AS TO THE CONTENTION THAT THERE HAS BEEN A DENIAL OF THE EQUAL PROTECTION OF THE LAWS IN VIOLATION OF THE CONSTITUION OF THE UNITED STATES.

On this issue develops inquiry as to whether (a) there is plea that the statutes involved violate the provision of the Constitution of the United States that equal protection of the laws shall not be denied. — In other words, whether it can be told from the pleadings whether it is an infraction of the *Federal Constitution* that is charged; (b) whether aside from challenging the validity of said statutes there is clear pleading that what appellant board did violates the *Constitution of the United States;* (c) whether there is decision in the lower courts on whether there has been a denial of the equal protection of the laws such as is guaranteed by the Federal Constitution.

Our first position is that whatever infraction of Constitution is charged on this head, the plea is such as that it does not present definitely what Constitution the pleader refers to; that the plea is merely that certain things are in certain named respects "unconstitutional and void" — and that the pleader may well be referring either to the Federal Constitution or the Constitution of South Dakota. In other words, the Constitution of the State forbids denial of the equal pro-

tection of the laws in practically the same words in which the Constitution of the United States forbids, and that for all that appears nothing may be charged except an infraction of the Constitution of South Dakota The allegations in question are first made in the bills. In them it is said, first, that the statutes involved are unconstitutional and void, and that they violate a certain provision of the Constitution of the State of South Dakota and as well the Fourteenth Amendment of the Constitution of the United States — a clear plea that each of these constitutions are being violated by what is complained of. Then follows an allegation merely that said statutes are "further void and unconstitutional". It is not said at this point, as was done earlier in the plea, what Constitution is being violated. The allegation last spoken to is this:

> "Said statute, Exhibit "A", is further void and unconstitutional in that the same provides no fixed and determinable method or rule for the apportionment of benefits upon the property and property owners situated within the drainage area and especially in that said purported statute furnishes no fixed or determinable basis for the apportionment of benefits upon the property of railroad companies and other corporations and upon the property of municipal and quasi municipal corporations and upon plated property in cities and villages. * * *". (R. 15; S. 14; N. 13, 14; P. 15; O. 15, 16; M. 15).

We repeat that so far there is a charge which for all that appears may be addressed either to the Constitution of the United States or that of the State; and submit that under well settled principles of pleading federal questions this fails sufficiently to present one.

As distinguished from attacking the constitutionality of the statutes of South Dakota there is allegation which makes attack not upon the statutes which authorize action but upon action taken.

It is charged in the Rock Island bill, only, "that the said equalization of benefits is so arbitrary and discriminatory against the property of the plaintiff as * * * * to deprive the plaintiff of the equal protection of the laws". (R. 15). This does not so much as mention any Constitution, and while it is true that depriving one of the equal protection of the laws is forbidden by the Constitution of the United States, it is also forbidden by the Constitution of South Dakota. But each of the plaintiffs filed an amendment. This amendment is this:

> It first sets out the number of units out of the total which was tentatively apportioned to the plaintiff, and with this a statement of what this tentative apportionment comes to approximately in dollars. Then it is said:
>
> "That said equalization of benefits is wholly speculative, arbitrary, unjust, illegal and discriminatory and was made by the board without any reasonable or rational basis therefor, and is not in proportion to any benefit which the property of the plaintiff has received or ever can receive by reason of the rebuilding of the spillway, the cleaning out, repairing and maintaining of drainage ditch No. 1 and drainage ditch No. 2, as set forth herein; that the property of the plaintiff has not been and never can be benefited by the work performed by the board as herein set forth to the extent of (the approximate sum in dollars and cents charged to be the equivalent of the tentative apportionment of benefits) or to any extent whatever, and that the assessment sought to be collected from the plaintiff as above set forth is out of all proportion to the assessment sought to be collected from the agricultural lands situated north of the city of Sioux Falls. That the said equalization of benefits is so arbitrary, and discriminatory against the property of the plaintiffs as * * * to deprive the plaintiff of the equal protection of the laws." (R. 80, 81; O. 66; S. 65, 66; P. 79, 80; N. 78, 79; M. 72, 73).

We submit that no plea presents that the action of the board was in violation of the Constitution of the United States.

The trial Judge states in his opinion that specified acts are complained of and that there is claim "that the plaintiffs are therefore deprived of the protection of the laws which must be extended to all". (M. 84). This, too, makes no mention of any Constitution. Then the trial Judge proceeds as follows:

> "The proofs overwhelmingly (Show) * * * * that the taxation that is imposed upon each of the plaintiffs is a much higher rate, and upon a different basis then the tax upon land lying within the district. As a matter of fact, no direct benefits to the property of the railways within the city are shown. It is further shown that the benefits estimated upon the plaintiff's property were upon no standard that would properly produce results approximately the same as those upon the land in the drainage district. Taking for instance the tax upon one of the plaintiffs, the City of Sioux Falls, for its miles of streets, with no pretense that there is any method of taxation or measuring a benefit or a gain, that would produce even approximately correct general results, when considered with benefits to the lands in the district. Simply a vague, indefinite generality, indulged in by the engineer and adopted by the board. Benefits purely fanciful with no substantial basis. Take the railroads * * * * there is no pretense that the basis used had any relation to that used in fixing the value upon the lands in the district. It is admitted that the basis was wholly different from that used for ascertaining the contribution demanded of individual owners". (M. 90, 91).

In effect this is a holding that plaintiffs received no direct benefits and that the method of seeking to ap-

portion benefits to them was arbitrary, unreasonable and fanciful, and that the assessing board discriminated as between these plaintiffs and those within the district who owned lands. There is not a word said by the trial Judge about any Constitution. His assertion on the findings of fact just referred to is:

> "I find that such difference clearly produces manifest inequality. There is an absence of the equal protection of the laws that must be extended to all". (M. 91).

This may well mean that a common law right to the equal protection of the laws has been infringed upon, or that the guaranty of the Constitution of the State of South Dakota that no one shall be deprived of the equal protection of the laws has been violated — and of course it may mean, too that the facts found constitute a violation of the Constitution of the United States. But what is required is a record, showing a decision that the Fourteenth Amendment has been disregarded.

After thus stating his conclusion the trial Judge to some extent, in substance, repeats what he has already said. He added "that the attempt to assess the property of these plaintiffs was an afterhtought". He repeats plaintiffs could not be benefited, says "there is no reasonable ground upon which the action of the board could be predicated", that "there is no pretense in this record that the railroad companies were treated like the owners of agricultural lands; says the discrimination is palpable, and the amount assessed simply an arbitrary assessment." One illustration the Judge makes is to say that the Power Company was assessed $50,000.00, or one-fifth of the entire expense "although there is included in the pretended district agricultural lands something like twenty miles in length and several miles in width". At this point the court overlooked that there was no showing whatever as to what the property of the Power Company was worth nor what these agricultural lands were worth. The opinion continues that the injustice of what was done to the Power Company is ap-

parent when it is noted the record shows it was located on the rapids of the Sioux River in the City of Sioux Falls, has been located there for many years and was therefore entitled to the water that naturally flowed down the stream to the end that it might secure power requisite for the conduct of its business. (M. 91). As said, this is in effect a repetition, and the conclusions of the court noted herein earlier and stated before this repetition are not repeated. But in fairness it may be said to embrace what is said following the statement of said conclusion.

As has been said, these appellees had the burden of obtaining from the courts a finding that what had been done denied the provision of the Constitution of the United States that no one should be deprived of the equal protection of the laws. We have pointed out that no such issue was raised and that no such decision was obtained below. We have also pointed out before, that the Circuit Court of Appeals left the matter where the trial court placed it and declined to find that the equal protection clause of the Constitution of the United States had been violated — thus, as we contend, leaving the appellees without either plea or decision that there had been any infringement of the equal protection clause of the Fourteenth Amendment.

V.

IF IT BE ASSUMED A SUFFICIENT SUM IS IN CONTROVERSY, STILL NO SUBSTANTIAL FEDERAL QUESTION WAS PRESENTED.

Though neither of the lower courts gave the appellees any relief on the ground that there had been a violation of the Constitution of the United State, the question remains whether though in fact the Constitution had not been violated there was reasonable ground for asserting that it had been. Each of the lower courts held that a substantial federal question had been presented. And what we have now to deal with is whether these findings ought to be sustained here. The test is in a way a matter of degree. It a party sought to enter the federal court by taking a position which this court had time and again held to be untenable all would concede that no substantial federal question was being presented. If to find the question to be unsubstantial resort must be had to complicated analysis it would be held that the question presented was substantial though such analysis might demonstrate that it was not. Somewhere between trese two illustrations lies the test which is, after all, whether reasonable men and practitioners versed in the law may reasonably differ on whether the assertion is or is not well made. If there may be such difference, there is a substantial federal question.

To apply this test it is necessary to examine what the assertion is. First, is the statement of the following naked conclusion:

> "The 'purported' statute of the state of South Dakota 'is unconstitutional and void' in that the same is in violation of Section two of Article Six of the Constitution of the state of South Dakota, and in that the same is in violation of the Fourteenth Amendment of the Constitution of the United States." (R. 15).

Next comes an allegation which is practically a naked conclusion, to-wit:

"If said apportionment of benefits be made as threatened by the board and as is provided in the notice given 'the same will constitute the taking of the property of plaintiff and of the other property owners affected by said notice without due process of law'." (R. 15).

Then follows specific complaint:

"Said statute is 'further unconstitutional and void' in that the same provides for an assessment against property without the right of the property owners to be heard thereon and without notice of any character to the property owners." (R. 15).

"Said statute is 'further void and uncontitutional' in that the same provides for no fixed and determinable method or rule for the apportionment of benefits upon the property and property owners, and especially in that said purported statute furnishes no fixed or determinable basis for the apportionment of benefits upon the property of railroad companies and other corporations and upon the property of the municipal and quasi municipal corporations and upon platted property in cities and villages." (R. 15).

"Each plaintiff filed an amendment to its bill, alleging that the apportionment of benefits assessed and the amount of such assessment in dollars and cents 'is wholly speculative, arbitrary, unjust, illegal, and discriminatory and was made by the board without any reasonable or rational basis therefor'."

"That the said equalization of benefits is so arbitrary, and discriminatory against the property of the plaintiff as to deprive plaintiff of its property without due process of law and to deprive it of the equal protection of the laws." (R. 80, 81).

"That the property of the plaintiff has not been and never can be benefited by the work per-

formed by the board as herein set forth to the extent of the amount in dollars assessed, or to any extent whatever".

"And it is not in proportion to any benefits which the property of plaintiff ever received or ever can receive by reason of the rebuilding of the spillway, the cleaning out, repairing and maintaining of drainage ditches No. 1 and No. 2 as set forth herein".

"The assessment sought to be collected from the plaintiff as above set forth is all out of proportion to the assessment sought to be collected from the agricultural land situated north of the City of Sioux Falls."

Aside from statement of naked conclusions we have a claim (a) that the statutes provide for an assessment against property without notice to or right of the property owners to be heard thereon; (b) that a threatened apportionment of benefits will constitute a taking without due process of law; (c) that the statute provides for no fixed or determinable method or rule for the apportionment of benefits; (d) that this is especially so as to apportioning benefits on the property of railroads, other corporations and of municipal and *quasi* municipal corporations, and on platted property in cities and villages. (R.15); (e) that the tentative benefits assessed are "wholly speculative, arbitrary, unjust, illegal, and discriminatory, and made without reasonable or rational basis; (f) the the proposed equalization of benefits is so arbitrary and discriminatory against the property of plaintiff as to deprive it of its property without due process of law and to deprive it of the equal protection of the laws; (g) that the property of plaintiffs has not been and never can be benefited by the work performed by the board to the extent of the proposed assessment or to any extent; (h) that the tentative apportionment of benefits is not in proportion to any benefit which the property of plaintiff has received or ever can receive from the rebuilding of the spillway, and the cleaning out, re-

pairing and maintaining of the new drainage ditches; (i) that the assessment sought to be collected is entirely out of proportion to that sought to be collected upon agricultural land situated north of Sioux Falls. (R. 80, 81.)

The only further attempt to charge unconstitutionality (if it be that) is found in certain allegations which each of the lower courts found to be true, to-wit: that the formation of the so-called new ditch was simply a pretense and subterfuge resorted to for the sole purpose of attempting to burden plaintiffs with the cost of maintaining the old ditches; (M. 89); that there was merely assumption to institute a new drainage district and to assess benefits to the property of the plaintifls that was located in the City of Sioux Falls; (R. 255); that what was in fact done is a subterfuge for the purpose of obtaining money for mere maintenance and that the statutes governing assessment for maintenance were not followed; (M. 87); that the proceeding was not an independent project but was an attempt to maintain and repair existing ditches or to take care of conditions that resulted from the imperfect and inadequate construction of the old ditches; (R. 257); that instead of charging the repair and maintenance to those who were responsible for the defective construction and proceeding under statutes authorizing levy for repair and maintenance the board assumed the right and authority to construct a new drainage district without abandoning any of the old ditches, with no thought of using a new and different drainage and with the sole purpose to maintain and perfect that which had in the past been inefficiently constructed; that there was no thought or purpose except to repair the damage that had already been done and prevent further damage (M. 89); — and that there is no statute authorizing the board to take in other lands to help bear assessment of burden created in maintaining the original drainage; that the only authority was to provide payment for maintenance and repairs of the old ditches. (R. 255, 256).

We feel clear that this assertion of subterfuge is not charged to be a violation of the Constitution of the United States and that there is no decision below holding that the subterfuge so called would violate any such provision. But we have thought best to set forth all there is on this head so that our discussion of whether there was a substantial federal question may cover all that by possibility can be claimed to be the assertion of a federal question.

First, then we have questions of fact, to-wit: (a) is it true no notice or hearing is provided for the property owner; (b) or that there is no provision for a fixed or determinable method or rule for the apportionment of benefits; (c) or that the tentative apportionment is speculative, arbitrary, unjust, illegal and discriminatory, and made without reasonable or rational basis; (d) or that the plaintiffs derived no benefit from the improvement equal to the proposed assessment or indeed any benefit; (e) does the proposed assessment unduly discriminate in favor of agricultural lands; and (f) was the establishment a pretense and subterfuge.

V-1.

As to notice and right to be heard. — Section 8458, Revised Code of South Dakota, 1919, provides that the board of County Commissioners may at any regular or special session establish or cause to be construct *any* ditch or drain. Section 8459, that the board shall act only on a written petition signed as required by statute and that such petition shall set forth the necessity for the drainage, a description of the proposed route by its initial and terminal points, its general course or its exact course in whole or in part, and also a general statement of the territory likely to be affected thereby. Section 8476, that no proceedings affecting the rights of persons in the establishment of the drainage district shall be had except upon notice prescribed by statute to be given as to the construction of

drains. Section 8461, that there shall be a time and place for the hearing of the petition, that notice shall be given thereof by prescribed publication; that such notice shall describe the route of the proposed drainage and the tract of country likely to be affected thereby, in general terms, and the notice shall further refer to the files in the proceedings for further particulars. It is to summon all persons affected by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established and constructed. Section 8462, provides that at any such hearing any person interested may appear and contest the statements of the petition and matters set forth in the surveyor's report required and may contest the findings of the board as to width and route; and the petitioners may be heard in like manner in support of the petition. It is after full hearing that the drainage may be established along the lines set forth in the petition or in the finding of the board prior to hearing; and the action on the petition is had at the time named in the notice. (8461). The Circuit Court of Appeals finds, as it was bound to do under undisputed testimony, that the foregoing general notice addressed to all who were affected had been given. (R. 250, 251). — And the trial court ruled (and that is still unchanged) that such notice obviated violation of the federal Constitution.

Proceeding under Section 8462, if the board after full hearing and consideration finds the project sought to be established is conducive to the puplic health, convenience, or wellfare, or necessary or practicable for drainage of agricultural lands, it establishes the project. Not only is there this notice and opportunity to be heard before the petition is acted on but after the drainage system has been established, when the board enters into the statutory duty of apportioning benefits; Section 8463 requires that it shall appoint a time and place for equalizing same; that it shall give notice of the proposed equalization in a described manner; that such notice shall state the route and width of the drainage project established, giving description of each tract of land af-

fected by the proposed drainage, and the names of the owners of the tracts involved as they may be found in the records of the office of the Register of Deeds at the time the petition was filed. The notice must further state the proportion of benefits fixed for each tract, taking any particular tract as a unit. It is to notify all such owners to show cause why the proportion of benefits shall not be assessed as was tentatively done — and the statute further provides a hearing for the purpose of equalizing the proportion of benefits tentatively apportioned which shall be a final equalization and shall fix assessment according to benefits received.

It is provided by Section 8463, that:

> "Benefits to be considered in any case shall be such as accrue directly by the construction of said drainage or indirectly by virtue of such drainage being an outlet for connecting drains that may be subsequently constructed".

After equaliation, the statutes open wide the doors of judicial review.

Under Section 8469, any one deeming himself aggrieved by the action of the board of equalization may appeal to the Circuit Court of the state, and any number of persons interested may join in the same appeal. On that appeal there may be review of the fixing of the proportion of benefits, the acceptance of the drainage, and of whether the project is conducive to the public health, convenience, or wellfare, and whether it is necessary or practicable for the purposes of draining agricultural lands. The scope of the review in court is so broad as that the statute requires certifying to the court the petition and all other papers and records in the matter. Relative benefits and whether the tract taken as a unit is or is not benefited and if benefited to what extent, may be inquired into by the court. The matter shall be heard in the Circuit Court as an original action. (8469) — and if the defect is substantial the court shall of its own motion determine the rights of the parties,

validate the proceedings as justice may require and if it shall find cause for such validation or such action should have been taken in the first instance, providing all parties interested are before the court. (8488).

It would seem clear, then, that the statutes do not provide for an assessment without notice to or right of the property owners to be heard; and it is without dispute that everything required by valid statutes with reference to notice or opportunity to be heard was complied with.

It seems equally clear that the statute does not have the vice of failing to provide for a fixed or determinable method or rule for the apportionment of benefits. Is this court warranted in following the lower courts by holding that the learned counsel who prepared the bills had the right to believe, or indeed, did believe, that the South Dakota statute so operated to deprive of due pro cess and of the equal protection of the laws as to be violative of the Constitution of the United States. At the time the bills were framed the reports of this court and of most of the courts of last resort of each of the states were filled with decisions that statutes in substance like those of South Dakota were not open to the objection of running counter to the federal Constitution. These reports were full of decisions that where, as here, administrative tribunals were provided to hear objections to a drainage project, both as to validity and reasonableness, and where judicial review of the action of these tribunals was provided, no federal question arose, especially where, as here, there was a failure to invoke the action of said tribunals, or where, if invoked, resort to the courts that was permitted was, as here, not availed of. It would be both impossible and useless to give even as much as a reference to those almost innumerable decisions. Something in the way of support we will enter upon here. And the summary or brief will exhibit what little else in the way of citation of authority we may exhibit without being guilty of pedantry.

The trial court finds in its decision that the statutes at bar are not unconstitutional. And it puts it thus:

> "It is universally held 'that a law that provides for notice and an appearance and the right to contest the amount of the tax, and to contest the right to tax at all, with the right of appeal therefrom, as given to the land owners prior to the time that a tax is levied and becomes effective, is due process of law'." (M. 80).

The opinion cites authorities in this court and in other courts of last resort to the effect that there is no violation of the federal Constitution where notice is given at some time; where a hearing is provided in which everything involved may be contested, and especially if review in the courts is provided after the administrative tribunals have been exhausted. (M. 80, 81, 82).

And it decreed that all required to keep out of conflict with the due process clause, had been done. It finds that the legislature has provided no tax can become effective, and no assessment can be made, until the benefits have been ascertained and apportioned; and before this can be done a definite day must be named by the board and land owners are given notice. (M. 80). It finds the day was named and the notice given.

It is held in *Soliah v. Heskin,* 222 U. S. 522:

> "Neither does that amendment invalidate an act authorizing an appointed board to determine whether a proposed drain will be a public benefit and create a drainage district consisting of land which it decides will be benefited by such drain, and to make special assessments accordingly, if, as here, notice is given and an opportunity to be heard afforded the land owners before the assessment becomes a lien against his property".

And again this Court said:

> "The motion to affirm the judgment should, however, be granted if the question on which the

decision depends are found to be so wanting in substance as not to need further argument." Milheim, 43 Sup. Ct. Rep. 696; Hodges, 43 Sup. Ct. Rep. 435.

Surely, ample notice and opportunity was given; and given when no assessment yet existed.

We repeat that no lawyer was justified in thinking that the South Dakota Statutes violated any guaranty of or right given by the Constitution of the United States.

V-2.

We have set forth heretofore the claim that the establishment of the project at bar was a mere subterfuge, an allegation which might by possibility be interpreted to charge a fraud if some elements that do not exist, existed. That is to say, if the plaintiffs were prevented from protecting themselves against such a fraud such subterfuge might possibly be a basis for invoking the aid of the federal courts, provided of course, the requisite amount was in controversy. But here, in no view is such a charge of fraud, because the record shows without dispute and the framers of the bills must have known that provision was made for such notice and such hearing thereon as would enable the plaintiffs to resist assessment on the ground that the project was not of a character which authorized assessing them. Nor do we overlook that if it were granted the federal court had jurisdiction it had power to pass on the question of whether there had been such subterfuge even though that is not a federal question.

We shall later assume for the sake of argument that there was power in the court to determine whether or not there was the alleged subterfuge. We shall deal with it by attempting to show that in truth the charge of subterfuge is unfounded. Wat concerns us now is whether the pleading of this subterfuge creates a sub-

stantial federal question, or any such question. Surely, it will be conceded that the federal court cannot obtain jurisdiction by a charge of fraud when there is no claim made that the fraud violated any federal constitutional provision, or law. And that is this case.

What is in Paragraph Nineteen of the bill of the Appellee Rock Island sets forth both generally and specifically all things that are asserted to be an infraction of the Constitution of the United States. The bill of each appellee is identical on this point with that of the Rock Island. And not so much as a mention of subterfuge or fraud of any sort may be found in the allegations of the bill that attempts to present a federal question.

VI.

DELEGATION BY LEGISLATURE.

The view taken by the legislature as to what is prudent and comports with propriety and justice in fixing a drainage tax district, or in declaring how much tax shall be raised and the method of raising and distribution, cannot be reviewed by the courts, though the legislature may have erred. — *Spencer's* case, 8 Sup. Ct. Rep. 926.

If then the project at bar had been created by direct action of the legislature any provision of the act declaring what property is benefited or specially and peculiarly benefited would be beyond all judicial review, and would not be affected by the Fourteenth Amendment. — *Milheim's* case, 43 Sup. Ct. Rep. 698; *Spencer's* case, 8 Sup. Ct. Rep. 925, 927. This has been said even where the view that there was a benefit was based on the thought that the drainage would tend to increase the traffic of a railroad taxed. — *Thomas,* 277 Fed. 711. So of claims that an act of assembly creates over-taxation. — *Milheim's* case, 43 Sup. Ct. Rep. 698. So of the amount to be raised. — *Spencer's* case, 8 Sup. Ct. Rep. 925, 927; *Martin's* case, 27 Sup. Ct. Rep. 442, and cases cited. — All this, though the result accomplished be unjust. — *Spencer's* case, 8 Sup. Ct. Rep. 925. It follows, of course, that the legislative determination as to what is benefited and therefore what should be included in the district is beyond judicial review. — *Bush's* case, 251 U. S. 190; *Thomas,* 277 Fed. 711; *Spencer's* case, 8 Sup. Ct. Rep. 926.

All these things that the legislature may do and which are beyond judicial review when done by it, it can delevate, say, to commissioners. — *Spencer's* case, 8 Sup. Ct. Rep. 925, 927. In the case of *Embree,* 36 Sup. Ct. Rep. 319, what the legislature might have done for itself in the premises was delegated to the County Court, and there was held to be committed "to the judgment and discretion of that Court whether there is need for the

district and if so what lands should be included and what not included".

True, the project at bar was not created by direct action of the South Dakota legislature; equally true, that general statutes gave appellant board all such powers in the premises as the legislature could exercise by special and direct action. That this board could on the authority of the general statute do all that the legislature could do by special act is beyond question. But there is one difference. Had the establishment been made by special act no notice to those affected was required and there could be no judicial review. But when the legislative authority is exercised on delegation, action is invalid unless the statute under which the one proceeding under delegated authority acts makes provision both for proper notice by the board, adequate hearing before it, and some method of review on direct attack. — See *Spencer's* case, 8 Sup. Ct. Rep. 927. In the case of *Fallbrook v. Bradley,* 164 U. S. 112, this Court said:

> "The legislature not having itself described the district, has not decided that any particular land would or could possibly be benefited as described, and, therefore, it would be necessary to give a hearing at some time to those interested upon the question of fact whether or not the land of any owner which was intended to be included would be benefited by the irrigation proposed. If such a hearing were provided for by the act, the decision of a tribunal thereby created would be sufficient".

While perhaps that has not been specifically settled, it is probable that the review on direct attack should include some hearing in a court of competent jurisdiction, and, possibly, in a proper case, a hearing in this court on writ of error to the highest court of the State.

We have already shown that required and sufficient notice and opportunity to be heard are provided by the South Dakota statute, and were given, and that ample review is provided.

VII.

THOUGH FIVE OF THE APPELLEES HAVE DIVERSITY AND THOUGH IT BE ASSUMED FOR THE SAKE OF ARGUMENT THAT THERE IS A SUFFICIENT AMOUNT IN CONTROVERSY AND THAT A SUBSTANTIAL FEDERAL QUESTION HAS BEEN PRESENTED, STILL THERE IS NO RIGHT TO ENTER THE FEDERAL COURTS WITH THIS COLLATERAL SUIT, BECAUSE THE APPELLEES HAVE NOT EXHAUSTED THE ADMINISTRATIVE TRIBUNALS TO WHICH THE STATUTE OF THE STATE HAVE GIVEN THE POWER TO CORRECT ALL THAT APPELLEES COMPLAIN OF, BEARING IN MIND ALSO THAT THE HIGHEST COURT OF THE STATE HAS DETERMINED THAT SAID TRIBUNALS HAVE SAID POWER.

See for illustration, *Bagley v. Butler,* 24 S. D. 426.

We are not unmindful it is the settled law that one who *does have* the right to enter the federal courts cannot be kept out of them by any state statute or state action, direct or indirect, and that where he *does have* the right to enter he is not bound to observe statute provisions making it a condition precedent that he first exhaust such tribunals as the state has provided. But to aply this, in a way, begs the question. When the inquiry is *whether* one has the right to invoke the aid of the federal courts there may not be applied rules which govern only where it is the fact that he does have the right to invoke it. Passing that, one who has diversity or sufficient amount in controversy and a substantial federal question is relieved from exhausting the state tribunals, only, where the resident citizen may enter the courts of his state. If before beginning suit in state court the citizen of the state must first exhaust certain administrative tribunals, then the non-resident of course cannot enter the state court without having so exhausted. And if neither can enter the state court before final action by the provided administrative tribunals, neither

may enter the federal court without first exhausting those tribunals. It is well said in *Regan v. Farmers Company*, 154 U. S. 362, 14 Sup. Ct. at 1052:

> "A state cannot tie up a citizen of another state having property rights within its territory invaded by unauthorized acts of its own officers, to suits for redress in its own courts. Given a case where a suit can be maintained in the courts of the state to protect property rights, a citizen of another state may invoke the jurisdiction of the federal courts".

In other words, the rule just stated involves no attempt by a state to keep a non-resident out of the federal courts. Such rule is not a matter of state law at all. It is general law, and asserts no more than that no one may enter the federal courts, in the first instance, if no one may obtain in the state courts what is sought in the federal court without first exhausting the power of administrative boards which the state has provided for its own citizens and which the citizen of the state must first exhaust before he may enter the courts of the state with a civil suit; especially suit seeking an injunction to stop the operation of the taxing power. It would be remarkable doctrine that when *the citizen of the state* claims that the taxing power is as against him proceeding in violation of state or federal constitution or both, or is otherwise acting illegally, that *he* may not resort to civil suit until he has obtained the final decision of the administrative boards provided and having presented and redressed his grievances, — but that the mere fact that the one who suffers from the identical acts from which the citizen of the state suffers can by reason of his residing in a place other than where his property lies override the conditions precedent which the state in which such property lies insists upon before opening the doors of the court *to its own citizens.*

2.

There is of course no question that here is a collateral suit; that the appellees have never attempted to

avail themselves of said machinery for administrative relief; relief from tribunals acting *quasi* judicially. It remains to discuss whether this machinery has power to redress what is complained of in the collateral federal court suit. And whatever the highest court of the state has ruled as to what those powers are is conclusive here, and said court has so spoken.

We submit the state of South Dakota not only has provided ample power in certain administrative bodies to redress all that appellees complain of, but in addition has provided for judicial review for cases where the taxpayer feels himself aggrieved by the final action of the administrative boards.

Curtis v. Pound, 34 S. D. 628-632.
Milne v. McKinnon, 32 S. D. 627.
Revised Code 1919, Sec. 8462, 8459, 8469.

By way of introduction, it was affirmatively pleaded there are special tribunals that have not yet acted in the premises and that therefore the Federal Court has no jurisdiction (R. 26, 27; M. 25; N. 25; O. 26; S. 24; P. 26) — and as said, that is not and cannot be disputed. The Court overruled a motion to dismiss, which asserted:

> "The record shows the defendant Board is charged by the law of the State with executing the provisions of its drainage law and has jurisdiction to proceed with respect to the property within said drainage area, including that of the plaintiffs. If there have been any errors in administering said statute law, that does not involve the jurisdiction of said special tribunal. The record shows the opportionment of benefits and assessment to be made as provided by the laws of the State and as applied by the Board was based on its judgment as to values and benefits; that in these cases there is a standard method of apportionment which will probably produce substantial justice generally and the proba-

bility is the parties will be taxed proportionately to each other and all others upon whom benefits are conferred by the method provided and employed, and that probably approximately general results will be produced." (R. 210).

"It is moved to dismiss for the further reason the record shows that notice and opportunity to be heard were given as to the amount or proportion of benefits plaintiffs have received and they have a plain, adequate and speedy remedy at law." (R. 209).

This motion, which had been overruled pro forma (R. 210), was renewed at the close of the plaintiff's cases in chief (R. 254), and again overruled.

Whatever variance there may in fact be between the tentative assessment and the amount of benefits to be received, is to some extent due to the fact that appellees refrained from giving the Board any information they possessed which bore upon and might favorably have affected even the tentative apportionment, to say nothing of affecting it when equalization would be entered upon. It is in testimony without dispute that the Board felt the tentative apportionment might not be what the actual benefit to be received was because, for one thing, no equalization herein was permitted and because appellees at no time appeared before the Board and helped it by presenting their views on that subject. (R. 155, 156).

In such circumstances, the only duty of the Board was to exercise an informed and honest judgment in fixing the values for the purposes of taxation. — *Southern Railway Company v. Watts, et al,* 260 U. S. 519, 43 Sup. Ct. Rep. 196.

We will assume for the purposes of present statement that the Board did act honestly and used all due care. Indeed, there is an abundance of testimony that this care was used. For one place, see Pages 155, 156, Rock Island transcript.

No appeal was taken from the order of establishment or from any other act of the Board. (R. 250, 251).

> "The ultimate test is that there be some tribunal specially vested by statute with the power of equalization, which power it may assert at the instance of any one aggrieved." *First National Bank vs. Board,* 264 U. S. 454, 44 Sup. Ct. Rep. at 387.

This brings us to what powers of redress the statutes of South Dakota provided. We submit they are broad enough to afford redress for all that appellees complain of, and provide adequate judicial review where the taxpayer feels himself aggrieved by the final judgment of the administrative tribunals provided by statute. We submit in addition there is a presumption that any just grievance would have been redressed by these administrative tribunals.

We concede, of course, there was no obligation to resort to these tribunals if they lack the power to proceed with a drainage project, including lack of power to assess and levy. — *Ward v. Alsup,* (Tenn.) 46 S. W. at 576. We concede also that if some fraud had prevented resort to these administrative bodies, failure to resort to them would not be a bar to these suits. But we have to say it cannot seriously be questioned that the appellant Board did acquire jurisdiction as to this drainage project and that there is no pretense that fraud or anything else prevented resort to those tribunals.

It is not only shown by this record and the exhibiting of the South Dakota statutes that the Board had full jurisdiction, but the highest Court of the State had before it the very drainage project, and it was contended the Board had not acquired jurisdiction. The Court declared that jurisdiction had been duly acquired. True, the constitutionality of the law under which the project was carried out was not challenged, but acquisition of jurisdiction was. From the decision of the Supreme Court of South Dakota a writ of error was

taken to this Court and same has since been dismissed. — *Gilseth v. Risty,* 46 S. D. 374.

In the Gilseth case it is stressed by the Supreme Court of South Dakota that there was no appeal from the order of establishment, and that therefore injunction would not lie to stop the carrying out the work contemplated by the petition.

It is true the Supreme Court also found that Gilseth was estopped among other things by delay in instituting his suit, but that was a pure cumulative holding, and the slightest examination of the opinion will disclose there was no thought of resting the decision on this estoppel, and that the main purpose of the decision was to settle whether or not the ditch establishment and the proceedings of the Board were valid, and on jurisdiction. And if it were the fact that the decision on jurisdiction and that on estoppel were of equal rank, it would not detract anything from the binding force of either.

In *First National Bank v. Board,* 264 U. S. 455, 44 Sup. Ct. Rep. at 387, it was contended that the decision in a certain case turned upon the point that plaintiff had an adequate remedy at law, and not that it had lost its right by neglecting to seek an administrative remedy, and the Court says:

> "It is true the court after the statement quoted above proceeds to say that plaintiff can not have relief in equity, but this seems to be put forth as an independent ground for affirming the judgment below. It follows the unqualified statement that plaintiff, having refrained from seeking the administrative relief open to it, 'may not now complain'." It introduces the next following, with the words "But apart from this":
>
> "It is not suggested that in so doing the requirement, already broadly recognized, that administrative remedies must be exhausted as a necessary pre-requisite to a judicial challenge of the tax, could be dispensed with; and, accepting the decision of

the state court that such remedies were in fact open and available under the Colorado statutes, it could not be dispensed with".

A decision denying the force of an objection to a statute which is raised by the record and argued by counsel is not *dictum*, because the statute is held invalid on other grounds.

Carstairs v. Cohran, 95 Ind. 488; affirmed 193 U. S. 10.

It is said in 15 Corpus Juris, 952:

"This is so even though by reason of other points in the case the result reached might have been the same if the Court had held, on the particular point, otherwise than it did. An adjudication on any points within the issue presented by the the case cannot be considered a *dictum*."

"Accordinly, a point expressly decided does not lose its value as precedent because the disposition of the case is based upon other grounds." — Citing cases in the Supreme Court of the United States, Federal Courts, Mississippi, Missouri, Nebraska, New Jersey, New York, North Carolina, Tennessee, Washington, and England.

It is said in 15 Corpus Juris, 953:

"Where a case presents two or more points, any one of which is sufficient to determine the court issue, but the court actually decides on such points, the case is an authoritative precedent as to every point decided and none of such points can be regarded as having merely the status of a *dictum*."

Supported by citations of the Supreme Court of the United States, Federal Courts, California, Iowa, New York, Oregon, Tennessee, Texas, Washington, and Wisconsin.

"Though both were grounds of decision, to-wit, that the decision was not based alone on actual

knowledge of what property was intended to be taxed but upon the sufficiency of a description to identify the land in connection with the notice given to appellant — this does not constitute *dictum.*"

Ontario v. Wilfong, 233 U. S. 543, 32 Sup. Ct. Rep. at 333, 334.

"Where an appellate court places its decision on two or more distinct grounds, each is as much an authoritative determination as the other, and neither can be disregarded as *dictum.*"

King v. Pauly, 159 (Calif.) 549.

"Where a decision is based on two individual lines of reasoning, neither one is a *dictum.*"

Pugh v. Moxley, 104 Calif. 374.

"It cannot be said that a case is not authority on one point because, although that point was properly presented and decided, in the regular course of consideration of the cause, something else was found in the end which disposed of the whole matter."

Railroad Co. v. Schutte, 103 U. S. at 119.

"The case is of equal authority upon each of two distinct and sufficient grounds upon which an appellate court rests its affirmance of a judgment although only one of those grounds was considered in the court below."

Union Pacific v. Mason City Ry., 199 U. S. 160, 26 Sup. Ct. Rep. 19.

3.

We recur to what grievances the board of equalization could under the law correct.

Relief could be given as to the finding on any matter alleged in the petition seeking establishment. — *People v. Hagar,* 52 Calif. 183, citing *Freeman Judgments,* Section 523; *Bigelow, Estop.* page 142; *Ward v. Alsup,*

(Tenn.) 46 S. W. at 575, 576; such board has "ample power to pass upon and rectify their individual grievances." — *Idem.*

The trial Judge held there was notice and opportunity to try out why the proposed drainage system should not be established and constructed. (M. 77).

The board had power to pass on whether the assessment district was of proper extent — *Hennessy v. Douglas County,* (Wis.) 74 N. W. 985; there was power to determine whether the lands of a given owner should be included within the district. The trial Judge so held (M. 76), — the board had power to pass upon whether the proposed assessment was valid and just. (M. 82, 83). That is the holding of *Londoner v. Denver,* 210 U. S. at 379, and of *Farncomb v. Denver,* 252 U. S. 7, 40 Sup. Ct. at 272, and of *McGregor v. Hogan,* 263 U. S. 234 at 238, 44 Sup. Ct. at 52.

He held the board had power to pass upon whether there was the right to tax at all. To pass upon what the total tax should be; he so held on the authority of *Soliah v. Drain Commissioners,* 222 U. S. 522; 13 Sup. Ct. 103, and *Paulson v. Portland,* 149 U. S. 30; 13 Sup. Ct. 750. (M. 81). There was power to pass upon what the amount of each owner's assessment should be. — *Londoner v. Denver,* 210 U. S. 379; *McGregor v. Hogan,* 263 U. S. 234, 44 Sup. Ct. at 51. To determine whether the assessment is unjust. — *Petoskey v. City,* (Mich.) 127 N. W. 345; *Michigan Bank v. City,* 107 Mich. 246. Power to determine whether property has been improperly assessed. — *First National Bank v. Board,* 264 U. S. 450, 44 Sup. Ct. at 386, 387. Whether the assessment is improper. — *First National Bank v. Board,* 264 U. S. 450, 44 Sup. Ct. at 386, 387; *Ward v. Alsup,* (Tenn.) 46 S. W. 575. Whether the assessment is illegal. — *Ward v. Alsup,* (Tenn.) 46 S. W. 575; or is unfair. — *First National Bank v. Board,* 264 U. S. 450, 44 Sup. Ct. at 386, 387. The trial Judge ruled the board had power to determine what the proportion of benefits should be after equalization. (M. 78). There was power to determine

whether the assessment was excessive. — *Southern Railway v. Watts,* 260 U. S. 519, 43 Sup. Ct. at 195; *Ward v. Alsup,* (Tenn.) 46 S. W. 575. Whether there had been an excessive assessment through overvaluation. — *Stanley v. County,* 121 U. S. 535, 7 Sup. Ct. at 1238. Whether it was illegally excessive. — *Idem,* at 1239. Whether it was irregular and excessive. — *Ward v. Alsup,* (Tenn.) 46 S. W. 575. Whether is was unequal and excessive. — *Idem; Township v. Rose,* (Mich.) 55 N. W. at 928. Whether the assessment was discriminatory by means of overvaluation. — *Keokuk v. Salm,* 258 U. S. 122, 42 Sup. Ct. at 207, 208. — And in such case the board of review must have the claim presented. — *Idem,* at 208. And relief in equity depends upon having sought correction from this board and having failed to secure redress. — *Idem.* This board has power to determine whether there has been a willful disregard of law requiring uniformity in the valuation of property for taxation. — *Western Union v. Missouri,* 190 U. S. 412, 23 Sup. Ct. at 734. And where the power that this board has is given to a county court then in suit in that court it may be determined whether the assessment was or was not deliberately or fraudulently discriminatory. — *Keokuk v. Salm,* 258 U. S. 122, 42 Sup. Ct. at 208. There is power to determine whether the general rule of equality and uniformity of taxation required by constitutional or statutory provisions has been disregarded. — *Stanley v. County,* 121 U. S. 535, 7 Sup. Ct. at 1239; *Western Union v. Missouri,* 190 U. S. 412, 23 Sup. Ct. at 734 — wherein it is held that the action of such board cannot in this regard be collaterally attacked because the proceeding is *quasi* judicial. Without submitting to the board one may not even complain that the assessment is unconstitutional. — *Milheim v. Moffat,* 262 U. S. 710, at 723, 43 Sup. Ct. at 699. It may pass upon what proportion of benefits should be put upon any particular owner. The trial Judge so held on the authority of *Paulson v. Portland,* 149 U. S. 30, and of *Soliah v. Drain Commissioners,* 222 U. S. 522, 13 Sup. Ct. 103. (M. 79, 81), (82). That is the holding of *Spencer v. Merchant,*

125 U. S. 345, 8 Sup. Ct. 921. There is power to determine whether the proposal will be a public benefit and whether land included should be found to be benefited. So ruled the trial court on the authority of *Soliah v. Drain Commissioners,* 222 U. S. 522, 13 Sup. Ct. 103, and *Paulson v. Portland,* 149 U. S. 30, 13 Sup. Ct. 750. (M. 81). It ruled a hearing was provided wherein the owner might contest the amounts of the benefits or even urge that none are derived. (M. 79). — *Hennessy v. Douglas County,* (Wis.) 74 N. W. 985. There is power to determine whether there is any benefit. — *People v. Hagar,* 52 Calif. at 182, 183, citing Freeman Judgments, Section 523; *Bigelow, Estop.* page 142 — *Milne v. McKinnon,* 32 S. D. 627. The board of equalization can give relief against arbitrariness of assessment. — *Milheim v. Moffat,* 262 U. S. 710, 43 Sup. Ct. at 698. The highest court of South Dakota holds in the *Milne* case, supra, that if this is honestly determined the only review is on appeal, and it may not be obtained in a suit in equity to restrain the collection of the assessment. The trial court held there was provision for having the board of equalization determine whether the benefits will or will not exceed assessment. (M. 76). The board of equalization may review whether the property has been fraudulently assessed. — *First National Bank v. Board,* 264 U. S. 450, at 455, 44 Sup. Ct. at 387. Of course it is true that some kinds of fraud excuse submitting to this statutory board. — *Ward v. Alsup,* (Tenn.) 46 S. W. 575, 576. But that must be the same kind of fraud that will set aside a decree, that is, it must appear that the fraud charged prevented the complaining party from making full and fair presentation of his side. — *Toledo Scale Co. v. Scale Company,* 261 U. S. 399 at 423, 43 Sup. Ct. at 464. There is of course no claim of such fraud, or indeed of any fraud. And the Supreme Court of South Dakota held in the *Gilseth* case that there was none, 46 S. D. 374. There is this power of review even where there is provision for paying under protest and recovering back. — *Ward v. Alsup,* (Tenn.) 46 S. W. 575. And no objection to unconstitutionality may be

raised where the board of equalization is ignored. — *Milheim v. Moffat,* 262 U. S. 710 at 723, 43 Sup. Ct. at 699.

What it all comes to is that making no complaint before the reviewing boards provided by law amounts to an admission that the action of the assessing board was correct. — *Hinds v. Township,* (Mich.) 65 N. W. at 546; that if there be no resort to the board of equalization collateral attack on the action of the assessing board will not lie because such action is *quasi* judicial. — *Stanley v. County,* 121 U. S. 535, 7 Sup. Ct. 1239. The *Ward* case (Tenn.) 46 S. W. 575, approves the statement of Cooley on taxation that "the statutory remedy of equalization was supposed to be adequate to all the requirements of justice and the party's folly if he fails to avail himself of it". If he fails to avail himself of the power given the board of equalization to pass all complaints against tentative assessment he has according to the *Milheim* case, *supra,* no sufficient ground of complaint including even the complaint that the assessment is unconstitutional, and having failed to object to a tentative ad valorem assessment adopted by the commission, failure to seek modification or correction before the board of equalization before the tentative basis has been finally adopted, left the party with no sufficient ground of complaint. — *Milheim v. Moffat,* 262 U. S. 710 at 723, 43 Sup. Ct. at 699.

It is the inevitable implication of the opinion of the Circuit Court of Appeals that the absence of benefits will justify injunctive relief. (R. 263).

But is is said in *First National Bank v. Board,* 264 U. S. 450 at 545, 44 Sup. Ct. at 387:

> "We cannot assume that if application had been made to the commission, proper relief would not have been accorded by that body in view of the

statutory authority to receive complaints and examine into all cases where it is alleged that property has been fraudulently improperly or unfairly assessed".

"The fact, 'that such remeny were in fact available is controlling here'."

"The question whether an assessment is excessive is not for the courts to try and the board of review is the only tribunal to try and determine that question." — *Township v. Rose,* (Mich.) 55 N. W. 928.

The Supreme Court of South Dakota said in *Bagley v. Butler,* 24 S. D. 429:

"When a party whose property though assessed at less than its value is assessed much higher than that of other taxpayers, shall have requested the several boards to equalize taxes in the manner fixed by statute, to-wit, by raising the assessment of all property to its actual value — and such board refuses or fails to do their clear duty under the law, then, and only then, let such party apply to the courts for relief".

"Error if any in the method of assessing benefits for the construction of a drainage ditch by which a wrong result may have been reached is a matter to be considered on appeal from the determination of the board levying the assessment, and not a suit to restrain its collection."

Milne v. McKinnon, (S. D.) 144 N. W. 117, 32 S. D. 627.

"It follows that if the commissioners exceeded their jurisdiction in the length of the ditch and size of tiling, it's only effect so far as appellants were concerned was to increase the amount assessed against them above the amount that it should have assessed. This is a matter which should have been settled at the time of the assessment of benefits and

expenses of construction and appellant's remedy for an unjust or unwarranted assessment was through an appeal to the Circuit Court from such an assessment." — *Curtiss v. Pound*, 34 S. D. 628-633.

Where there is a conflict as to benefits it is enough for the complainant that there is such conflict especially where the assessing board has made personal inspection. — *Pittsburg Railway v. Backus*, 154 U. S. 421, 14 Sup. Ct. at 1120, 1121. And in that case this court said:

> "Is testimony that the value placed by the board was excessive together with testimony that portions of the road outside of the state were of largely greater value than any similar length of road within the state, unaccompanied with evidence that the board reached the valuation by simply dividing the total value of the company's property on a mileage basis, or that it failed to take into consideration the fact of such excessive value of portions outside the state, sufficient to impeach its determination? This question must be answered in the negative. No determination of a special board, charged under the law with the duty of placing a value upon property, can be successfully impeached by such meager testimony."

IX.

THESE SUITS WERE PREMATURE.

The trial Judge says in his opinion that under the South Dakota statutes there may not even be an assessment until after equalization, and the injunction stopped the making of any assessment. (M. 78). The opinion declares further that no assessment can be spread by the auditor until the benefits are finally fixed. (M. 78). Section 8463 of the South Dakota Revised Statutes obviously makes the first apportionment of benefits tentative and subject to the later equalization. And Section 8464 provides that no assessment shall be made until after the equalization has been completed. Whatever may be the law as to the right to have injunction where a tax has been finally fixed and is sought to be enforced surely there is nothing to enjoin when it is not even known what amount the tax will finally be. The Circuit Court of Appeals concedes that when the suits were brought it was not known what the final benefit apportionment would be, but it avoids this with the rather remarkable statement that the suits were not premature since the total expenditure was known and that, therefore, the amount of the threatened assessment was merely a matter of mathematical deduction. (R. 262). The trouble is that knowing what the total is that must be raised by taxation does not give the slightest basic for ascertaining what part of the total a given property owner must bear, or for ascertaining what his share of contribution will be after equalization.

> "An attack which seeks relief 'against anticipated injury consequent upon anticipated assessment, before the assessment was completed' is premature."
>
> *Western Union v. Howe,* (C. C. A.) 180 Fed. at 53, 54.

As is well said in *Western Union v. Howe,* (C. C. A.) 180 Fed. at 53, 54, the effect of an injunction obtain-

ed to relieve against anticipated injury consequent upon anticipated fraudulent assessment, before the assessment is completed, is to take away from th tax commission all right to exercise discretion and judgment in arriving at a fixed and proper valuation — that it is not permitted to bring such injunction suit "before the board had an opportunity to complete the exercise of its *quasi* judicial discretion by equalizing the various assessments throughout the state and completing the assessment of this property" and that therefore "the result is that this suit was prematur[illegible]".

X.

ASSUMING FOR THE SAKE OF ARGUMENT A SUFFICIENT AMOUNT IN CONTROVERSY AND OTHER ELEMENTS REQUIRED TO GIVE THE FEDERAL COURT JURISDICTION, IT ERRED IN ENTERTAINING THE CAUSES ON ITS CHANCERY SIDE.

1.

It cannot be seriously questioned, and the testimony shows without dispute, that these appellees owed contribution to this drainage project in *some* amount. They tendered nothing. This fact was pleaded as constituting a waiver of the right to have any relief. We need not at this time go so far as that. It suffices to say that this failure to offer what at all events was due is a bar to relief in equity. — *City v. Hall,* 19 S. D. 663, 104 N. W. 470. Even where over-valuation has arisen from the adoption of a rule of appraisement which conflicts with a constitutional or statutory direction and operates unequally on a large class of individuals or corporations the party aggrieved has no right to restrain the collection of the assessment unless he pays or tenders what is admitted to be due. — *Stanley v. County,* 121 U. S. 535, 7 Sup. Ct. at 1239.

2.

AS TO THE CLAIM THAT THE PLAINTIFFS HAVE NO ADEQUATE REMEDY AT LAW.

As required by law, the defendants raised in the trial court an issue on this allegation and averred affirmatively that there was an adequate remedy. (R. 23; N. 22; S. 20; P. 23; O. 22; M. 22).

The Circuit Court of Appeals declares that appellees did not have an adequate remedy at law. (R. 257). This is so if there was no remedy at law which was as practicable and efficient to the ends of justice and its prompt administration as the remedy in equity; one as complete, efficient and practicable as the equitable remedy and as efficient both as to final relief and mode of obtaining it. We concede there must be an adequate remedy on the law side of the federal court and that it does not suffice there is such remedy in the state courts. Our contention is that there *was* such remedy on the law side of the federal court.

It was ruled below that the board were naked trespassers because the alleged new ditch project was in law never in existence. (M. 84, 89, 90; R. 255, 256). Both the trial court and the Circuit Court of Appeals base this ruling, for one thing on the ground that the proceeding should have been dealt with under statutes governing the abandonment of existing drainage systems and that the board acted without authority because it did not follow those statutes.

The Circuit Court of Appeals found an exception to the general rule governing equity jurisdiction in the fact that the proceedings of the board were without authority. (R. 252, 253). The trial court held that though the board was a mere trespasser the plaintiffs could get no relief on the law side of the federal court. (M. 83). And indicates that such a distinction is made in *Milheim's* case, 262 U. S. 710; 43 Sup. Ct. 694. (R. 261, 262). We are unable to find such a distinction drawn

in that decision. There must of necessity be a remedy on the law side for resisting a non-constitutional tax, or a tax invalid for any other reason. For it has been held that the tresspass resulting from proceedings to enforce an unconstitutional tax cannot be restricted by injunction unless irreparable injury or other ground for equitable interposition is shown to exist. — *Shelton v. Platte*, 139 U. S. 591, 11 Sup. Ct. 649. It is said in *Boise Company v. Boise City*, 213 U. S. 276; 29 Sup. Ct. 427:

> "It is obvious that the rights of which the company seeks to avail itself are rights cognizable in a court of law, and not rights created only by the principles of equity. The sum of the company's contentions is that the imposition of the license fee was illegal, unconstitutional and void; all these contentions are open in a court of law. As complete as inequity." — *Walla Walla*, 19 Sup. Ct. Rep. 77.

It is held in *Dows v. Chicago*, 11 Wall,-80, that no relief may be had in equity against an effort to tax which because of invalidity of the tax amounts to a common trespass.

Surely, one is not without *any* remedy against such a tax, and since it is not to be had in equity it must of necessity exist at law.

In the *Shelton* case, 139 U. S. 591, 11 Sup. Ct. 648, 649, it was claimed for Allen v. Railway, 114 U. S. 311, Osborn v. Bank, 9 Wheat. 738, Cummings v. Bank, 101 U. S. 153, and Dodge v. Wolsey, 18 How. 331, that a court of equity has jurisdiction to restrain a collection of a tax when same is wholly illegal and void. But the court says that in those cases the jurisdiction will be found to have rested on grounds other than merely the unconstitutionality of the taxes involved.

And it is held in the *Shelton* case, 139 U. S. 591, 11 Sup. Ct. 647, if the tax was illegal the taxpayer had, for one thing, the right to prosecute for damages — an action that of course can be entertained on the law side of the federal court.

3.

In *Shelton v. Platte,* 139 U. S. 591, 11 Sup. Ct. 648, it is ruled an allegation is a mere matter of inference which recites that if seizure be made by the sheriff it will greatly embarass the plaintiff in the conduct of its business and will subject it to heavy loss and damage and the public served by it to great loss and inconvenience. The allegations at bar are in worse case. It is said that the threatening apportionment of benefits will cause a multiplicity of suits. (S. 13, 14; N. 13, 14; P. 14, 15; R. 15; O. 15, 16; M. 25). This is denied. (M. 22, 23; R. 23, 24; O. 23; N. 22, 23; S. 21; P. 23, 24). Next, that said apportionment will cast a cloud on the title of the appellee to their real property — and no appellee, other than the Power Company, has any real property which may be seized or have a lien fastened upon it. (S. 13, 14; N. 13, 14; P. 14, 15; R. 15; O. 15, 16; M. 15). Next, if said apportionment is carried out the plaintiff will suffer immediate and irreparable injury — how, is not stated. (S. 13, 14; N. 13, 14; P. 14, 15; R. 15; O. 15, 16; M. 15). Finally, if said apportionment is carried out plaintiff has no plain, speedy, and adequate remedy at law. (S. 13, 14; N. 13, 14; P. 14, 15; R. 15; O. 15, 16; M. 15). Defendants plead in bar that plaintiff does have such remedy. (M. 22, 23; R. 23, 24; O. 23; N. 22, 23; S. 21; P. 23, 24). They plead further that the bill states no matter of equity entitling plaintiff to the relief prayed for because it has such remedy at law. (M. 22; P. 23; S. 20; O. 22; N. 22; R. 23). Then follow certain pleas in avoidance. First, that plaintiffs are not entitled to the aid of a court of equity because they have neglected and refused to tender the amount of actual benefits received. (M. 29; O. 22). It is held in the case of *Milheim,* 262 U. S. 710, 43 Sup. Ct. 698, that appellees did have an adequate remedy at law because of the provisions for contesting the apportionment; to the same effect is *Indiana Manufacturing Co. v. Koehne,* 188 U. S. 681; 23 Sup. Ct. 452.

In *Union Pacific v. Commissioners,* (C. C. A.) 217

Fed. 456, it was urged there was no adequate remedy at law in such a case as this because injunction "could be issued in a shorter time than would be necessary to pay the taxes and begin an action at law and prosecute to judgment for the recovery of the money". The court said, "but if this reasoning is sound the unlawful resort to equity becomes the very ground of equitable jurisdiction", — and, "if the position were sound every decision of the Supreme Court reversing a decree in equity because the remedy at law was adequate, would be wrong.". And following the case of *Buzzard v. Houston*, 199 U. S. 347, that Section 723, Revised Statutes, can be given effect in no other way than by the dismissal of a suit brought in violation of its provisions.

4.

There is great and proper reluctance on part of the federal courts to interfere with the collection of taxes.

> "The evil caused by suits in equity to restrain the collection of taxes is grave and has often been set forth by the courts".
>
> *Union Pacific v. Commissioners,* (C. C. A.) 217 Fed. 543.

It is said in *Shelton v. Platte,* 139 U. S. 591, 11 Sup. Ct. 648, that legislation restricting the issuance of such injunction has been called for by the embarrassment resulting from the improvident employment of the writ in arresting the collection of the public revenue, and that resort to the court of chancery ought not to be interposed in that direction, except where resort to that court is grounded upon the settled principles which govern its jurisdiction. In *Boise v. Boise,* 213 U. S. 276, 29 Sup. Ct. 428, it is held that while the state is at liberty to permit injunctions resisting the collection of taxes, "very different considerations arise where courts of a different though paramount sovereignty impose in the same manner and for the same reason". — And that "the decisions of this court show a reluctance to interfere in

all cases where the federal rights of the persons could otherwise be preserved unimpaired." Upon this principle is grounded the declaration of the Circuit Court of Appeals in the case at bar that the right to establish relief must be clear where it is sought to restrain the collection of a state tax. (R. 259).

The Circuit Court of Appeals holds that though equalization of benefits is provided, as the matter stood when the suits were brought each appellee was threatened with levying of a tax for more than the jurisdictional amount. (R. 259, 263). Surely, this asserts no more than the threat of a illegal tax. — *Union Pacific v. Cheyenne,* 113 U. S. 516, 525, 526, approves the statement of Judge Cooley that "the illegality of the tax alone, or the threat to sell property for its satisfaction cannot of themselves furnish any ground for equitable interposition". Indeed, though the Circuit Court disregards it, it expressly approves of said text. (R. 259, 261). And does so on the authority of *Union Pacific v. Cheyenne, Supra,* and of *Hannewinkle v. Georgetown,* 15 Wall, 547, 548. (R. 262, 263).

We show elsewhere that the federal court has no jurisdiction to interefere by injunction against the collection of what is an excessive tax. Under all the undisputed testimony it is not open to challenge that the most which is sought to be restrained is the possibility that an excessive tax may ultimately be collected. (R. 159, 177, 196, 200, 241).

It is perhaps made as clear what equity does not have jurisdiction of by the decisions which find that equity did have.

In the *Ohio Tax* cases, *v. Dittey,* 232 U. S. 576, 34 Sup. Ct. 374, there was involved removing a lien that constituted a cloud. In *Tyler v. Savage,* 143 U. S. 79, 12 Sup. Ct. 345, the relief sought was discovery and discovery was warranted. So of *Sullivan v. Railroad,* 94 U.

S. 807. In *McMullen v. Strother,* 136 Fed. 301, accounting was sought.

Equitable jurisdiction was upheld where the ingredients to support the jurisdiction were discovery, accounting, fraud, and misrepresentation. — *Jones v. Bolles,* 9 Wall, 364, 369. In *United States Insurance Co. v. Cable,* 98 Fed. 763, the concellation of policies was involved. In *Hopkins v. Walker,* 244 U. S. 486, 37 Sup. Ct. 712, the cancellation of a location certificate which was a cloud on title, and where it further appeared that without the interposition of the court the plaintiff might suffer injury. In *Coler v. Board,* 89 Fed. 260, there was an attempt to impress a trust. In *Cummings v. National Bank,* 101 U. S. 153, the plaintiff had standing as a fiduciary and trustee seeking to protect his trust. In *Boyce v. Grundy,* 3 Pet. 215, and in *Green v. Railway,* 244 U. S. 522, 37 Sup. Ct. 682, there was present the element that if the chancery court dismissed the suitor the law court would only give him partial relief thus affirming the rule that where equity can attach at all it will give complete relief. In *Shelton v. Platte,* 139 U. S. 591, 11 Sup. Ct. 649, there was in fact a threat of irreparable injury and of multiplicity of suits. And in *McConihay v. Wright,* 121 U. S. 201, 7 Sup. Ct. 941, where the plaintiff sought to compel defendant to assert what right and title in reality he claimed, the court held that equity had jurisdiction because such suit afforded a better remedy than would ejectment.

5.

As before said the Circuit Court of Appeals agrees that mere illegality of a tax will not base the chancery jurisdiction. (R. 261, 262, 263). That is thoroughly settled by the decisions to which the Court refers.

> "A federal court is not vested with jurisdiction of a suit in equity to enjoin the collection of a state tax because the case is one arising under the constitution and laws of the United States within the meaning of the judiciary act of Aug. 13, 1888,

(25 Stat. at L. 433, Chap. 866) Sec. 1, unless there is apparent some ground of equitable jurisdiction recognized by the federal courts."

Indiana Mfg. Co. v. Koehne, 188 U. S. 681; 23 Sup. Ct. 452.

There must be more than that the tax is illegal and unconstitutional. It is not enough that what is being done and threatened, constitutes a common trespass. — *Dows v. Chicago,* 11 Wall. 180. It is said in *Boise v. Boise,* 213 U. S. 276, 29 Sup. Ct. 429, that the books do not disclose a case in which chancery interferred merely because the enforcement of an illegal or unconstitutional tax was threatened.

The Circuit Court of Appeals recognizes its holding can be supported only by finding that in addition to illegal taxation some of the recognized heads of the chancery jurisdiction were also involved. (R. 259). So all that needs argument now is whether or not finding the existence of these chancery ingredients is warranted by the record.

AS TO FRAUD.

It is more than doubtful whether any fraud is charged. The only claim that there is such charge must rest on allegations (and to say the least, it is doubtful if there are any), that the board only pretended to be establishing a new and independent drainage system and was in fact using that pretense for obtaining money wherewith to repair existing ditches. We say elsewhere that the charge is unfounded in fact; that objections on that score could and should have been made to the assessing board or before the board of qualization — and we show in another place that this very question was raised in the Supreme Court of South Dakota as to the project at bar and it found affirmatively upon construction of the statutes of the state that this was a new and independent project. Three of the appellees concede this to be so. In *Union Pacific v. Commissioners,* (C. C. A.) 217 Fed. 544, it was charged that the taxing officers

were guilty of fraud in the assessment of plaintiff's property and claimed that such fraud gave equity jurisdiction. The court said it was by no means true that for all alleged fraud equity may be resorted to for redress; — that that was not the case when a legal remedy has been given by the statute which is a substitute for remedy in equity; — that it is immaterial what the cause of invalidity is and that even if it consists of unconstitutionality or fraud it still effects no more than to make the tax invalid, which alone is not a ground of equitable jurisdiction. It is only where correction has been sought from the board of review and there has been a failure to secure redress that an overvaluation that is fraudulently discriminatory will open the doors of the court of equity. — *Keokuk v. Salm,* 258 U. S. 122, 42 Sup. Ct. 207. This was held, too, where a corporation was assessed on the basis of 75% of actual values while taxable property in general was assessed systematically and intentionally at not more than 52%. — *Greene v. Railway,* 244 U. S. 522, 37 Sup. Ct. 675.

In *Boyce v. Grundy,* 3 Peters, 213, there *was* a sufficient charge of fraud:

> "The bill was filed to obtain the rescission of an agreement entered into on the 3d of July, 1918, between James Boyce, the appellant's testator and devisor, and the complainants, for the sale of a tract of land lying on the Homocito river, in the state of Mississippi. The grounds set forth in the bill are fraudulent misrepresentations: 1. As to the testator's title to the land. 2. As to the locality of the land. 3. As to the liability of the lands to inundation. 4. As to the general description of the character and quality of part of the land, not examined by complainant."

6.

AS TO MULTIPLICITY OF SUITS THREATENED.

It does not appear any are threatened. One set of

suits is brought and is pending. These will settle the rights of the parties and there is therefore no need for any further suits. *Boise v. Boise,* 213 U. S. 276; 29 Sup. Ct. Rep. at 430.

Where the multiplicity to be feared consists of repetitions by the same person against the plaintiff for causes of action arising out of the same facts and legal principles, a Court of Equity ought not to interefere on that ground unless it is clearly necessary to protect the plaintiff from continued and vexatious litigation. — *Idem.*

It is ruled in the *Boise* case, 213 U. S. 276, and in *Indiana Company v. Koehne,* 188 U. S. 681, that the doctrine of jurisdiction to prevent a multiplicity of suits has no reference to suits which might be begun by him who asserts multiplicity. Whatever else may threaten, surely there is no possibility of suits against appellees.

Multiplicity cannot successfully be invoked where the statutes give access to the Board of Review, and appeal from the decision of such Boards to the Courts. — *Indiana Company v. Koehne,* 188 U. S. 681; 23 Sup. Ct. Rep. 452.

To the same effect is *Keokuk v. Salm,* 258 U. S. 122, 42 Sup. Ct. Rep. at 208.

In *Union Pacific v. Ryan,* 113 U. S. 516, 5 Sup. Ct. Rep. 606, it was found that in fact a multiplicity of suits was threatened concerning the title of lots, and that there was a cloud which prevented sale.

AS TO IRREPARABLE INJURY.

As seen, there is nothing but naked conclusion in asserting any of the recognized heads of the chancery jurisdiction. It is ruled in *Shelton v. Platte,* 139 U. S. 591; 11 Sup. Ct. Rep. 646, that a bill to restrain the levy of a distress warrant which seeks to collect an alleged illegal tax which bill merely alleges that the property of plaintiff — an express company — is employed in Interstate Commerce, and that the seizure will

greatly embarrass the Company and will result in heavy loss to it and the public it serves — states no ground for equitable intereference. A vague allegation will not suffice. — *Boise v. Boise,* 213 U. S. 276; 29 Sup. Ct. Rep. at 429.

AS TO IRREPARABLE INJURY.

We agree with the Circuit Court of Appeals to collect an illegal tax will open the doors of the chancery court if there be involved in addition a threat of irremediable mischief. (R. 259). But here there was no such mischief nor the threat of any which the law recognizes. For a valid law gave opportunity to have it dteermined whether these appellees shall ever pay any tax. Surely it is not an irremediable mischief such as gives chancery jurisdiction that one might be defeated on resort to lawful tribunals including the right to go to appellate tribunals. Where such remedy exists no case of irreparable injury is made out. — *Keokuk v. Salm,* 258 U. S. 122; 42 Sup St. Rep. at 208.

All that needs to be said as to *Watson v. Sutherland,* 5 Wall. 74, is that it exhibits an undoubted case of irreparable injury. Injunction was allowed to restrain a creditor who had levied on a miscellaneous stock in retail trade suitable for the then current season and intended to be paid for out of sale. The stock was in possession of a young man recently established in trade, and doing a profitable business. There was allegation that he had conveyed to defeat his creditors. The Court finding there had been no such conveyance held injunction was authorized because the measure of damages at law could not extend beyond the actual injury done, and would not cover loss of trade, destruction of credit and failure of business prospects — commercial ruin, in short.

7.

NO CLOUD ON TITLE OF RAILROAD OR CITY PROPERTY.

The Circuit Court of Appeals rules there was such cloud on title by threatened sale as to constitute a grievance entitling plaintiffs to enter a Court of Equity. (R.

259,. We submit that with the exception of the Northern States Power Company there is no possibility of a cloud on title to real estate. As we understand the pleadings, there is not even a claim that as to the appellees a lien against its property might be effected. All we can find on that head are assumptions in each of the lower Courts that such lien would follow assessment. (M. 79, 80, 92).

In *Boise v. Boise,* 213 U. S. 276; 29 Sup. Ct. Rep. 430, it is said that a certain ordinance did not cast a cloud upon the title of the Company or its franchise; that it is not a lien on any of its property; that the only remedy for collection is one at law for the collection of the assessment.

Averment that an assessment of capital stock on franchise constitutes a cloud on title is insufficient to sustain a bill which seeks to enjoin the collection of such tax as illegal, where it contains no allegation that the corporation owns any real property. *Indiana Company v. Koehne,* 188 U. S. 681; 23 Sup. Ct. Rep. 452. It will presently be shown that in no proper sense do either of the appellees other than the Power Company own any real property.

A railroad can not be regarded as mere land, like farm land or building lots; its value depends upon the whole line as a unit to be used as a thoroughfare and means of transportation. One mile or two of its length is almost valueless by itself. — *Union Pacific Ry. v. Ryan,* 113 U. S. 516; 5 Sup. Ct. Rep. at 603.

> "Payment of taxes on final assessment against real estate is enforced (as against railroads) in the first instance not by distraint or levy, but by legal proceedings, to-wit, application by the collector to the county court for judgment against the property." — *Keokuk v. Salm,* 258 U. S. 122, 42 Sup. Ct. Rep. 208.

Section 8463 of the Revised Code of South Dakota provides merely that "the proportion of benefits which

any Railroad Company may obtain for its property by such construction shall be fixed and equalized together with the proportion of benefits to tracts of land." This, of course, makes no provision for placing any lien upon any property of railroad corporations.

Section 8464, provides for a notice after equalization and requires the notice to state, among other things, the amount of each assessment, "together with the amount assessed against * * * * the Railroad Company." The notice shall further give the date when the assessment will become deliquent, together with the amount of penalty which will then accrue and the date from which interest will begin to run — still no provision for any lien. But the Section provides further that "the provisions of Chapters 7, 8, 9, Part 9 of this Title shall apply to the enforcement of the lien or drainage assessments so far as such provisions are applicable."

Section 6606, dealing with the subject of how collections are made and enforced is as follows:

> "All laws relating to the enforcement of the payment of delinquent taxes shall be applicable to all taxes levied under the provisions of this article, and whenever any taxes levied under the provisions of this article shall become delinquent, the treasurer may proceed to collect the same in the same manner and with the same right and power as a sheriff under execution, except that no process shall be necessary to authorize him to sell engines, cars or any rolling stock for collection of such taxes."

Under this, the tax is assessed against the Railroad Company, as a personal tax, to be enforced by execution against the personal property of the railroad.

It is obvious this deals with nothing but the seizure of personal property. And as before indicated, the statute could not validly go beyond that. The State could not seize upon a few miles of railroad in South Dakota which is a part of a large interstate carrier system and sell those miles. Beyond doubt, such action wuold be

restrained as an interference with the carrying on of Interstate Commerce.

Section 8463 has, as to cities also a provision for equalizing benefits by the construction of drainage, to highways or otherwise.

Section 8464 provides that "whenever any assessment for drainage * * * has been made against any * * * city * * * as provided in this Chapter, the officers of such * * * city * * * whose duty it is under the law to make the levy of taxes shall at the time of the next annual tax levy after the making of this assessment, make a levy for drainage purposes for such amount as shall be necessary to pay such assessment, which tax shall be collected the same as other taxes." Of course the proposed assessment at bar would not result in any lien upon the property of a city.

In a word, all claim that equity has jurisdiction because of the casting of a cloud or because of a lien either threatened or effected, falls to the ground because the premise is unsound.

Ohio Railway v. Ditty, 232 U. S. 576; 34 Sup. Ct. Rep. 374, is merely a case wherein it was clear that lien was provided to make the tax effective.

So of *Wallace* case, 253 U. S. 66; 40 Sup. Ct. at 436. And *Union Pacific v. Board,* 247 U. S. 282; 38 Sup. Ct. 510.

XI.

THE CONSTITUTION EMPOWERS THE LEGISLATURE TO AUTHORIZE BOARDS LIKE APPELLANT TO ESTABLISH SUCH DRAINAGE PROJECT AS THE ONE AT BAR, AND THE LEGISLATURE HAS AVAILED ITSELF OF THIS POWER AND HAS AUTHORIZED SUCH ESTABLISHMENT.

It was the opinion of each of the lower Courts that appellant Board had no power to establish any drainage project unless it was one for the purpose of draining agricultural lands. (M. 79; R. 257).

It does not seem to be contended, and it cannot well be, that the Constitution of South Dakota does not authorize such a project as the one at bar. What is asserted is that while there is authority for the Legislature to authorize the establishment of such a one, that constitutional provision is not self-executing — in the language of the brief of the appellee Omaha in the Circuit Court of Appeals (30) that the Legislature has never passed an act putting into effect the authority vested in the Legislature to create drainage districts except such as are to drain agricultural lands. According to the trial Judge, while the Constitution has provided for the drainage of agricultural lands and also for the drainage of lands "for any public use", there is no statutory enactment under which drainage districts may be formed for the drainage of lands "for any public use". (M. 93, 94).

As to what the Legislature is authorized to do by the Constitution, there has been construction by the highest Court of the State and it is its holding that the Legislature is empowered to provide for either of two methods in authorizing drainage work. It may give authority to incorporate a drainage district and vest its corporate authorities with power to establish — or it may dispense with this and vest the necessary powers in such bodies as the Board of Commissioners. — *Davidson v. Watertown Tile Company,* (S. D.) 196 N. W. 96.

To like effect is *Tuthill v. McMackin,* 31 S. D. 507.

The Circuit Court of Appeals is of opinion there was no intention to establish a drainage for the purpose of draining agricultural lands. (R. 257). The sole purpose was in fact to drain these lands, and it may be conceded that the method adopted to accomplish this end, was to hasten the flow of the flood water tereby preventing it from ponding back on the lands. The property of the appellees was such as could be used as farm land, if so desired, though it may be conceded that it was not being used for such purpose at the time of the construction of this project. While there is testimony that appellees property has never been and cannot be used for agricultural purposes, one witness for the plaintiff testified in effect that the project did not deal with agricultural lands, excepts to a very limited extent, if at all. (R. 208). And there is testimony that there was no natural reasons why the lands of the plaintiffs might not in whole, or in part at least be used for agricultural purposes. (R. 183, 185, 197). All this, however, is not very important, because we rest this branch of the case on the proposition that the drainage project was for a public use and was authorized even if it was not intended for the drainage of agricultural lands which the constitution had made merely one public use.

The controlling question is whether the legislature has used the power given it by authorizing Boards such as this to establish drainage systems such as this.

It admits of no doubt that the Legislature has so availed itelf. All claims to the contrary are based on patent misconception of Section 8462 Revised Statutes. It certainly availed itself of the power which the Constitution has given the Legislature, for said statute authorizes establishment, not only of drainage for draining agricultural lands, but of any drainage system which the board finds conducive to the public health, convnience, or welfare. Indeed, so far from this statute limiting authority to the drainage of agricultural lands, it makes the establishment of systems for that purpose

merely alternative. It provides first, that if the Board finds the drainage proposed conducive to the public health, convenience, or welfare, then it may establish and then continue, *or* if it finds it necessary or practicable for drainage agricultural lands it may establish a drainage system to accomplish draining such lands.

2.

We are of opinion the Board was authorized to construct such drainage project without any reference to the particular Constitutional provision which has before been referred to.

Tuthill v. McMacken, 31 S. D. 507, so far from holding that the right to drain is limited to the drainage of agricultural lands construes the constitution to provide that one effect of the amendment of it was to make the drainage of agricultural land a public work. The amendment seems to be purely declaratory — to be an attempt to say in terms that the draining of agricultural land is a taking for and engaging in a drainage project for a public use. It needed no exercise of a power given by this particular constitutional provision to authorize the establishment of a drainage project other than one designed to drain farm lands. Authority to engage in such a project exists under the general provision of the South Dakota constitution and the general statutes availing of those provisions. Without reference to this particular amendment those who engaged in drainage projects generally were engaged in a public work for the public use. *Tuthill v. McMacken,* 30 S. D. 507. Without reference to this specific amendment there was authority to engage in works that were for the public use. The matter comes fairly within the rule laid down in *Fallbrook v. Bradley,* 164 U. S. 112; 17 Sup. Ct. Rep. 65, which rules that statutes authorizing drainage of swamp land have frequently been upheld independently of any effect upon the public health, as being reasonable regulation for the general advantage of those who are threatened as owners of a common property.

XII.

THERE IS NEITHER PLEA NOR PROOF OF ANY FRAUD, TO SAY NOTHING OF SUCH FRAUD AS GIVES EQUITY JURISDICTION, AND THE HIGHEST COURT OF THE STATE IN CONSTRUING THE STATUTES OF THE STATE HAS RULED THAT THERE WAS NO FRAUD.

We find ourselves unable to find any allegation of fraud. It seems to have gotten into the cases by declarations of each of the two lower courts, that the project at bar was a mere subterfuge; that a larger sum could be raised for a new drainage project than repairing an existing one, and that the board attempted to obtain the larger sum by pretending it was creating a new system and did this for the purpose of using what was raised in maintaining and repairing an already existing drainage system.

The trial court asserts at considerable length that what was really done was providing money to cure in the existing system defects of construction which were the fault of the appellant board; and that all that was in truth required to be done was to cure these defects in construction. (M. 85, 86, 87, 88, 93). Though this is said, the trial Judge points out forcibly how much more than mere repairing was needed by stating in detail how great was the danger at the time when this project at bar was established and how radical the steps needed to be to avoid this danger. (M. 86, 87, 88). The Circuit Court of Appeals admits the great danger that existed at the time of the establishment. (R. 254).

The Supreme Court of South Dakota ruled as follows:

> "It is contended by the appellant that the project contemplated by the petition was not the creation of a new drainage district or a new drainage ditch, but merely to repair a project already in operation, and that, therefore, the board was without authority to proceed."

"But this contention is not tenable. The constitution (Section 6, Article 21) and the statute (Section 8458) gives the board the same authority to reapir an old ditch that it does to construct a new one."

"But the two projects were by no means identical. The drainage district involved in this case contains a materially larger area than the combined area of the two old ditches."

Gilseth v. Risty, 46 S. D. 374, 193 N. W. 134.

"No fraud or bad faith on the part of the board has been shown." (135).

In addition, two of the appellees conceded that to be true which the Supreme Court affirms as above set forth. (Brief in Circuit Court of Appeals of Appellee Omaha, 24, 25, 28).

The trial Judge in effct sums his view with the statement that everything that was done merely came to giving the old ditches a new name. (M. 89). In this holding he disregarded that the project was initiated on a petition on which the City of Sioux Falls was one signer and which petition prayed the establishment of a new and enlarged drainage district, and which suggested also the enlargement and improvement of the old ditches, the canalizing of the course of the river and the enlargement of the assessment area by adding some ten sections (R. 42); overlooked, that it cost One Hundred Twenty-seven Thousand and some dollars to construct the old system and over Three Hundred Nine Thousand Dollars to construct the new. (R. 185), (R. 224 to 229), (M. 18). He overlooks his own statement that so great a danger existed as that no mere attempt to repair could meet it. (M. 86, 87, 88). And so does the Circuit Court of Appeals. (R. 254). He overlooked that the old ditch was but forty feet wide at the bottom with a side slope of one and one-half to one (M. 119; R. 159); while the new, is from eighty to one hundred feet wide, for miles (M. 256; R. 165);

overlooks the increased discharge capacity of the new ditch (P. 294; R. 180, 181); the nature and amount of work that was done. One item was that three miles of the original ditch was enlarged to a width of eighty to one hundred feet and that a dike five or six feet high was thrown up along the new ditch (R. 164, 204); overlooks, the size of the new drainage area (R. 179), and that it was increased so as to cover all the land described in the notice of equalization. (R. 19). Overlooks testimony that the effect was to establish a more perfect drainage system with more substantial controlling works and equipment and ditches of more than double the capacity of the old ones. (R. 19). Overlooks testimony that the effect of the canalizing and enlarging and installing wiers, dams, and controlling works and a substantial spillway, made a double and more perfect system of drainage (R. 41); testimony, that the real purpose of the ditch was to take the water from the river in flood time and conduct it to the spillway to prevent overflow from spreading over farm lands (R. 209); that the ditch serves the purpose of a drainage ditch as well as to care for overflow and was put in for the purpose of serving in both respects (R. 237); that through the diking when flood waters backed up on the farm lands to the west these lands were protected (R. 165); that the ditch was so effective as to lower water in wells to a very considerable extent (R. 208, 209); there was overlooked the detailed testimony by the engineer of the board as to how effective the new project was. (R. 236, 237).

The conclusion that merely repairing was the sole purpose is reached by ignoring all which showed that much more than repairing must have been in contemplation. The trial court seem to have been quite impressed by the fact that the board did not follow statutes that dealt with the abandonment of ditch projects or with projects to maintain and repair existing ditches. In other word, it seems to be found it was planned to do nothing but repair because repair statutes were not

acted upon. (M. 88). The Circuit Court of Appeals indulges in the same line of reasoning. (R. 255, 256).

We submit in all confidence there is no warrant for basing the decree below upon anything having so much as even a fraudulent aspect.

XIII.

AS TO DISREGARD OF STATUTORY DIRECTIONS.

The type of complaint on this head is fully exhibited in the statement of matters for consideration. From these we select, that as to action required to be had by resolution no resolution was passed; that the statute direction that the petition be filed was disregarded (ante 32); that the statute requiring petition to be sent to th state engineer was not followed. (Ante 33).

As to complaint that the construction was not on competitive bide (ante 34), the statute authorized what was done. Section 8465 provides that the work shall be let on competitive bids, the board being given the right to reject all bide, — and

> "If in the judgment of the board the entire drainage or any part thereof could be constructed for less money than the amount of any bid submitted therefor the board may cause such drainage to be constructed, hire the necessary labor and purchase all necessary materials for such construction, without letting contracts therefor."

The Board took that view of the situation.

The record shows without dispute that all complaints charging failure to comply with statute are unfounded.

All alleged failure to comply with the statute are foreclosed by the Gilseth case.

> "Numerous irregularities on the part of the board were alleged and it may be assumed that the board did in certain instances proceed in an ir-

regular manner, but it is not shown that the board did in any instance exceed the jurisdiction conferred upon it by law."

Gilseth v. Risty, 46 S. D. 374.

"All the irregularities complained of occurred after the board had acquired jurisdiction of the subject-matter". (135).

XIV.

AS TO THE CONTENTION THAT THE STATUTE LAW WAS ADMINISTERED IN AN ARBITRARY AND DISCRIMINATORY MANNER AND THAT THE ASSESSMENT OF BENEFITS WAS WITHOUT A BASIS IN REASON.

We have at the outset the question whether this complaint of arbitrary and discriminatory action includes as well a claim that by such action there was a violation of the Constitution of the United States — a violation of the guaranty of the equal protection of the laws. As to this it is our position that the bills do not assert there was any arbitrary conduct or discrimination in violation of that Constitution. All that is said is that there was arbitrary and discriminatory conduct so that if the apportionment of benefits be made as threatened and as stated in the notice given this "will deny and deprive plaintiff of the equal protection of the laws". (P. 14; O. 15; M. 15; M. 13, 14; R. 15; S. 13). A protest against such conduct must be made upon the ground that it violates the federal constitution. — *Hinds v. Township,* (Mich.) 65 N. W. 545. It is not enough to say that it will deprive of the equal protection of the laws, because the constitution of South Dakota (Art. 6, Sec. 18), has the same guaranty — wherefore, it cannot be told by this plea whether complaint is made of violation of the state constitution or the constitution of the United States. Neither is it clear that either of the lower courts put decision or any part of it on the ground that there had been a denial of the equal protection of the laws

in violation of the federal constitution. In the opinion of the trial Judge it is said there was a higher rate as to appellees, that it was ascertained on a different basis from that employed as to lands, that no direct benefits resulted, that the method was arbitrary and the benefits fanciful. (M. 81, 90). The opinion then enters upon what the appellees claim on this head, to-wit, that the assessment of benefits is arbitrary, unjust, illegal and void; that thereupon they claim that the assessment is such as to result in the property of the plaintiffs bearing more than its share of the burden, though not benefited; that the alleged benefits from this improvement have not been estimated on these properties in accordance with the basis used as to farm lands nor by any standard which will produce approximately general results; that the taxes upon the property of the plaintiffs are based upon some fanciful view of benefits, while farm property is assessed wholly according to its area and position, and that said property is sought to be burdened on a basis so wholly different from that used for ascertaining the contribution demanded from owners of agricultural lands as necessarily to produce manifest inequality. (M. 84).

The Court "suggests in conclusion" that the taxation that is imposed upon each of the plaintiffs:

> "Is at much higher rate and upon a different basis than the tax upon land lying within the district. * * * * It is further shown that the benefits estimated on the plaintiffs property were upon no standard that would probably produce results approximately the same as those upon the land in the drainage district. Taking for instance, the tax upon the City of Sioux Falls, for its miles of streets, with no pretense that there is any method of taxation or measuring a benefit or a gain that would produce even approximately correct general results when considered with benefits to the lands in the district. Simply a vague, indefinite generality indulged in by the engineer and adopted by the board.

benefits purely fanciful with no substantial basis. Take the railroads, there is no pretense that the basis used had any relation to that used in fixing the value upon the lands in the district. It is admitted that the basis was wholly different from that used for ascertaining the contribution demanded of individual owners, and I find that such difference necessarily produces manifest inequality. There is an entire absence of the equal protction of the law that must be extended to all". (M. 90, 91).

It will be noted it is not said that the Constitution of the United States had been violated.

The Circuit Court of Appeals contents itself with saying the plaintiffs claim that the attempted assessment is arbitrary, unjust and illegal, and constitutes a discrimination so palpably arbitrary as to amount to a denial of the equal protection of the laws. R. 252, 253).

And it declines to pass upon any constitutional questions. We, therefore, repeat there is no complaint or decision that any alleged arbitrary or discriminatory conduct violated the Constitution of the United States.

Be that as it may, if it were asserted the Constitution of the United States had been disreyarded that will not avail in this collateral suit because the plaintiffs had full opportunity to object to the method of the proposd taxation and declined to avail themselves of that right.

2.

This brings up the question whether if it be assumed that the federal court had jurisdiction to decide this question it decided rightly. Before entering into this more in detail, we submit the main complaint on this head is that by reason of discrimination the appellees were threatened with an excessive tax, with having to bear more than their just share of the cost of

the drainage project. — And that, too, is a matter they were bound to present to the board of equalization before they could enter either a state court or a federal court. We submit also that the *Gilseth* case settles for this court that nothing arbitrary or discriminatory was done.

Entering now upon the question whether the evidence shows there was arbitrary and discriminatory action, it is a fair statement in the rough that the testimony was in conflict and that it should have been left to the board of equalization to resolve this conflict instead of turning the federal court into a reviewing tribunal.

The District Court ruled that no direct benefits to the property of the appellees within the City are shown. (M. 90, 92).

It cannot be stressed too much that the major prim-ise for all this is utterly lacking. It is difficult to see how it may be found there was discriminatory assessment as between agricultural lands and the property of the appellees when there is neither plea nor proof what these respective properties were worth; or what the assessment would be after equalization. (M. 5).

There is a statement that the project "was designed for the purpose of draining upwards of 20,000 acres of agricultural land", and there is a detailed description of where this land is located. There is no allegation that the drainage district in fact had that many acres; there is not even a suggestion as to the quality of this land or its value. Nor is there allegation as to how much the property of the appellees was worth. What basis is there for holding that there was discrimination between these two classes of property. If the property in lands that was subject to the assessment and the property of the appellees subject to assessment are of the same value, it would not be unreasonable to say it would not be arbitrary to tentatively fix benefits at the same rate, and for that matter, in the same sum.

Passing that, we have affirmative testimony that

all that was done was on careful and honest consideration and all substantially on the same basis. (R. 161, 162, 163, 166, 232, 233, 238, 239). While the trial court said (M. 91) there is no evidence that the Railroad Companies were treated like owners of agricultural lands and that the discrimination is palpable — there was testimony in detail which tended to show that there was no such discrimination and that the method used was not arbitrary. (R. 160, 256).

While the trial Court found there was a method of assessment that would necessarily produce manifest inequality in that farm property was assessed wholly according to its area and position, which was not done as to other properties (M. 84) — there is much testimony there was no discrimination and there is very much there was none against the City, and some that there was. (R. 160, 162, 170, 178, 178, 182, 232, 233, 234, 234, 241, 242, 253, 254, 255, 256, 257, 258, 260, 262, 263, 266).

The Court found the method for assessment was arbitrary and took a farciful veiw as to benefits which was not calculated to produce even approximately correct general results. (M. 84).

As to the methods not being arbitrary, much is found. (R. 162, 232, 233, 238, 239, 251). There is testimony that the method used involved great care and consideration, and therefore was not arbitrary. (R. 162, 163, 233, 234). In that connection, it was suggested in evidence that probably the tentative assessment might differ from the actual benefits received but that this could have been in a measure helped if the appellees had not seen fit to make no appearance and to give help by presenting their views. (R. 155, 156, 158).

There is testimony that the property of the appellees was in such position with reference to the river and otherwise as at least to be exposed to danger from flood. (O. 163, 182, 183, 184, 245; R. 169, 170, 171, 191, 192, 239, 240). Testimony, that past floods had

done no substantial damage to the property of any of the appellees. (M. 224, 246, 247; R. 179, 180, 181, 183, 193, 198, 200); that no Power Company property had been flooded since 1900 (N. 244); that the Rock Island has not suffered from even a threat of water damage from January 1, 1913, to June 1, 1920, (R. 181, 182); nor the Milwaukee since 1897. (R. 193). And there is testimony that this is so of practically all the appellees. (R. 177, 179, 189, 183, 189, 191, 194, 200, 103). On the other hand it is testified there was past flood injury. (R. 172, 183, 193, 200). (M. 247).

There is testimony that the project has accomplished nothing that could not have been accomplished at trifling expense by simply abandoning the old ditches and preventing the flow of the water through the bluff and into the river. There is variety of testimony as to why the project is needless. (R. 172, 180, 191, 204, 207). And testimony to the effect that it had done more harm than good. (R. 189, 193, 201, 204). And that no protection against floods was needed. (N. 244, 245; R. 193, 196, 197, 198, 202, 205, 206, 207, 297, 198; O. 196; M. 246, 247) — and that the elevations were too high to need protection against floods. (R. 177, 183, 188, 189, 191, 196, 199).

There was conflict of whether or not the operating expense of railroads was lessened. (R. 163, 168, 171, 172; N. 246).

There was much testimony without any substantial dispute that the Board acted honestly and according to honest judgment so that the most that can be claimed is that there was an honest mistake of judgment. (R. 232, 233, 234, 251, 255, 256, 258, 262). As said in *Embree v. K. C. Dist.*, 240 U. S. 242, 36 Sup. Ct. at 320, it presents a question which is one of opinion and degree. There is testimony that benefits accrued. One illustration is that in the past tracks had been washed out so that trains could not be run for eight or ten days. (M. 33; R. 192). Other instances are given. (R. 190, 200, 202, 241, 242, 243). Another instance is that, be-

fore, well water in the city was often unfit for drinking which was remedied after the project was constructed. (R. 279, 281). There are still other instances. R. 155, 156, 518, 234).

The Schodjt's dam was put in to prevent the water that had broken from the river into the ditch from being diverted; this was done at the request of the appellee Power Company, which had objected to the ditch taking its power; and the diversion was further promoted by the controlling gates at Thompson's. (R. 233).

It was testified that there was no benefit to the Power Company. (P. 197, 198, 295, 296, 297; R. 195, 196, 241, 259, 264). As to this there is conflict. (N. 243, 246; R. 241, 259, 264).

One witness gives it as his opinion that no benefit has resulted to railroad property. (R. 189). Link speaks to the same effect as to benefits to the Power Company plant. (R. 206).

When it is all said and done, there is nothing in all this that excused the appellees from presenting their claims to the Board of Equalization.

As to arbitrary method of assessment see page (5 ante); as to arbitrariness with reference to unit method (ante 45); as to arbitrariness concerning benefits (ante pp. 39 to 44, both inclusive, 46, 47, 48); as to benefits (ante 5), (And 55, 56, 57, 58); as to arbitrariness by discrimination (ante 34); as to discrimination (ante 5, 35 to 39, both inclusive, 44).

A brief on this subject will be presented in the summary that follows.

Each of the defendants made an affirmative plea of stoppel. These were never met by any denial in pleading. — (See O. 39; M. 34; S. 39; N. 38; P. 38; R. 39). Indeed, we are unable to find that the plea was met at all. It sets out specific conduct. A rought and fairly accurate summary is that the City is estopped because it was a signer on the petition that initiated the project, (M. 30, 31, 32, 33; N. 39; O. 35) — and that its representatives attended some of the proceedings and its commission witnessed some of the work while in progress — and that there is an estoppel by the acts of the railroads in co-operating as to the construction by carrying freight and men for it, and being paid for it. (N. 275, 276, 266; R. 237, 231, 279, 280, 183, 191, 211; S. 245).

The Circuit Court of Appeals says:

> "Appellants plead estoppel against all of the appellees, and claim that appellees are not in position to maintain their actions, for the reason that as to some of the railroad companies, the engineering departments have been in close touch with the drainage ditch proceedings; that some of them were assessed for benefits received upon the construction of the original ditches in the same territory, received benefit thereby, and have not protested before the bringing of this action. As to some of the appellees it is claimed that their officers showed interest in the construction work and encouraged the board of commissioners to do the work; that some of the appellees, for instance, the Chicago, Milwaukee & St. Paul Railway Company, hauled men and materials used in the construction work, and stopped trains between stations to unload men and materials."

> "As to the City of Sioux Falls, it is claimed by way of estoppel that under due authority the

mayor and city auditor signed the petition for the project". (R. 264).

It will be seen that the Circuit Court of Appeals points out what, the City did, and then stops; that it recognizes the acts pleaded (and which the undisputed testimony shows were done) and then holds that these acts do not constitute an estoppel because the city and the railroads did not have notice that they were to be affected by the drainage construction or by assessment for its costs. (R. 264).

This holding is undoubtedly in response to an argument made by appellees that under the South Dakota statute no notice was required to be given until the assessment of benefits had been made; that, therefore, up to that time appellees have no knowledge that their property situated outside of the original assessment area of the old ditches is affected by the drainage construction or would be assessed for its costs — and that all the acts upon which an estoppel is claimed were done during the time construction work was going on and long before the making of an assessment of benefits and the publishing of the equalization notice.

All this is a misconception of the record and of the statute law. The pleadings by the appellees demonstrate it is not claimed that no notice was required until the assessment of benefits had been made. The attack was, first, that a notice required by Section 8461 of the Revised Statute to be given earlier than that is not such notice as the persons affected are entitled to have under the Constitution of the United States. The exact complaint is it is too general, for in that, while it requires that notice be given as to the hearing on the petition asking establishment and though it is to describe the route of the proposed drainage and the tract of country likely to be affected thereby, it may do this in general terms, and that this is not helped by the requirement that it describe the separate tracts through which the proposed drainage will pass and to give the names

of the owners thereof as they appear from the records of the office of the Register of Deeds on the date of the filing of the petition, the complaint is that the statute makes no requirement as to who shall be summoned to the hearing except that it shall be "all persons affected by the proposed drainage" and "all persons deeming themselves damaged by the proposed drainage or claiming compensation for the lands proposed to be taken for the drainage". It was said in the printed brief presented to the Circuit Court of Appeals that while the board thus had before it the names of the property owners through wose land the drainage ditch passes neither it nor anyone has the slightest idea of what land will be assessed for the cost of construction because the only notice that is given is this general notice "to all persons affected"; that there cannot be found a case in which a mere general notice directed to "all persons affected" has been held to be sufficient notice to a property owner that his property is to be included within the assessment area; that under the statutes the first time the description of the land "affected" is published is when the notice of equalization is given. In fewer words, in framing their pleadings appellees did not present that they were not estopped because what they saw was done before any notice was required to be or was given. They say nothing as to the estoppel pleaded against them and urge nothing on any head except that while there is to be and was given a notice before they saw what it is claimed estops them, that such notice is violative of the federal constitution.

That this was the issue on this point is made clear by the opinion of the trial Judge:

> "Plaintiffs note that this statute except as to property owners through whose property the proposed drainage will pass provides only this general notice, and especially complain that it gives no property owner any notice that his particular tract of land is included in the lands affected by the proposed drainage, and insisted the notice is broad

enough to take in each and every tract of land included in the boundaries of the county in which the drainage project is instituted. It is true that other than this general notice there is no notice whatever given to the property owner that his particular land is affected by the drainage proposition or that he has any interest in it or will be mulched in assessment for benefits by reason thereof. He receives no summons or other notice, either by personal service or by mail. He has, however, the general notice given in the published summons by the commissioners to "all persons affected by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established and constructed". (M. 77).

He then holds that this general notice is constitutional:

> "I repeat that under the South Dakota statute there is ample provision for notice to every land owner and an opportunity given to be present at the hearing at which time and place he may assert all objections against the validity and justice of the proposed charge upon his property before the tax is levied and carried by the county auditor as such on the books of his office and made a lien upon the property". (M. 82, 83).

In still other words, there was no issue here on whether certain acts constituted or did not constitute an estoppel; if it be assumed there was such issue, none that there was estoppel because when the acts upon which an estoppel is ureged were done no notice had been given which would cause the one sought to be estopped to know that what he saw was something that might affect him — and that the only issue was whether or not a notice which in fact was given and which advised the one sought to be estopped with notice that what he saw affected him, was unconstitutional. — And it is settled by the highest court of the State and binding on

this court that the general notice was sufficient under the statutes of South Dakota. — *State v. Pound,* 34 S. D. 628, 150 N. W. at 287, 288.

There was also a claim by the appellees that if the general notice be assumed to be valid and sufficient yet the statute is fatally defective because while it provides notice the provision does not include any notice to railroad corporations; that as to them no notice at any stage of the proceedings is provided. (See Omaha brief, in the Circuit Court of Appeals, pp. 30, 31, 32).

Finally the Circuit Court of Appeals dismisses the subject of estoppel with the following statement:

> "There can certainly be no just claim of estoppel as to those appellees whose property was not within the area of the original drainage ditch No. 1 and No. 2". (R. 264).

We are unable to understand how the fact that one does not have property within the area of the old ditches prevents his being estopped from objecting to the new ditches unless he had no property within the area of the new ditches. We concede for the sake of argument that one who has no property within the new area might not realize that what he saw in the way of ditch construction affected him, and on that premise could not be estopped by what he saw and apparently acquiesced in. But if he had property within the new area and remained silent when he should have spoken the fact that he owned no property within the area of the old ditches certainly does not destroy the estopel. On this point it cannot be the test whether one did or did not own property in the old drainage ditch territory. Whoever owned property in the new area would or would not be estopped without any reference to where else he did or did not own property.

We submit it was error not to hold that appellees are estopped.

SUMMARY OF ARGUMENT, AND BRIEF.

1.

AMOUNT IN CONTROVERSY.

Ruling on (R. 262, 26).

The amount in dispute must exceed Three Thousand Dollars even if a federal question is presented.

Sec. 991 (Judicial Code, § 24, as amended, Act, Dec. 21, 1911; c. 5) 1, U. S. Compiled Stat., 1916, annotated, bottom page 553.

The suits at bar are within none of the exceptions.

Idem, bottom pages, 758, 764, 784, 786, 798, 800, 802, 803, 805, 913, 814, 817, 830.

Such amount must be shown, affirmatively.

Johnson v. Wilkins, 116 U. S. 392; 6 Sup. Ct. Rep. 600.

Washington Ry. v. District, 146 U. S. 227; 13 Sup. Ct. 64.

Green v. Fisk, 154 U. S. 668; 14 Sup. Ct. at 1193.

Citizens Bank v. Cannon, 164 U. S. 319; 17 Sup. Ct. at 90.

Though there is an allegation that the drainage project was intended to drain 20,000 acres of agricultural land and though it appears that the board in assessing benefits considered the value of the property in the district belonging to appellees, there is neither plea nor proof as to what either said lands or said properties were worth; and even if there had been such plea and proof it would avail nothing because the values of the said lands and properties are not the amount in controversy.

At the least, proving the values of these was an essential step toward arriving at an amount in controversy.

Washington Ry. v. District, 146 U. S. 227; 13 Sup. Ct. 66.

Johnson v. Wilkins, 116 U. S. 392; 6 Sup. Ct. 600.

These suits were brought at a time when nothing had been done beyond making a tentative assessment of benefits and giving notice of time and place at which this tentative apportionment would be equalized.

It is said in *Green v. Fisk,* 154 U. S. 668; 14 Sup. Ct. 1193:

> "There has been no order even for an accounting, and as yet we are not advised there ever will be one; much less that, if it should be made, a balance would be found due from the appellant sufficient to make the value of the matter in dispute, on an appeal by him, such as our jurisdiction requires. As the appellant, to sustain his appeal, must show affirmatively that more in pecuniary value than our jurisdictional requirement has been adjudged against him, he has failed to make a case for us to ronsider."

In *Washington Ry. v. District,* 146 U. S. 227, 13 Sup. Ct. at 66, an appeal was dismissed where the bill alleged that complainant had refused to pay a certain tax and if same were held to be a lawful tax, "the amount which would probably be computed and charged against the complainant by the said municipal authorities would reach nearly if not quite the sum of $5,200.00 besides interest, fines, and penalties".

It is said in *Milheim v. Moffat,* 262 U. S. 710, 43 Sup. Ct. at 699:

> "It is contended that the commission arbitrari-

ly adopted an ad valorem basis of appraisal for the apportionment of benefits to the several parcels of land within the district, without reference to the actual benefits in each. This argument erroneously assumes that the commission had finally adopted such a basis for its appraisal. This is not the case. It had merely adopted a tentative ad valorem basis, subject to modifications and corrections, before final confirmation, after the hearing of objections filed by land owners, of which public notice was given. These land owners did not seek to have the commission modify or correct this tentative basis of apportionment or file any objections to the appraisal of benefits to their properties. Presumably if the tentative appraisal was made on an erroneous basis it would have been modified upon a proper showing. Having failed to object to the tentative ad valorem basis adopted by the commission or to appear before it for the purpose of obtaining modifications or corrections as to their lands before the final adoption of such basis, they have here no sufficient ground of complaint.

"Where a city charter gives property owners an opportunity to be heard before a board respecting the justice and validity of local assessments for proposed public improvements and empowers the board to determine such complaints before the assessments are made, parties who do not avail themselves of such opportunity cannot be heard to complain of such assessment as unconstitutional".

The amount cannot be based upon any contingent loss, including what may result from the probative effect of an adverse judgment, however certain it may be that such loss may occur.

Ross v. Prentiss, 3 How. 771.

New England Co. v. Gay, 145 U. S. 123; 12 Sup. Ct. 816.

As to the prematurity of attack upon proposed tax-

ation it is held in *Western Union v. Howe,* (C C. A.) 180 Fed. at 53, 54, that there may not be relief, "against anticipated injury consequent upon anticipated assessment before the assessment was completed".

The presumption is that the courts of Washington will not deny to any of its citizens or corporations the equal protection of its Constitution. If, however, it should turn out that we are mistaken in this respect, the complainant will have his remedy in an appeal from the highest court of the state to the Supreme Court of the United States.

> "The doctrine here is that the aggrieved party must first invoke the aid of the state courts, since it is for the state courts to remedy the acts of state officers done without authority of, or contrary to, state law. In such a case the complaining party must exhaust his remedy in the state courts by prosecuting his case to the state court of last resort for cases of that character; and, until he has done this, it cannot be said that he has been denied due process or deprived of his property by state action. If the decision of the highest state court to which he can resort is adverse to him, he can then take his case on writ of error to the United States Supreme Court upon the ground, not that the proceeding or action complained of was contrary to or unauthorized by state law, but upon the ground that what was complained of as a deprivation of life, liberty, or property without due process of law in violation of the fourteenth amendment has at last received the sanction of the state and, in effect, become the act of the state itself". 5 Ency. U. S. Sup. Ct. Rep. p. 545.
>
> *Seattle Electric Co. v. Seattle, R. & S. Ry. Co.,* 185 Fed. at 372.

2.

NO SUBSTANTIAL FEDERAL QUESTION WAS PRESENTED.

Each of the appellees other than the City of Sioux Falls has diversity, had there been an affirmative showing of sufficient amount in controversy these five had the right to enter the federal court, even though no substantial federal question was presented. But the City of Sioux Falls needs both the amount in controversy and the substantial federal question.

It is our position that no substantial federal question was presented because at the time these bills were prepared it was as well settled as any law proposition has ever been that in a collateral action such as this the federal courts could grant no relief as to anything complained of in the bills.

Appellees sum up that the due process of law clause requires that "at some stage of the proceedings the tax payer must have an opportunity to appear and be heard both as to the validity of the tax and as to the amount (Omaha brief, in C. C. A. 17); that in a special assessment proceeding the tax payer must have the right at some time or other in some manner or other, to be heard both as to the validity and as to the amount of assessment. — (Idem 20).

Exactly this is held in:

Londoner v. Denver, 210 U. S. 379, 28 Sup. Ct. 714.

Voight v. Detroit, (Mich.) 82 N. W. 253; being 184 U. S. 115 on appeal.

Embree v. K. C. Dist., 240 U. S. 242; 36 Sup. Ct. 320.

McGregor v. Hogan, 263 U. S. 234; 44 Sup. Ct. 51.

Paulson v. Portland, 149 U. S. 30.

Spencer v. Merchant, 125 U. S. 345, 8 Sup. Ct. 926.

The trial court held that the general notice given

as to the hearing on the petition for establishment saved the case from the Fourteenth Amendment. (M. 77).

This notice gave time and place for hearing. (R. 55; O. 55; M. 62; N. 54; S. 53; P. 56); it concluded with a statement "all persons affected by said proposed drainage are hereby summoned to appear at said hearing and show cause if any they have why the said drainage should not be established and constructed" and that "reference is hereby made to the files in said proceedings for further particulars". (M. 71; R. 62; O. 65; P. 65; S. 63; N. 63).

This was sufficient to give the board jurisdiction.

Lamb v. Connolly, (N. Y.) 25 N. E. 1043, 1044.

Hennessey v. Douglas, (Wis.) 74 N. W. 987.

Pittsburg v. Backus, 154 U. S. 421, 14 Sup. Ct. 1116.

There was sufficient notice of time and place at which the tentative apportionment of benefits would be equalized. (S. 17; R. 19; N. 19; O. 19; M. 19; P. 19).

On the equalization hearing review could be had on every matter set forth in the petition asking establishment.

Fallbrook v. District, 164 U. S. 112, 17 Sup Ct. 62.

People v. Hagar, 52 Calif. at 183.

There could be review on whether the lands would be charged with benefits including all that in the judgment of the board would be benefited. (Opinion of trial Judge, M. 78).

There was the right to make objection to the organization of the district and whether lands were included that should not be and on whether lands included would be benefited.

Embree v. K. C. Dist., 240 U. S. 242, 36 Sup. Ct. 320.

To raise question as to benefits to the owner's lands including all questions of fact which embraces the question of benefit to the lands.

Fallbrook v. District, 164 U. S. 112, 17 Sup. Ct. 62.

On whether the benefits tentatively assessed were out of proportion. (Idem). And as to the apportionment among the land owners.

Spencer v. Merchant, 125 U. S. 345, 8 Sup. Ct. 926.

They could there raise all pertinent and available questions and dispute their liability or its amount or extent. (Idem). And question the constitutionality and validity of the act; also the amount and mode of the apportionment itself. (Idem).

Could present any legal ground of objection including fraudulent discrimination.

Keokuk v. Salm, 258 U. S. 122, 42 Sup. Ct. 208.

Had the right to present whether the project would be a public benefit, as well as whether it would benefit their lands.

Soliah v. Heskin, 222 U. S. 522.

They were bound before attempting to enter any court to exhaust the adiministrative tribunals which the state had provided for raising all of the above questions.

Fallbrook v. District, 164 U. S. 112 17 Sup. Ct. 62.

And it is only where the matters that may be presnted at the hearing are unduly limited that the due process of law clause can be invoked.

Georgia Railway v. Wright, 207 U. S. 127.

If the legislature had itself established this district this would settle the propriety of establishing, or in-

clusion, or what is benefited and even how much. The only difference between legislative establishment and establishment on authority delegated by the legislature is that there must be such notice and opportunity to be heard as is above set forth.

Embree v. K. C. Dist., 240 U. S. 242.

Londoner v. Denver, 210 U. S. 373, and cases cited.

3.

These suits were prematurely brought.

The amount cannot be based upon any contingent loss, including what may result from the probative effect of an adverse judgment, however certain it may be that such loss may occur.

Ross v. Prentiss, 3 How. 771.

New England Co. v. Gay, 145 U. S. 123, 12 Sup. Ct. 816.

As to the prematurity of attack upon proposed taxation it is held in *Western Union v. Howe,* (C. C. A.) 180 Fed. at 53, 54, that there may not be relief, "against anticipated injury consequent upon anticipated assessment before the assessment was completed".

4.

It does not violate the equal rights clause that there was gross overvaluation.

Baker v. Druesedow, 263 U. S. 137, 44 Sup. Ct. 41.

It does not matter how unconstitutional, arbitrary, or discriminatory the method was there may not be this collateral suit where the administrative tribunals provided by the laws of a state have not been exhausted.

Martin v. Dist., 205 U. S. 135, 27 Sup. Ct. 442.

In *Dodge v. Brady,* 240 U. S. 122, being 36 Sup. Ct. 277, it was said, on motion to dismiss complaint for want of jurisdiction because complainant had an adequate remedy at law:

> "And this doctrine has been repeatedly applied until it is no longer open to question that a suit may not be brought to enjoin the assessment or collection of a tax because of the alleged unconstitutionality of the statute imposing it." — Citing cases.

Where there is permitted to make payment of tax under protest and then to bring an action at law to contest the validity of the tax, the rule applies that:

> "The collection of taxes under state authority will not be enjoined by a court of the United States on the sole ground that the tax is illegal, but it must appear that the party taxed has no adequate remedy by ordinary processes of the law, and that there are special circumstances bringing the case within some recognized head of the equity jurisdiction".

Long v. Norman, (C. C. A.) 289 Fed. 67, with many citations of Supreme Court decisions.

Stonebraker v. Hunter, (C. C. A.) 215 Fed. 67, was an action to enjoin taxes alleged to be illegal:

> "It is and must be conceded that independently of statute an action in equity will not lie to enjoin illegal taxes in the absence of some specific grounds for equitable relief. Ordinarily there is a plain, speedy and adequate remedy at law, and, to maintain an action in equity to enjoin such taxes there must be some distinct ground of equitable jurisdiction, such as to avoid a multiplicity of suits or the like."

Citing the *Singer* case, 229 U. S. 481; *Pittsburg Railway v. Board,* 172 U. S. 32; *Shelton v. Platt,* 139 U. S. 591; *Stanley v. Supervisors,* 121 U. S. 535.

The rule that the state may not directly or indirectly keep one having diversity out of the federal courts is in the last analysis a prohibition of discrimination. In other words, a state that permits a suit in its own courts by its own citizens is bound to know of course that a

citizen of another state has an election to enter either the state or the federal court with such suit. All that is prohibited is interference by the state with this additional right of the non-resident. That is to say, as to a suit that both the resident and the non-resident can maintain in state court the state must leave the non-resident free to sue in federal court.

To put it another way — if no one may sue in the court of the state without first exhausting the state administrative tribunals, no one may sue in federal court without exhausting those tribunals.

Nothing less can explain the repeated holding of the federal courts, that exhausting the state administrative machinery is a condition precedent to suing for injunction, at all.

> "A suit to enjoin the enforcement of a municipal ordinance on the ground that it will deprive complainant of property without due process of law is not within the jurisdiction of the federal court as involving a constitutional question where the state constitution contains a similar provision and the ordinance, if invalid under one is equally so under the other, the rule being that in such cases the remedy must be first sought in the state courts." — *Seattle Electric Company v. Seattle Railway,* (C. C. A) 185 Fed. 365.

The assertion that there was disregard of statutory directions is unfounded in fact and the highest Court of the State has ruled as to this very project that there was no irregularity which prevented the acquisition of full jurisdiction by both the assessing Board and the same body as a Board of Equalization. *Gilseth v. Risty,* 46 S. D. 374. (140).

The contention that the statute law was administered in an arbitrary and discriminatory manner and that the assessment of benefits was without a basis in rea-

son, is unfounded in fact. The highest Court in sustaining the project held to the contrary, and no constitutional objection on that ground was ever presented.

Hinds v. Township, (Mich.) 65 N. W. 545. (141).

At any rate, there was conflict on all this and there is no reason why the objection that there was such arbitrary action should not have been submitted to the Board of Equalization, assuming for the sake of the argument that appellees were not bound so to submit even if there had been no such conflict. (144 to 147).

It is difficult to see how there may be claim of arbitrary or discriminatory assessment where there is no showing what the properties of the respective parties were worth, and where as yet it cannot be known, because no equalization has been had, what the assessment will finally be.

5.

No substantial Federal question was presented. (92, 93, 94).

In *Dodge v. Brady,* 240 U. S. 122, being 36 Sup. Ct. 277, it was said, on motion to dismiss complaint for want of jurisdiction because complainant had an adequate remedy at law:

> "And this doctrine has been repeatedly applied until it is no longer open to question that a suit may not be brought to enjoin the assessment or collection of a tax because of the alleged unconstitutionality of the statute imposing it." — Citing Cases.

Where there is permitted to make payment of tax under protest and then to bring an action at law to contest the validity of the tax, the rule applies that:

> "The collection of taxes under state authority will not be enjoined by a court of the United States on the sole ground that the tax is illegal, but it

must appear that the party taxed has no adequate remedy by ordinary processes of the law, and that there are special circumstances bringing the case within some recognized head of the equity jurisdiction".

Long v. Norman, (C. C. A.) 289 Fed. 67, with many citations of Supreme Court decisions.

Stonebraker v. Hunter, (C. C. A.) 215 Fed. 67, was an action to enjoin taxes alleged to be illegal:

> "It is and must be conceded that independently of statute an action in equity will not lie to enjoin illegal taxes in the absence of some specific grounds for equitable relief. Ordinarily there is a plain, speedy and adequate remedy at law, and, to maintain an action in equity to enjoin such taxes there must be some distinct ground of equitable jurisdiction, such as to avoid a multiplicity of suits or the like."

Citing the *Singer* case, 229 U. S. 481; *Pittsburg Railway v. Board,* 172 U. S. 32; *Shelton v. Platt,* 139 U. S. 591; *Stanley v. Supervisors,* 121 U. S. 535.

The rule that the state may not directly or indirectly keep one having diversity out of the federal courts is in the last analysis a prohibition of discrimination. In other words, a state that permits a suit in its own courts by its own citizens is bound to know of course that a citizen of another state has an election to enter either the state or the federal court with such suit. All that is prohibited is interference by the state with this additional right of the non-resident. That is to say, as to a suit that both the resident and the non-resident can maintain in state court the state must leave the non-resident free to sue in federal court.

To put it another way — if no one may sue in the court of the state without first exhausting the state administrative tribunals, no one may sue in federal court without exhausting those tribunals.

Nothing less can explain the repeated holding of

the federal courts, that exhausting the state administrative machinery is a condition precedent to suing for injunction, at all.

The administrative state tribunals must be exhausted first because it is not to be assumed that these tribunals will not modify and correct as justice demands.

Milheim v. Moffat, 262 U. S. 710; 43 Sup. Ct. 699.

To like effect is *Seattle v. Seattle Railway,* (C. C. A.) 185 Fed. at 372.

Oklahoma permits injunction to restrain the illegal levy of any tax.

> "If this section would authorize a suit in the state court then the plaintiff being a citizen of Missouri could maintain the action in the United States court."—Citing *Cummings v. Merchant Bank,* 101 U. S. 153.

The question, therefore, is whether this action could be maintained in any of the courts of Oklahoma.

> "We find that the Supreme Court of Oklahoma has uniformly held, where the question was considered by it, that such suit would not lie, and there being no allegation in the bill of any distinct grounds of equitable jurisdiction" — dismissal of the bill is affirmed.
>
> *Stonebraker v. Hunter,* (C. C. A.) 215 Fed. 69, 70.

Each of the lower courts laid much stress on the fact that the board had not observed relevant statutes. But all relevant statutes were observed and thus was obviated all the objections under the Fourteenth Amendment. (M. 84, 85).

The statute gave ample opportunity to be heard both by the administrative tribunals and afterwards on appeal from the final decision to the regularly constituted courts of the state. (M. 90). — Wherefore, no objections

on the score of unconstitutionality lies in collateral suits such as the one at bar.

Soliah v. Heskin, 222 U. S. 522.

Whatever discrimination there may be is not available where the parties fail to avail themselves of what the Board of Equalization might do.

First National Bank v. Board, 264 U. S. 450; 44 Sup. Ct. at 386.

Plaintiffs have failed, likewise, in showing systematic refusal on the part of the state board to allow a proper reduction in the valuation of any railroad.

Southern Railway Co., 260 U. S. 519; 43 Sup. Ct. 195.

Union Pacific v. Commissioners, (C. C. A.) 217 Fed. 541, is a suit by the railroad against the commissioners and its tax collecting officers to restrain the collection of certain taxes levied for the year 1912, and the complaint charges that the property of the company was assessed at one-third of its actual value while all other property was assessed at not to exceed one-fifth of its value. It is further charged that some classes of property which should properly have been assessed for the purpose of taxation were wholly omitted by the assessors. These discriminations are alleged to have been systematic and deliberate. Temporary injunction was denied.

> The question whether an assessment is excessive is not for the courts to try and the board of review is the only tribunal to try and determine that question.
>
> The board of review is a tribunal provided by law in which the taxpayer may appear to contest an unequal or excessive assessment. Failing to appear there, he is estopped to assail the assessment afterwards. Citing cases.
>
> *Township v. Rose,* (Mich.) 53 N. W. at 928.

Even if a substantial Federal question were presented, appellees had no right to enter the District Court because the amount in controversy was insufficient. (83, 84).

6.

While the appellees did not have a sufficient amount in controversy, appellants do have a sufficient amount to maintain appeal from the Circuit Court of Appeals to this Court.

The entry into the Federal Court is governed by one statute, the entry into the Supreme Court on appeal by an independent one.

On the right to appeal, the test is how much has been adjudged to the appellees. — *Green v. Fish,* 154 U. S. 668, 14 Sup. Ct. 1193.

Appellees will, if there be an affirmance, be denied the right to raise a $250,000.00 assessment and therewith to pay the drainage warrants outstanding. (80).

The appellees having entered the Federal Court on the plea that more than $3,000.00 was in controversy, will not now be heard to say that their opponents' may not maintain appeal because there is less than $1,000.00 involved.

Butte v. Clark, 249 U. S. 12; 39 Sup. Ct. 233. (81).

7.

There was no denial of the equal protection of the laws in violation of the Constitution of the United States. (86, 87).

There was no plea asserting such violations. (P. 87, 89).

There was nothing in the administration of the statutes that violated the Federal Constitution. (M. 88). It is doubtful to say the least whether the decision of either of the lower Courts is addressed to any viola-

tion of the Constitution of the United States; and the trial Court expressly ruled that the due process clause had not been violated. While it is true it discusses denial of the equal protection of the laws, we submit it did not place the decision in whole or in part on that violation — and the Circuit Court of Appeals declined to determine any constitutional question; so that at no time was it the fact or was it held that the charge of unconstitutionality had been sustained.

8.

No fraud was charged, but each of the lower Courts largely based decision on the existence of a fraud said to consist of the pretense that an independent drainage project had been established, when in truth this was a scheme to raise the larger amount that could be raised for the new project in order to repair old ditches which the appellant Board had inefficiently constructed. (95, 96).

No such subterfuge was established by the evidence, and the highest court passing upon this very project, held there was no fraud of any kind, and that the project was in truth a new and independent drainage system.

At all events, opportunity was given to present objection on the ground that there was such subterfuge, to the Board of Equalization. (96, 97, 98, 99).

There was at any rate no fraud that will avail because nothing was done to prevent full presentation of all objections to the administrative tribunals. (101).

Where the administrative tribunals and the appeal provided by state laws are not exhausted, chancery has no jurisdiction where nothing is involved but the unconstitutionality of the tax. — *Shelton v. Platt,* 139 U. S. 591, 11 Sup. Ct. 648, 649. — *Boise v. Boise,* 213 U. S. 276, 29 Sup. Ct. 428.

A non-constitutional tax or one tainted with fraud

still presents nothing but the case of an invalid tax and where the administrative relief is not exhausted, invalidity of a tax may not be urged. — *Union Pacific v. Commissioners,* (C. C. A.) 217 Fed. 544; *Shelton v. Platt,* 139 U. S 591, 11 Sup. Ct. 647, 648.

9.

Section 267, Judicial Code, reads as follows:

> "Suits in equity shall not be sustained in either of the courts of the United States in any case where a plain adequate and complete remedy may be had at law."

And it was said in *New York Guaranty Company v. Memphis,* 107 U. S. 205:

> 'This enactment certainly means something".

Smith v. Douglas County, (C. C. A.) 242 Fed. 856.

There was no right to entertain these suits in chancery because nothing was involved but the claim that a tax was invalid, and there was no recognized ingredient of the chancery jurisdiction in the case; and with the exception of the appellee, Power Company, the real property of appellees could not be affected by either a cloud or a lien. — *Wallace v. Hines,* 253 U. S. 66, 40 Sup. Ct. 436; *Union Pacific v. Board,* 247 U. S. 282, 38 Sup. Ct. 510.

Assuming with each of the lower courts that the board acted wholly without jurisdiction and was, therefore, committing a naked trespass, there was adequate remedy on the law side of either the state or federal courts by a suit for damages. Wherefore there was no chancery jurisdiction. — *Shelton v. Platt,* 139 U. S. 591, 11 Sup. Ct. 648.

10.

It was error to overrule the defendant's plea of estoppel.

The acts upon which the plea is founded are not in dispute. The Circuit Court of Appeals recognizes their existence, but denied the plea on the unfounded ground, among others, that at the time when these acts were done, those who did them had not yet been notified that their property would be affected. (148 to 152).

11.

It would be mere pedantry to cite cases for the proposition that this court is bound by the construction of state laws and state constitution on part of the highest court of the state.

12.

Where the legislature establishes, it settles against all court review, proper inclusion, and that property included will be especially benefited. — *Milheim v. Moffat*, 262 U. S. 710, 43 Sup. Ct. 698.

Whether the estimate of the value of land for the purposes of taxation as fixed by the legislature exceeds its true value, the Supreme Court cannot consider upon writ of error to a state court. — *Spencer v. Merchant*, 125 U. S. 345, 8 Sup. Ct. 926.

As said elsewhere, when the legislative function is delegated the action of the one to whom the power is delegated is conclusive. The only difference is that the board acting under delegation must give notice and opportunity to be heard.

13.

It does not work an inequality which is protected by the constitution of the United States that the administrative boards have not arrived at an assessment of benefits which is exactly equal to the benefit received. — *Southern Railway v. Watts*, 260, U. S. 519, 43 Sup. Ct. 195, 197; *Stanley v. County*, 121 U. S. 535, 7 Sup. Ct. 1238, 1239.

There should not be extracted from the very general language of the Fourteenth Amendment a system of delusive exactness. — *Martin v. Dist.*, 205 U. S. 135, 27 Sup. Ct. 441.

The Fourteenth Amendment "was not intended to compel the states to adopt an iron rule of equal taxation". — *Branson v. Bush*, 251 U. S. 182, 40 Sup. Ct. 115.

Railroads differ in so many respects from other properties that they as a class must be taxed differently or additionally so long as that is not inconsistent with the constitution of the state. — *Southern Railway v. Watts*, 260 U. S. 519, 43 Sup. Ct. 197.

"The equal protection clause is not violated by prescribing different rules of taxation for railroad companies than for concerns engaged in other lines of business". — *Baker v. Druesedow*, 263 U. S. 137, 44 Sup. Ct. at 41.

There must be added the obvious fact that anything that develops the territory which a railroad serves must necessarily be a benefit to it, and that no agency for such development equals that of good roads — and the holding of the Circuit Court of Appeals that the railroad would not be benefited by the improvement cannot be sustained.

Branson v. Bush, 251 U. S. 182, 40 Sup. Ct. 116.

Traffic benefits resulting from the haul of increased croppage on lands within a drainage district, because of overflow protection, are sufficient to authorize assessment of railroad property for improvements within such district, though there were no direct benefits, by way of protecting the company's right-of-way from overflow.

Thomas v. Kansas City Southern Ry. Co., 277 Fed. 708.

Wherever there have been holdings such as in *Kansas City Railway v. Road Improvement District*, 256

U. S. 658, 41 Sup. Ct. 604, or *Gast v. Schnider,* 240 U. S. 155, 36 Sup. Ct. 255, there was direct attack upon the assessment. In other words, the administrative tribunal had been exhausted before the federal court was entered.

14.

BENFITS.

Section 6 of Article 21 of the constitution of South Dakota, makes the drainage of agricultural lands a "public purpose" and gave to the legislature the authority to provide therefor and that the same should be paid for "by special assessments upon the property benefited according to benefits received." Here is no constitutional limitation upon "property benefited". Whatever that "property" might be, it may constitutionally be assessed if benefited. Section 8463, Code 1919, provides, "The proportion of benefits which any county, city * * * * may obtain by the construction of such drainage to *highways or otherwise* and the benefits which any railroad company may obtain for its *property* * * * shall be fixed and equalized together with a proportion of benefits to *tracts of land.*" It will be seen, that the drainage may be constructed for a "public purpose" included in which is the drainage of farm lands, but that under both the constitution and law the only limit in respect to benefits is that the drainage shall be constructed and paid for by special assessments upon "property benefited" without regard to the nature or kind of *property,* the only requirement being that it be *benefited*

Com'rs of Highways v. Com'rs of Drainage, (Ill.) 21 N. E. 207.

The power to treat a drainage improvement as giving relief to agricultural lands is not limited to lands that are absolutely worthless and incapable of growing anything valuable without irrigation. — *Fallbrook v. District,* 164 U. S. 112, 17 Sup. Ct. 66.

Though the land sought to be assessed for benefits in the construction of a drainage ditch were covered by

native timber and underbrush, grass and weeds, though they were never used for for agricultural purposes and were of little or no value, they were nevertheless subject to assessment as agricultural lands.

"Certainly a tract of land need not be in use and cultivated for agricultural purposes in order for it to be agricultural land * * * * (unimproved lands) are agricultural lands before they are prepared as well as afterwards." — *Milne v. McKinnon,* 32 S. D. 627.

15.

To avail of a fraud in any event, even if resort had first been had to the administrative tribunals provided, it must appear there was an undervaluation which was intentional and systematic, and unless that is shown an equal assessment will not be held to violate the equality clause.

Southern Railway Co. v. Watts, 260 U. S. 519, 43 Sup. Ct. 195.

16.

The Courts cannot relieve against honest mistakes of judgment in the administrative Boards.

Maish v. Territory, 164 U. S. 599, 17 Sup. Ct. 198.

Baker v. Druesedow, 263 U. S. 137, 44 Sup. Ct. 41.

Pittsburg Railroad v. Backus, 154 U. S. 421, 14 Sup. Ct. 1120.

And in the Pittsburg rase it was stressed there was no evidence the Board had before it or considered any matter in reaching its determination which it was not proper to receive and consider.

At the most there have been errors of judgment;

and mere errors of judgment are not subject to review in these proceedings.

Southern Railway Co., 260 U. S. 519; 13 Sup. Ct. 195, 196.

All of which is respectfully submitted,

BENJ. I. SALINGER,
Attorney for Appellants.

E. O. JONES and
N. B. BARTLETT
Of Counsel.

Appendix A

PROVISIONS OF SOUTH DAKOTA CONSTITUTION

SECTION 2 OF ARTICLE VI.

§ 2. No person shall be deprived of life, liberty or property without due process of law.

SECTION 6 OF ARTICLE XXI.

§ 6. The drainage of agricultural lands is hereby declared to be a public purpose and the legislature may provide therefor, and may provide for the organization of drainage districts for the drainage of lands for any public use, and may vest the corporate authorities thereof, and the corporate authorities of counties, townships and municipalities, with power to construct levees, drains and ditches, and to keep in repair all drains, ditches and levees heretofore constructed under the laws of this state, by special assessments upon the property benefited thereby, according to benefits received.

Appendix B

SOUTH DAKOTA DRAINAGE STATUTES

(Note: The section numbers at the beginning of each paragraph are those of the South Dakota Revised Code of 1919. The references at the end of each paragraph are to the Session Laws of the various years. The paragraphs as printed constitute the law as it stood at the time of the transactions involved in this suit.)

§ 8458. POWER OF COUNTY COMMISSIONERS. The Board of County Commissioners, at any regular or special session, may establish and cause to be constructed any ditch or drain; may provide for the straightening or enlargement of any watercourse or drain previously constructed, and may provide for the maintenance of such ditch, drain or watercourse whenever such ditch, drain or watercourse shall be conducive to the public health, convenience or welfare, or whenever the same shall be for the purpose of draining agricultural land. (§ 1, ch. 98, 1905; § 1, ch. 134, 1907.)

§ 8459. PETITION. Such board shall act only upon a written petition signed by one or more owners of land likely to be affected by the proposed drainage. Such petition shall set forth the necessity for the drainage, a description of the proposed route by its initial and terminal points and its general course, or by its exact course in whole or in part, and a general statement of the territory likely to be affected thereby. The petition shall be accompanied by a bond with sufficient sureties to be approved by the county auditor, conditioned to pay all expenses incurred in case the board does not grant the petition or the same is denied on appeal. Such petition may be presented at any regular or special meeting of the board and, if sufficient in form, shall be ordered filed with

the county auditor. (§ 2, ch. 98, 1905; § 2, ch. 134, 1907.)

§ 8460. INSPECTION OF PROPOSED ROUTE. It shall be the duty of such board to act promptly upon all drainage petitions. Upon filing such petition the county auditor shall transmit a copy thereof to the state engineer, who, together with the board of county commissioners shall as soon as practicable, inspect the proposed route and, if in the opinion of such board and the state engineer it is necessary, the board shall cause a survey of the proposed drainage to be made by such competent surveyor as such board may select, but such survey shall be under the general supervision of the state engineer. Such survey shall primarily be for the purpose of aiding the board in determining the necessity of the proposed drainage, but may be a complete survey such as will be required for the construction of the proposed drainage and assessment of its cost, or as much less as the board may require. Such survey may extend to other lands than those affected by the proposed drainage for the purpose of determining the best practical method of draining the entire section of country of which the lands proposed to be drained, or a portion of them, are a part. For the purpose of inspection, the county commissioners, surveyors or their employees may enter upon any lands traversed by the proposed drainage or in their judgment likely to be affected thereby. The county auditor shall promptly furnish the state engineer with a copy of the surveyor's report mentioned in the succeeding section and of all maps and plans filed by such surveyor and also with a copy of such further files as the state engineer may ask for. In case the drainage is established the preparation of plans and specifications upon which the contract of construction is to be awarded and also the work of construction, shall be under the supervision of the state engineer. It shall be the duty of the state engineer to render such assistance and advice to the board of county commissioners in regard to such drainage as the duties of his office will permit and he shall be reimbursed by such board for his expenses incident thereto;

provided that in case of minor ditches the state engineer shall not be required to attend with the board of county commissioners at the first inspection, nor to perform subsequent services if in his judgment it shall not be necessary for him to do so. (§ 3, ch. 98, 1905; § 3, ch. 134, 1907; § 1, ch. 102, 1909.)

§ 8461. SURVEYOR'S REPORT—NOTICE OF HEARING. The surveyor shall report in writing to the board of county commissioners and his report shall be filed with the petition. After personal inspection or after the receipt of the surveyor's report the board shall determine the exact line and width of the ditch, if the same shall not be fixed in the petition, and shall file its determination with the petition. The board shall then fix a time and place for the hearing of the petition and shall give notice thereof by publication at least once each week for two consecutive weeks in a newspaper of the county, to be designated by the board, and by posting copies of such notice in at least three public places near the route of the proposed drainage. Such notice shall describe the route of the proposed drainage and the tract of country likely to be affected thereby in general terms, the separate tracts of land through which the proposed drainage will pass and give the names of the owners thereof as appears from the records of the office of the register of deeds on the date of the filing of the petition, and shall refer to the files in the proceedings for further particulars. Such notice shall summon all persons affected by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established and constructed, and shall summon all persons deeming themselves damaged by the proposed drainage or claiming compensation for the lands proposed to be taken for the drainage to present their claims therefor at such hearing. (§ 4, ch. 98, 1905; § 4, ch. 134, 1907; § 2, ch. 102, 1909.)

§ 8462. HEARING ON PETITION. At such hearing any person interested may appear and contest the statements of the petition and matters set forth in the

surveyor's report and the finding of the board as to width and route. The petitioners in like manner may be heard in support of the petition. After full hearing the drainage may be established along the line set forth in the petition or in the finding of the board prior to the hearing, or the board may vary the route thereof, or its width, as deemed practicable or necessary. If the board deems it best to vary the route, or to materially change the initial or terminal points of such proposed drainage so that it will pass through other lands than those described in the notice of hearing, or to increase the width of lands to be taken for the proposed drainage, the board shall adjourn the hearing and give the owners of such lands notice as in case of the original hearing. No open ditch shall be constructed within the limits of any public highway except where the topography of the country makes such construction advisable and in such case the ditch shall be located at a sufficient distance from the center of such highway to permit a roadway of standard width being constructed. If the proposed drainage does not give sufficient fall to drain the lands sought to be drained or will not properly take care of the waters collected by such drainage, the same shall be extended so as to secure the drainage or properly dispose of the water. The hearing in any such case shall be adjourned and notice given to all parties newly affected as in case of the original hearing. When the board of county commissioners shall have fully heard and considered such petition, and all matters in opposition to or in support of the same, it shall, if it finds the proposed drainage not conducive to the public health, convenience or welfare, or not needed or practicable for the purpose of draining agricultural lands, deny such petition, the petitioners to be jointly and severally liable for the costs of the proceeding, the same to be recovered in a civil action. If it finds the drainage proposed or any variation thereof conducive to the public health, convenience or welfare, or necessary or practicable for draining agricultural lands, it shall establish the drainage and shall assess the damages sustained by each tract of land or other property

through which the same shall pass and the damages as compensation for the land taken for the route of such drainage. Any person interested may be heard in the matter of damages or compensation for land and the determination of the board of county commissioners shall be final unless an appeal therefrom, as provided in this article, shall be taken, failure to prosecute such appeal or to appear and contest an award of damages by the board to be deemed conclusively a waiver of any such damages or compensation for land taken or of any claimants right to have the same assessed by the jury. Such drain shall be given a name and the proceeding thereafter taken shall be recorded and indexed in a book kept for that purpose in the auditor's office. (§ 5, ch. 98, 1905; § 5, ch. 134, 1907; § 3, ch. 102, 1908; § 1, ch. 205, 1917.)

§ 8463. EQUALIZATION OF BENEFITS. After the establishment of the drainage and the fixing of the damages, if any, the board of county commissioners shall fix the proportion of benefits of the proposed drainage among the lands affected, and shall appoint a time and place for equalizing the same. Notice of such equalization of proportion of benefits shall be given by publication at least once each week for two consecutive weeks in a newspaper of the county to be designated by the board, and by posting copies of such notice in at least three public places near the route of the proposed drainage. Such notice shall state the route and width of the drainage established, a description of each tract of land affected by the proposed drainage and the names of the owners of the several tracts of land as appears from the records of the office of the register of deeds at the date of the filing of the petition and the proportion of benefits fixed for each tract of property, taking any particular tract as a unit, and shall notify all such owners to show cause why the proportion of benefits shall not be fixed as stated. Upon the hearing of the equalization of the proportion of benefits, the board of county commissioners shall finally equalize and fix the same according to benefits received. The proportion of benefits which any county, city, town or township may obtain by the construction of

such drainage to highways or otherwise, and the benefits which any railroad company may obtain for its property by such construction, shall be fixed and equalized together with the proportion of benefits to tracts of land. Benefits to be considered in any case shall be such as accrue directly by the construction of such drainage or indirectly by virtue of such drainage being an outlet for connection drains that may be subsequently constructed. (§ 6, ch. 98, 1905; § 6, ch. 134, 1907; § 4, ch. 102, 1909.)

§ 8464. ASSESSMENTS. After the equalization of the proportion of benefits the board may make an assessment against each tract and property affected, in proportion to the benefits as equalized, for the purpose of paying the damages and the cost of establishment thus far incurred or to be incurred. The cost of establishment shall include the costs of the service of the board of county commissioners, surveyors and assistants, plans and profiles, publication and filing, and other fees, interest on bonds issued or to be issued and all other expenses incurred or to be incurred that in any way contributed or will contribute to the establishment or construction of the drainage. At the expiration of thirty days after the making of such assessment, a copy thereof certified by the county auditor shall be filed by him with the county treasurer, but before the same is filed a notice shall be given by the board of the time when the same will be so filed, by publication at least once each week for two consecutive weeks in a newspaper in the county to be designated by the board and by posting copies of such notice in at least three public places near the route of such drainage. Such notice shall also contain a description of the property assessed, the name of the owner as it appears in such assessment and the amount of each assessment, together with the amount assessed against the county or any city, town, township or railroad company, and shall also give the date when the assessment will become delinquent, together with the amount of penalty which will then accrue and the date from which interest will begin to run.

From the time of filing such certified copy of assess-

ment in the treasurer's office, the same shall be due and payable and shall be valid and perpetual liens upon the respective tracts so assessed against all persons or governments except the State and the United States and, if not paid within ten days, a penalty of five per cent shall attach thereto and such assessment shall bear interest from the date of the order of the assessment at a rate not to exceed eight per cent per annum payable annually. Such assessment shall be paid to and received by the county treasurer and paid over to the holders of the assessment certificates or upon the order of the board of county commissioners. The board of county commissioners may issue separate assessment certificates against each tract assessed for the amonut of the assessment thereon, and may sell the same at not less than par value with all accrued interest, or may contract to pay for the construction of such drainage with such assessment certificates or with warrants. Such assessment certificates shall refer to the record in the office of the county auditor of the order of assessment and of the filing of a copy thereof in the county treasurer's office, shall transfer to the holder all interest, claim, or right in or to such assessment, bear the same rate of interest, carry the lien of such assessment and be enforcible as provided by law. Assessments for drainage or installments thereof shall be enforced by the county treasurer by sale of the property at the annual tax sale, provided that no such assessment or installment thereof shall be included in the sale of any given year unless the same shall have been delinquent on or before August first of each year. The provisions of Chapters 7, 8, 9, Part 9 of this title shall apply to the enforcement of the lien or drainage assessments so far as such provisions are applicable, except that a treasurer's deed issued upon a delinquent drainage assessment shall recite the fact that the title conveyed is subject to all the claims which the state or any political subdivision thereof may have thereon for annual taxes.

Whenever an assessment for drainage or an installment thereof has been made against any county, city, town or township, as provided in this chapter, the officers

of such county, city, town or township, whose duty it is under the law to make the levy of taxes, shall at the time of the next annual tax levy after the making of such assessment make a levy for drainage purposes of such an amount as shall be necessary to pay such assessment, and return the same to the proper officers as provided by for the other taxes, and such levy and tax shall be enforced and collected in all respects as provided by law for other taxes; provided, that any surplus remaining in any fund at the close of any year may be used by any township to pay and apply on any drainage assessment, as provided herein; provided, further, that in unorganized townships the county commissioners shall be authorized to pay for drainage as provided herein out of any money belonging to such unorganized township, and each succeeding year a like levy shall be made by such authorities until the whole of such assessment for drainage is paid. Instead of making an annual assessment for the purpose of paying the damages allowed in any drainage proceeding and the costs of establishment and construction, the board of county commissioners may issue warrants payable only out of the assessments to be subsequently made, the same to bear interest at a rate not to exceed eight per cent per annum payable annually, and may sell such warrants at not less than the face value thereof and shall with such money so raised pay any damages allowed and cost of establishment and construction. In making assessment for such drainage such warrants and the cost of issuing the same shall be included in the costs of the drainage. (§ 7, ch. 98, 1905; § 7, ch. 134, 1907; § 5, ch. 102, 1909; ch. 130, 1911, and as amended by § 1, ch. 46, Laws of Second Special Session of the Sixteenth Session of the Legislature of South Dakota 1920.)

§ 8465. BIDS—SPECIFICATIONS—CONTRACTS. Whenever sufficient money shall have been collected the damages occasioned by the construction of such drainage and fixed as herein provided shall be paid and thereupon the board of county commissioners shall proceed to construct such drainage and shall let contracts for the construction of the same. Such contracts may require the

contractors to take their pay in assessment certificates or in warrants to be thereafter issued. The contract may be for the construction of the entire drainage or for any portion thereof, and shall be let upon competitive bids, the board reserving the right to reject any and all bids. The lowest responsible and capable bidder shall be accepted but if any landowner affected be an equally low, capable and responsible bidder with a non-owner of the lands affected the former shall be preferred. When any contract shall be let the contractor shall give a bond in such sum as shall be approved by the board of county commissioners, conditioned for the faithful performance of his work and full completion of his contract to the satisfaction of such board. For the information of the contractors in bidding upon the proposed drainage, full plans and specifications shall be filed in the office of the county auditor. If in the judgment of the board of county commissioners the entire drainage or any part thereof can be constructed for less money than the amount of any bid submitted therefor, the board may cause such drainage to be constructed, hire the necessary labor and purchase all necessary material for such construction, without letting contracts therefor. Contracts for building bridges or culverts rendered necessary by the construction of such drainage may be let separately and after the drainage is completed. The cost of constructing such bridges or culverts shall be charged in the first instance as part of the cost of drainage and thereafter such bridges and culverts shall be maintained as part of the highway; provided, that the cost of removing, repairing, enlarging or replacing bridges and culverts already existing across the line of a proposed drainage ditch shall not be charged as a part of the drainage. (§ 8, ch. 98, 1905; § 8, ch. 134, 1907; § 6, ch. 102, 1909; ch. 206, 1917.)

§ 8467. ASSESSMENTS FOR FURTHER COSTS. At any time after the damages arising from the establishment and construction of such drainage are paid and the lands for such drainage are taken, assessments may be made for further costs and expenses of construction. If

the contractors are required and agree to take assessment certificates or warrants for their services, assessments need not be made until the completion of the work when an assessment shall be made for the entire balance of cost of construction, including the services of the board of county commissioners, surveyors and assistants, plans and profiles, publication and filing, and other fees, interest on bonds issued or to be issued and all expenses of every kind and nature that contribute to the establishment and construction of the drain and notice of such assessment shall be given by the board of county commissioners in all respects as provided for the first assessment. And such assessment and the certificates issued thereon shall be in like manner perpetual liens upon the tracts assessed, interest-bearing and enforcible as such first assessments and certificates. The board of county commissioners may sell such assessment certificates at not less than par and thereby raise funds to defray the cost of establishment and construction. If there be no damages to be paid before taking the lands for such drainage, or if the damages have been paid by the proceeds of the sale of warrants only one assessment need be made. In any case, in the discretion of the board, several assessments may be made as the work progresses. Assessments shall be paid to the county treasurer and the money therefrom shall be paid by him to the holders of assessment certificates, or upon the order of the board of county commissioners for the purpose of the particular drainage. (§ 10, ch. 98, 1905; § 10, ch. 134, 1907; § 7, ch. 102, 1909.)

§ 8469. APPEALS. An appeal shall lie for any final order or determination of the board of county commissioners establishing or denying any proposed drainage; fixing damages occasioned by the taking of lands for drainage or caused by such drainage; fixing the proportion of assessments of benefits; or accepting any drainage to the circuit court of the county in which such drainage is located by any one deeming himself aggrieved by any such order or determination. Written notice of such appeal shall be served upon the board of county

commissioners and a bond conditioned to pay all the costs of such appeal, in case the contention of appellant be not sustained in some respect, shall be filed in the office of the clerk of courts, to be approved by him in such amount and with such sureties as he deems necessary. Upon the service of such notice and the filing of such bond, the county auditor shall transmit to the clerk of courts the petition and all other papers and records in the matter or certified copies thereof, when the convenience of the auditor's office would be seriously impaired by the transmission of the original records, and such matter shall be heard as an original action in the circuit court. No appeal shall operate as a stay of proceedings by the board of county commissioners, but the court may upon the taking of an appeal, for good cause shown issue an order staying the further proceedings by the board of county commissioners until the hearing and determination of such appeal. Before granting such stay, the court shall require an undertaking in sufficient amount and with sufficient surety to the effect that if the order appealed from be sustained the person upon whose motion the stay is granted shall pay all damages caused by the issuance of such order of stay. Any number of persons interested may join in the same appeal. Appeals shall be in all cases taken within thirty days from the making of the order or determination appealed from. If, on the trial of such action, it be determined that the drainage as petitioned for and established by order of the board is not conducive to the public health, convenience or welfare or is not necessary or practicable for the purpose of draining agricultural lands, the petitioners shall be jointly and severally liable for all the costs thus far incurred. If the contention of the appellant as to the amount of damages or proportion of benefits, the acceptance of the drainage, of the practicability of the drainage when the route thereof is varied by the county commissioners over the protest and objection of the petitioners, be sustained in whole or in part, the costs of such trial shall be part of the cost of the drainage. Upon an appeal from an assessment of benefits, the court

or jury shall consider not only the relative benefits, to the tract in regard to which the appeal is taken, with reference to the tract taken as a unit, but shall also consider the question as to whether the tract taken as a unit is benefited or not; if benefited, to what extent. (§ 12, ch. 98, 1905; § 12, ch. 134, 1907; § 9, ch. 102, 1909.)

§ 8474. FURTHER POWERS OF BOARD. Where proceedings have been had for the establishment of a ditch, drain, levee, or straightening or enlarging of a natural watercourse under the law as heretofore existing, and the improvement has been established and constructed and assessments made upon the land benefited thereby, or upon any portion thereof, for the cost of such improvement, and where the assessment so made cannot for any reason be enforced, the board shall proceed as in all lands benefited by such improvement in the same manner as if the appraisement and apportionment of benefits had never been made, and it shall proceed in the manner provided in this article, using as a basis the entire cost of such improvement, and in the assessment of such benefits account shall be taken of the amount of assessments, if any, that have been paid by those benefited and credit therefor shall be given accordingly. (§ 17, ch. 98, 1905; § 17, ch. 134, 1907.)

§ 8476. POWERS DEFINED. The powers conferred by this article for establishing and constructing drains shall also extend to and include the deepening and widening of any drains which have heretofore been or may hereafter be constructed, also to straightening, cleaning out and deepening the channels of creeks and streams and constructing, maintaining, remodeling and repairing levees, dykes and barriers for the purpose of drainage; and the board of county commissioners may relocate or extend the line of any drain if the same is necessary to provide a suitable outlet, and shall cause a survey thereof to be made, but no proceedings affecting the rights of persons or property shall be had under this section except upon notice and the other procedure pre-

scribed herein for the construction of drains. (§ 19, ch. 98, 1905; § 19, ch. 134, 1907.)

§ 8482. DRAINS FOR TOWNS AND CITIES. The board of county commissioners shall have authority to establish drainage for or including the whole or any part of any city or incorporated town, including cities acting under special charter, as provided in this article, and it shall have the same authority with respect to the assessment of damages and benefits within such city or town or in other cases provided for in this article, and like notices to such city or town with respect to the establishment of such drainage and the apportionment and assessment of damages and benefits shall be given as is required by this article to be given to the owner of property damaged or benefited by the establishment or construction of such improvement. (§ 24, ch. 98, 1905; § 24, ch. 134, 1907.)

§ 8486. NOTICES, HOW SERVED. Notice by personal service, as of a summons in a civil action, may be given instead of by publication and posting in all cases where notice is provided for in this article. In any case where notice is required under the provisions of this article and any person affected by the drainage has not been notified, either by publication or personally, and a hearing has been had or determination made, such person may be notified personally or by publication and posting, to show cause at a time and place to be fixed by the board of county commissioners, and to make return or claim damages as in case of the original hearing. Any such omitted person may be brought in on such due notice at any stage of the proceeding, or after it has been otherwise concluded. The enforcement of any assessment shall not be enjoined for want of the notice provided for in this article, except pending an application to the board of county commissioners for the determination of such matters as to which any person deems himself not bound because of want of notice. (§ 28, ch. 134, 1907.)

§ 8488. DEFECTS IN PROCEEDINGS DISREGARDED. Any defect or irregularity not affecting the substantial rights of parties interested, occurring in any drainage proceeding, shall be disregarded in any action seeking to avoid an assessment or cancel, annul or declare void any such proceeding. And in case the defect is substantial the court shall of its own motion determine the rights of the parties, validate the proceedings and assess the costs as justice may require, if the court shall find cause for such valuation or such action should have been taken in the first instance and all parties interested are before the court. (§ 29, ch. 98, 1905; § 30, ch. 134, 1907.)

§ 8489. INVALID OR ABANDONED PROCEEDINGS. If any proceeding for the location, establishment or construction of any drain under the provisions of a previous law has been heretofore enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned, or if any such proceeding or like proceeding under this article be hereafter enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned in consequence of any error, defect, irregularity or want of jurisdiction affecting the validity of such proceeding or for any cause, the board of county commissioners may nevertheless proceed to locate a drain or drains under the same or different names and in the same or different locations from those described in the invalid or abandoned proceedings under the provisions of this article. In case any new proceeding be had resulting in the location of a drain in the same or substantially the same location as that described in the invalid or abandoned or dismissed proceeding, and the extent to which the same will contribute to the location, establishment or completion of such new drain. Such value shall be determined at a hearing upon the same notice as the equalization of benefits or assessments, and may at the same time or at any other time, and the notice of such hearing may be a part of the notice of the hearing upon the equalization of benefits or assessments or separate therefrom, but the board shall in any case notify all persons interested to show cause why

the determination of the board thereupon shall not be final. When finally fixed such value shall become a part of the cost of the new drainage. No use shall be made by the board of county commissioners in the laying out or completion of any drain or ditch under this article of any map, chart, survey, or other work done under any former law or under this article without having paid therefor; and all sums allowed for any work or material or money expended under the provisions of any previous law or under this article shall be paid to the persons who have paid therefor in proportion to the amounts severally paid by such persons. (§ 33, ch. 134, 1907.)

§ 8491. REFUNDING SURPLUS ASSESSMENTS. The board of county commissioners shall have authority and it shall be its duty to refund, upon request, any excess assessment or funds not necessarily used in the contruction of any drainage, made or levied against any person, private corporation, city, town or township within any drainage district, in proportion to the amount paid by him or it. (Ch. 219, 1913.)

EXHIBIT "C".

GENERAL AND LOCAL ASSESSMENT AGAINST RAILROADS.

---

§ 6606. COLLECTION, HOW MADE AND ENFORCED. All laws relating to the enforcement of the payment of delinquent taxes shall be applicable to all taxes levied under the provisions of this article, and whenever any taxes levied under the provisions of this article shall become delinquent, the county treasurer having control of such delinquent taxes may proceed to collect the same in the same manner and with the same right and power as a sheriff under execution, except that no process shall be necessary to authorize him to sell engines, cars or any rolling stock for collection of such taxes. (§ 11, ch. 100, 1915.)

IN THE

Supreme Court of the United States

OCTOBER TERM, 1925

No. 95

A. G. RISTY, et al, as County Commissioners, etc., et al,

Appellants,

vs.

CHICAGO, ROCK ISLAND & PACIFIC RAILWAY COMPANY,

Appellee,

And the Five Other Cases set forth on the cover page hereof numbered 95 to 100 inclusive.

REPLY BRIEF AND ARGUMENT FOR APPELLANTS.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1925

No. 95

A. G. RISTY, et al, as County Commissioners, etc., et al,

Appellants,

vs.

CHICAGO, ROCK ISLAND & PACIFIC RAILWAY COMPANY,

Appellee,

And the Five Other Cases set forth on the cover page hereof numbered 95 to 100 inclusive.

REPLY BRIEF AND ARGUMENT FOR APPELLANTS.

As a reply to the appellees' contentions advanced in their several briefs the appellants submit the following:

I.

AS TO THE CONTENTION THAT THE REQUIRED AMOUNT IS AFFIRMATIVELY MADE TO APPEAR OR EXISTS.

See *Citizens' Bank v. Cannon,* 164 U. S. 319, 17 Sup. Ct. 90.

There is the required affirmative showing, if what

is in effect a concession that no one can tell what the amount will be, constitutes such showing, but not otherwise.

The statute (Sec. 8464), prevents any assessment until there has been the equalization which appellees stopped by injunction. That is the settled law of the State, and the trial Court so ruled. (M. 79, 80).

> "Because no one can say what injury will result before an anticipated assessment is completed, there can be no relief before the completion of the assessment."
>
> *Western Union v. Howe,* (C. C. A.) 180 Fed. 53-54.

The trial Judge made it the settled law of the case that the Board had power to determine what the assessable benefits should be after equalization. (M. 78).

> "No one can say what amount is in dispute when no accounting has yet been ordered, much less, that if one should be had that appellant would have a balance large enough. — That is not an affirmative showing of a jurisdictional."
>
> *Greene's case,* 154 U. S. 668, 14 Sup. Ct. 1193.
>
> "An unaccrued tax cannot be conjectured in order to make up the requisite amount."
>
> *Washington Railway,* 146 U. S. 227, 13 Sup. Ct. 66.
>
> "The amount may not be based on any contingent loss including what might result from the probative effect of an adverse judgment however certain it may be that such loss may occur."
>
> *Ross,* 3 How. 771; *New England Company,* 145 U. S. 123, 12 Sup. Ct. 816.
>
> "And it will not avail that decision on the validity of the tax at bar will have effect on future

taxation."

Holt v. Indiana, 176 U. S. 68, 20 Sup. Ct. 273.

And one appellant (R. brief 24) after contending, as they all do, that the tentative apportionment supplies the amount, naively inquires, "but after equalization how much of an assessment".

Nor will it avail that there is a total of more than $3,000.00 to be collected. Rights against third persons, singly or collectively, add nothing to what each appellee may have in dispute.

I-(a).

WRONG PRESUMPTION.

One of the two main arguments of appellee is a disregard of the fact that they enjoined when nothing more than a tentative apportionment had been made — that this no more fixed a tax than an unaccepted proposal fixes a liability. (N. 42; P. 39).

For illustration:

> The apportionment as to railroads has already been determined in advance and it is conceded is to be made of the railroad companies. (M. brief 55, 56).

For another illustration:

Argument that because we say we have $250,000.00 to collect and therefore have a sufficient amount in controversy to entitle us to appeal, no matter what becomes of the total of the tentative apportionment against appellees, we concede that such apportionment gave appellees enough to enter the District Court.

As said, it amounts to a claim (a) that what is purely tentative is fixed, and (b) that it must be presumed the tentative will become the final apportionment

— neither of which positions is sound.

> "While some step is still to be taken, the tax cannot be treated as something finally adopted."
>
> *Milheim,* 262 U. S. 710.

By enjoining, there was stopped that action which by statute (Sec. 8463) is termed final equalization. It is this equalization which for the first time *fixes* assessment in accord with benefits, and the notice of proposed equalization gives opportunity to be heard on whether the tentative apportionment shall become fixed.

> "The apportionment made when appellants were enjoined is only tentative and subject to correction and modification. — *Milheim,* 262 U. S. 710. And it is the equalization which was stopped that 'completes the assessment'." — *Western Union v. Howe,* (C. C. A.) 180 Fed. at 53-54.

And there is no right to urge that the tentative is equivalent to the final apportionment. That is presuming that the Board will not correct as justice requires (which the Circuit Court of Appeals did). The presumption runs the other way.

It is said in *First National Bank v. Board,* 264 U. S. 450, 44 Sup. Ct. 387:

> "We cannot assume that if application had been made to the commission proper relief would not have been accorded by that body, in view of the statutory authority to receive complaints and examine into all cases where it is alleged that property has been fraudulently, improperly or unfairly assessed".
>
> It is presumed such tribunal will modify and correct according to the demands of justice.
>
> *Milheim v. Moffat,* 262 U. S. 710.
>
> *Seattle v. Railway,* (C. C. A.) 185 Fed. 372.

ACTION TENTATIVE.

Throughout, appellees *assume* the Board was a naked trespasser. Were that so, it is immaterial as to amount in controversy. If tentative apportionment by a trespasser is effective, so is a reduction of the apportionment by the same trespasser.

And even as to an alleged trespasser there is no right to say, before he is asked to change, that a change of mind on his part is impossible.

I-(b).

UNSOUND ARGUMENT.

The remaining argument is (a) that matter anticipated may supply, and thus there has been supplied, the requisite amount, (b) pure guessing and speculation, and (c) mere words. — Also another naive admission that there is no way to tell how much the anticipated injury will reach in money.

First comes a statement which abounds in generality, and in blithe *assumption* that the Board had no power or jurisdiction:

> The amount in controversy cannot be questioned. Appellee is threatened with an assessment amounting to (amounts stated) and its property will be so assessed upon its failure to show cause, before a tribunal having no power or jurisdiction, why a levy of that amount should not be spread. (N. 43; P. 40).

Next comes generality plus speculation:

> In addition, there is the great and irreparable damage that appellee is threatened with by having its property included within the drainage area. (N. 43; P. 40).

It was not only threatened with the levying of

such a tax but with a further and possibly more dangerous situation — that of having its property included within a drainage district, resulting in the extreme probability of its becoming involved in a project threatening to cause great and irreparable damage to property interests.

If the property is brought within the territory it will be there forever. Future repairs will be assessed. Evidence shows spillway is already being endangered and that time is soon coming when more money will have to be expended for its maintenance.

There is great danger that the new spillway will go out and that there is danger the ditch will have to be closed and the water turned into the original channel. And if it should wash out there is no way in which it can be determined what amount will in future be assessed against the appellees.

In the case of *Washington Railway,* 146 U. S. 227, 13 Sup. Ct. 66, the following allegation was held not to exhibit the requisite amount:

The taxes alleged to be wrongful would be in an amount "which would probably be computed and charged against the complainant and would reach nearly if not quite the sum of $5,200.00 besides interest and costs."

Finally, "argument" which we are unable to see the meaning or relevancy of:

"The testimony shows the dissimilarity of the property and the theory of the arbitrary assessment so that it clearly appears from the pleadings and the proof that * * * * more than $3,000.00 is involved". (M. 56).

I-(c).

CONSISTANCY.

We are told that *Butte v. Clark,* 249 U. S. 12, is inapplicable because it but holds that litigants must be consistent. It does so hold. We have been consistent, have always urged there was no showing of amount that entitled appellees to enter the District Court. The violation of consistency asserted is, however, that we urge appellees have not shown what amount is in controversy and also that we have the right to appeal because more than $1,000.00 is in dispute.

I-(d).

CASES DISTINGUISHED.

Butte v. Clark, 249 U. S. 12, and *Western Railway v. Commissioners,* 261 U. S. 264, are cited.

As to the first, it is obvious that it merely holds that a sufficient amount was involved because of facts stated in the opinion which conclusively demonstrate that there was such amount.

And so of the last. It was an injunction halting an order that the railroad construct and maintain a spur track for a shipper. It holds that the sum involved may not be limited to the original cost of construction; that there is involved also the cost of maintenance, and the annual burden of interest on the cost of construction, maintenance and operation — and that all this capitalized at a reasonable rate comes to more than $3,000.00.

II.

AS TO THE QUESTION WHETHER WE HAVE THE RIGHT TO APPEAL TO THIS COURT FROM THE DECISION OF THE CIRCUIT COURT OF APPEALS.

We have attempted to show that when the bills were filed it did not appear that more than $3,000.00 was in dispute. It is obvious this may be true and also true that when the decision of the Circuit Court of Appeals came that we would lose more than $1,000.00 if that decision was not appealed or was affirmed. So much for amount in controversy.

II-(a).

The appellee, Power Company, moved here to dismiss this appeal, and the motion was denied. At least one other of the appellees now moves to dismiss. In support, it presents, in effect, just the decisions that were relied on by the Power Company — and our brief on the Power Company motion fully met those decisions.

That brief is on file in the record of the instant Power Company case, and we beg to refer the court to that brief.

II-(b).

STATEMENT OF SUING PARTY FURNISHES GROUND OF JURISDICTION.

The motions to dismiss urge as ground that since the trial Court made a decision, which was not appealed from, that the objection of unconstitutionality could not be sustained, no federal question *now* exists. In addition to calling attention to it that the Power Company motion was denied, we submit:

Defendants were forced into federal court and five

of the plaintiffs asserted a federal question when they could have entered on diversity alone.

They induced both the lower courts to hold that a substantial federal question had been presented by them and it does not lie in their mouths now to say that it was not substantial.

Appellees thus kept the door open for themselves to go higher and would have claimed that right had they been defeated on the merits. This right must be reciprocal. But they say that defeat on the merits takes away from appellants a right of appeal that appellees made by their bills.

Appellees desire to take away the right to go to this court by one who has lost everything of substance because appellees were defeated and told that their federal question objection, though substantial, was untenable. The argument is that because plaintiffs were mistaken about their federal question, the moral victory of defendants of having this held compels the defendants, who were dragged in, to refrain from a right that appellees always had, and which appellants now need as badly as ever, in spite of their academic victory.

A premium is to be paid the appellees because their assertion of violating the federal constitution was not sustained.

> "It is sufficient to render the judgment appealable that the injury may become irreparable by the final judgment or action of the Supreme Court on the judgment."
>
> 3 *C. J.* § 276, page 460.
>
> " 'The principle of decision' is that the ground of jurisdiction in the District Court and ultimately in this court on appeal from the Circuit Court of Appeals is the statement of the suing party of his cause of suit."
>
> *Butte v. Clark*, 249 U. S. 12, 39 Sup. Ct. 233.

It may be said in passing, that while appellees contend the federal questions have died, they argue them at great length, seemingly, in the hope of inducing this court to decide them differently than the trial court did.

It is indisputable that some federal questions are still left for decision. These are (a) the dispute over the amount in controversy, and (b) the holding of the lower courts that the federal question presented was a substantial one.

We are at a loss to understand the presenting of *United States v. Jahn,* 155 U. S. 109 (R. 17). It is cited for the proposition that appellants might have gone directly to this court from the District Court, on the jurisdictional question. That may be done only where nothing but the jurisdictional question is to be presented. The *Jahn* case itself is authority for the rule that there should be no direct going to this court where in addition to a jurisdictional question the merits also are decided against a party.

III.

AS TO THE CONTENTION THAT THESE SUITS WERE NOT PREMATURELY BROUGHT.

Little further argument on this head is needed, because of what has been said as to the bearing that inability to say at the time appellants were enjoined how much in money was involved, has on amount in controversy. This inability resulted because nothing tangible had yet been done. That fact demonstrates there was nothing to enjoin.

Additionally —

The appellee, Rock Island, asserts that only a suit in equity can remove a cloud (it is elsewhere shown

there could be no cloud); with this assertion it couples the concession that chancery may function only "once the assessment attaches". (R. 21).

> "There may not be relief 'against anticipated injury consequent upon an anticipated assessment before assessment is completed'."
>
> *Western Union v. Howe,* (C. C. A.) 180 Fed. 53, 54.

The trial Judge ruled and it is universally held that there is sufficient notice if opportunity be given before the assessment of benefits becomes final. — *Erickson v. County,* (N. D.) 92 N. W. 841. — Sufficient if notice is given at any time before the assessment becomes a lien. (As to the City and the Railroads there never could be a lien). *Soliah's* case, 222 U. S. 522. — Which means, by the clearest analogy, no suit in equity should be begun until the assessment has become final. Nothing is certified or filed until thirty days have elapsed from the completion of the assessment. (Sec. 8464).

The suits were prematurely brought because brought before the administrative hearings provided by state law had been gone into, to say nothing of having been exhausted. An appeal after assessment, which the statute provides, could not be foregone and a court of equity entered. — *Milne v. McKinnon,* 32 S. D. 627. There was no right to enter the courts until equalization was exhausted. — *Bagley v. Butler,* 24 S. D. 429.

The view of appellees is that the suits were not premature because there was the right to proceed at once because the board was acting beyond jurisdiction — as to which we say, the record shows and that the highest court of South Dakota settled in the Risty case that the board *had* acquired jurisdiction. Further argument is that appellees had the right to sue when they did, to ascertain whether the board was acting beyond jurisdiction and also attempting to deny due process of law (N. 43; P. 40); that they were under no obligation to wait because the

statutes of the state were unconstitutional — which assumes, that this is so though the trial Judge made a final decision that it was not so, and which disregards the oft repeated decisions that one who does not exhaust administrative relief afforded by state statutes may not urge unconstitutionality or other invalidity. Still further argument is that they had the right to sue when they did because there was improper discrimination — another objection that is waived if the administrative relief is not exhausted. Finally, that there was no obligation to wait because there was no probability that the board would change from the tentative apportionment that had been made. (R. 23, 24). — Which disregards, first, that if this be sound, statute provisions for equalization are idle, and, second, disregards the presumption that the board would change its mind if justice demanded a change in the tentative apportionment.

Another position is an assertion that we have admitted, at least inferentially, that the board intends to make levy and have nowhere said that that was not the intention. (R. 23, 24). It is elementary that no mere threat of assessment will base the chancery jurisdiction. And our alleged intentions are quite immaterial since we were stopped from doing even as much as attempting an equalization.

III-(a).

AS TO THE CITATIONS FOR APPELLEES.

Gast v. Schneider, 240 U. S. 55, reached this court on writ of error and therefore could not involve the question of exhausting the administrative tribunals; and it was a suit to collect a tax already levied. — In *Thomas v. Kansas Railway,* 277 Fed. 708, 261 U. S. 481, the tax had already been levied and the case involved attempt to enjoin the collection of it. In *Kansas City v. Road District,* 256 U. S. 658, the assessment had been

made.

The case of *Milheim,* 260 U. S. 710, furnishes nothing whatever in support of a claim that these suits were not prematurely brought.

III-(b).

NEED FOR HASTE UNEXPLAINED.

Just what hardship appellees would have suffered had they waited with their suits, is not indicated. Nothing is said to show it would not have been just as effective to protect appellees against an alleged illegal tax and its collection had they waited until such time, if ever it came, as found them dissatisfied with the action of the board of equalization.

In a word — the matter is squarely within the holding of *Western Union v. Howe,* (C. C. A.) 180 Fed. 53, 54, that to permit these suits to be brought at the time they were would take away all right of the appellant board to exercise the discression and judgment in arriving at a fixed and proper valuation which the statutes have confided to it. And that, therefore, the courts may not be entered in anticipation of an assessment before such assessment is completed. We do not overlook the claim that this case is to be distinguished because in it no lack of jurisdiction is involved. As to this we repeat that the lack of jurisdiction in the cases at bar is pure assumption, made contrary to the record and the decision of the highest court of the state.

IV.

AS TO THE CONTENTIONS THAT THE BOARD ACTED WITHOUT OR BEYOND JURISDICTION.

It is important to deal with these contentions because, time and again, positions are taken which have as their premise, or as a material ingredient, an assumption that the Board was not clothed with jurisdiction.

As to the claim that while Constitution authorizes legislation dispensing with corporate entities and gives the power to establish drainage projects to the board (N. 12; P. 12) — the legislature has not availed itself of the grant.

Whether or not the legislature has availed itself of what permission there may be in the Constitution to establish drainage districts, other than those organized for the purpose of draining agricultural lands, is quite academic, for, drainage is an exercise of the police power — *Bemis v. Drainage District,* (Ind.) 105 N. E. 496. Under that power there is authority to establish drainage projects though they be not for the draining of agricultural lands, unless the Constitution forbids the establishment of such districts — and that is not claimed for the Constitution of South Dakota.

It is settled by the highest court of the state that no constitutional amendment was needed; that the constitutional provision merely made the drainage of agricultural lands something done for a public purpose or use, and that so far as establishing drainage conducive to the public health, convenience and welfare was concerned, there was power on part of someone to do this before said constitutional provision was adopted. — *Tuthill v. MacMackin,* 31 S. D. 507; and see *Fallbrook's* case, 164 U. S. 112.

The relevant constitutional provision is Section 6 of Article 21. It does permit the drainage of agricultural lands, by declaring that such drainage is for a public purpose. But to permit this is of course no exclusion of any drainage project that is, and before the adoption of this constitutional provision was, something for a public purpose. It will not be seriously contended that a drainage system which is conducive to the public health and welfare is not something provided for a public purpose and public use, even though it does not touch an acre of land being used or being useable for agricultural purposes.

After so dealing with the drainage of agricultural lands the Constitution next says that the legislature may provide for the organization of drainage districts for the drainage of lands "for any public use"; and that it may vest the corporate authorities of counties, etc., with power to construct levees, drains, and ditches, paying therefor by special assessments on property benefited thereby, according to benefits received.

The sole question then is (if it be material) whether the legislature has availed itself of this grant, which we concede is not self-executing. Section 8458 R. C. 1919, provides that the board "may establish and cause to be constructed *any* ditch or drain * * * * whenever such ditch, drain, or water course shall be conducive to the public health, convenience and welfare".

The highest court of the state has settled that the legislature *has* availed itself of the power granted by the Constitution; that the grant authorized the legislature to select who should have authority to construct drainage projects, and that it had selected the boards of county commissioners. — *Davidson v. Tile Company,* (S. D.) 196 N. W. 96; *Tuthill v. MacMackin,* 31 S. D. 507; and *Gilseth v. Risty,* 46 S. D. 374.

IV-(a).

ULTRA VIRES.

As to the claim the board acted *ultra vires* because the appellees owned no agricultural lands, and that the power of the board was limited to draining such lands.

First — it is not essential the benefits shall be *for* agricultural purposes. It suffices that a district is *organized* for that purpose. — *Commissioners v. Commissioners,* (Ill.) 21 N. E. 207.

But it is obvious the board is not limited to the drainage of agricultural lands, (1) because the Con-

stitution does not attempt so to limit it, and (2) because Section 8458 availing iself of the grant of power in the Constitution gives the board power to establish and cause to be constructed "any" ditch or drain, etc. (a) whenever it finds the same to be conducive to the public health, convenience or welfare, and having thus provided adds in the alternative — (b) "or" whenever the same shall be for the purpose of draining agricultural lands. Nothing can be dealt with as being exclusive when it is obviously but an alternative to something else.

It has been settled by the highest court of the state that the power of the board is not limited to the drainage of agricultural lands but extends to any drainage project so long as same is conducive to the public health, etc. — *Tuthill v. McMackin,* 31 S. D. 507; *Davidson Co. v. Tile Co.,* 47 S. D. 101; *Drainage Ditch No. 12,* 44 S. D. 157.

> "Drainage for public purpose includes drainage for farm lands but under Constitution and law the only limit as to benefits is a drainage district constructed and paid for by special assessment on property benefited, without regard to the nature or kind of property."
>
> *Commissioners v. Commissioners,* (Ill.) 21 N. E. 207.

The state Constitution (Section 6, Article 21) permits assessment for benefits to the "property" benefited. Sec. 8463, to "the lands affected".

> "It is not essential that the land be in use for agriculture."
>
> *Milne v. McKinnon,* 32 S. D. 627.
>
> "It need not be absolutely worthless and incapable of growing anything."
>
> *Fallbrook v. District,* 164 U. S. 112.

IV-(b).

POWERS OF THE BOARD.

The assertion that jurisdiction was lacking has many details other than those that have been adverted to. We are told the board had no power to determine whether any benefit was being produced by the project, nor the extent of the benefit. The highest court has declared that it had jurisdiction to deal with both. — *Milne v. McKinnon,* 32 S. D. 361. Next, that there is no evidence that the Great Northern and the Power Company ever received any benefit. (Briefs N. 46; P. 42). Surely that is an evidentiary question that does not go to jurisdiction but is to be deteremined by resort to the administrative tribunals provided. Next, that the threatened assessment was excessive. But as said in *Curtiss v. Pound,* 34 S. D. 628, 630, that only results in making an assessment larger than it should be, does not go to jurisdiction and must be corrected by resort to said tribunals. Next, that there was no power to assess the appellee Power Company, for in that, the statute permitted dealing with "lands" affected and with tracts of land only, and that what the Power Company possessed was neither lands nor tracts of land. The railroad company appellees make a similar argument. All overlook that under Section 8463, benefits may be taxed against *any* property. So of Section 8464. So of Section 6 of Article 21 of the South Dakota Constitution. And that this is the range of assessment is held in *Milne v. McKinnon,* 32 S. D. 361. But the Power Company concedes (Brief 2) it owns "real property" consisting of a hydro-electric plant, dams, property rights and water rights. It is declared in Sections 256 and 257, South Dakota R. C., 1919, that real property is land or anything affixed to land or anything incumbent or appurtenant to land, anything that is in law immovable; any solid material of the earth whatsoever, as sand, soil, rock, or other substances.

It was said in *Kimberly v. Hewitt,* (Wis.) 44 N. W. 303:

> "It may be conceded that a water power used or unused is included within the meaning of the word 'land'."

In *Carey v. Daniels,* 8 Metchalf, 866:

> "Right to the use of the flow and fall of water on land of the proprietor is not an easement. It is inseparably connected with and inherent in the land; is a part of the inheritance and passes with it."

And see *Edwards,* 180 Ill. 99; *Philadelphia Trust Co.,* (N. J.) 69 Atl. 729; *Swain,* (N. H.) 85 Atl. 288.

The appellee Rock Island, concedes (Brief 35) that the board did have jurisdiction to determine what the amount of assessment should be. It is ruled in *Erickson v. County,* (N. D.) 92 N. W. 841, that such boards as this have jurisdiction to apportion benefits. And to assess them; and that the courts will not inquire into the correctness of their determination. (92 N. W. 848). It is ruled in the *Gilseth* case that the filing of the petition gives jurisdiction to inspect and survey and that the filing of the surveyor's report gives power to fix time and place as to the hearing of the establishment of the project.

It is also argued that power to do what was done was lacking because there having been no abandonment of the old ditches there was no right to add new territory or to make a new and larger ditch system on the lines of the old, even if the new project doubled the capacity of the old — meaning that if a plow ditch was made, it must remain all the drainage its territory can ever have.

There was power to determine what lands would be benefited. — *Erickson v. County,* (N. D.) 92 N. W. 841.

842, and to apportion the cost. — *Idem* — and in the absence of fraud there was jurisdiction to determine what lands should be included and assessed, and an honest mistake in this regard would not open the doors of the courts for redress. *Idem* 848.

This overlooks the authority given in Section 8458, under which the Board is given the same and equal authority to do *three* things, viz.: (1). "May establish and cause to be constructed any ditch"; (2). "May provide for the straightening or *enlargement* of any watercourse *or drain previously constructed*"; and (3) "May provide for the maintenance for such ditch, drain or watercourse"; all this "whenever such ditch, drain or watercourse shall be conducive to the public health, convenience or welfare", included in which is the drainage of agricultural land.

The Power of the Board, the method to be pursued, etc., when providing for *straightening or enlargement of any water course or drain* previously constructed, is governed by Section 8476, which says: -

> "But no proceedings affecting the right of persons or property shall be had under this section, *except upon notice* and the other procedure prescribed herein for the construction of drains."

This provision places the straightening or enlargement of any watercourse or drain previously constructed in the same class or category as an original drainage project, and the procedure is governed by Section 8459 to 8468, inclusive, as well as subsequent sections applicable to a new drainage project, and authorizes the inclusion and assessment of all property benefited, whether in the old drainage district or not.

Most of the important positions taken by the appellees on this head are squarely negatived by *Tuthill's* case, 31 S. D. 507, and emphatically so by *Gilseth v. Risty*, 46 S. D. 374. In the last named case the Court said:

"It is contended by the appellant that the project contemplated by the petition was not the creation of a new drainage district or a new drainage ditch, but merely to repair a project already in operation, and that, therefore, the board was without authority to proceed. But this contention is not tenable."

"The two projects were by no means identical. The drainage district involved in this case contains a materially larger area than the combined area of the two old ditches."

"No fraud or bad faith on the part of the Board has been shown."

The authority to build enlarged ditch over line of old ditch is supported by the following decisions:

In re Sorenson Drainage Ditch, 27 S. D. 342.

In re Judicial Ditch No. 8 v. Nelson, (Minn.) 163 N. W. 135.

Steensburg v. Kyle, (Ind.) 121 N. E. 537.

C. & N. W. Ry. Co. v. Board, (Ia.) 172 N. W. 443.

For that matter there is neither plea or proof of fraud or bad faith. As to this, one appellee concedes that though it charges bad faith that possibly the board had no bad intentions. (P. brief 23, 24). The claim that there is "ample proof" on this head (P. 29) seems to rest on the fact that those who became the petitioners first attempted other projects and went into this new one as a result of compromising. (P. 29). If compromise as an antecedent constituted fraud most things that have been accomplished after negotiation are fraudulent. At worst there is nothing pleaded or proven beyond honest mistake — which of course will not suffice. — *Southern Railway v. Watts,* 260 U. S. 519. And the fraud that would avail must be of a character to have kept the complainant from making full and fair presentation of its side — which

of course cannot be claimed here. — *Toledo Company v. Scale Company,* 261 U. S. 423.

IV.-(c).

NEW ENLARGED DRAINAGE.

The *Gilseth* decision is addressed to the project at bar. And it should be said, in passing, that some of the appellees have conceded that this was a new and independent project.

It is held in *People v. Mayor,* 4 N. Y. 419, and *Roberts v. Smith,* (Mich.) 72 N. W. 1092:

> "There never was any just foundation for saying that local taxation must necessarily be limited in or co-extensive with any previously established district."

And while *Thornton v. Road District,* 291 Fed. 520, has some language in line with the contention of appellees on this head, the exhausting of administrative tribunals is not mooted.

We are not overlooking the avoidances. We are told that the *Gilseth* case is inapplicable because Gilseth, unlike most of the appellees, was in the old drainage area, but the decision was in no manner based upon it. It is pointed out that Gilseth joined in the petition, was present at the hearing and took no appeal from establishment. (Briefs N. 46; P. 42). The City of Sioux Falls is also in the old drainage area, its representatives too were present at the hearing, and while the appellees other than the City, did not join in the petition nor appeared at hearing on it, we shall show in another connection that they too are as much estopped as though they had done what the City did. But like Gilseth, neither appellee appealed from the setablishment of the project, which appeal certainly would have enabled them to test whether or not their property should be included

and whether or not the establishment was a mere pretense and subterfuge. We concede that constitutionality was not challenged in the *Gilseth* case; but jurisdiction was. And there was a flat holding that the board had acquired jurisdiction.

Finally, it is argued (Brief N. 47; P. 43) that the real decision in the Gilseth case is first, that there was no protest when Gilseth saw the work performed. Assume for the sake of argument, that that is the holding. Neither appellee objected to the work — and their agents saw it going on and some of them furnished help to carry it on. It is strenuously insisted that the *Gilseth* decision turns wholly on the fact that Gilseth was held to be estopped. Any examination will make it clear this position is untenable. What is stressed is that there had been no appeal from the order of establishment and that, therefore, injunction would not lie to stop the carrying out the work contemplted by the petition. True, after the Court had declared that the board had jurisdiction and stressed the failure to take appeal it also found that Gilseth was estopped. That was purely a cumulative holding and the case makes plain the court had no thought of resting decision on this estoppel; that the main inquiry was whether or not the establishment and the proceedings of the board were valid and done within jurisdiction. Surely the estoppel cannot take first rank in the decision. At best for appellees it is only one ground of decision. And it is elementary that though more than one point is decided that does not make any particular point decided a *dictum*. (See our original brief, pp. 110, 111, 112). If that were not so, every decision having more than one point would be a *dictum, in toto*. Every litigant could pick out one of the points and say *it* was *dictum*, because other points were decided. His opponent might select other points decided as being alone of the essence of the decision — and as said, the effect would be that nothing would be a *decision* unless the court limited itself to passing upon some one single point.

IV-(d).

LACK OF JURISDICTION NOT SUSTAINED BY DECISIONS.

There is nothing in *Milheim's* case, 262 U. S. 710, which justifies a claim that this board lacked jurisdiction. It is not limited to a holding that where the jurisdiction of the assessing authorities is not challenged, there is no right to restrain in federal court where the only complaint is that an erroneous method of assessment or assessment on a wrong standard are involved — in other words, is not limited to cases where the taxing authorities have jurisdiction and the complaint is that an *ad valorem* basis was and should not have been used.

> "The Constitution violations were charged to be (a) that the purpose of the act is not public in the sense warranting the exercise of the power of taxation, but is essentially private; (b) it authorizes the imposition of the entire taxes upon the lands within the district, without regard to and relation to the tunnel or the benefit to be derived from it, and, there being no special benefits to such lands justifying such taxation is entirely arbitrary; and (c) that the commission has arbitrarily and unreasonably adopted an *ad valorem* basis for the appraisal and apportionment of benefits to the several parcels of lands within the district without reference to the actual benefits to each."

So of *Keokuk v. Salm*, 258 U. S. 122. It does not hold that such boards as this have power to act only in cases where nothing is involved but the amount of the tax. It does speak to such a situation, but only to say that *if* that be all that is involved there can be no relief in equity without tender of amount confessedly due or what may be found to be due in justice and equity.

In the guise of a concession it is said we might be right in asserting there should have been no enjoining if nothing were involved but irregularities in procedure

or dispute over amount. Thus is produced as assumption that the *Gilseth* case and others cited by us were decided as they were because nothing was involved beyond mere irregularities in procedure or dispute in amount. That is not a proper limitation upon these decisions.

V.

THE SUBSTANCE OF ATTACK AS PRESENTED IN THE ARGUMENTS FOR THE APPELLEES, IS ASSERTION THAT BOTH STATUTE LAW AND CONDUCT OF THE BOARD WERE VIOLATIVE OF THE CONSTITUTION OF THE UNITED STATES.

Assuming for the sake of argument that there is the requisite amount in controversy, still, appellees are not entitled to relief on the ground of unconstitutionality or other invalidity, because —

(a). Their bills do not raise the objections that their arguments do.

(b). The trial Judge ruled that there was no violation of the federal Constitution, or of any other. Appellees have not cross-appealed. And the Circuit Court of Appeals left the constitutionality question where the trial Court had put it. This means it is the settled law of the case that there is no unconstitutionality here presented — and though it be assumed appellees presented a federal question that might in reason be urged, the constitutional objection could not be sustained — that while the objection may have given the right to be heard by the District Court the hearing had is final on the point, and there is no constitutional question that can now be argued or ruled in favor of appellees.

(c). The failure to exhaust the administrative

tribunals provided by statute, estops appellees from urging unconstitutionality, fraud or other invalidity.

(d). They are estopped by conduct and silence to question constitutionality or other illegality or invalidity.

(e). If all else be passed, there was no unconstitutionality or other invalidity or illegality.

V-(a).

AS TO THE PLEADINGS.

First — is a blanket allegation that the *statute law* violates the federal Constitution. Then, that —

> If the apportionment of benefits be made, as threatened, it will constitute taking of property affected by the notice given, without due process of law.

So far — a blanket attack on *statute,* and another that threatened action will violate the due process clause.

There is further allegation for which it seems to be claimed it raises infringement of the equal protection clause of *the Constitution of the United States.* If it is to be held there is a reference to *that* Constitution, it must be because, in the beginning, it is said in terms that the statutes violate that Constitution, and because the allegations next to be set forth begin with, "it is further unconstitutional and void". Those allegations are:

> It is further void and unconstitutional because it provides no fixed and determinable method or rule for the apportionment of benefits upon the property and property owners situated within said drainage area, and especially that it does not fix

> one for the apportionment of benefits upon the property of railroad companies and other corporations and municipal corporations. (Par. 22, P. 15 — M).

It will be noted that the *Constitution of the United States* is not mentioned. This does not meet the strictness with which federal questions must be pleaded. True, the pleading *may* be a charge that the Federal Constitution has been violated. But as the Constitution of the state has the same guaranties, the pleading *may* be addressed to a violation of those. Indeed it is elsewhere urged by the other appellees that the state Constitution *has been* violated. The trial Court ruled that the statute law does lack fixed and determinable method or rule for apportionment of benefits, and especially so as to apportionment to railsoads and municipal corporations. But it did not so much as suggest that the Constitution of the United States had been disregarded. And the Circuit Court of Appeals declined to pass on constitutionality, at all.

Up to now, there is not a word about improper conduct — and no claim or ruling that any conduct violated *any* Constitution. Then comes an amendment to the bills (M. 74). The nearest it comes to intimating a constitutional question is by allegation that —

> Said equalization of benefits is so arbitrary and discriminatory against the property of plaintiff as to deprive it of its property without due process of law and of the equal protection of the laws.

Which, as said, may refer to the Constitution of the state. As for the rest — conduct is attacked, as follows:

> The equalization of benefits out of the total number is estimated at a sum greater than three thousand dollars.
>
> This equalization is wholly speculative, arbitrary, unjust, illegal, and discriminatory, and was made by the board without any reasonable and ra-

tional basis therefor.

It is not in proportion to any benefit which the property of plaintiff has received or ever can receive by what is proposed to be done

Its property has not been and never can be benefited by the work performed by the board to the extent of said estimated amount or to any extent.

The assessment sought to be collected from plaintiff is out of all proportion to the assessment sought to be collected from the agricultural lands situated north of the city of Sioux Falls and within the drainage area of the new ditch.

And, as said, neither of the lower courts ruled that as to the matter so pleaded there had been any violation of the Constitution of the United States.

We are not overlooking that the appellee City alone is concerned with the absence of Federal question; that the other appellees, having diversity, may have decision of non-federal questions. At this point we but assert that no plaintiff is entitled to more than he pleads; that on appeal by his opponent plaintiff can have nothing added to what the lower court gave him, and that anything that has become the settled law of the case binds him on appeal by his adversary.

VI.

WHAT HAS BECOME THE SETTLED LAW OF THE CASE BECAUSE OF DECISION BY THE TRIAL COURT, NOT APPEALED FROM, NOR TOUCHED BY THE CIRCUIT COURT OF APPEALS.

Starting with the premise that nothing has been declared unconstitutional, what the trial Court has settled negatives the allegation that the statute is further unconstitutional and void because it provides for an assessment against property without the right of the

owners to be heard thereon and without notice of any kind to him. It has been made the settled law of this case, binding on this appeal, as it should have been on the Circuit Court of Appeals:

1. It has so become settled that the "general" notice, saved from the Fourteenth Amendment — and that there was such provision for notice at some time before any assessment could become final, or a lien, as that there was no denial of due process. (M. 79, 80). — On which the trial Court is sustained by the statutes of the state and such decisions as that of Soliah, 222 U. S. 522; Gatch, (Iowa) 18 N. W. 314; and Ford, (Iowa) 45 N. W. 1034.

2. Settled it was an unjustified claim that no notice to railroads and municipal corporations was provided for. (P. 37). Or that there was no provision for notice to cities or railroad corporations of either apportionment or equalization.

3. That notice provided was proper though it did not name all those to be affected, and that though it was not required to name them, the notice of equalization was required to and did give a detailed description of the property, including that of the railroad appellees. (Section 8463). Curtis v. Pound, 34 S. D. 628.

4. It is so settled that no appellee was mislead because notice did not name it; nor because it did name some appellees. (R. 19, 21; P. 19). Nor mislead by the alleged fact that the notice spoke only of tract owners and tracts of land (P. 36; R. 32, 33) — the fact being that the notice of equalization gave name, owner and definite and specific tracts by specified section, township and range — and the appellee, Rock Island, was not mislead by a notice (and it is not the fact that there was such a notice) which gave no information beyond describing the land through which the ditch would pass, though it is true same did not de-

scribe property of the Rock Island, nor advise it that its bridges would be assessed. (R. 28).

5. No one was mislead into believing that nothing would be assessed except agricultural land. (N. 21; P. 20). — Or into believing there was to be no enlargement of the area of the already constructed older ditches.

6. It was expressly settled that the notice provided complied with constitutional requirement (M. 77) — and with the South Dakota statutes.

7. Involved in this finding is a denial of the contention that the notice was bad even if it be assumed to be good in itself because no statute provided for such notice as was given (which however is not the fact) — and such alleged "fact" is not material — see *Paulson,* 149 S. U. 30; *Tripp v. Yankton,* 10 S. D. 516; *Page* and *Jones, Taxation,* Sec. 135 and cases cited.

And so of the claim that there is a fatal defect as to notice because it was given without preceding action by the board. (N. 20; P. 19).

8. There was opportunity by Sections 8463 and 8464 to present whether the cost was greater than the benefit. (N. 9; P. 9, 20). And the trial Court so ruled. (M. 76).

9. There was due opportunity to contest all that is to be set forth in the petition to establish. (Sec. 8459).

10. To contest establishment, but opportunity to contest is not limited to that.

11. To contest all that is required to be set forth in the report of the surveyor, required to be filed. (Sections 8459, 8461, 8462).

12. To contest the finding of the board on width and route. (Same statutes).

13. To contest whether the proposed system is conducive to the public health, convenience and welfare. (Same statutes). — Or is necessary and practicable for agricultural purposes. (Same statutes).

14. To contest as to what lands should be included. (M. 76; R. 35; N. 21; P. 20).

15. It is so settled there was due opportunity to be heard on whether there should be a tax at all (N. 9; P. 9) — on whether the proposed tax was valid and just. (M. 81, 82; N. 8; P. 7).

16. Opportunity to be heard was not limited to the amounts to be apportioned. (N. 21; P. 20). And there was due opportunity to be heard on the amount of tax (M. 81; N. 9; P. 9) — on whether same was after equalization, confiscatory. (M. 78; R. 30, 35).

17. Opportunity to show that owner was not being benefited (N. 21; P. 20); or not as much as assessed for — and see *Hennessey's* case, (Wis.) 74 N. W. 985; *Soliah,* 222 U. S. 522; *Milheim,* 262 U. S. 710; *Paulson,* 149 U. S. 30; *Spencer,* 125 U. S. 345.

The trial Court so ruled. (M. 82).

18. There was opportunity under Section 8463 to present the objection that action was taken before cost was known and that cost exceeding benefit resulted. (R. 29).

19. There was opportunity to have determined whether the proceedings had been illegal. (R. 29).

By way of avoidance it is said the decision of the trial Court is sound only where the legislature fixes the boundaries and what is the amount of benefit. The only difference between the doing of this by the legislature

and doing it on delegation is that in the first case notice is not required and in the last it is. And that is all that is held on this point by *Spencer v. Merchant,* 125 U S. 345, and *Road District v. Railway,* 275 Fed. 600. It is obvious, then, that the decision holding there was due notice is not irrelevent.

Yick Wo v. Hopkins, 118 U. S. 356, 6 Sup. Ct., 1064, holds only that an ordinance which attempts to keep men from pursuing a lawful calling except on permission, is unconstitutional.

VI-(a).

RULING OF TRIAL COURT.

What was settled by the trial Court as to the objection of unconstitutionality (N. 47; P. 43; R. 25) is fairly well presented by the following extracts from its opinion:

> "Without repetition, and calling attention now to the reasons urged by plaintiffs sustaining the unconstitutionality of the statute enacted for the purpose of draining agricultural lands, and considering the objections urged in various forms by the different plaintiffs, we find that all of the objections center about the criticism that no notice is provided the owners of land affected by the drainage ditch except the general notice, and in fact, no personal notice until the date fixed by the board for the equalization of proportional assessments for the various tracts of land benefited by the drainage." (M. 79, 80).
>
> "In my judgment the South Dakota statutes enacted in the light of that provision of the Constitution of the State providing for the drainage of agricultural lands is constitutional." (M. 83).
>
> "The statutes of this state do not provide for the description of the lands alleged to be benefited

by the ditch, or the owners of the lands, or that notice shall be given to such owners, or that the owners shall appear and show cause if any they have why the ditch is not practicable or should not be established, or have the opportunity to show that the cost would be greater than the benefits, or would be confiscatory, and yet, I am satisfied that the courts of the various states and the Supreme Court of the United States have recognized the power of the legislature to provide the method of the levying of this tax against the lands benefited by a drainage ditch, and have held that a law that provides for notice and an appearance and the right to contest the amount of the tax, and to contest the right to tax at all, with the right of appeal therefrom, if given to the land owners prior to the time that a tax is levied, and becomes effective, is 'due process of law'." (M. 80).

He then holds that this general notice is constitutional:

"I repeat that under the South Dakota statute there is ample provision for notice to every land owner and an opportunity given to be present at the hearing at which time and place he may assert all objections against the validity and justice of the proposed charge upon his property before the tax is levied and carried by the county auditor as such on the books of his office and made a lien upon the property." (M. 82, 83).

VI-(b).

RULINGS NOT APPEALED FROM, FINAL.

Argument on errors against appellee will not be considered.

3 *C. J.*, pp. 1404-1405.

The review is limited to the assignments of the appellant.

U. S. v. Blackfeather, 155 U. S. 180.

The appellee cannot complain of any adverse ruling.

Bolles v. Outing, 175 U. S. 262, 268.
Guarantee Co. v. Ins. Co., 124 Fed. 172.
Canter v. Ins. Co., 3 Peters 307, 318.
Pauly v. Co., (C. C. A.) 62 Fed. 698, 703.

Can urge no issue founded on errors below.

Guarantee Company, supra.

It is the long settled rule that appellee will be heard only in support of the decree as it stands.

London v. Dist., 104 U. S. at 774.
The Stephan Morgan, 94 U. S. 599.
The Maria Martin, 12 Wall. 31, 40.
Guarantee Company, supra.
The William Bagaley, 5 Wall. 412.

Where a plaintiff also has grounds of complaint in respect to judgments in his favor he may cross-appeal if the defendant has appealed or independently if defendant has taken the case directly to the Supreme Court on the question of jurisdiction only.

United States v. Jahn, 155 U. S. 109.

Though an error might be held to be fatal were there cross appeal, without such appeal appellee can

not take advantage of such error, and the matter stands as if he had waived the error at the hearing.

Chittenden v. Brewster, 69 U. S. at 195.

VII.

THE APPELLEES ARE ESTOPPED FROM ASSERTING UNCONSTITUTIONALITY OR OTHER ILLEGALITY BECAUSE THEY HAVE NOT MADE USE OF THE ADMINISTRATIVE TRIBUNALS PROVIDED BY THE STATE STATUTES.

If it is the law that those who do not exhaust the avenues of summary and administrative relief provided by the state may not enter court to complain of *any* invalidity including unconstitutionality, it is idle to argue upon whether there is invalidity. And such *is* the law.

It is bottomed on the presumption that such tribunals will see that no wrong or injustice is done the ones sought to be taxed. — *Milheim*, 262 U. S. 710; *First National Bank v. Board*, 264 U. S. 450.

In the case of *Milheim*, it is stressed that the apportionment of taxes was "subject to correction and confirmation after hearing the property owners affected".

> "The utimate test is that there be some tribunal especially fixed by statute with the power of equalization, which power it may assert at the instance of anyone aggrieved".
>
> *First National Bank v. Board*, 264 U. S. 454; 44 Sup. Ct. Rep. 387.

Must exhaust administrative tribunals before

raising any question in court.

Fallbrook v. District, 164 U. S. 112.

Making no complaint before the reviewing board is an admission that the action of the assessing board is correct.

Hinds v. Township, (Mich.) 65 N. W. 546.

In these administrative tribunals relief may be had as to the finding on any matter alledge in the petition.

People v. Hagar, 52 Calif. 183.

Bigelow Estoppel, page 142.

Freeman Judgment, Section 523.

Ward v. Alsup, (Tenn.) 46 S. W. 575, 576.

And this is so because of Section 8459 and others.

And see *Fallbrook v. District,* 164 U. S. 112.

The one deeming himself aggrieved must appeal.

Milne, 32 S. D. 627 — and it is only where no appeal is permitted that the courts may be entered.

Bemis v. Drainage, (Ind.) 105 N. E. 497.

The scope of the appeal permitted by the South Dakota statute permits review of all that appellees complain of, and the alleged grievances are dealt with as in original action. Section 8469 Code 1919; *In re Sorenson,* 27 S. D. 342.

The constitutional guaranties of due process of law in *Const. Bill of Rights,* § 21, requiring just compensation for private property taken for public use, are not absolute but are subject to the right of the state to modify or appropriate when public necessity or welfare requires, under the police power, the taxing power, or the

power of eminent domain.

Bemis v. Guirl Drainage Co., (Ind.) 105 N. E. 496.

The taxing power being reserved to the states, they may control method, manner and detail of fixing, apportioning, equalizing and collecting tax — method of determining same, and the agencies by which the proceedings are to be carried on.

And the exercise of these powers presents no federal question.

Davidson, 96 U. S. 97.
Spencer, 125 U. S. 345.
Walston, 128 U. S. 578.
Hagar, 111 U. S. 701.
Lent, 140 U. S. 318.
Fallbrook, 164 U. S. 113.
French, 181 U. S. 324.
Mt. Cemetery, 248 U. S. 502.

They have power to prescribe as to kind of notice to be given to avoid due process clause — courts may not question either method, manner or kind of notice provided — and notices containing less than the one at bar and not naming the parties affected have been repeatedly held to satisfy the Fourteenth Amendment.

The failure to appeal gives jurisdiction to proceed — and as to anything done with jurisdiction there may not be collateral attack.

Erickson, (N. D.) 92 N. W. 848.

VII-(a).

To speak more in detail.

For illustration, the following objections may not be raised by one who has not exhausted the administrative

tribunals created by state statute.

That the land of the complainant should not have been included.

Embree v. District, 240 U. S. 242.

For, if it was not intended to afford a hearing on inclusion there was no purpose in the provision of Section 8462 for contesting the statements of the petition with reference to the "territory affected"; or in requiring notice to describe the tract of land likely to be affected.

Unconstitutionality only works invalidity and may not be raised by those who have not entered the administrative tribunals.

Union Pacific v. Commissioners, (C. C. A.) 217 Fed. 544.

Milheim v. Moffat, 262 U. S. 723.

Martin v. District, 205 U. S. 135.

Farncomb's case, 252 U. S. 7, 11.

So of fraud.

Union Pacific v. Commissioners, (C. C. A.) 217 Fed. 544; — and whether the property has been fraudulently assessed.

First National Bank v. Board, 264 U. S. 455. This on the reasoning that being tainted with fraud only works that the tax is invalid. — *Shelton v. Platt,* 139 U. S. 591; *Union Pacific v. Commissioners, supra.*

That the assessment was illegal.

Ward v. Alsup, (Tenn.) 46 S. W. 575.

That it was improper.

First National Bank v. Board, 264 U. S. 450.

Ward v. Alsup, (Tenn.) 46 S. W. 575.

That the assessment is unjust and unwarranted.

Curtiss v. Pound, 34 S. D. 633.
Petoskey, (Mich.) 127 N. W. 345.
Michigan Bank v. City, 107 Mich. 246.

That the assessment was unfair.

First National Bank v. Board. 264 U. S. 450.

That the assessment was disproportionate and unequal, as between those sought to be taxed.

Bagley v. Butler, 24 S. D. 429.
Spencer v. Merchant, 125 U. S. 345.
Township v. Rose, (Mich.) 53 N. W. 928.

That the assessment is excessive.

Curtiss v. Pound, 34 S. D. 628, 633.
Hinds v. Township, (Mich.) 65 N. W. 546.
Township v. Rose, (Mich.) 53 N. W. 928.
Ward v. Alsuf, (Tenn.) 46 S. W. 575.
Southern Ry. v. Watts, 260 U. S. 501.

Whether it was illegally excessive or irregular and excessive.

Stanley v. County, 121 U. S. 535.
Ward v. Alsup, (Tenn.) 46 S. W. 575.

Or excessive through over-valuation.

Stanley v. County, 121 U. S. 535 — a question not for the courts.

Spencer v. Merchant, 125 U. S. 345.

Whether there is any benefit or to what extent it is benefited.

Milne v. McKinnon, 32 S. D. 361.
Fallbrook v. Dist., 164 U. S. 112.
Soliah v. Heskin, 222 U. S. 522

Resolving a conflict on whether lands included would be benefited.

Pittsburgh Ry. v. Backus, 154 U. S. 421.

The courts may not be entered in the first instance to determine whether either statute or administration of it is arbitrary or the method is so arbitrary as that a wrong must result.

Milne v. McKinnon, 32 S. D. 627.

Martin v. District, 205 U. S. 135.

Keokuk v. Salm, 258 U. S. 122.

Even if it be fraudulent discrimination caused by over-valuation.

Milheim v. Moffat, 262 U. S. 710.

At this point the attention of the court should be called to the fact that all complaint of arbitrariness in assessment falls flat where the one complaining prevented equalization. One may not presume that the assessment would have remained unequal, disproportionate or arbitrary after equalization had been had. One unconscious piece of humor in which appellees indulge is urging that the equalization was arbitrary, unfair, etc., when through their own act there was no equalization. It should further be noted the burden was on the plaintiffs to show unconstitutionality, and neither of the lower courts found any unconstitutionality. Further, the evidence does not sustain the complaint.

And the courts may not be appealed to in the first instance on a complaint that the appellees should not be taxed because they were not the owners of agricultural lands.

VII-(b).

CASES DISTINGUISHED.

As to the citations by appellees and their attempt at distinguishing of citations on our part —

The case of *Abernathy,* 274 Fed. 801, is not authority on non-existent taxes because it involves a controversy where in the *tax bills had already issued.* In *Board v. Pipe Line Company,* 292 Fed. at 474, there was involved resistance to a proceeding "to collect unpaid levy taxes", and the matter of exhausting administrative tribunals is not mooted. Nor was this mooted in *Norwood v. Baker,* 172 U. S. 269, 19 Sup. Ct. 187; nor in the *Milheim* case, 262 U. S. 710. The matter of exhausting the administrative tribunals could not arise in *Myles v. Board,* 239 U. S. 474, nor in *Gast v. Schneider,* 240 U. S. 55, nor in *Kansas City Railway v. Road Improvement District,* 256 U. S. 658 — because each of these cases went through the state courts and were considered in the Supreme Court only on writ of error to the respective highest court of the states.

The case of *Milheim v. Moffat,* 262 U. S. 710, is not distinguishable on the ground that in it no lack of jurisdiction was asserted, because the case at bar is just in that situation. For a conclusive showing that jurisdiction has attached is at least equivalent to a failure to assert lack of jurisdiction. (N. 45; P. 41).

Keokuk v. Salm, 258 U. S. 122, is not well distinguished. At any rate the construction that appellees give it differs from the analysis given the case in the matter of *Bohler,* numbers 170, 171, October Term, 1924. The Supreme Court says the *Keokuk* Decision declining to enjoin should be sustained because the assessment was subject to revision by a board of review which was required to give a hearing and to correct the assessment as should appear just; that the payment of taxes was not to be enforced (as here, except as to the Power com-

pany) by distraint or levy but by legal proceedings in a civil suit for the collection of a debt wherein any defense including discrimination could be made; that complainant brought his bill without taking any of the steps offered by the statute as an administrative body — and the *Bohler* case sustains itself on the ground that the state statutes provided no remedy against excessive assessment other than by petition in equity and that, therefore, those who had the right to enter the federal court at all might do so with a petition in equity.

The *Soliah* case deals with a statute which for one thing had provision for a suit to recover back. From that fact appellees deduce that the *Soliah* decision rests on that fact. What it holds is that where ample provision for administrative review is made the courts may not be entered in the first instance. It nowhere holds that equity has not jurisdiction because of this provision for a suit to recover back but merely that such provision is one reason why there was an adequate remedy at law. It does not hold that such provision is the only adequate remedy at law which will deter the court of equity from acting. It stresses this one provision no more than the fact that general review in administrative tribunals is provided. And *Ward v. Alsup,* (Tenn.) 46 S. W. 575, holds that though there be provision for suit to recover back the courts may not be entered in the first instance without exhausting the administrative tribunals.

VII-(c).

NON-RESIDENT MAY ENTER FEDERAL COURT ONLY WHEN CITIZEN MAY ENTER STATE COURT.

It was ruled in *Reagan v. County,* 154 U. S. 362, and followed in *Smyth,* 169 U. S. 466, 517 and *Sheffield,* 149 U. S. 574:

> " 'Whenever a citizen of a state can go into the courts of a state to defend his property against the illegal acts of its officers, a citizen of another state

may invoke the jurisdiction of the federal courts to maintain a like defense'. *A state cannot tie up a citizen of another state having property rights within its territory invaded by unauthorized acts of its officers to suits for refress in its own court."*

The italics are those of appellees, and indicate they deem the matter within the rule that the state may not, directly or indirectly, keep one out of federal court who by federal law has the right to enter it — a sound piece of law, but utterly irrelevant. What they should have italized is, "whenever a citizen of a state can go into the courts of a state". In other words, diversity will not open the federal courts to a suit which the resident may not bring in the courts of his state. Where the resident can sue he must sue in state court. The non-resident has an election. He may sue either in state or federal court. On this head the following are significant:

"If this section would authorize a suit in the state court then the plaintiff being a citizen of Missouri could maintain the action in the United States court".

Stonebraker v. Hunter, (C. C. A.) 215 Fed. 69, 70, citing *Cumings v. Bank,* 101 U. S. 153.

"We find that the Supreme Court of Oklahoma has uniformly held that such suit would not lie, and there being no allegation in the bill of any distinct ground of equitable jurisdiction, dismissal of the bill is affirmed".

Stonebraker v. Hunter, (C. C. A.) 215 Fed. 69, 70.

To put it another way — if no one may sue in the court of the state without first exhausting the state administrative tribunals, no one may sue in federal court without exhausting those tribunals.

It is ruled in *Bagley v. Butler,* 24 S. D. 429, one may not enter the courts until he has at least exhausted equalization. It would seem this applies to both resident

and non-resident. If it does not, there is no explaining the countless *federal* decisions that one must first exhaust the state administrative tribunals. If appellees are right the federal court should have entertained the suits on the ground that the provisions for administrative relief were void because an attempt by indirection to shut one who had the right to sue in federal court, out of that court.

VIII.

APPELLEES ARE ESTOPPED BY ACTION AND NON-ACTION TO ASSERT ANY INVALIDITY.

As to the Appellee City —

It signed the petition, was present at hearings; its commission visited the work; it furnished water for the job, put in a meter for it and was paid by the Board on bills presented — and it seems to be admitted that the project saved or at least helped save the water supply of the City. Gilseth was held estopped on less than this. Beyond question it estops the City to assert any invalidity. — *De Noma,* 28 S. D. 372.

Shepard v. Barron, 194 U. S. 583.
Wright v. Davidson, 181 U. S. 371.
Conde v. City, (N. Y.) 58 N. E. 130.
Vose, 44 N. Y. 415.

City v. Hill, (Wash.), 62 Pac. 446, and long line of cases cited; *Erickson,* (N. D.) 92 N. W. 850; *Vickey,* (Ind. Supp.) 32 N. E. 881 and cases cited.

The Circuit Court of Appeals disposed of the estoppel by statement that when the acts relied on for estoppel were done those who did them did not know the project was likely to affect them. How can that possibly be so as to the City?

Counsel for the City presents another avoidance, to-wit, that there is no estoppel because despite all done

by the City it is not estopped because the project work departed from the petition, violated the federal Constitution and was otherwise tainted with illegality.

This disregards (a) that the allegation of fact is unproved, and (b) since what the City did estops it to object on account of illegality it is not relieved from the estoppel by asserting illegality.

VIII-(a).

ESTOPPEL AS TO OTHER APPELLEES.

It is true no other of the appellees did so much to base estoppel as did the City. But it does not follow these others are not estopped. They are estopped because all done was open, notorious and long continued, and they stood by silently and made no objection and took no action until the work was finished.

> *McCoy v. Able,* 131 Ind. 417; *Kellog,* 15 Ohio State 64; *Wiggin,* 9 Page 24; *Erickson,* (N. D.) 92 N. W. 849 — citing a long line.

In *Erickson v. County,* (N. D), 92 N. W. 850, it is said on citation of *Smith v. Carlow,* (Mich.) 72 N. W. 22:

> "The entire proceedings were open and notorious and evidenly were known to most, if not all, who were affected. The courts were open to them to contest validity before the work was performed. Whatever advantage the system is to the public has been reaped. This brings the case within the well settled doctrine that when parties stand by and see the improvement made and take no steps to impeach invalidity, they are estopped to raise validity when called upon to pay."

To like effect is *Patterson v. Baumler,* 43 Iowa, 477, citing numerous cases. One thing said in the Patterson case is that the work of construction was adjacent to the property of those sought to be taxed, that they cannot

be presumed to be ignorant of any irregularity and must be presumed to have had notice of the action on the work and the causing of it to be prosecuted. A consent by implication is said to be established in such circumstances. See *Motz v. City*, 18 Mich. 495 (Cooley).

IX.

PASSING ALL ESTOPPELS, THE CITY MAY NOT BE HEARD AT ALL BECAUSE IT HAS NO DIVERSITY, AND WE CONTEND HAS NO SUBSTANTIAL FEDERAL QUESTION.

At this point we claim nothing for the fact that it was held below there had been no unconstitutionality; and concede that whether it was reasonable to assert unconstitutionality is raised by our assignments.

In the main, the basis of attack was unconstitutionality, and excessive taxation. We have seen that here neither raises a federal question.

It is our position that no substantial federal question was presented because at the time these bills were prepared it was as well settled as any law proposition has ever been that in a collateral action such as this the federal courts could grant no relief as to anything complained of in the bills.

X.

PASSING ALL ESTOPPELS, NO COURT WAS WARRANTED TO ENTERTAIN THESE SUITS ON THE CHANCERY SIDE. NO EQUITY SHOWN.

At the outset, it is to be noted that unless state law permits it, the federal courts are extremely reluctant to interefere with the collection of state taxes by injunction. And Congress has recognized that the process of injunction has been used too freely, by several statutes making injunction more difficult to obtain or forbidding

its use altogether. See *Boise v. Boise,* 213 U. S. 276.

It is settled that illegality of a tax, alone, will not base chancery jurisdiction. — There must, in addition, be present something that rightfully invokes that jurisdiction. — *Shelton v. Platt,* 139 U. S. 591. All this is conceded, and the sole question is whether appellees present more than illegality of tax.

(a). *They invoke multiplicity of suits.*

Multiplicity cannot successfully be invoked where the statutes give access to the Board of Review, and appeal from the decision of such Boards to the courts.

Indiana Company v. Keohne, 188 U. S. 681.

To the same effect is *Keokuk v. Salm,* 258 U. S. 122.

We add, in the words of *Boise v .Boise,* 213 U. S. 276, it does not appear any other suits are threatened, the ones brought so involve the whole controversy that no new suits are necessary, and that the doctrine is not invoked by suits that are threatened by these appellees who have already sued.

(b). *No immediate or irreparable injury is made to appear.*

A vague allegation of irreparable injury will not suffice.

Boise v. Boise, 213 U. S. 276, 29 Sup. Ct. 429.

Surely it is not an irremediable mischief such as gives chancery jurisdiction that one might be defeated on resort to lawful tribunals, including the right to go to appellate tribunals. Where such remedy exists no case of irreparable injury is made out. *Keokuk v. Salm,* 258 U. S. 122; 42 Sup. Ct. Rep. 208.

(c). *No cloud on title is possible,* unless, perhaps, on the property of appellee Power Company.

The appellees present that Section 8464 of the Code makes the assessment a valid and perfect lien and that this apparent valid lien (said to be in reality invalid) would cast a cloud. (R. Brief 21). To begin with, all cloud was the purest speculation and merest anticipation when the bills were filed, and, for that matter, when the injunction issued. At these times no tax of any sort was in existence. Wherefore no enforcement of tax could at that time cast any cloud. Section 8464 in plain language declares that no assessment may be made, to say nothing of being made effective, until after the ascertainment of benefits are equalized which the injunction stopped.

Again — the doctrine of casting clouds cannot be invoked against one whose real property may not be seized to enforce the collection of a tax. Sections 6606 and 6663 makes fairly clear that as to railroads taxes can be collected only out of sale of personal property. It directs collection to be made by selling engines, cars, rolling stock "and any personal property".

Sections 6662, 6663 and 6664 permit railroad companies to defend any suits brought against them to collect such tax, in which they may set up any defense which they have, even to attacking the validity thereof.

Moreover, if any statute had attempted to permit collection of taxes by selling some part of a railroad lying within South Dakota it would undoubtedly have been held to be an interference with Interstate Commerce. As said in *Union Pacific v. Ryan,* 113 U. S. 516, a railroad cannot be regarded as mere land as farms or building lots, that its value depends on its whole line as a unit, and any segregated section would be almost valueless, by itself.

As to the City — Section 8463 provides that enforcement of anything due from the City must be made by the assessing officers — and of course these may be commanded by *mandamus* to act.

Taxes against such parties are not enforced by distraint or levy but by suit to collect.

Keokuk v. Salm, 258 U. S. 112.

Averment that an assessment of capital stock on franchise constitutes a cloud on title will not sustain bill to restrain collection without allegation that corporation owns real property.

Indiana Co. v. Kochne, 188 U. S. 681.

Payne, (Calif.) 138 Pac. 967.

Union Pacific's case, 113 U. S. 516.

Greene's case, 244 U. S. 499.

(d). What has been said as to casting a cloud applies quite largely to the claim of lien attaching. See *Boise,* 213 U. S. 276. As said, at the time the injunctions issued, there was no lien possible.

Section 8467 says that the tax shall be a perpetual lien but says that this is so as to "tracts". We have appellees committed to the assertion that using the word "tract" found in another statute or found in a notice, does not give notice to either a railroad or a municipal corporation. If that be so, fixing a lien on "tracts" is not fixing a lien on any property of either a railroad or a municipal corporation.

But as said, liens at all event attach only to real property owned by someone whose real property may be sold for taxes — and neither railroads nor municipal corporations are in that class. There can be neither cloud or lien cast upon property of Railroads or City described.

X-(a).

ADEQUATE REMEDY AT LAW.

It is strenously urged there was chancery jurisdiction because there exists no adequate remedy. The provisions for administrative tribunals alone constitute an

adequate remedy.

The *Ward* case, (Tenn.) 46 S. W. 575, approves the statement of Cooley on taxation, that "the statutory remedy of equalization is supposed to be adequate to all the requirements of justice, and it is the party's folly if he does not avail himself of it".

Administrative provisions give adequate remedy.

Milheim v. Moffat, 262 U. S. 710.

Indiana Co. v. Koehne, 188 U. S. 681.

Union Pacific v. Commissioners, (C. C. A.) 217 Fed. 456.

Wherefore there is not ground for equitable jurisdiction.

Boise v. Boise, 213 U. S. 276.

Dows v. Chicago, 11 Wall. 180.

Walla Walla v. Walla Walla, 172 U. S. 1, 19 Sup. Ct. 77.

Shelton v. Platt, 139 U. S. 591.

Having failed to object to a tentative *ad valorem* assessment, failure to ask modification of cost before the board of equalization, and before the tentative basis has been finally adopted, leaves the party with no sufficient ground of complaint.

Milheim v. Moffat, 262 U. S. 723.

Relief in equity depends on having sought correction from the Board of review and failure to secure redress.

Keokuk v. Salm, 258 U. S. 112, 42 Sup. Ct. 207, 208.

A subordinate but involved argument is that there was chancery jurisdiction because whatever remedy existed was not one that can be presented on the law side

of the federal court. It is held in *Shelton v. Platt,* 139 U. S. 591, and the *Walla Walla* case, 172 U. S. 1, 19 Sup. Ct. 77, that as to an illegal tax a damage suit may be enteretained on the law side of the federal court. Again, over and again is it asserted (and the Circuit Court of Appeals sustains the assertion) that the Board acted without color of right or authority, that it was a naked trespasser from the very commencement of the assessment proceedings. (P. 23, 34, 35, and also in the briefs of M., S. and O.). Surely, there is a remedy against a trespasser on the law side of the federal court, say, by a damage suit. There is no suggestion that the appellants are insolvent, and it is presumed they are solvent — moreover it seems to be settled that the existence of a threatened common trespass will not give equity jurisdiction.

No relief in equity as to tax which because of invalidity amounts to a common trespass.

Dows v. Chicago, 11 Wall. 80.

Some peculiar reasons are given why the chancery jurisdiction should be sustained. Largely, these reasons assert matters which we have attempted heretofore to show are immaterial and untenable under the law, and not sustained by the evidence.

For illustration — equity had jurisdiction because the project was "confessedly" a mere subterfuge — which was never confessed and is negatived by the express holding of the highest court of South Dakota.

Another "reason" is that there was the right to have equity investigate whether the board was acting without power and whether appellees were being deprived of due process of law. This is remarkable. It seems to be thoroughly settled that the chancery court has no jurisdiction *even if the* proposal of a tax has no authority back of it, or violated the Constitution. But

the court does have jurisdiction to find out whether what it could not act on, if established, existed.

Finally, that there was jurisdiction because the state statutes did not provide the right to bring suit for the recovery back of illegal taxes paid under protest. That such provision would have constituted an adequate remedy at law we concede. But there are a number of things that might be such remedies that the state statute did not provide for. How is it material if there are other sufficient provisions to constitute adequate remedy at law? And what of it, that no statutory right is given to recover back? If, as appellees urge, the members of the Board were mere trespassers there was always the common law right to bring suit to recover back anything that these trespassers had obtained by their trespass.

It might be added that the very fact that there is no remedy in equity proves there is one on the law side, for it cannot be assumed the law has left a wrong without a remedy.

XI.

PASSING ALL ESTOPPELS, THERE WAS IN FACT NO VIOLATION OF THE FEDERAL CONSTITUTION.

The Board was acting under the taxing power. — *People v. Mayor,* 4 N. Y. 419; *Roberts v. Smith,* (Mich.) 72 N. W. 1092. As to what should be included in the District, its action was a political matter. — *Bemis,* (Ind.) 105 N. E. 497. — And it would not deny due process if notice as to boundaries were not required. *Ross v. Board,* (Iowa) 104 N. W. 506.

Being an exercise of the taxing power, one reserved to the states, the courts may not interfere because of the method, manner or details of apportionment, equalization and collection adopted and fixed by the proper state

authority; nor with their method of determination or the agencies chosen to carry on; nor because of the method and manner of notice, or the kind of notice adopted — and many times all such action has been held to satisfy the Constitution — even where what was done was much more open to such objections than those urged by appellees, or anything done or omitted here.

NOTICE GIVEN, SUFFICIENT.

No notice showing intended classifying as to assessment is necessary.

Ross v. Board, (Iowa) 104 N. W. 506.

In *Curtiss v. Pound*, 34 S. D. 628, the notice to City and Railroads is held sufficient. In it —

> A township unsuccessfully contended it had no notice because it could not infer from the notice whether the township was to be affected, that it was not named and had no reason to believe it would be benefited or damaged by the proposed drainage. It was further held the owner need not be named, and that all that was necessary was a general description of the lands to be affected.

It suffices that appeal is provided. — *Bemis*, (Ind.) 105 N. E. 497.

It suffices that notice is given at some time before the assessment becomes final. — *Idem.* This is true as to the question of what may rightly be included in the District; — *Voight*, 184 U. S. 115; 22 Sup. Ct. 337, — this, even where no notice was given before establishment, as to establishing. *Goodrich v. Detroit*, 184 U. S. 432, 22 Sup. Ct. 397.

Sections 8459, 8461 and 8462 provide for due notice on whether there is necessity for establishing. Section 8463, for due notice as to assessment. — Section 8476 is a complete harmonizer as to notice requirements. It provides:

> "All proceedings affecting right of persons in the establishment must be had on such notice as the statute requires to be given as to construction of drains."

Thus, it puts straightening or enlargement of old drains previously constructed, in the same class as an original drainage project; and provides for due notice as to inclusion, whether in the old drainage district or not. This applies particularly to the enlargement proceeding in the cases at bar.

> It is settled by the highest court of the State that the notice which the trial Judge found sufficient was sufficient under the statutes of the State.
>
> *State v. Pound,* 34 S. D. 628, 150 N. W. 287, 288.
>
> *Gilseth v. Risty,* 46 S. D. 372.

And such is the holding of

> *Lamb v. Connolly,* (N. Y.) 25 N. E., 1043, 1044.
>
> *Hennessey v. Douglas,* (Wis.) 74 N. W. 987.
>
> *Pittsburgh v. Backus,* 154 U. S. 421.

Under Sections 6663 and 6664, the railroad appellees had opportunity to present all they complain of, by way of defense to a suit to collect.

The opportunity to be heard as to the petition is penary. (Sections 8461, 8462). For one thinb, the notice as to this hearing, "shall refer to the files in the proceedings for further particulars. Such notice shall summon *all persons affected* by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established and constructed."

And Section 8461 provides for a notice that shall contain:

> A description of the exact line and width of the ditch as determined by the board, describing

"the tract of country likely to be affected thereby, in general terms."

So the property sought "to be affected" is required to be described even though its owners are not named, and the notice given describes said land by sections, townships, ranges, and city sub-divisions.

It would not deny due process if no notice of hearing on sufficiency of the petition had been provided. — *Bemis,* (Ind.) 105 N. E. 497.

There was power to determine what lands were benefited. *Voight,* 184 U. S. 115, 22 Sup. Ct. 337 — and at least one appellee seems to concede this. (Brief R. 35).

All held in *Georgia v. Wright,* 207 U. S. 127, is that the opportunity to be heard is too much limited. The laws of Georgia seem to deny about all notice and hearing that the laws of South Dakota give.

XII.

THERE IS IN FACT NOTHING ARBITRARY EITHER IN STATUTE OR ADMINISTRATION OF STATUTE.

What is arbitrary in taxation is described in *Brushaber v. Union Pacific,* 240 U. S. 1, 36 Sup. Ct. 237, to be a tax that transends the conception of all taxation, is a mere arbitrary use of power, forces courts to the conclusion that it is not the exertion of taxation but an attempt to confiscate, and is so wanting in basis for classification as to produce such gross patent unequality as leads inevitably to the same conclusion. This is the standard then to measure by — in which connection it is not amiss to add that the *pleadings* do not seem to attack the *statute* for being arbitrary but are addressed to arbitrary conduct by those who proceeded under statute. In argument, however, this is enlarged and we

are told the statute is so arbitrary as to be unconstitutional because it fixes no definite standard for benefits. (N. 8; P. 8). And *Martin v. District,* 205 U. S. 135, is cited and appears to be a case on a statute that *was* so lacking in definite standard. Passing the question of pleading, the statute itself (Section 8463) follows Section 6, Article 21 of the Constitution in providing that the special assessments shall be raised according to benefits "among the lands affected".

There is no limitation that it shall be *upon* or among lands *used for agricultural purposes.* There is no suggestion that railroads or cities shall not be assessed for benefits resulting to their property. The board then fixes a time and place for equalizing the same. Notice of such equalization shall be given by publication and posting. Said notice shall state (1) the width and route of the drainage; (2) a description of each tract of land affected by the proposed drainage; (3) and the names of the owners of the several tracts of land as appears from the records in the office of the Register of Deeds; and (4) the proportion of benefit fixed against *"each tract of* (or) *property* *", and shall notify all such owners to show cause why the proportion of benefits shall not be fixed as stated.

Under clause 4 above, the statute now reads "each tract *of* property", and is evidently a typographical error on the revision, as the original statute of 1907 read "each tract *or* property". Since the statute specifically directs that "all such owners" be notified to show cause, (Sec. 8463) it cannot be said that owners of one class of property are required to be notified, and that no provision is made for notifying owners of property used for a different purpose, (City or Railroad Companies).

It is of course also argued that the board did not follow this statute. (R. 33; P. 29). All that need be said as to this is that the evidence does not sustain the assertion. The main support of the assertion that the board acted arbitrarily is (1), that it listened and

was largely influenced by the advice of its engineer and that this engineer was too ignorant to be a competent advisor; and (2) that an opportionment of benefits made in 1919 as to a proposed system which was abandoned made the apportionment much lower, and that the 1919 action in this regard is sacrosanct, and any great departure from it proves arbitrariness.

The evidence is set forth fairly well in the briefs of the appellees (N. 27, 28, 29; P. 28, 29) and we may fairly claim for *Pittsburg Railway v. Backus*, 154 U. S. 420, that the evidence does not sustain the contention. In that case it was said:

> "Is testimony that the value placed by the board was excessive together with testimony that portions of the road outside of the state were of largely greater value than any similar length of road within the state, unaccompanied with evidence that the board reached the valuation by simply dividing the total value of the company's property on a mileage basis, or that it failed to take into consideration the fact of such excessive value of portions outside the state, sufficient to impeach its determination? This question must be answered in the negative. No determination of a special board, charged under the law with the duty of placing a value upon property, can be successfully impeached by such meager testimony".

We have the rather remarkable argument that there was arbitrariness and undue discrimination worked by equalization — remarkable, because the injunction prevented there being any equalization. Then there is "argument" that here was arbitrariness because the benefits were not derived directly or indirectly from the drainage of agricultural lands. As to this we have said already all that seems to be necessary.

The cases of *Thomas v. Railway*, 277 Fed. 608, and *Kansas City v. Road District*, 256 U. S. 658; and that of *Gast*, 240 U. S. 55, involve an attack upon the statute

for being arbitrary which is not made in the pleadings in the case at bar, and each of the three exhibits a situation that comes fairly within the description of *Brushaber's* case.

Let it again be noted it is impossible to hold that the apportionment was arbitrary for being either unequal or excessive, because the act of the appellees left the apportionment purely tentative and no one can say whether it would be either unequal or arbitrary if appellees had permitted equalization to be proceeded with.

XII-(a).

METHOD OF DETERMINING BENEFITS.

If there is a possibility of direct or indirect present benefit or a potential present benefit, based on reasonable facts, which benefits are determined by a method which can be reasonably presumed will produce substantial equality between lands and properties, and if all property of the same class is operated on alike, the tax and the method pursued is not arbitrary.

> "Traffic benefits resulting from the haul of increased croppage of lands within a drainage district, because of over-flow protection, are sufficient to authorize assessment of railroad property for improvements within such district, though there were no direct benefits, by way of protecting the company's right-of-way from overflow".
>
> *Thomas v. Kansas City Southern Ry. Co.*, 272 Fed. 708.
>
> "There must be added the obvious fact that anything that develops the territory which a railroad serves must necessarily be a benefit to it, and that no agency for such development equals that of good roads — and the holding of the Circuit Court

of Appeals that the railroad would not be benefited by the improvement cannot be sustained".

Branson v. Bush, 251 U. S. 182, 40 Sup. Ct. 116.

The drainage act provides that in apportioning benefits among the several tracts and property benefited by the system the board shall select one tract, "the benefit" received *"by which"* shall be taken as the unit from which to measure the benefits received by the other tracts and property. This does not make it arbitrary to use "the benefit" in dollars received by any tract of any class as the unit from which to estimate the proportionate benefit received by any other tract or property of either class — the sole thing aimed at being the ascertainment of what proportion of the total amount to be assessed should be borne by each tract, or property. *Milne v. McKinnon*, 32 S. D. 627.

The capitalization method of determining the amount of actual benefit in cases like this, has been approved in *Western Railway v. Commissioners*, 261 U. S. 264. And the method of assessment in

Railway v. Supervisors, (Iowa) 153 N. W. 110.

Marion v. Simons, (Ind.), 102 N. E. 132.

Drainage District v. Railway, (Nebr.) 146 N. W. 1055.

Chicago, Rock Island v. County, (Iowa) 154 N. W. 888.

Northern Pacific v. Board, (Wash.) 181 Pac. 868.

Northern Pacific v. County, (N. D.) 148 N. W. 545.

Spring Creek v. Railway, (Ill.) 94 N. E. 529.

Illinois Central v. Commissioners, (Ill.) 21 N. E. 926.

XIII.

THERE WAS IN FACT NO PROHIBITED DISCRIMINATION, IF ANY, AND NOT MORE THAN PERMITTED CLASSIFICATION.

It is held in at least ten decisions in this court that classification for tax purposes is permissible and is not in contravention of the equal protection clause of the Fourteenth Amendment, so long as all persons similarly situated are treated alike.

> It is not necessary that the benefits assessed and those in fact received should be exactly equal.
>
> *Southern Ry. v. Watts*, 260 U. S. 519.
>
> *Stanley v. County*, 121 U. S. 535.
>
> There should not be extracted from the very general language of the Fourteenth Amendment a system of delusive exactness. — *Martin v. Dist.*, 205 U. S. 135, 27 Sup. Ct. 441.
>
> The Fourteenth Amendment "was not intended to compel the states to adopt an iron rule of equal taxation". — *Branson v. Bush*, 251 U. S. 182, 40 Sup. Ct. 115.

What is condemned is wilful disregard of law requiring uniformity in valuation and taxation — *Western Union v. Missouri*, 190 U. S. 412; *Stanley v. County*, 121 U. S. 535. Here, there was no disregard, wilful or other, because Section 2, Article 11, South Dakota Constitution, empowers the legislature to divide all property into classes for the purpose of taxation and only requires that all property of the same class should be taxed uniformly.

For illustration — the following have been held to be not improperly discriminatory:

> Allowing deduction for interest in income tax

return to one class of corporations and not to a different class or to individuals.

Brushaber, 240 U. S. 1, 36 Sup. Ct. 237.

Allowing individuals to deduct from gross income dividends paid them by corporations whose incomes are taxed and not allowing the same deduction to such corporation. — *Idem.*

Though family expenses are not as a rule deductible, allowing farmers to omit from their return certain products which are susceptible to use by the family. — *Idem.*

Excusing owners of the house they live in from giving an estimate of rental value, and not allowing renters to deduct rent paid. — *Idem.*

And as to discrimination by valuation it has been held that a disproportionate assessment is but an excessive one — from which relief will not be granted to those who have not invoked the aid of the equalization board — *Bagley v. Butler,* 24 S. D. 429. — So, where a corporation was assessed on basis of 75 per cent of actual value — property generally not more than 52 per cent — *Greene v. Railway,* 244 U. S. 522.

And so where one class was assessed at one-third actual value, and others at less than one-fifth. — *Union Pacific v. Commiss.,* (C. C. A.) 217 Fed. 541.

XIII-(a).

ELEMENTS OF BENEFIT.

That different elements of benefits enter into different classes of property, is immaterial. The law does not require that a farm as such shall be compared with a railroad track or a high-way or with the grade of the bridges of a City or of a railroad company.

Though benefits to a railroad company as such are composed of different and larger number of elements than real estate consisting, say, of land, which latter can be determined by estimating value before and after — it is still allowable to tax benefits to a railroad company, say, to right-of-way, bridges, culverts, embankments, tracks, and uniterrupted traffic and saving in annual maintenance.

Railroad v. Supervisors, (Iowa) 153 N. W. 110.

Marion, (Ind.) 102 N. E. 132.

Drainage No. 1 v. Railway, (Nebr.) 146 N. W. 1055.

Chicago and R. I. Ry. v. Wright, (Iowa) 154 N. W. 888.

Northern Pacific Railway v. Board, (Wash.) 181 Pac. 868.

Northern Pacific v. County, (N. D.) 148 N. W. 545.

Spring Creek District, (Ill.) 94 N. E. 529.

Illinois Central v. Commissioners, (Ill.) 21 N. E. 926.

Railroads differ in so many respects from other properties that they as a class must be taxed differently or additionally so long as that is not inconsistent with the Constitution of the state.

Southern Railway v. Watts, 260 U. S. 519.

43 Sup. Ct. 197.

"The equal protection clause is not violated by prescribing different rules of taxation for railroad companies than for concerns engaged in other lines of business". — *Baker v. Druesedowe*, 263 U. S. 137, 44 Sup. Ct. at 41.

Proper method so long as railroads are not dealt with differently than those in its class. —

Kent Railway case, 115 U. S. 321; *Durham,* 261 U. S. 149; *Valley Company,* 261 U. S. 155.

And we have this sample of hyper criticism:

> The statute itself is discriminatory because as to lands affected it fixes the apportionment of benefits and as to the property of railroads it is "the benefits". In the one case it requires relative benefit and in the other of an actual benefit. And if the benefits should materially exceed the cost, the result of the discrimination would be most obvious. (N. brief 25.)

XIV.

THE CONTENTION THAT THE EVIDENCE SHOWS NO BENEFIT WAS RECEIVED.

As to this we have the opinion of a witness that the project did the interests of the Power Company harm rather than good because diversion of water of any kind would diminish its power. We think the testimony on this head is clearly over-borne by the testimony as a whole. Next comes the opinion of employees of the appellees that there was no benefit whatever to either right-of-way, tracks, bridges, embankment grounds, or station grounds. Next, an opinion that the system does not take enough water out of the river to make any material difference although it had just been said for the same side that it took so much that it injured the Power Company. Then we have the opinion of one of the employees that if he were planning to shorten bridges he would act as though this ditch did not exist. Next, opinion that the new spillway is as liable to go out as the old one — a defect that does not seem to have been charged in pleading.

Then comes a line by the employees which involves past history. Bassett says that no property of the Great Northern has to his knowledge ever been flooded; and he and Link and Reed unite on the proposition that both

Power Company and railroad property are so constructed as to be flood proof. Bassett supports this by the fact that the Great Northern banks have high slope, that there is a growth of grass and weeds and rip rap, and that therefore the embankments of the Great Northern will withstand any possible flood conditions. Another basis for the claim that no benefits were received, (if not worse) is that the engineer of the Board was ignorant — something hardly borne out by the record and the statement of qualification and experience in the record as to this engineer which seems to be disputed in argument only.

We are content to stop with saying that if there is any reason to complain of benefits tentatively assessed, if there is any reason why the proposed assessment is too high, or to say that no benefits were being received, that was all a matter for the Board of Equalization and if necessary for appeal to the Circuit Court of the state — *Curtiss v. Pound*, 34 S. D. 633. We are content with the holding of *Pittsburg v. Backus,* 154 U. S. 421, on sufficiency of testimony herein earlier set out. And, finally, submit we have heretofore made clear, it may fairly be said, on this record that unquestionably the appellee City received a benefit, and the record is equally clear that, within rules we have heretofore called attention to, each of the other appellees was benefited in some degree at least. That the proposed assessment seemed greater to them than the benefit received was, as said, a matter to be first presented to the administrative tribunals.

XV.

In the case of the appellee Milwaukee and appellee Omaha the trial Court refrained from enjoining the making of *any* assessment leaving it open for later determination how much the assessment should be in view of the fact that these two appellees had previously been assessed for the construction of the old ditches. It seems

the City is in exactly the same situation. But as to it the injunction stops *all* assessment, without the reservation made as to the Milwaukee and Omaha — and the Circuit Court of Appeals left this matter uncorrected, also.

Respectfully submitted,

BENJ. I. SALINGER,
Solicitor for Appellants.

E. O. JONES and
N. B. BARTLETT
Of Counsel.

Appendix "A"

SOUTH DAKOTA REVISED CODE 1919.

NATURE OF PROPERTY.

Sec. 256. REAL PROPERTY DEFINED. Real or immovable property consists of:

1. Land.
2. That which is affixed to land.
3. That which is incidental or appurtenant to land.
4. That which is immovable by law.

Sec. 257. LAND DEFINED. Land is the solid material of the earth, whatever may be the ingredients of which it is composed, whether soil, rock or other substance.

COLLECTION OF TAXES.

Sec. 6662. CIVIL ACTION TO COLLECT, PROCEDURE. In case any railroad company, telegraph company, telephone company, express company, sleeping car company, private car line company, or other company or corporation coming within the provisions of this chapter, shall refuse or neglect, for a period of thirty days after the same shall have become delinquent, to pay any tax levied against it the state or county treasurer to whom such tax is payable shall have the power, in addition to other remedies provided by law for the collection of personal property taxes, to institute and main-

tain an action in the circuit court, in his name as such treasurer, against such company to collect the tax, with penalties and interest as provided by law. In any such action it shall be sufficient for the treasurer to allege in his complaint that the taxes stand charged upon his books against such company and the same are due and unpaid, and that a debt is thereby created, and that such company is indebted in the amount appearing to be due on the treasurer's books. The treasurer's books shall be received as prima facie evidence, on the trial of the action, of the amount and validity of such tax appearing due and unpaid thereon, and of the non-payment of the same. If on the trial of the action it shall be found that such company is so indebted, judgment shall be rendered in favor of the treasurer prosecuting such action for the taxes, penalties and costs as in other actions. The defendant may set up by way of answer any defense which it may have to the collection of such taxes. If the defendant claims the tax to be void, the court must in the action ascertain the just amount of taxes due for the year it is claimed the taxes are delinquent, and if, in its opinion, the assessment or any subsequent proceeding has been rendered void or voidable by the omission or commission of any act required or prohibited, the court shall order it reassessed by the tax commission, and shall thereupon render judgment for the just amount of taxes due from the defendant for that year or years.

Sec. 6663. SPECIAL ASSESSMENTS, PROCEDURE. If any railway company shall neglect or refuse to pay any special assessment levied against such railway company, the county treasurer, city treasurer, or other officer charged with its collection, whenever such special assessment shall become delinquent, shall collect the same by seizure of engines, cars, rolling stock, and any personal property of such company, in an amount sufficient to pay such special assessment, with accrued penalty and interest, and all accrued costs, wherever the same may be found in the county or coun-

ties in which such special assessment may have been made and levied, and shall immediately proceed to advertise the same for sale in three public places in the county, or by advertisement in one of the newspapers published in the county where such property is taken, for a period of at least ten days before such sale, stating the time when and place where such property will be sold. And, if the special assessment or assessments for which such property is distrained, and the accrued costs thereon, are not paid before the day appointed for such sale, such treasurer shall proceed to sell such property at public auction, or so much thereof as shall be sufficient to pay such special assessment, penalty and cost of such seizure and sale. Any surplus remaining above the special assessment or assessments, charges for keeping, fees for sale, fees for levying on the property and mileage, as allowed by law, shall be returned to the owner; and the treasurer shall, on demand, render an account in writing of the sale and charges. If the property so distrained and seized cannot be sold for want of bidders, the treasurer shall return a statement of the fact, and return the property to the possession of the railway company from which the same was taken and such tax shall be returned as unpaid.

Sec. 6664. GENERAL TAX PROVISIONS APPLICABLE. The provisions of this code relating to general taxes shall apply to the enforcement and collection of any delinquent special assessment against a railway company, so far as such provisions are applicable, and wherever in this code reference is made to general taxes, the same shall be construed to include special assessments, as well as taxes for general purposes.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1925.

No. 95

A. G. RISTY, ET AL, as County Commissioners, etc., et al,

Appellants,

vs.

CHICAGO, ROCK ISLAND & PACIFIC RAILWAY COMPANY,

Appellée,

And the Four other cases set forth on the Cover page hereof, numbered 96, 97, 98 and 100, inclusive.

ON APPEAL FROM THE CIRCUIT COURT OF APPEALS, EIGHTH CIRCUIT.

PETITION FOR REHEARING.

All references to record pages hereinafter made will be made to the printed record in case No. 96, Chicago, Milwaukee & St. Paul Railway Company, Appellee. All the other cases have the identical records hereinafter referred to, but the pagings, of course, will be different. For that reason we limit ourselves to the record in case No. 96.

TO THE HONORABLE, THE SUPREME COURT OF THE UNITED STATES:

Having carefully examined the opinion of the Honorable Court herein, we think with propriety we may ask

the Court to consider whether the opinion does not err on certain vital points. We respectfully submit that there is such error, and therefore, appellants pray this Honorable Court to set aside the opinion and judgments rendered herein on March 1, 1926, and to reverse the decision of the District Court in these cases. Supporting this appellants respectfully say that the Court overlooked the following matters:

FIRST.

The pronouncement that "while *Gilseth v. Risty*, 46 S. D. 374, has expressions which, standing by themselves, might be regarded as supporting that the proceedings at bar were authorized by statute — the court clearly rested its decision upon other grounds, and the said decision does not so clearly or decisively pass on the question involved herein as to control the decision here," clearly overlooks the true holding in that case.

SECOND.

The basic "fact" found by the trial and appellate Court, and which this Court assumes to be true in its decision, is the finding that "Drainage Ditch No. 1 and 2 was not a new project (and) that no new or additional drainage was established". It is our contention that this "Finding of Fact" is not only unsupported by any evidence in the record, but the undisputed evidence is against such finding, and the same is conceded by appellees Milwaukee, No. 96, and Omaha, No. 97.

THIRD.

The meaning and interpretation of Sections 8458 and 8476 of the Revised Code of South Dakota, 1919, as construed by this Court, is not in accord with the repeated construction placed thereon by the Highest Court in the State of South Dakota.

ARGUMENT.

I.

THE GILSETH DECISION SHOULD CONTROL AS TO EVERY PRONOUNCEMENT THAT WE HEREIN CHALLENGE.

This Court speaking with reference to amount in controversy says that "the substantial basis of the suit was want of jurisdiction in the Board". Surely the Gilseth decision speaks clearly and decisively as to that vital matter. This will be obvious from the following statement of just what that decision is. The very last thing in it is the finding that Gilseth was estopped. What is said on this head is purely an independent ground for affirmance stated after several other such independent grounds had been put forth. It does the utmost violence to that decision to hold that it "rests" on that last stated ground. If there be any stressing it is as to the grounds that come first. If there be any difference in emphasis the last ground is the more incidental. Indeed the very fact that there was an affirmance in the Gilseth case makes it error to hold that the estoppel is the essence, because the affirmance of necessity declares that the Board had jurisdiction to do just what it did do.

The Gilseth decision:

It deals with reference to the very project at bar; and says the record shows that in 1908, a petition was filed with the County Commissioners asking that the said drainage district be extended several miles farther up the river, and that the following further action was had upon this pettiion, to-wit:

> "Said petition was allowed, and a resolution adopted by the Board of County Commissioners, establishing said drainage and designating it as 'Drain Ditch No. 2', extending said original drain No. 1 from the upper end of said original drainage ditch No. 1 about 12 miles".

This would seem to be a clear cut holding that the project asked for and ordered was *not* a repair project, and that, instead, there was an extension about 12 miles long "extending said original drain Ditch No. 1 from the upper end of said original Drainage Ditch No. 1".

(If we accept this Court's pronouncements the establishment of Drainage Ditch No. 2 was only repair and maintenance of the original Ditch No. 1, and could only be paid for by assessment upon Ditch No. 1 district).

Surely, in cases of mere maintenance of an existing ditch there could be no such thing as "an original drainage ditch", as distinguished from an extension of an original drain. In maintaining an established project there is but one ditch; there is neither original nor extension of original.

> "Sometime in April, 1916, Gilseth and others affected by the condition of the water and of the existing drainage ditches, filed a petition with the Board "asking that said spillway be abandoned and that the water flowing through said ditches be turned through a certain sleugh or lake in the northern part of te city of Sioux Falls and thence into the channel of the river and flow around said city. A survey of said proposed plan was made, and, after notice to the interested parties a hearing was had upon said petition and report of said survey. On the 8th of July following, an order was made granting said petition. Thereafter, many conferences were had between plaintiff and the said petitioners and other interested parties, with the result that the said petition and the said plan of drainage were abandoned. Thereupon, a second petition was filed, asking for the re-establishment of drainage ditch No. 1 and 2, for the re-construction of said spillway and for the enlargement of the drainage area so as to include all the land along the river to the outlet of said spillway. This petition was filed on the 3rd of August, 1916. The Board thereupon caused

a survey to be made of the entire area covered by the said last named petition. Upon the filing of the report of such survey the Board gave notice of hearing on the said petition and upon such hearing the Board, on the third day of October, 1916, made an order purporting to establish a new drainage district, designating it as 'drainage ditch No. 1 and 2', and this drainage district included the entire area of the two former districts together with drainage area along the river through the city of Sioux Falls."

Speaking to whether the project is a new enlarged district, the Supreme Court of South Dakota said:

"The Board then proceeded to do the work necesary to carry out the plan contemplated by the said order. The ditches in what had been drainage districts Nos. 1 and 2 were cleaned out, widened, deepened, and diked, *so as to greatly increase the carrying capacity thereof. Several cut-offs were made in the river so as to accelerate and increase the flow of water* through the channel of the river, a new and larger spillway was constructed".

The doing of all this work cost approximately $240,000.00.

"It is contended by the appellant that the project contemplated by the petition was not the creation *of a new drainage district or a new drainage ditch* but merely to repair a project already in operation, and that, therefore, the Board was without authority to proceed. *But this contention is not tenable."*

"But the two projects were by no means identical. The drainage district involved in this case contains a materially larger area than the combined areas of the two old ditches".

"The Constitution, Section 6, Article 21, and the Statute, Section 8458, gives the Board the same au-

thority to repair an old ditch that it does to construct a new one."

"The filing of the petition, asking for the establishment of a new drainage ditch on the third of August, 1916, gave the Board jurisdiction to proceed with the inspection and survey of the proposed drainage area as required by the provisions of Sections 8460 and 8461, Revised Code, 1919, citing *Laning v. Palmer,* 117 Mich. 529, 76 N. W. 2".

"Upon the filing of the surveyor's report the board was authorized to fix a time and place for the hearing on said petition. This was done and the notice provided for in Section 8461 given. The hearing was had as provided for in Section 8462".

"The board after a full hearing found the drainage, as petitioned for in said petition, to be conducive to the public health, convenience and welfare, and necessary and practicable for the drainage of agricultural lands".

"Numerous irregularities on the part of the Board are alleged and it may be assumed that the Board did in certain instances proceed in an irregular manner. But it is not shown that the Board did in any instance exceed the jurisdiction conferred upon it by law".

"All the irregularities complained of occurred after the Board had acquired jurisdiction of the subject-matter".

"No appeal was taken from the order establishing the new district. Therefore, *the order became final, and there cannot in our judgment be any* question of the board's jurisdiction to proceed to carry out the work contemplated by the petition".

"No fraud or bad faith on the part of the board has been shown.

It was after all this was said that the Court then

spoke of estoppel (upon which it is claimed the decision "rests") then:

> "While plaintiff did not sign this petition he was present at the hearing thereon and is presumed to have known that whatever was done in the way of constructing any drain, ditches or repairing the old ones would have to be paid by an assessment on the property that received the benefits. He saw the work in progress and was advised of all that was done".
>
> "Two years were allowed to elapse after the work was completed before this action was commenced".
>
> "Appellant having stood by and seen all the work performed without protest, and having received all the benefits that can result therefrom, should not now be permitted to escape payment for the same. The relief asked by appellant is equitable in its nature, but because of the circumstances above shown, all the equities of the case are against appellant and in favor of the Board".

It is said also in the Gilseth case:

> "At the hearing Gilseth and many others interested were present".
>
> "Appellant was present when the order granting the new district was made. If he believed that such order was prejudicial to his rights, or was dissatisfied for any reason with the course pursued by the Board, he should have appealed from the said order before the expense of executing the same had been incurred".

There is just one way to argue that nothing but the estoppel pronouncement is a binding decision — and that is to claim that if a decision is made on more than

one ground, then nothing is decided. That is not the law.

In *First National Bank v. Board,* 264 U. S., 455, it was contended that the decision turned upon the point that plaintiff had an adequate remedy at law, and not upon the question whether plaintiff had lost its rights by neglecting to seek administrative remedy. The Court said:

> "It is true the court, after the statement quoted above, proceeds to say that plaintiff cannot have relief in equity. But this seems to be put forth as an independent ground for affirming the judgment. It follows the unqualified statement that 'plaintiff having refrained from seeking the administrative relief open to it, may not now complain'."

It is next said that though adequacy of remedy was also dealt with, there is a holding that administrative remedies must be exhausted prior to judicial challenge, and that, indeed, such pre-requisite could not be dispensed with.

> "The case is of *equal* authority upon each of two distinct and sufficient grounds upon which an appellate court rests its affirmance of a judgment, although only one of those grounds was considered in the court below."
>
> *Union Pacific v. Ry.,* 199 U. S., 160.
>
> "Where a decision is based on two independent lines of reasoning, neither is a dictum".
>
> *Pugh v. Moxley,* 104 Cal., 374.
>
> "Where an appellate court bases its decision on two or more distinct grounds, each is as much an authoritative determination as the other, and neither can be disregarded as dictum."
>
> *King v. Pauly,* 159 Cal., 549.
>
> "Where a case presents two or more points any one of which is sufficient to determine the court

issues, but the court actually decides on such points, the case is an authoritative precedent as to every point decided, and none of such points can be regarded as having merely the status of dictum."

15 C. J., 953.

This is supported by citations from this court, Federal Courts, California, Iowa, New York, Oregon, Tennessee, Texas, Washington, and Wisconsin.

"An adjudication on any point within the issue presented by the case cannot be considered a dictum. Accordingly, a point expressly decided does not lose its value as precedent because the disposition of the case is based upon other grounds."

15 C. J., 952.

The text cites for support cases in this Court, the Federal Courts, Mississippi, Missouri, Nebraska, New Jersey, New York, North Carolina, Tennessee, Washington, and from English Courts.

"This is so even though by reason of other points in the case, the result reached might have been the same if the court had held on the particular point otherwise than it did."

15 C. J., 952.

Where one specific objection urging invalidity of a statute is raised by the record, and argued by counsel, the denying the force of the objection is not dictum, even though the statute is held invalid on other grounds.

Carstairs v. Cochran, 95 Ind., 488, affirmed 193 U. S., 10.

"It cannot be said that a case is not authority on one point, because although that point was properly presented and decided in the regular course of consideration of the cause, something else was found in the end which disposed of the holding made."

Railway Co. vs. Schutte, 103 U. S., 119.

It is said in *Ontario vs. Wilfong,* 233 U. S., 543:

> "Though both were grounds of decision, to-wit: that the decision was not based alone on actual knowledge of what property was intended to be taxed, but upon the sufficiency of a description to identify the land in connection with the notice given to appellant — this does not constitute dictum."

If this were not true, every decision having more than one point would be dictum in toto. Every litigant could pick out one of the points and say it was dictum because other points were decided. His opponent might select other points that were decided as being alone the essence of the decision. In effect, it would lead to holding that nothing is a decision unless the court limits itself to passing upon some one single point.

II.

FACT ASSUMED NOT SUPPORTED BY ANY EVIDENCE.

When we say this Court overlooked a fact question, we are not unmindful of the rule that this Court is not a trier of facts, (Case *Mfg. Co. vs. Soxman,* 138 U. S., 431), nor of the well settled rule mentioned in the case of *U. S. vs. State Investment Co.,* 234 U. S., 206, 207, that the concurrent findings of the two lower courts will be accepted by this Court unless error is shown, and neither are we unmindful of the rule of the cases on the law side of the Court, that errors merely in the findings of fact by the Court are not subject to revision by this Court if there is any evidence upon which its findings could be made. *Alexander vs. Machan,* 147 U. S., 72, 77; *Dooley vs. Pease,* 180 U. S., 126, 131, 132. The rule of concurrence with the conclusions of the trial and appellate courts is given more weight when in the first instance the facts are found by a master or a jury. *Furrer vs. Ferris,* 145 U. S., 132, and cases cited in the opinion; *Beyer vs. Le Fevre,* 186 U. S., 114, 119. However, all of these rules are subject to the additional rule, that the

findings made by the two lower courts must be based upon *some* competent evidence in the record, or it will be disregarded. *Beyer vs. Le Fevre*, 186 U. S., 114, 119; *Darlington vs. Turner*, 202 U. S., 195, 220.

We respectfully assert that the finding of the two lower courts which is approved by this court and hereinafter mentioned, is without *any* support, and is not based upon *any* competent evidence in the record.

This Court in its opinion says:

> "The two Courts below agree as to all material facts. We accordingly consider them here only so far as is needful to pass on questions of law. * * * *
>
> "Both courts below found that the drainage ditch No. 1 and 2 was not a new project, but was in fact identical with the previously established ditches No. 1 and No. 2; that no new or additional drainage was established, and that the only purpose of the proceedings was to provide for the maintenance and repair of the previously established ditches by assessing the cost on tracts not included within the area originally assessed for their construction. For these reasons, among others, both courts held that the proceedings had by the Board of County Commissioners to apportion and assess benefits on land outside the original drainage districts were unauthorized and void under the statutes of South Dakota. In this we think they were right."

The foregoing statements are apparently based upon the theory that there was *some* evidence to support the findings of the lower courts, but in making these statements, we believe this Court inadvertently overlooked the fact that there is *no* evidence in the record to support such findings by either of the lower courts, and this point appellants attempted to stress in their argument.

The findings of the trial court appear on pages 84

to 87 of the record. Assuming for the moment that Section 8458 of the Revised Code authorizes the Board to do *three* things, viz: "(1) May establish and cause to be constructed any ditch or drain; (2) may provide for the straightening or enlargement of any watercourse or drain previously constructed, and (3) may provide for the maintenance of such ditch, drain or watercourse"; we find that whenever there is presented a question of deepening or widening a drain, or of straightening, cleaning out, or deepening creek channels and streams, or remodeling or repairing dikes or barriers, all proceedings therefor are to be considered upon like notice, hearing, etc., as though the project were a new project. (Sec. 8476), which means, of course, upon petition, notice, hearings, surveys, orders, apportionments, equalizations, assessments, etc., as provided by Sections 8458 to 8569, inclusive. The trial judge and the highest court of the State hold that the notice at bar was valid and sufficient. We also find that when it is desired to merely repair or maintain a ditch previously constructed, the work may be done only "upon the petition of any person setting forth the necessity thereof, and after due inspection by the Board of County Commissioners", but without notice or public hearing thereon. (Section 8470). Whether, therefore, the project be one for *enlargement,* or one for *maintenance,* the law requires that a proper petition must be first filed with the Board before the Board can consider the work. It is clear, from this law, that the determination of what should be done concerning a ditch previously constructed, does not lie in the first instance with the Board to determine, but such determination is made by those whose land is affected by such established drainage. They petition the Board, and say that they desire the constructed ditch to be *enlarged* so as to make a more complete drainage project, or that the ditch so previously constructed shall be *merely repaired* and kept in the same condition as originally constructed. A petition having been presented, the Board is then authorized to consider the same in connection with the physical condition of the drainage suggested, and the Board may

either reject or grant the petition, and that only. (Sorenson case, infra). In the case at bar, as we will later show, the petition called for an *enlargement* of a previously existing drainage ditch, (Record, p. 50), and the Board, therefore, was only authorized to consider that petition together with the facts as found generally by the trial court, as indicated supra, and the Board, acting thereon, after due hearing, granted the prayer of the petition and established the enlargement project. The determination of the Board thereon is quasi-judicial, and had it refused to grant the prayer of the petition in part or in toto, the petitioners would have had the right to appeal to the Circuit Court and the Supreme Court of the State of South Dakota for redress. Such is the ruling of the highest court of the State.

In the case of *In re Sorenson Drainage Ditch,* 27 S. D., 342, the ditch there considered was established in 1907 and was thereafter constructed and completed. Later, owners of lands affected petitioned the Board, and alleged that the ditch was "wholly insufficient and inadequate to drain a portion of the lands through which the same runs, and which were assessed", and was "wholly insufficient in size to carry off the water so collected", and that the same would "flood the lands and destroy the crops and vegetation", unless the same was "deepened, widened and enlarged", and prayed that it be "enlarged, deepened and widened", and that "bends in said ditch be straightened out, and that the same would be more efficient if straightened". On June 8, 1910, upon due notice, the Board made an order enlarging the ditch, but to a very much less extent than petitioned for. The petitioners appealed to the Circuit Court, and alleged that "the proposed enlargement granted by the Board was entirely inadequate and insufficient". The Board moved to dismiss the appeal, and the Circuit Court dismissed the appeal. The petitioners then appealed to the Supreme Court. The respondent Board contended that inasmuch as it had determined to enlarge the ditch to a certain extent, but not to the extent asked for, and as

the petition was one for enlargement of an already established ditch, the order of the Circuit Court was not, therefore, an appealable order, for the reason that it did not present a judicial question, and was not such a one as could be appealed under the drainage law, in that it was not an appeal from any final order or determination of the Board establishing or denying the proposed drainage. The Board urged that appellants' only remedy was to have appealed from the original establishment, and having failed so to do, they could not, by a petition to enlarge, indirectly accomplish an appeal, and could not attack the original decision fixing the size and route of the ditch. In other words, respondents contended that they alone had the authority to decide how much enlargement should be made, or whether it should be an enlargement or a maintenance project.

The Supreme Court, construing the drainage law, held that the action of the Board was quasi-judicial, and that the action of the Board upon the petition was a final and appealable order; thus conclusively determining that the Board must be governed by the petition presented, and that it did not lie within its power to determine in the first instance whether the constructed ditch, under the circumstances existing, should be enlarged, or should be repaired and maintained in its original condition, but that the authority to make such determination resided solely in the owners of property affected by the original ditch. The Court said: "The petition of the appellant and associates, while not demanding the construction of an entirely new ditch, does demand the enlargement of a ditch already constructed, to such an extent as, in effect, to constitute a drainage ditch, and a denial by the Board of the application, except to a very limited extent, was in effect a denial of the proposed drainage." * * * * * It seems quite clear that an order establishing or denying a proposed drainage by way of enlarging a ditch previously constructed, is equally as final and quasi-judicial in its character as an order establishing or denying the construction of the originally proposed drainage ditch."

In the case at bar, the petition (Record, p. 50), says that the petitioners are affected by the ditch, and that the old ditches have been established and constructed, and "that said drainage ditches Nos. 1 and 2, *were and are insufficient* to accomplish the purpose for which they were constructed, and were and are insufficient to properly drain the agricultural lands within the drainage districts or territory supposed to be drained thereby, and are insufficient for the drainage of *other agricultural lands* lying within the valley of the Big Sioux River above the mouth or outlet to said drainage ditches Nos. 1 and 2, and *between the mouth of said outlet and the lands heretofore included within the assessment districts upon which the cost of the construction of said ditches, Nos. 1 and2 was imposed*", and "that it is necessary for the drainage of agricultural lands within said drainage districts Nos. 1 and 2, *and also* agricultural lands lying above the mouth of the spillway or outlet to said ditches and *between the mouth thereof and the present boundaries of said drainage districts,* to reconstruct, deepen, widen and improve said drainage ditches", and "that in the reconstruction of said ditches, that it will be necessary that the same be *cleaned, deepened, widened* and that certain *levees, dikes* and *flood gates* and *barriers* thereto be constructed to such extent as may be necessary *to carry off the surplus or flood waters* and to properly drain and protect the lands within said drainage districts and within the areas hereinbefore described", and "that the lands and territory likely to be affected * * * * are all the lands lying in the valley of the Big Sioux River and included within the present boundaries of said drainage districts, *as well as* all of the lands in the valley of the Big Sioux River between the mouth of said spillway and the city of Dell Rapids, South Dakota, that are subject to overflow if said outlet to said drainage ditches be abandoned and said outlet closed and that said district should be so *extended* and *enlarged* as to include all lands and property benefitted thereby as far down the valley of the Big Sioux River as the mouth of said outlet or spillway". An examina-

tion and comparison of the petition at bar with the petition in the Sorenson case (Supra) will disclose that this petition was evidently drawn and patterned upon the petition in the Sorenson case. What the petition prayed be done by the Board, what was done by the Board, and the cost thereof is shown by the record in this case, namely, that the original ditches were forty (40) feet wide and cost approximately $127,706.21, (Record pp. 119, 155, 203), while the new enlarged drainage ditch was ninety (90) feet wide and diked, and the river canalized, at a cost of over $250,000.00, (Record p. 304), providing a ditch of over twice the capacity, at a cost of over twice the amount of the cost of the original ditches. The enlarged ditch is longer than the combined old ditches. The enlarged ditch and spillway cares for approximately 3,000 cubic feet of water per second or one-third of the maximum flood stage run-off of this drainage basin, while the old ditches cared for but 1400 second feet of water. The board by resolution abandoned the outlet to the old ditch thereby throwing the flood water into Covell Lake and thence following the river around the City of Sioux Falls. The enlarged ditch keeps this flood water from passing around the City of Sioux Falls. All of which shows that there was, in fact, an additional drainage established and given to the properties below the old drainage district, included in which are the properties of the appellees for keeping flood waters off of land and property is equivalent to draining the water off after it is once on. This large expenditure and this additional drainage was clearly not intended by the petitioners, nor by the Board, as repair or maintenance, and should not be held by the Board or by any court to be maintenance and repair, which can mean only replacing and keeping in its original condition.

In the Sorenson case (Supra), the petitioners asked for an enlarged drainage. The Board granted the petition only in part, and denied it in part, and the Supreme Court of South Dakota held that this was a final and an appealable order, and, in substance, that the Board

had no authority to modify the petition, or to determine whether the ditch should be only repaired and not enlarged. But on the other hand the Board was entirely governed by the petition filed, and could either grant or reject the same. In the present case, the petitioners requested an enlarged drainage project, and upon notice duly given, the Board granted the prayer of the petition and an enlarged drainage was established, (Record p. 58), and later constructed at an expense of over twice the expense of the original ditches. This is the evidence and the only evidence under the law applicable thereto, as interpreted by the Supreme Court of South Dakota, and which evidence was entirely overlooked by the trial court in its findings in the case at bar, and which was again overlooked by the Circuit Court of Appeals. What the Board of County Commissioners may think should be done with an inefficient ditch previously constructed, or what a court might think should be done under the circumstances as to whether that ditch should be repaired or enlarged, is absolutely immaterial, for their action is, and should be, entirely governed by the petition filed, as truly as a court's decision is governed by the issues made by and confined to pleadings in an action in court. It is the pleader's choice to place his issues where he desires, and so it is the petitioners' choice in drainage matters to ask for exactly what they desire, and it does not lie within the province of the Board of County Commissioners or of a court to tell the petitioners that what confronts them is not an enlarged drainage ditch, but the maintenance of a ditch already constructed. The only competent evidence in this case of what confronted the Board of County Commissioners at the time the present project was instituted, or at the time these cases were tried in the United States District Court, was the petition, Exhibit "A", in this record, (Record, p. 50), and there was absolutely no evidence before the trial court, and there is no evidence in the record, in the absence of a pleading and proof of fraud, which substantiates the trial court's finding that the present proceedings were a maintenance project, and not

an enlarged project. It is, therefore, clear that the trial court's finding that "The thing that confronted the Board of County Commissioners at that time, having charge of these two drainage districts, was the *maintenance* of the ditches. * * * The situation that confronted them was not drainage of agricultural land, it was maintenance of the ditches that had been established by them, and the prevention of dangers threatened", (Record p. 86), is absolutely unwarranted under the evidence and the law applicable thereto. It is not within the authority of the court to determine what should have been done, and then to say that what was done was in effect what the court thinks should have been done, namely, repair and maintenance work.

The highest court of South Dakota, in interpreting the drainage law in the Soreson case, (supra), held that the determination of the Board of County Commissioners upon the petition filed for enlargement of that ditch, was a quasi-judicial act, and if that be true, then that determination cannot be changed or altered by another court, in the absence of a plea and proof of fraud, except upon appeal, as provided by the drainage law of the State, and no appeal was taken from the determination in establishing Drainage Ditch No. 1 and 2.

The case of *Curtiss vs. Pound*, 34 S. D., 628, 633, was a mandamus proceeding brought against Pound and others, as supervisors of a township, to require them to levy a tax to pay a drainage ditch assessment. When the commissioners decided to construct the ditch described in the petition and notice, certain interested parties appealed from the order of the commissioners, and the Circuit Court entered a judgment directing the construction of a ditch in accordance with the original petition, but thereafter the commissioners constructed a ditch twice the length of the one petitioned for, and the township then set up this fact as a defense in the mandamus proceedings, and the Court said: "If the commissioners exceeded their jurisdiction in the length of the ditch, and size of tiling, its only effect, so far as

appellants were concerned, was to increase the amount assessed against them, above the amount that should have been assessed. This is a matter which should have been settled at the time of assessment of benefits, and appellant's remedy for an unjust or unwarranted assessment was through an appeal to the Circuit Court from such assessment"; thereby holding that the order of the Board was a final judicial order, and could not be attacked collaterally, in the absence of a pleading and proof of fraud.

In the case of *Milne vs. McKinnon*, 32 S. D., 627, 631, which was an action in equity to restrain the sale of real property in satisfaction of a special assessment made under the drainage law, and in which it was claimed that the Board acted without jurisdiction, and that the land assessed was not benefitted, the Court said: "Whether (the land) would receive any benefits from the drainage system, and the extent of such benefits, was a matter clearly within the jurisdiction of the Board to determine, and its determination thereon *honestly made*, can only be reviewed upon an appeal", and "error, if any, in the method of assessment by which a wrong result may have been reached, would be a matter to be considered by the reviewing court upon an appeal from the determination of the Board."

In the case of *Gilseth vs. Risty*, 47 S. D., 374, 379, the Court said: "The Board, after a full hearing, found the drainage as petitioned for in said petition, to be conducive to the public health, convenience and welfare, and necessary and practical for the drainage of agricultural land. No appeal was taken from the order establishing the *new district*. Therefore, the order became final." True there was an estoppel found, but it in no way detracts from the above ruling. (See also *Sanborn County vs. Estabrook*, (S. D.) 207 N. W. 164, 165.

In all of the foregoing cases the Supreme Court of South Dakota has consistently held in their interpretation of this drainage law, that the determinations of

the Board of County Commissioners acting as a drainage Board, are *quasi-judicial determinations,* and that such judgments cannot be attacked collaterally, in the absence of fraud. Can the Federal Courts do otherwise than follow the interpretations given to the drainage statutes by the highest Court of South Dakota?

These are collateral actions, and no fraud has been pleaded, and there is no evidence of any fraud whatsoever in the record. The judgment of the Board establishing this new *enlarged* drainage, cannot be set aside by a State Court in a collateral action, and that judgment is just as binding on the Federal Courts, and upon a non-resident in Federal Court as upon the State Court or a resident in State Court, when there is neither plea nor proof of extrinsic fraud.

In *Steenburg vs. Kyle,* (Ind.) 121 N. E., 537, under a state of facts similar to the facts found here by the trial Court, it was contended that the new ditch established along the line of an old ditch in no way affected the jurisdiction of the old ditch proceeding. The Court said: "It seems to us that the fair interpretation of the facts leads to the conclusion that the (old) ditch was superceded by the (new) ditch. * * * However that may be, it should have been presented to the * court. It had jurisdiction to determine the character of the proposed (new) drain, and we must presume that it did so and rendered judgment which is conceded to be fair upon its face. That judgment is entitled to full faith and credit by courts of coordinate jurisdiction, as well as by this Court, until set aside, either on appeal or by a direct proceeding brought in the Court rendering it for that purpose."

Applying this holding to the case at bar, where no appeal was taken from the Resolution establishing the new enlarged drainage, such establishment is now conclusive as against these collateral attacks.

CONCESSIONS IN TWO CASES.

This Court, in its opinion, entirely overlooked the concession made by the Appellees Milwaukee, No. 96, and the Omaha, No. 97, in both their briefs and arguments, in this Court and in the Circuit Court of Appeals, that the appellants' contention that the work done was not repair or maintenance work, but that the proceeding known as Drainage Ditch No. 1 and 2, was a new drainage project. Counsel in his Brief (M., p. 13), uses this language:

> "We accept the position of counsel for the appellants that Drainage Ditch No. 1 and 2 was an original and independent ditch proposition".

With this concession made, it can hardly be said, as to these two cases at least, that the trial Court's finding that "Drainage Ditch No. 1 and 2 was not a new project, and that no new or additional drainage was established", can be sustained. With the concession made that the trial Court's finding of fact is not an issue in said cases, and that the same is not true, then that question, the appellees concession, was not before the Court, and the Court could not pass on a non-issuable fact, and find it different than the parties concede the fact to be.

III.

CONSTRUCTION OF ASSESSMENT STATUTES.

Our third proposition is the proper construction of, and the construction given by the Supreme Court of South Dakota to Section 8458 and Section 8476, Revised Code.

This Court in its opinion recognizes the fact that Section 8458 authorizes the Board of County Commissioners as a drainage Board to do equally, three distinct things, viz: (1) May establish a new ditch, (2) may straighten or enlarge a watercourse or ditch previously constructed, and (3) may provide for the maintenance of such ditch, drain or watercourse previously constructed.

But this Court overlooked the connection between

Section 8458 and Section 8476 by misconstruing, as we believe, and giving an improper interpretation to, Section 8467 covering "assessments for further costs"; by construing that section to apply to assessments for costs of maintenance of an old ditch and overlooking the connection, between that part of Section 8464 providing for assessments for paying *damages* and the provision of Section 8465 as to the payment of such damages before any physical construction of the ditch is undertaken and Section 8467 which provides for an assessment for the physical construction of the drainage after an assessment for damages has been made and such damages paid. The Court's conclusions were arrived at by reasoning from what the Court claims the method of assessment provided for by the statute and by either overlooking the three separate provisions of Section 8458 or by recognizing the three and then placing an *enlarged* drainage and a *maintenance* project in the same category, while in truth the statute places an enlarged drainage and a new ditch in the same category. This Court's conclusion is a misconception of Section 8458 and Section 8467 and the plan of assessment pointed out by the Court seems to be a misconception of Section 8467, which latter section applies *only* to assessments for further costs of the physical contruction of a *new* ditch or its equivalent.

In order to understand what Section 8467 is intended to cover, it is necessary to apply previous sections of the law. A petition signed by the owners of land likely to be affected accompanied by a bond may be presented to the Board and is filed with the County Auditor. (Sec. 8459). Upon the filing of the petition, the County Auditor transmits a copy to the State Engineer, who with the Board inspects the proposed route and if the Board and Engineer deem necessary, a survey is made. When this is made, the County Auditor furnishes a copy of the report to the State Engineer. The surveyor's report is filed with the petition and the Board personally inspect the proposed project and determine the line and width of the ditch, if not fixed in the petition, and fix a

time and place for hearing the petition and give notice thereof, which notice "shall summon all persons deeming themselves damaged by the proposed drainage or claiming compensation for the lands proposed to be taken for the drainage, to present their claims therefore at such hearing." (Sec. 8461).

At such hearing persons interested may appear and contest the statements of the petition and the surveyor's report as to the width and route of the proposed drainage and after such hearing, the drainage may be established along the line set forth in the petition or findings of the Board or the Board may vary the route or width thereof. If the Board deem it best to vary the route or to change its initial or terminal points "so that it will pass through other lands than those described in the notice of hearing, or to increase the width of lands to be taken for the proposed drainage, the Board shall adjourn the hearing and give the owners of such lands notice as in case of the original hearing" and "any persons interested may be heard in the matter of damages or compensation for land and the determination of the Board of County Commissioners shall be final unless an appeal therefrom shall be taken; failure to prosecute such appeal or to appear and contest an award of damages by the Board is to be deemed conclusively a waiver of any such damages or compensation for land taken or of any claimant's right to have the same assessed by a jury". (Sec. 8462).

The Board is not authorized to start work or to let any contracts for the same until after the damages caused by the proposed drainage or compensation for the lands to be taken as right of way and spoil banks has been paid for. "After the establishment of the drainage and the *fixing of the damages,* if any, the Board shall fix the proportion of benefits of the proposed drainage among the land affected, and shall appoint a time and place for equalizing the same". (Sec. 8463). "After the equalization of the proportion of benefits, the Board may make an assessment against each tract and prop-

erty affected in proportion to the benefits as equalized, for the purpose of *paying* the *damages* and the *cost* of *establishment* (not construction) *thus* far incurred or to be incurred." (Sec. 8464). "Whenever sufficient money shall be collected, the *damages* occasioned by the construction of such drainage and fixed as herein provided *shall be paid*, and *thereupon* the Board of County Commissioners shall proceed to construct such drainage and shall let contracts for the construction of the same." (Sec. 8465). From the foregoing quotations, it will be observed that after the ditch is established, damages fixed, apportionments made, equalization had, the Board must then make an assessment to pay for the property damaged and property taken for right of way, etc., and that the Board cannot proceed to construct the drainage nor to let contracts for the construction of the same until such damages have been paid. The costs, etc., thus far incurred, are known or are ascertainable but the costs of the construction of the ditch whether by contract or by the County Commissioners, is unknown and unascertainable and as said By Section 8465 when the damages shall be paid, "*Thereupon* the Board shall proceed *to construct* such drainage and let contracts for the construction of the same." It is evident that more than one assessment is ordinarily necessary and required on a new or enlarged ditch, and the Board having established the ditch, made the apportionment, equalized the same, made an assessment to raise money with which to pay the damages occasioned by taking the right of way, etc., and such damages having been paid under such first assessment, that "assessments for further costs" are necessary and must be made to pay the physical construction of the drain. It is for the purpose of paying such additional costs that Section 8467 provides for "assessments for further costs" of construction in addition to the assessment to pay for the damage to property and land taken for right of way. This section clearly has nothing whatever to do with assessments for "maintenance" of a drainage ditch previously established and completed.

It provides that the Board may issue assessment certificates or warrants and that such interest bearing certificates shall be perpetual liens upon the property assessed and enforcible as such first assessment and certificates and that the contractors may agree to take the same in payment of their services or the Board may sell such assessment certificates at not less than par and thereby raise funds with which to pay the costs of the construction of such drainage.

On the other hand Section 8470 being one of the "maintenance" statutes provides that "certificates may be issued (upon assessments made in like manner and upon the apportionment made for the construction of the drain) and such assessment and certificates shall be liens, interest bearing, perpetual and enforcible, in all respects as original assessments and may be sold at not less than par by the Board of County Commissioners or turned over to persons contracting for such cleaning and maintenance or may be collected directly by the Board of County Commissioners."

If Section 8467 was intended to cover the procedure of assessments for maintenance as indicated by the Court's opinion in this case, then we ask, for what purpose would the Legislature include in Section 8470 the above quotation, as the same matter is contained in Section 8467?

Section 8467 is premised upon the first sentence in the same, to-wit: "At any time *after* the *damages* arising from establishment and construction of such drainage are *paid* and the lands for such drainage are taken, assessment may be made for further costs and expenses of construction". And this section further provides that if there are no damages, then only one assessment need be made and provides: "If there be no damages to be paid before taking the lands for such drainage or if the damages have been paid by the proceeds of the sale

of warrants, only one assessment need be made". It is evident from this section and Section 8465 that the payment of damages arising to lands and the compensation to be paid for the taking of lands for right of way, if damages are claimed, is made a condition precedent to their proceeding to construct the drainage and letting contracts for construction. And the payment of such damages contemplates and necessitates a prior assessment. The notice of assesment provided by this section is required in order to fix the due date of such assessment and give the property owner an opportunity to pay the same before its becoming delinquent and thereby save the five per cent penalty as provided by Section 8464, and to give notice to and permit the property owner to exercise his option under Section 8471.

From the foregoing quotations we find that the Board, upon equalization having been had, must then make an assessment based upon such equalization, in an amount sufficient to pay for such damages, surveying, etc., thus far incurred. After this has been done, then for the *first* time the Board is authorized to enter into contracts for the actual construction of the drain and may also after such assessment has been made and the damages paid, make "assessments for further costs" at any time for the further construction costs and expenses of such drain. No time is fixed by the law when this second assessment need be made; it may be made at the time the contracts are entered into or it need not be made until the drainage project is completed but when it is made, it is of necessity made upon the same apportionment and equalization upon which the assessment was made for the payment of damages. This is true because it contemplates the same identical drainage project. For these reasons Section 8467 has application only to the assessments for the cost of a new drainage or its equivalent, and has no reference to maintenance.

By Section 8477, the Board of County Commission-

ers are placed in charge of all drains which must be kept open and in repair by them and "The costs of such drains shall in all cases be assessed, levied and collected *in the same manner* as provided in this article for the construction of drains *originally*"... (See Sec. 8464). Maintenance or repair can mean only to keep in its original state or to replace in its original state. Hence, this section contemplates only the original ditch and territory affected. There is no provision here for a new apportionment and no provision for a new equalization and none is necessary because the apportionment and equalization have already been made and the cost of such maintenance or repair is and must be assessed against the property originally affected in the same proportions as the assessment was made for the construction of the drain.

It frequently happens that drains have been constructed which do not function properly or the original construction has not been fully completed, when it becomes necessary to either make such drain function or at the time of the completion of the drain to clean out the debris collected in that part previously constructed, in each of which cases no assessment has previously been made. Section 8477 provides for these cases as follows "and in all cases when no assessment of benefits shall have been made, the Board of County Commissioners having charge of such drain shall make such assessments", for the cleaning out of the old drain as indicated above.

How shall such maintenance and repair projects be instituted? Section 8470 provides "upon the petition of any person setting forth the necessity thereof and after due inspection by the Board of County Commissioners" and further says "Such assessments shall be made as other assessments for the construction of drainage". (See Sec. 8464). There is no provision here for a new notice to give all persons interested an opportunity to be heard

whether such repair or maintenance shall be done, because by Section 8477, the authority to determine that matter is placed entirely in the hands of the Board of County Commissioners, upon the petition being presented under Section 8470. No new apportionment is provided for because the territory to be assessed and the territory affected necessarily is the territory of the original district, being identical with that upon which the repair work is to be done, and likewise no new equalization is necessary as all parties have had their day in Court as to their apportionment. In all this, however, the law does not contemplate that the ditch is to be made larger or a more efficient drain or affect more territory than that of the original drainage ditch.

Placing the ditch back in its original condition or keeping it there, or in other words, repair and maintenance, does not contemplate more than one assessment being made and does not contemplate the assessments for further costs provided for under Section 8467. That section deals entirely with a new drainage project or that which is equivalent to a new drainage project.

Section 8476 provides: "The powers conferred by this article for establishing and construing drains (Sections 8458, 8459, 8460, 8461, 8462, 8463, 8464, 8465, 8466, 8467, 8468 and 8469) *shall extend to and include* the *deepening and widening of any drains* which have heretofore been or may hereafter be constructed, also to *straightening, cleaning out* and *deepening* the channels of creeks and streams and *constructing,* maintaining, remodeling and repairing *levees, dikes* and *barriers* for the purpose of drainage; but no proceedings affecting the right of persons or property shall be had under this section except upon *notice and the other procedure* prescribed herein for t heconstruction of drains".

Section 8458 says: "The Board of County Commissioners * * * may provide for the straightening or

enlargement of any watercourse or drain previously constructed". How is this done? By the procedure pointed out in Section 8476 supra. What is meant by enlarging a drain, It certainly intends something more than placing the ditch back into or keeping it in its original condition — original width — original depth — original length — in short, maintaining its original water carrying capacity. If such was not the case then there would be no purpose for the two statutory provisions, supra.

The extent to which a ditch can be enlarged is illustrated by the extent of the enlargement in the Sorenson Case (supra), in which the Supreme Court of the State held that the ditch petitioned for was practically a new ditch.

An examination of the South Dakota drainage law discloses that there is no requirement in the construction of a drain, that the complete drainage of a definite area shall be provided for in one project; that there is no mandatory provision requiring a topograhical survey for the entire drainage basin in which a proposed drainage ditch is to be constructed. In fact in this case, one W. H. Lyon was the sole petitioner for the establishment and construction of the old Drainage Ditch No. 1, which was approximately 3 miles in length. Thereafter Drainage Ditch No. 2 starting at a higher elevation and extending into the initial point of Drainage Ditch No. 1, was petitioned for and established and constructed, yet both of these old ditches drained a part of the water collected in the water shed of the Big Sioux Valley and carried by the Big Sioux River. All that is required under the South Dakota law is that one or more owners of land likely to be affected by a proposed drainage, file a petition for a ditch designating therein the proposed route, the necessity therefor, and a general statement of the territory likely to be affected thereby and if these conditions are found by the Board to exist, the ditch may be established and constructed although other lands within the same drainage basin, which require drainage, — and the drainage from which must pass over the same

route as the proposed ditch, — are not provided for by such initiated proceedings. In the case at bar was Drainage Ditch No. 2 a new drain or was it repair or maintenance of No. 1 and the owners of land and property affected by No. 1 only assessable thereof, An examination of the respective petitions of Drainage Ditch No. 1, Drainage Ditch No. 2 and Drainage Ditch No. 1 and 2, and the records of assessments made, as disclosed in this record, show that some of the petitioners for Drainage Ditch No. 1 and 2 were owners of property not included within either of the former old districts. Can it be said that the Legislature intended that the construction of a ditch at the instance of certain property owners draining only a part of a drainage basin or only a partial drainage of such drainage basin should operate, as a bar to the construction of another drainage ditch of greater carrying capacity, with twice the bottom width as the previous ditches, with dikes thrown up on both sides, with controling works built and a more efficient outlet thereto draining a larger territory or making a more complete drainage at the instance of other property owners, although to establish and build such new and enlarged ditch, the line of the same extended along the line of the two older ditches?

Section 8476 gives the same right to those who petitioned for Drainage Ditch No. 1 and 2, to initiate their project, that it gave to W. H. Lyon who petitioned for Drainage Ditch No. 1, and to the petitioners who initiated Drainage Ditch No. 2. There is no provision in the South Dakota law that requires Drainage Ditch No. 1 and 2 to be confined to territory not embraced in Drainage Ditch No. 1, or in Drainage Ditch No. 2, or in both of these former areas. In fact the powers conferred upon the Board by Section 8458 dissipates such a contention, because it expresly autorizes the Board to provide for the enlargement of any drain previously constructed. If it were to be held by any Court that the construction of Drainage Ditch No. 1, or the construction of Drainage Ditch No. 2 exhausted the power granted to the Board

of County Commissioners in that particular area, and that therefore no other or additional drainage ditch can be constructed within such drainage basin, such a holding would hinder the drainage of wet lands and defeat the purposes of the drainage law. This would be equal to holding that a power granted to a Board, once used by the Board, is destroyed. To repair and maintain a ditch does not take into consideration the basic objects and purposes of the drainage law. Such object in final analysis is the complete drainage of lands in the drainage basin.

Keeping water off the land is equivalent to draining the land after water is upon it. That is what this enlarged ditch does to the properties below the old districts. Can it be said that this last mentioned ditch does not drain a greater territory and that it only affects those who are within the original territory? If others are affected and the record in this case shows that there are such, then such others must under the law of the land be given their day in Court as to the confines of that drainage district and the amount of their assessment. For these reasons the Legislature of South Dakota provided by Section 8476 that where a drainage ditch was to be enlarged, deepened and widened and channels or streams straightened or cleaned out or when dikes or barriers were constructed, that all proceedings looking to that end and affecting the right of persons or property shall be had upon like notice and upon like procedure prescribed for the construction of drains and thereby placed the procedure for an enlarged drainage in the same category and class as a new drainage ditch and district.

In the Sorenson Case (supra), the Supreme Court of South Dakota recognized the fact that what is now Section 8458 and Section 8476 are to be read and interpreted together and doing so in that case said: "The petition of the appellants and associates, while not demanding the construction of an entirely new ditch, does

demand an enlargement of a ditch already constructed to such an extent as, in effect, to constitute a drainage ditch and a denial by the board of the application, except to a very limited extent, was in effect a denial of the proposed drainage", and thereafter said, "As before stated, therefore, *in effect,* the appellant and his associ- quires all the procedure of a new drainage project; new ditch of a greater capacity, extending through their lands, to protect them from such overflow as might occur during heavy rains". An enlarged drainage proceeding being by the statute placed in the same class and category as a new drainage project, the enlarged project requires all the procedure of a new, drainage project; new petitions to establish, a new notice of hearing upon the petition, a new fixing of damages, a new apportionment, and a new equalization and assessment and possibly additional and further assessment might be required, as permitted by Section 8467, in the same manner and to the same extent that this procedure is required and necessary in the establishment and construction of a new ditch and district.

Sections 8470 and 8477 furnish to the Board complete authority and instructions to make, spread and collect the assessments required for maintenance and repair work. Both of these sections provide that assessment for maintenance and repair shall be made as other assessments and in the same manner as provided by the law for the construction of drains originally (on the same apportionment and equalization — after notice given in all respects as provided by Section 8464). These sections of the law further provide for the issuance of certificates with which to pay for such repair and maintenance, making such certificates interest bearing, perpetual and enforcible liens in all respects as original assessments and they give to the Board the alternative to either pay for the work with such certificates or they may sell them

and from the proceeds thereof pay for such work. No additional authority or instructions are necessary for or needed by the Board to do the repair and maintenance work on an old ditch and to pay for such work by assessment upon the equalization previously had in such district, after notice is given of the time the certified assessment will be filed with the County Treasurer; thereafter collecting such assessments, all as provided by Section 8464.

No additional authority is granted and no additional instructions are given to the Board by Section 8467 as to the assessments for maintenance and repair work.

Appellants, therefore, respectfully contend that there are three distinct powers granted to the Board of County Commissioners (Section 8458), (1) to establist and construct a new drain, procedure for which is provided by Sections 8458-8469 inclusive; (2) to provide for the enlargment of any drain previously constructed, procedure for which is provided by Sections 8476, 8458-8469 inclusive; and (3) to provide for the maintenance of a ditch, drain or watercourse previously constructed, procedure for which is provided by Sections 8477, 8470 and 8464.

Upon the foregoing showing we respectfully assert that the opinion of this Court dated March 1, 1926, should be withdrawn and a decree entered reversing the judgment and decree of the District Court ordering the vacation of the injunctions granted herein.

Respectfully submitted,

BENJAMIN I. SALINGER,

ELBERT O. JONES,

NORMAN B. BARTLETT,

Solicitors for Appellants.

We hereby certify that the foregoing Petition for Rehearing is well founded in law and fact, and is not filed for delay.

BENJAMIN I. SALINGER,

ELBERT O. JONES,

NORMAN B. BARTLETT,

INDEX.

Issues—description of 1

Propositions urged by Appellee:

1. It is not required that there shall be both a substantial Federal question and also that the decision shall turn on that question. Nor required that such question enter into the decision. Nor that the decision shall turn on such question 13
2. Several of movant's citations are, so far as the *decision* is concerned, no more than a finding that the so-called Federal question is colorable, or is not substantial, or is not sufficiently alleged. Or a finding that there is no right to appeal under the Act of March 3, 1891, because it is clear that the decision is one which the Act affirmatively excludes 14, 15, 17, 19
3. Defendants are aggrieved, and not in the position of one who challenges the validity of a statute which does not affect him. And it is the movant that is seeking to use its substantial success as a grievance by depriving the party actually aggrieved of review on the ground that movant has suffered an academic defeat 20, 21
4. Entering the Circuit Court of Appeals cannot lose an appeal which can be taken only by those who enter that court 18
5. One main basis of the argument is the misconception that, here, there is an attempt by two didect appeals to have both this court and the C. C. A. review the merits. Defendant did not appeal to both said courts—and it never had the right to appeal here directly from the action of the District court—and has not attempted to do so 18, 23, 25

Record 2

Propositions for Appellant:

1. The bill controls; and nothing that happens after its filing can affect the nature of the suit and its appealability 5, 6, 7

Page

2. Presentment of Federal question controls—not the decision upon such questions. Presentment fixes status as to both jurisdiction and appealability 8, 9
3. It is not required for defendant's appeal that the decision below should have turned on the question injected by plaintiff 8, 9
4. Was substantial question—so found below 3, 4, 8
5. There being two questions of which but one is appealable, the appealable one controls as to appealability of whole case 9, 10
6. If there is an appealable Federal question in the bill, an appeal by defendant gives the appellate court the whole case; and it may decide on the merits only 9, 10
7. Where plaintiff would have a right to maintain appeal if defeated both on the substance and on his Federal question, defendant has the same right when defeated as to substance, though he has the idle victory of having defeated plaintiff on an inducement for having the court give him the substance 11
8. Where plaintiff wins on the substance, he cannot deny review to defendant because plaintiff was defeated on his own Federal question 21
9. The contentions of movant are not of nature that cannot be tried out on a motion to dismiss. If tenable they must be passed upon after this court has taken jurisdiction 12

IN THE

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1924.

No. 454.

A. G. RISTY ET AL., AS COUNTY COMMISSIONERS ET AL., APPELLANTS,

vs.

NORTHERN STATES POWER COMPANY, APPELLEES.

RESISTANCE TO MOTION TO DISMISS APPEAL.

WHAT THE QUESTION IS.

A plaintiff sought to enjoin what is said to be in effect an attempt to compel it to contribute to the cost of a ditch project. It has diversity of citizenship. But that is not the sole ground upon which it invokes the chancery jurisdiction. It invokes it also on properly worded constitutional questions raised in its bill. While the trial court holds that these questions are substantial, genuine and not colorable, it held on full consideration that there has been no violation of the Constitution, but still gives decree on the merits to the plaintiff.

Defendant appeals to the Circuit Court of Appeals and plaintiff re-asserts the constitutional questions. The appellate court agrees these are substantial, genuine and not colorable, but declares it can again decree for plaintiff on the merits without deciding those questions—and it does just this. From this decree defendant appeals here—and it is the plaintiff who presented the constitutional questions, and still does not say they are colorable, who seeks to dismiss the appeal to this court. In other words, the issue is on whether a plaintiff who does not invoke the jurisdiction solely on account of diversity, but so presents a substantial Federal question as that when his bill is filed he has created a suit in which appeal may be taken under the Act of March 3, 1891, can, after winning on the merits, insist that the benefit of the Act has been lost to defendant because the lower courts have decided that in fact the Constitution has not been violated. Our position is that *status* as to appealability is fixed by the questions raised in the bill and that said *status* is not affected by the decision of such questions; and that when plaintiff wins the substance and defendant the shadow, plaintiff cannot ask that the actual defeat of defendant shall not be reviewed on appeal because plaintiff's Federal question has been decided against plaintiff.

The Record.

In Paragraph Eighteen of the Bill, this defendant in error (now movant) first avers that a "purported" statute of the State of South Dakota annexed as Exhibit "A," and enforcement of which the Bill seeks to enjoin, is in violation of a state provision of the Constitution of the State of South Dakota. And it continues:

"And in that the same is in violation of the fourteenth amendment of the Constitution of the United States; that said statute Exhibit A is further void and unconstitutional in that the same provides no fixed and determinable method or rule for the apportionment of benefits upon the property and property owners situated within the drainage area, and especially in that said purported statute furnishes no fixed or determinable basis for the apportionment of benefits upon the property of railroad companies or other corporations, and upon the property of municipal and quasi municipal corporations and upon platted property, in cities and villages. Said purported law Exhibit A is further unconstitutional and void in that the same provides for an assessment against property without the right of the property owners to be heard thereon and without notice of any character to the property owners; that if said apportionment of benefits be made as threatened by the said Board of County Commissioners of said Minnehaha County and as is provided in said notice, Exhibit C, the same will constitute the taking of the property of the plaintiff and of the other property owners affected by said notice without due process of law and will deny and deprive plaintiff of the equal protection of the laws." (Printed transcript 14).

In dealing with said plea the District Court said:

"The case made by the bills filed by the plaintiffs in these various actions involves a real and substantial question under the Constitution of the United States, the amount involved in each case is greatly in excess of three thousand dollars exclusive of interest and costs. On the question of the jurisdiction of this court I am of the opinion that each plaintiff states a

> case in his bill plainly cognizable in this court, all of the plaintiffs except the City of Sioux Falls allege diversity of citizenship in addition to the constitutional question, and the proper amount involved. I repeat that there can be no question as to the bills involving a real and substantial question under the Constitution of the United States, and in such a case the jurisdiction of this court extends to every question involved whether a Federal or State law, and enables the court to rest its judgment or decree on the decision of such of the questions as in its opinion effectively dispose of the case." (Printed transcript 89).

As seen, the court fully considered the Federal question so raised by said plea (Printed transcript 86, *et seq.*). But it overruled said contention that there was a violation of the Federal constitution and held that notice and opportunity to be heard are provided by the State Statute. (Printed transcript 87). It gave plaintiff an exception "to the order of the court denying the plea of the constitutionality of the drainage statute as applied to agricultural lands." (Printed transcript 100.) It entertained jurisdiction in case 455, in which there was no diversity of citizenship and therein also entered decree for plaintiffs, on the merits.

Risty *et al.* appealed to the Circuit Court of Appeals for the Eighth Circuit. There appellees re-asserted said constitutional question. And the Court said:

> "The constitutional questions raised are grave, serious and doubtful. Their determination is not necessary to the solution of these cases. But because of the reluctance to deciding constitutional questions, "we leave these questions aside." (Printed transcript No. 451, pp. 253, 254.)

BRIEF.

I.

As the right to sue in Federal court must exist before any defense is made, as the Federal question is created by apt and honest allegation in the bill, and as such allegation invokes and causes jurisdiction to attach, it must follow that the status created by the bill governs, as to appealability, no matter what happens after the bill is filed.

It does not matter what Federal question the answer may or does inject.—Colorado Central, 150 U. S. 138; Shulthis, 225 U. S. 561.

The inquiry as to Federal jurisdiction must be limited to the time at which the bill is filed. The jurisdiction must be made to appear at the outset. Therefore, it does not matter what develops in the course of the proceedings—Borgmeyer, 159 U. S. 408—say, the arising of an additional Federal question.—Boyse, 230 U. S. 98; *Ex parte* Jones, 164 U. S. 691; Third Street Co., 173 U. S. 457.

The allegations of the bill invoke and cause the attaching of jurisdiction.—Huguley, 184 U. S. 297; Vicksburg, 231 U. S. 259.

The test on whether it has attached is whether the necessary facts were made to appear when jurisdiction was invoked.—Colorado Co., 150 U. S. 138.

Say as to diversity, for illustration—the applicability of the Act of March 3, 1891, is to be determined by the showing made in the summons and the filing of claim or declaration. —Borgmeyer, 159 U. S. 408.

1-a.

If the allegations of the bill create, and if because of them jurisdiction has attached—Colorado Co., 150 U. S. 138; City

of Fergus Falls (C. C. A.), 72 Fed. 883; Lovell, 227 U. S. 412; *Ex parte* Jones, 164 U. S. 691.—If, so, the jurisdiction has become complete—Loeb, 179 U. S. 472—it must follow that the jurisdiction *remains* complete, and that the nature of the suit remains for all purposes what the bill made it—including all rights to appeal that exist in such a suit.

The jurisdiction is determined by the allegations of the bill.—Shulthis, 225 U. S. 561; Colorado Central, 150 U. S. 138.

It depends on these allegations and not upon the facts as they subsequently turn out to be.—City *v.* Railway, 166 U. S. 319. Jurisdiction having so attached, it cannot be affected by subsequent developments. The inquiry goes to the time when the suit is commenced.—Colorado Central, 150 U. S. 138.

And as without such allegations there is no right to use the Federal Court, and they alone create that right—see also Metcalf, 128 U. S. 588; Florida Co. *v.* Bell, 176 U. S. 321; State *v.* Tennessee, 152 U. S. 454—it must follow that those allegations fix the Federal right and the nature of the suit.

1-*b*.

It is the presentment and not the decision of the Federal question that controls on appealability—Lovell, 227 U. S. 412. And if on one question the judgment of the Circuit Court of Appeals is final and on another is reviewable, the reviewable question controls—MacFadden, 219 U. S. 288; 31 Sup. Ct. 240.

All that is necessary is a good faith claim that a contract is being impaired—a good claim as to, a constitutional ques-

tion—City *v.* Ry., 166 U. S. 653; Penn Co., 168 U. S. 685; Chappell, 160 U. S. 499, 509; Sperry, 264 U. S. 488; 44 Sup. Ct. 372.

One test is whether it appears from the plaintiff's own statement in legal and logical form such as is required by good pleading that a substantial Federal question dispute exists—American Sugar Refining Co., 161 U. S. 277.

And the validity of the claim set up is not the test.—Southern Pacific Ry., 118 U. S. 109.

The jurisdiction does not depend on the validity of the claim set up but on the fact that the claim involves a real and substantial dispute.—Nashville (C. C. A.), 86 Fed. 169.

It is elementary that though diversity be set forth, appeal lies under the Act of March 3, 1891, if in addition other Federal questions are properly raised in the complaint.—Warner, 191 U. S. 195; 24 Sup. Ct. 79 (in which, by the way, it was the bill of plaintiff that was dismissed). Huguly, 184 U. S. 297; Amato, 144 U. S. 465.

The judgment is not final where in addition to diversity there are Federal questions which appear in the record by a statement in legal and logical form such as good pleading requires.—Telegraph Co. *v.* Railroad, 178 U. S. 238.

It suffices to sustain the appellate jurisdiction if it is claimed in a way that is not colorable, but is real, that the law of a state is in contravention of the Federal Constitution. And it does not suffice to assert that the claim as alleged in the bill is legally unsound.—Penn Co., 168 U. S. 685.

The questions, here, were not colorable, and movant does not deny that they were honest and substantial questions—and the whole record stamps them to be that.

The attitude of both the lower courts in attesting to the genuineness and substantiality of the questions is of the highest importance.—City *v.* Ry., 166 U. S. 653.

These questions are substantial because they assert oppressive discriminatory legislation—Nashville (C. C. A.), 86 Fed. 178, 179—and assert unequal exactions and taxation.—*Idem.*

And such questions are not frivolous when as here they require analysis and exposition for decision.—Milheim, 262 U. S. 710; 43 Sup. Ct. Rep. 694.

1-*c*.

Nor may movant have the effect it contends for from the fact that the lower courts could find for it on the merits, though they held against it on the merits of the Federal question presented by it. First, because it is not vital on appealability how that question was decided, and, second, because it is not vital on appealability that the decision did not turn on said question.

The jurisdiction does not depend upon the outcome. It suffices that if the claim on the merits failed the Court may be turned to the Federal question—that if it appears in any aspect which the case may assume that the right of recovery may depend upon a construction of Federal acts; and if the Federal claim is not merely a colorable one, but rests upon construction of the Constitution, there is a Federal question which is adequate.—St. Paul Railway, 68 Fed. 2 (C. C. A.).

It does not matter that there is sufficient allegation of diversity and that relief is asserted on another ground which does not involve the consideration of a Federal question. It does not matter, so far as jurisdiction is concerned, that the Court may not be compelled to construe an Act of

Congress; for its jurisdiction does not depend on the nature of the question that is ultimately decisive of the plaintiff's right to recover.—St. Paul Railway (C. C. A.) 68 Fed. 4.

It may be conceded the rule is that the statement of the plaintiff must exhibit the Federal question to be a necessary part of his claim. But, as construed, this but means that in some phases that a case may develop, the claimant will be driven to rely on this Federal question.—Weir, 216 U. S. 607.

It is said to be elementary that there is a Federal question if "it appears that some title, right, privilege or immunity on which the recovery depends will be defeated by one construction of the constitution or sustained by the opposite construction."—Southern Pacific Ry. 118 U. S. 109.

It suffices that in some aspect which the case might assume the right to recover may depend on the construction of Federal statute. It being apparent that the claim is not merely colorable.—St. Paul Ry. *v.* Ry. (C. C. A.) 68 Fed. 2.

It does not exclude the jurisdiction that questions are involved which do not at all depend on the Constitution. It is enough that the constitutional question is an ingredient of the original cause, although other questions of fact or of law may be involved.—Railroad *v.* Mississippi, 102 U. S. 141.

I-*d*.

Plaintiff having injected an appealable Federal question, the Appellate Court gets the whole case, whether the ultimate decision turns on the merits or on Federal or on local law—and in number 455, one of the six cases with which the one at bar was tried, the lower courts decreed for plaintiff on the merits, though there was no diversity, and though it was defeated on its only Federal question (the additional one raised in the case at bar).

Where the constitutionality of an Act of Congress is drawn in question, the Appellate Court has power to dispose, not merely of the constitutional question, but of the entire case, including all questions whether of a jurisdictional question or of the merits.—Chappell, 160 U. S. 499, 509.

In the case of Spencer, 191 U. S. 526, the Appellate Court reversed a decree in favor of the plaintiff Spencer. It is there held that the appellate jurisdiction is not limited to the constitutional question, but extends to the determination of the whole case.

There is not a limitation to the constitutional question, but the review includes the whole case.—Loeb, 21 Sup. Ct Rep. 178; citing Whitten, 160 U. S. 231; Penn. Co., 168 U. S. 685.

Under section five of the Act of March 3, 1891, if constitutionality is drawn into question, the Supreme Court acquires jurisdiction of the entire case and of all questions involved in it and not merely of the question of constitutionality of the law of the United States.—U. S. *v.* Horner, 143, 570, 576.

If the case presents a Federal question, there is jurisdiction over the whole case and decision is not limited to merely deciding the single Federal question.—Omaha Horse Railway Co., (C. C. A.) 32 Fed. 729, 730; Horner, 143 U. S. 570; Chappell, 160 U. S. 499; Press, 163 U. S. 700.

If on the face of the complaint a Federal question is presented the Court has the right to decide every issue that may subsequently be raised whether the decision ultimately turns on Federal, local or general law, and jurisdiction is not affected.—St. Paul Railway (C. C. A.) 68 Fed. 10; citing Mayor, 6 Wall. 247; Railroad *v.* Mississippi, 102 U. S. 135, 141; Tennessee *v.* Davis, 100 U. S. 257, 264; Horse Railway Co., 32 Fed. 727 (C. C. A.); and see City of Fergus Falls (C. C. A.), 72 Fed. 883.

The case was brought directly to this court, because the constitutionality of the statute was drawn in question. The question has since been settled adversely to plaintiffs in error. Hoke *v.* United States, 227 U. S. 308. Nevertheless, we must retain jurisdiction for the purpose of passing upon the other questions in the record.—Horner *v.* United States, 143 U. S. 570, 576; Burton *v.* United States, 196 U. S. 283, 295; Williamson *v.* United States, 207 U. S. 425, 432; Wilson *v.* United States, 232 U. S. 563; 34 Sup. Ct. Rep. 348.

1-*e.*

The plaintiff cannot be allowed to say that his own failure to sustain a Federal question claim denies defendant an appeal when plaintiff might have sustained an appeal—that defendant can be deprived of the substance by being given a shadow. For this we cite the Loeb case, 179 U. S., 472:

If the lower court had adjudged against the constitutional question raised by defendant and had given a judgment for plaintiff, the one who raised the constitutional question could have brought the case to the Supreme Court. If that party on denial of its claim could invoke the jurisdiction of the Supreme Court, there is no principle on which the plaintiff can be denied the like privilege if the State law upon which his action depended was on the claim of his adversary held to contravene the Constitution. This right cannot be limited to being possessed of but one of the parties.

It is the unsuccessful litigant who may come to the Supreme Court directly from the Circuit Court in every case where the claim is made that the State law contravenes the Constitution.

It is unnecessary that the writ shall be sued out by the party that made the claim of Federal jurisdiction.

No matter which party claims rights or protection under the Constitution, that is decisive as to jurisdiction, and all questions may then be reviewed in the Appellate Court.—Mayor *v.* Cooper, 73 U. S., 252, 253.

1-*f*.

Movant having prevailed on the merits is in no position to have a decision here on how its Federal question ought to be decided, or to say it is no longer of consequence. But, passing that, it may not have a motion to dismiss determine the validity of its contentions.

It is not required that a constitutional question asserted shall be a well-founded claim. Whether it is meritorious must be decided on the merits after jurisdiction is taken.—Penn., Co., 168 U. S. 685, citing Horner, 143 U. S. 570.

It is sufficient that a genuine Federal question is claimed to exist and it is not essential that the claim be well founded. That is a question that must be decided after the court takes jurisdiction.—Nashville (C. C. A.), 86 Fed. 178, 179, and cannot be raised by motion to dismiss.—Chicago Life Co. *v.* Needles, 113 U. S. 574, and see Cohen, 6 Wheat. 264.

It is but necessary to show that the complainant claimed in good faith to have a contract which the other party had attempted to impair. Whether it was in fact impaired may not be tried out on motion to dismiss, where the claim in the bill was that the action of the city had that effect. It suffices that the bill presents a constitutional question, irrespective of the actual sufficiency of the facts alleged to justify the relief sought or of the facts as they may subsequently turn out.—Pacific Co., 194 U. S. 112.

II.

Movant relies upon detached excerpts in disregard of what the cases cited from decide. On its interpretation its citations would overrule the elementary law to which we have called attention, and overrule a very large number of decisions in this and the lower Federal courts, hitherto unquestioned, and do so without so much as mentioning those decisions.

And nothing found in what it cites can be strained into holding that where a plaintiff so presents Federal questions as that the invoking of jurisdiction does not rest on diversity alone, such plaintiff can dismiss the appeal of defendant who has lost on the merits, merely because the lower court had decided that while the Federal question presented by plaintiff was substantial, genuine and not colorable, plaintiff could not prevail upon it.

Let us turn to what movant relies upon.

Arbuckle—191 U. S. 405.—(Brief — 6)—In that case it is said that a right to a hearing *does* arise if there be a substantial controversy "upon the determination of which the case depends." It is *not* said that there is no right to appeal under the Act of March 3, 1891, *unless* there is not only a substantial Constitutional controversy, but one upon which the determination of the whole suit depends. No such limitation is found in the Act. To put it in by court action would overrule the decisions that it suffices if the case *might* take a turn that would make it necessary to decide the Federal question; and the decisions that if the question is substantial it does not matter, so far as the right to appeal is concerned, how the question was finally dealt with below; and the decisions that the presenting of such a question authorizes decision on matters other than such question. What the case *decides* is that *plaintiff who was dismissed* had failed to raise a substantial Federal question—that none such "appears on the record by a statement in legal and logical form such as is

required in good pleading." Hardly a decision that plaintiff may have the appeal of defendant dismissed because the court decided against plaintiff a substantial Federal question presented by plaintiff—hardly a decision that the Act does not mean what it says, to-wit; that appeal is denied only where the *sole ground presented* is diversity of citizenship.

2-*a*.

Defiance Water Company—191 U. S. 184.—(Brief — 6)—The only claim of Federal jurisdiction was a claim by the Water Company against the City that the obligation of a rental contract with the City was impaired by an ordinance which, though it denied the validity of the contract, still allowed the claim for rentals with a saving clause to prevent estoppel. The Federal question is held to be colorable, and the circuit court of appeals had ordered a dismissal of the bill.

2-*b*.

Shulthis v. McDougal—225 U. S. 561.—(Brief — 7)—Some language as to "the determination upon which the result depends." The *decision* is that no ground of Federal jurisdiction is sufficiently set forth. And it was the complainant who was ruled against.

2-*c*.

Lovell v. Newman—227 U. S. 412.—(Brief — 7)—Some more language upon "right to recover depends," and it, too, deals with the plaintiff. The *decision* is that he had not asserted a substantial Federal question.

2-*d*.

Empire Co. v. Hanley, 198 U. S. 292.—(Brief — 7)— Some more and kindred detached words, and a deduction from them that this appeal should be dismissed because "the Federal questions pleaded here were not those upon the determination of which the final result depended." Another disregard of the rule that if the question be substantial, the decision upon it will not oust the right to appeal created by the presenting of the question, nor exclude decree for the one whose Federal question is finally decided against him. The *Hanley* case is another in which the *decision* is, simply, that nothing is raised that authorizes appeal under the Act of March 3, 1891. The following statement by this Court makes that plain.

The averments of this complaint did not suggest that the courts of Idaho would hold the proceedings of the probate court if attacked by Hanley directly, effectual to overthrow his purchase, or charge that by taking any such action as had been taken they had committed error so gross as to amount in law to a denial by the State of due process of law; Hanley's contention was in effect that the lower proceedings were void for lack of jurisdiction, and he did not pretend that he could not have obtained redress by direct suit in the State courts. The Constitution and laws of the United States were not mentioned in the complaint, nor was any dispute or controversy raised as to the effect or construction of the Constitution or laws, nor was any privilege or immunity specially set up or claimed under the Constitution or law; that if this had been a writ of error to said Court, the averments would not have brought it within Section 709 of the Revised Statutes, and if it had been a direct appeal from the circuit court under the Act of March 3, 1891, it could not have been sustained

because the construction or application of the Constitution of the United States was not distinctly presented for decision in the court below.

2-*e*.

Henningsen, 208 U. S. 404.—(Brief — 8)—The circuit court had affirmed decree of the court below enforcing the right of a surety on the bond of a public contractor for first lien upon sums due under the contract.

It was said here:

A motion is made to dismiss on the ground that the jurisdiction of the circuit court was invoked solely on the ground of the diversity of citizenship of the parties, and hence the decree of the circuit court of appeals was final. The motion must be overruled. Diversity of citizenship was, it is true, alleged in the bills, but grounds of suit and for relief were also based on the statutes of the United States, as from the discussion of the merits will be seen. Those statutes entered as elements into the decision of the circuit court of appeals, and were necessary elements.

As seen, the appeal was entertained. In so doing this Court said: "Those statutes entered as elements into the decision of the Circuit Court of Appeals, and were necessary elements."

We have exhibited above what *was decided.* But because the quoted words state the fact to be that certain elements were vital ones and entered into the decision, movant deduces that there can be no appeal where the Circuit Court of Appeals affirms a holding that a certain question is grave and substantial, itself declares this to be true, but finds it unnecessary to decide that question for itself. But be all that as it may, the quoted words are mere argument, or, rather,

one argument in support of the grounds upon which the *decision* rests. Such words so spoken, should not be the means of overriding the settled law which permits the appeal at bar.

2-*f*.

Cary Co. v. Acme, 187 U. S. 427.—(Brief —10)—The Acme Company brought suit in the trial court for alleged infringement of letters patent which went to decree sustaining the validity of the patent and adjudging that the Cary Company had infringed it. The defendant appealed to the C. C. A. and there was an affirmance. Subsequently, proceedings in contempt were instituted by the Acme Company to punish alleged violation of the injunction issued by the decree. A fine of $2,000 was imposed. The Cary Company sued out a writ of error from the Circuit Court of Appeals to review its judgment and there was an affirmance. Thereupon, writ of error to the Supreme Court of the United States was allowed. It was said by the Court:

Judgments and decrees of those courts in all cases arising under the patent laws and under the criminal laws are made final by section 6 of the judiciary act of March 3, 1891. Although it is conceded that the judgment imposing the fine was a final judgment in a criminal matter, it is argued that it involved the denial of constitutional rights, and hence that this court has jurisdiction under section 5 of that act; but it is settled that even if a party might be entitled to come directly to this court under that section, yet if he does not do so, and carries his case to the circuit court of appeals, he must abide by the judgment of that court.

The decree at bar is not one in a patent case; nor is it a judgment in a criminal cause, made final by the Act.

And defendant could not have gone directly to this court. The direct appeal is available only where the jurisdiction of the district rests solely on a Federal question. It is no more available where diversity also exists than in a case wherein diversity is the sole ground upon which jurisdiction is invoked.—See American Co. *v.* City, 181 U. S. 279; Cary, 187 U. S. 211; Watkins, 118 Fed. 532; Huguly, 184 U. S. 452. And it is where the jurisdiction rests on diversity and the *defendant* injects a constitutional question, that he may take direct appeal. American Refining Co., 161 U. S. 277; 21 Sup. Ct. 647.

Again, it cannot be that the taking appeal to the Circuit Court of Appeals destroys the right to appeal to this court. For appeal *does* lie from the decision of that court to this; and one cannot appeal from the Circuit Court of Appeals unless he first enters it. In other words, since the Act of March 3, 1891, permits appeal here to any who enter the Circuit Court of Appeals where diversity is not the sole basis of jurisdiction, then, if entering that court takes away that appeal, the statute means nothing.

Where the plaintiff injects the constitutional question and is defeated on it, it is no waiver of rights under the Act of March 3, 1891, that thereupon direct appeal was not taken to the Supreme Court.—Northern Pacific Co., 113 U. S. 574; 12 Sup. Ct. Rep. 742.

2-*g*.

Ayres v. Polsdorfer, 187 U. S., 427.—(Brief 11.)—The headnote clearly expresses the essence of the decision, to-wit: that where, below, jurisdiction is invoked solely on the ground of diversity of citizenship there may not be a review in the Supreme Court on writ of error because a Fed-

eral question arose in the course of the proceedings, even though it be a question which could not be brought directly from the Circuit Court to the Supreme Court.

The declaration of Polsdorfer alleged ownership, possession and entry of defendant Ayres. It invoked the Federal jurisdiction *solely* on the ground of diversity of citizenship. There was verdict and judgment for the plaintiff Polsdorfer. Ayres sued out a writ of error to the Circuit Court of Appeals and the writ was dismissed in that court on the motion of Polsdorfer and on the ground that there had been no summons and severance of the defendant, Price. This being the bill, it is manifest that whatever Federal question got into the case must have gotten into it after the filing of the complaint setting up diversity of citizenship only.

For the right to appeal to the Supreme Court from the action of the Circuit Court of Appeals, the argument was in effect that the Federal question *arose in the course of the proceedings in the trial court,* consisting, as is claimed, upon a basing on grants of land from different states and a conflict between the grants under which the parties respectively claimed title—it is held that this did not make a non-final judgment—which is but affirming that the *status* at the time the complaint is filed is what is controlling. It is merely an affirmance of the Turck case, 150 U. S. 138. For the Turck case, the Ayres case says:

In it the jurisdiction of the trial court was invoked on the ground of diversity of citizenship, but defendant claimed to have set up in defense a Federal question arising under Section 2322 of the Revised Statutes, and on that ground insisted that the judgment of the Circuit Court was not final; that this contention was rejected, and the Supreme Court held that before such defense under this statute had

been set up jurisdiction had "already attached and could not be affected by a subsequent defense;" that jurisdiction "depended entirely upon diverse citizenship when the suit was commenced and to that point of time the inquiry must necessarily be referred."

It is added that the same idea was expressed in subsequent cases, though in somewhat different language.

Lampasas, 180 U. S. 276.—(Brief 13.)—This case and its reference to *Clark's* case, 176 U. S. 114, but affirms the self-evident proposition "that the objection of the unconstitutionality of a statute must be made by one having the right to make it, not by a stranger to its grievance." Why movant thinks this is relevant is set forth as follows:

> "If there was a grievance involved in the disposition of the Federal question raised in the lower courts, that grievance belonged to appellee, and appellants were strangers to it. Indeed, they were the direct beneficiaries of the disposition of those questions, when they were set aside by the lower court." Brief 14.)

Of course, this again disregards that the right of appeal depends on whether or not diversity *only* was *presented*, and not on how grounds other than diversity were decided. And it is a complete "swap" of a stone for bread. Plaintiff brings and holds defendant in court by so presenting substantial grounds for invoking jurisdiction as that diversity is not the *sole* ground. Some of these grounds are decided against plaintiff, but still the decree on the merits goes against defendant. Yet defendant is "a direct beneficiary" (one wonders in what way), and it is the victorious plain-

tiff who alone has been "aggrieved." That is, its "grievance" is that it won its whole case, but won it on one of its claims instead of another, or did not win on all of its reasons for demanding victory. And the defendant who has lost everything of substance is a "stranger" to all "grievance," and is in the position of one who attacks a statute for unconstitutionality when that statute in no way affects him.

It was rightly said in the *Hanley* case that appellant was making a grievance of its success; and movant urges the words against defendants, but they are relevant only to the position taken by movant. That position is in essence that because movant won the substance but lost an "argument for jurisdiction," asserted wholly to enable the court to give it the substance, such "defeat" entitles it to take from the truly defeated party a right to review which that party would have had if it had been defeated both on said "argument" *and* the substance. To have many such victories as defendants had would place them with Dickens' ruined "Fortunate legatee." And on the theory of movant its "grievance" through its academic defeat is truly an asset. And it claims a preference which we submit it is not entitled to unless the *Loeb* case is to be overruled and it is to be held that in the right to appeal the parties are not equals. That is to say,—when the bill was filed it created the right of appeal under the Act of 1891 for all parties. Now, had plaintiff lost the substance *and* its Federal question its right to appeal would have remained. Had defendants lost *both* substance and the Federal question they would have had the right to appeal. So, if the decision had rested solely on finding the Federal question for plaintiff. And in that case defendants would have been heard here on the substance, too. But they are not to be

heard at all under the Act because, foresooth, they lost the substance but won on one ground put in solely to enable the court to defeat them as to the substance.

2-*i*.

For some reason, reliance is had on the case of *Loeb*, 179 U. S. 472. The argument is against the position of movant. It points out it was asserted in the Loeb case that review of the judgment of the highest court of a State can be had *only* by the one who in that court made claim under the Constitution. This court held against that contention, and said:—Brief — 14)—

> "In other words, if a claim is made in the circuit court, no matter by which party, that a state enactment is invalid under the Constitution of the United States, and that claim is sustained or rejected, then it is consistent with the words of the act, and, we think, in harmony with its object, that this court review the judgment at the instance of the unsuccessful party, whether plaintiff or defendant."

And in the Loeb case, the attack was on and not by the plaintiff. This, standing alone, surely does not sustain movant. But the point urged seems to be that this, plus *Louisville v. Telegraph Co.*, 234 U. S. 369, establishes that all that was available after the Federal question was decided against plaintiff was *it* had the right to direct appeal to this court. Of course, the Loeb case does not hold that, and the *Louisville* case holds but this:

> "On a direct appeal under section 238, Judicial Code, from a judgment of the District Court dismissing the bill for want of jurisdiction on the ground

that neither of the parties was a resident of that district and that the suit was one that could only be brought in a district in which one of the parties resided, this court is only concerned with the jurisdiction of the District Court as a Federal court; whether appellant is entitled to the relief sought is not a jurisdictional question in the sense of section 238."

"When the matter in controversy is of the requisite value and diverse citizenship exists, the question is simply whether the case is cognizable in the particular District Court in which the case is brought."

2-*j*.

Robinson v. Caldwell, 165 U. S. 359.—(Brief — 10)— Caldwell brought suit in State court against Robinson and claimed to be the owner of certain lands in Idaho, the complaint stating that the validity of his title depended partly, if not altogether, upon the construction of the treaty between this Government and the Nes Perces Indians. It also appears there was drawn into question the constitutionality of an Act of Congress. Robinson had the cause removed, and in Federal court it was heard on the merits. There was final decree adjudging Caldwell to be the true owner of certain lands described in the complaint and quieting his title against Robinson. Robinson was allowed to appeal to the Supreme Court. He also prosecuted an appeal to the Circuit Court of Appeals which determined his case against him on February 4, 1895, and the citation on the appeal to the Supreme Court was for July 1, 1894. The opinions in both lower courts considered all the questions requiring construction of the treaty and involving the validity of said Act of Congress. The appeal

involved in the Robinson decision here was brought to the Supreme Court directly from the final decree in the Circuit Court of the United States. The holding is that one may not take appeals on a whole case both to the Supreme Court direct and also to the Circuit Court of Appeals, and that where the Circuit Court of Appeals affirms on the merits and decides all the questions raised, then, by invoking the jurisdiction of the Circuit Court of Appeals on the whole case, defendant waives his right to a decision by the Supreme Court on his direct appeal to it and the latter appeal must be dismissed. It is as to this that the court wrote the extract upon which movant relies:

> "It was not the purpose of the Judiciary Act of 1891 to give a party who was defeated in the Circuit Court of the United States the right to have the case finally determined upon its merits, both in the Supreme Court and in the Circuit Court of Appeals. As no question of jurisdiction was certified by the Circuit Court, and as the defendant chose not to await the action of the Supreme Court upon the appeal to it from the Circuit Court, but invoked the jurisdiction of the Circuit Court of Appeals on the whole case, he must be held to have waived his right to any decision by the Supreme Court on his direct appeal from the Circuit Court."

Of course, these words must be read in the light of the record upon which they were uttered, and, thus read, they have nothing to do with a case where a plaintiff is seeking to take away appealability because a Federal question raised by him has been decided against him.

2-*k*.

Anglo-American, 191 U. S. 376.—(Brief — 15)—More detached excerpt. The headnote states the *decision* well:

> "When the Circuit Court has decided the question of its jurisdiction and the alleged unconstitutionality of a state law in favor of the plaintiff, but has decided against him on the merits, the *plaintiff* cannot appeal directly to this court under the act of March 3, 1891, chapter 517, section 5, for the purpose of a revision of the judgment on the merits.

In other words, there was in that case no basis for *direct appeal to this court from the action of the trial court.* No such appeal is being attempted by us.

In a word, the jurisdiction was not based *solely* on diversity. Therefore, appeal lies under the Act of March 3, 1891.

What appellee seeks is the right to elect and regulate as to whether its suit may be brought here. If it be defeated in the C. C. A. the suit can be brought higher. If it be victorious in that court, then it claims the right to in effect amend by changing the bill to rest on nothing but diversity, and so to stop further appeal.

We submit respectfully that the motion should be overruled.

SUPREME COURT OF THE UNITED STATES

No. 451.

A. G. RISTY, et al, as County Commissioners, etc., et al,

Petitioners,

CHICAGO, ROCK ISLAND and PACIFIC RAILWAY COMPANY,

Respondent.

BRIEF ON BEHALF OF RESPONDENT CHICAGO, ROCK ISLAND AND PACIFIC RAILWAY COMPANY, IN RESISTENCE TO PETITION FOR WRIT OF CERTIORARI.

Petitioners seek a writ of certiorari to review the decision of the Circuit Court of Appeals of the Eighth Circuit. For the opinion written by Judge Kenyon, see Risty vs. Chicago, Rock Island and Pacific Railway Company, 297 Federal 710, which affirmed Chicago, Rock Island and Pacific Railway Company vs. Risty, 282 Fed. 364.

Petitioners advance five reasons for the granting of the writ. All but the first are so clearly and

conclusively disposed of contrary to petitioners' contention, by Judge Kenyon's opinion as to require nothing further than a reference thereto.

COPY OF THIS OPINION IS MADE A PART OF THIS BRIEF AS AN APPENDIX, PAGES 8 TO 39.

I.

Petitioners claim that there is such conflict between Risty vs. Chicago, Rock Island & Pacific Railway Company, 297 Fed. 710, the decision below, and Gilseth vs. Risty, 193 N. W. 132 by the Supreme Court of South Dakota, as to justify a writ. *There is in fact no conflict between the two cases as an analysis will show.*

Some years ago the County Commissioners established Drainage Ditch 1, levying an assessment upon certain adjacent property. A few years later the Commissioners established another ditch known as Drainage Ditch 2, likewise levying an assessment for this ditch upon adjacent property. Ditch 1 and Ditch 2 were physically connected and in reality constituted one ditch, although established separately.

While the terminology may not be accurate because in fact no assessment districts were ever established, as is pointed out by the Circuit Court of Appeals in its opinion, we shall, for the convenience, refer to the property which was assessed for the establishment of Ditch 1 and Ditch 2 as the old assessment district.

This respondent, the Rock Island Railway Company, had no property whatever in the old assess-

ment district, and was not assessed for the construction of either Ditch 1 or Ditch 2.

In 1916 the spillway connecting Ditch 1 and Ditch 2 with the Sioux River washed out. A very large expenditure was required to make these ditches function at all.

The Board conceived the plan of establishing a new ditch which it was pleased to call "Ditch 1 and 2". This ditch, so-called, was established over the identical route traversed by Ditch 1 and by Ditch 2, and the only work done in building it, was to clean out and widen the old ditches, and rebuild the spillway. The Board proposed to assess for this ditch, so-called, not only all property included in the old assessment district, but also certain additional property, which additional property will be designated, for convenience, the new assessment district.

The Rock Island, this respondent, had, as indicated, no property in the old assessment district but did have property within the new assessment district. Respondent had no notice of any intention to assess its properties, within the new assessment district, until the tentative assessment was made.

The Board having made a tentative assessment, of over $8,000, this suit was brought seeking an injunction against further action looking towards assessment of respondent's properties. Jusisdiction was based on diversity of citizenship,—the Rock Island being an Illinois corporation and the defendants (petitioners here) residents of South Dakota

and upon the asserted unconstitutionality of the South Dakota drainage statute.

Judge Elliott, judge of the lower court, held that the establishment of "Ditch 1 and 2" was a mere subterfuge for repairing Ditch 1 and Ditch 2, and for assessing additional property for such repairs *when the South Dakota law* (Section 8740 Revised Code of South Dakota for 1919) *limited assessments for repairs to the property originally assessed for construction.* Judge Kenyon on appeal expressed a similar view.

The district court entered a decree enjoining any assessment against any of this respondent's properties as all of its properties lay outside the old assessment district. This decree the circuit court of appeals affirmed.

The decree did not enjoin or restrict or in any way deal with the right of the Board to assess property within the old assessment district.

On the other hand, the South Dakota Supreme Court in the Gilseth case had before it for determination the validity of an assessment for Ditch 1 and 2 *upon property lying within the old assessment district.* The court was careful to say (page 133):

> "Plaintiff * * * was the owner of agricultural land within the drainage area of Drainage District No. 2".

The South Dakota Supreme Court reached the conclusion that the particular assessment for Ditch 1 and 2 upon property in the old assessment district, should be upheld because:

1. Even assuming the project to be the repair of the old ditches and not the construction of a

new one, still an assessment for repairs was proper under the constitution and statutes of South Dakota *upon the land originally assessed,* (Sections 8458 and 8470).

2. The land owner, the plaintiff in that case, was estopped to question the assessment, he having acquiesced and participated in the proceedings. A reading of the opinion makes it apparent that this was the real reason for the decision.

The South Dakota Supreme Court, therefore, upheld at most the validity of an assessment upon land *within the old district.* It is therefore apparent that there is absolutely no conflict between the holdings of the two courts.

Taking the view most favorable to petitioner and eliminating entirely the question of estoppel, the most that could be claimed for the decision of the State Supreme Court, is that, the *court held that land WITHIN the old district COULD be assessed for Ditch 1 and 2.*

The Federal Circuit Court of Appeals held that land WITHOUT the old district COULD NOT be assessed for Ditch 1 and 2.

The rule of conflict of decision so strongly urged by petitioners is not in the case at all.

Eliminating this proposition, there is nothing in the case which would call for or justify certiorari, even if this court were of the opinion that the decision of the Circuit Court of Appeals was wrong on the merits. However, nothing could be added to Judge Kenyon's opinion to demonstrate that the decision on the merits was correct. The only ques-

tion determined by the Court below was the construction of the South Dakota Drainage Statute, and a determination of the facts applicable. There is no Federal question in the case now. There was a very serious Federal question at the inception of the case, namely: the validity of the drainage statute under the Due Process of Law clause of the Federal constitution. This Federal question was expressly decided in petitioners' favor in the District Court by Judge Elliott; the Circuit Court of Appeals expressly refused to determine the question on the ground that it was unnecessary to the decision. *The Court below determined only the construction and not the validity of the state statute.* It is apparent that it was the intention of Congress to leave the final determination of such a question to the Circuit Court of Appeals. Section 128 of the Judicial Code.

II, III, IV and V.

We shall not attempt to follow petitioners' brief through the arguments upon these propositions. These portions of the brief deal with the jurisdiction of the Court below, it being claimed, as we understand it, that there was a plain, adequate and complete remedy at law, that there was no equity in the bill, that the action was premature, and that the necessary jurisdictional amount was not involved. All of these questions were carefully and exhaustively considered by the Circuit Court of Appeals and determined contrary to the conten-

tions now made by petitioners. Nothing could be added in support of the conclusion reached by the Circuit Court of Appeals and to the convincing reasoning by Judge Kenyon.

It is apparent that this application has no merit and it is respectfully urged that the petition for a writ of certiorari be denied.

Respectfully submitted,

W. F. DICKINSON, Chicago, Ill.
THOMAS D. O'BRIEN, St. Paul, Minn.
ALEXANDER E. HORN, St. Paul, Minn.
EDWARD S. STRINGER, St. Paul, Minn.
Counsel for Respondent,
Chicago, Rock Island and
Pacific Railway Company.

APPENDIX.

297 Federal 710.

RISTY et al. v. CHICAGO, R. I. & P. RY. CO., and five other cases.

(Circuit Court of Appeals, Eighth Circuit. March 18, 1924.)

Nos. 6312-6317.

1. Constitutional law—46(1)—Federal courts will not pass on constitutionality of statutes unless absolutely necessary.

Federal courts will not pass on the constitutionality of statutes unless absolutely necessary.

2. Drains—71—County commissioners held without authority to take in lands not benefited in assessing cost of repairs and maintenance.

Where a river broke through a natural barrier and flowed into drainage ditches and because of the inadequate construction of the ditches washed out a spillway, leaving the water uncontrolled, and threatening serious damage where the water emptied over a steep bluff into the river, the county commissioners could clean and maintain the ditches under Rev. Code S. D. 1919, § 8470, or abandon the ditches and construct new ones in the same location by complying with section 8489; but they had no power, by pretending to abandon the ditches, to assess part of the cost of maintaining and repairing the old one on lands outside of the original drainage district in no way benefited thereby.

3. Drains—2(3)—Draining of other than agricultural lands must be by drainage districts established under legislative authority.

Under Const. S. D. art. 21, § 6, drainage of lands for any public use other than the drainage of agricultural lands must be carried out by drainage districts established under legislative authority.

4. Courts—262(2)—Federal equity court cannot give relief where there is "plain, adequate and complete remedy at law."

Under Judicial Code, § 267 (Comp. St. § 1244), federal equity courts cannot give relief where there is a "plain, adequate and complete remedy" at law, but the remedy at law must be as certain and efficient as that in equity.

5. Court—262(2)—Remedy in federal court necessary to defeat suit in equity; "remedy at law."

The "remedy at law" which will prevent the bringing of a suit in a federal court of equity must be a remedy on the law side of the federal court, and not a remedy in the state courts.

6. Courts—262(2)—Landowner's remedy at law for illegal drainage assessments held inadequate.

Where the only remedy against unauthorized drainage assessments was to appear before the county commissioners and to appeal from their finding to the state, *held*, that the remedy at law was inadequate under Judicial Code, § 267 (Comp. St. § 1244).

7. Taxation—498, 608(2)—Right to restrain assessment or collection of state tax for illegality must be clear.

A suit in equity will not lie to restrain the assessment or collection of a tax on the sole ground that it is illegal, but there must be special circumstances bringing the case under some recognized head of equity jurisdiction, and the right to such relief must be clear where court is asked to restrain collection of a state tax.

8. Taxation—498—An assessment putting cloud on title gives rise to equitable jurisdiction.

An assessment putting a cloud on title gives rise to equitable jurisdiction unless there is an adequate remedy at law.

9. Drains—91—Assessment of benefits for drainage held to create cloud on title giving equity jurisdiction.

An assessment of benefits against land affected by a drainage improvement, or fixing the proportion of benefits thereof, under Rev. Code S. D. 1919, §§ 8463, 8464, *held* to create a cloud on the title giving equity jurisdiction.

10. Action—62—Suits to enjoin drainage assessments held not premature.

Suits in federal court to enjoin drainage district assessment proceedings on the ground that they were unauthorized *held* not premature.

11. Courts—328(11)—Threatened drainage assessments held to exceed $3,000 giving federal court jurisdiction.

Where the proportion of benefits for drainage improvements had been assessed on a unit basis and it was merely a matter of computation to determine the amount assessed against each tract of land, the apportioning being subject to change only if landowner should convince the county commissioners that their conclusion was erroneous, the federal court had jurisdiction of suits attacking such threatened assessments as exceeded $3,000.

12. Courts—263, 278—Federal court did not lose jurisdiction by failing to decide constitutional question.

The jurisdiction of the federal court in a suit presenting a constitutional question extended to all questions involved in the case, and it did not lose jurisdiction by omitting to decide the constitutional ones.

13. Estoppel—74—Acts of landowners outside of original drainage district held not to estop them from attacking validity of drainage assessments.

The fact that railroads and other landowners had been in close touch with drainage ditch proceedings and had in several instances encouraged the work and had been assessed for benefits to other lands in the original drainage district without protest *held* not to estop them from attacking the validity of the assessment as to property outside the original district, where they had no notice at the time of such acts that benefits would be assessed on such property.

Appeal from the District Court of the United States for the District of South Dakota; James D. Elliott, Judge.

Suits, by the Chicago, Rock Island & Pacific Railway Company, by the Chicago, Milwaukee & St. Paul Railway Company, by the Chicago, St. Paul, Minneapolis & Omaha Railway Company, by the Northern States Power Company, by the City of Sioux Falls, and by the Great Northern Railway Company, respectively, against A. G. Risty and others, as County Commissioners, and others. From decrees for plaintiffs (282 Fed. 364) the defendants in each case appeal. Affirmed.

In the year 1907 the board of county commissioners of Minnehaha county, S. D., acting under the drainage statutes of that state, established and had constructed a drainage ditch known as drainage ditch No. 1, bottom width of 40 feet, at an expense of $46,600. This ditch was north of Sioux Falls and ran first in a southerly direction from its initial point; thence easterly past the pumping station of the city of Sioux Falls; thence southeasterly about 1,000 feet to the Big Sioux river near the north limits of Sioux Falls. It passed through a ridge and descended approximately 100 feet in the terminal thousand feet. A spillway was constructed to carry the water down the descent. This ditch was approximately three miles in length, and there was a spur 670 feet long extending northwest into a bayou about 2,000 feet south of the initial point.

In 1910 the board of county commissioners established another drainage ditch known as drainage

ditch No. 2, which extended north from the northern terminal of drainage ditch No. 1, for a distance of about 12 miles. This ditch likewise had a 40-foot bottom and was constructed at a cost of $81,-106.19. These two ditches, making in fact one continuous ditch, drained certain agricultural lands, and traversed the land north of the city of Sioux Falls near the gravel bed from which the city obtained its water supply. It also passed near the state penitentiary lands and emptied into the Big Sioux river north of the falls in said river.

In the year 1916 there was a breaking of the river through the natural barrier into the bayou drained by the lateral branch. This, coupled with the large volume of water passing through these ditches, made it impossible for the spillway to carry the same, and it was washed out and destroyed. The waters therefore being uncontrolled descended from the steep bluff to the level of the Big Sioux river, and serious damage was threatened to various interests. There was danger that the Big Sioux river which flowed through the city of Sioux Falls would be diverted from its course and flow through these ditches cutting off the water supply of the city of Sioux Falls, injuring the Northern States Power Company, and depriving it of its water power.

The board of county commissioners attempted to devise some plan to reconstruct the spillway and to protect these various interests from the threatened damages.

April 8, 1916, certain parties filed a petition with the board of county commissioners asking

that that portion of drainage ditch No. 1 containing the old spillway be closed and abandoned, and the course of said ditch extended in a southerly direction through Covell's Lake to the Big Sioux river; and said board did pass a resolution that said drainage ditch No. 1 be permanently closed above the present spillway or outlet thereof.

August 3, 1916, a petition of F. L. Blackman and other parties was filed entitled, "To Reconstruct and Improve Drainage Ditches Numbers One and Two in Minnehaha County, South Dakota, and to Construct a New Spillway or Outlet to said Drainage Ditch Numbers One and Two and to Pay Therefor by an Assessment upon the Property, Persons and Corporations Benefited Thereby." This petition was transmitted by the board to the state engineer, and on August 14, 1916, a survey was ordered.

September 13, 1916, a report of the survey was made and filed by the engineer in charge. A resolution was thereupon adopted by the board fixing the line and width of said new proposed ditch in the exact location of old ditches No. 1 and No. 2, and providing for the time and place of hearing the petition. Notice was published for three successive weeks describing the route of the proposed drainage, and the tract of country likely to be affected thereby, in the general terms provided by the statute; also, the separate tracts of land through which the proposed ditch would pass, and the names of the owners of said tracts. Such notice informed all persons affected by the proposed drainage to appear at such hearing and show cause

why the same should not be established. Upon the return date of the notice the commissioners adopted a resolution purporting to establish the so-called drainage ditch No. 1 and 2, and providing for the reconstruction of the spillway.

No appeal was taken from this order establishing the purported new project.

The commissioners then caused ditches No. 1 and No. 2 to be cleaned out, widened, deepened, and diked so as to increase the carrying capacity; caused the spillway to be reconstructed, and certain portions of the Big Sioux river to be straightened. This work cost approximately $255,000, and drainage warrants were issued to be paid out of taxes assessed against the property determined to be benefited within the area of the purported new drainage ditch No. 1 and 2. The largest holders of these warrants are interveners in this action.

In April, 1919, notice was published of a hearing upon the matter of equalizing benefits resulting from said drainage ditch No. 1 and 2, and this was the first intimation that certain of appellees had that benefits might be assessed against them. The property of some of the appellees was not covered by the notice. However, the proceedings under this notice were abandoned.

June 10, 1921, appellant board by resolution fixed a proportion of benefits in units, which had been decided upon as a fair method of arriving at the same, on drainage ditch No. 1 and 2, and designated Monday August 1, 1921, at the office of the county auditor, as the time and place for a

hearing on the question of equalizing benefits, and caused notice of such hearing to be published as provided by the statute. Under the unit system adopted by the board upon recommendation of their engineer, the various appellees had units allotted against them as follows:

Chicago, Rock Island & Pacific Railway Company, out of a total of 32,549.62 units, 839.45.

Chicago, Milwaukee & St. Paul Railway Company, 1,681.

Chicago, St. Paul, Minneapolis & Omaha Railway Company, 839.45.

Northern States Power Company, 5,351.63.

Great Northern Railway, 613.85.

City of Sioux Falls, 3,147.95.

The amount due on warrants issued for this work at the time the actions were brought was about $300,000. The total units of benefit aggregate 32,549.62, so each unit of benefit amounts to slightly in excess of $9. If no changes had been made by the board, had they been permitted to proceed; the amounts charged against various appellees would have ranged from $50,000 against the Northern States Power Company to substantially $6,000 against the Great Northern Railway Company.

Appellees brought suit to restrain appellants from proceeding further with the equalization of said purported benefits and from levying any assessment upon their property to pay therefor. Some of the appellees had no property in original ditch district No. 1 and No. 2; others of appellees

did have, and some difference is made in the contention of those not having property in the original ditch district and those who did have, but the issues in the main were the same as to all the parties.

All of the appellees contended in the trial court that the South Dakota drainage law was unconstitutional, violating the Fourteenth Amendment to the Constitution of the United States; that it also violated sections 2 and 3 of article 6 of the Constitution of the State of South Dakota. Some of the appellees contended that the board exceeded its powers in what it attempted to do, in that the same was not for the drainage of agricultural lands, but being for other public purposes, could only be carried on by the corporate authority of drainage district entities established for that purpose, which had not been done, and that consequently the proceedings were void.

Others of the appellees contended that the proceeding seeking to establish drainage ditch No. 1 and 2 was a subterfuge to impose liability on new territory to pay for the maintenance of the former ditches, and that the proceedings were for maintenance and repair of the old drainage ditch and were not carried on as provided by section 8470 of the Code of South Dakota relating to assessments for the maintenance of drainage already established; that drainage ditch No. 1 and 2 was not a new ditch and not a new enterprise.

Further claim is made by the railroad appellees that the South Dakota drainage law is unconstitutional so far as respects assessments of railroad

property, in that it provides for the giving of no notice whatever of the apportionment and equalization of benefits to railroad companies.

All appellees claim that the attempted assessments upon their property are arbitrary, unjust and illegal, and constitute a discrimination so palpable and arbitrary as to amount to a denial of the equal protection of the law; and that the proceedings create a cloud upon their title.

It was the position of appellants, on the other hand, that the statutes referred to were constitutional; that the federal court in equity had no jurisdiction because there was a complete remedy at law; that there was no equitable question involved; no irreparable injury shown; no facts sufficiently pleaded to show any threatened cloud upon title; that the amount involved was not sufficient to give jurisdiction; that the bringing of the suit was premature; that ditch No. 1 and 2 was legally established as a new drainage project under the statutes of South Dakota; and that the board of county commissioners had full jurisdiction to do each and every act which they performed.

The trial court held that section 8461 of the Revised Statutes of South Dakota, being the statute particularly attacked as unconstitutional, gave sufficient notice and opportunity to be heard before an assessment became a lien against the property, and was constitutional. The court also held that the proceedings of the commissioners were proceedings for the maintenance of the original ditches No. 1 and No. 2; that there was no abandonment of the old ditches; that the formation of the new

ditch was a pretense and subterfuge carried on for the purpose of compelling property outside of the original ditches No. 1 and No. 2 to share the burden of the repair and maintenance of these ditches, and held that the proceedings of the commissioners with relation to ditches No. 1 and No. 2, by attempting to constitute a new drainage district and calling it district No. 1 and 2, were void.

The court further found that the complaints presented a real and substantial question under the Constitution of the United States; that the amount involved was in excess of $3,000 exclusive of interest and costs, and that each complainant stated a case in his bill cognizable in equity in the federal court; and that there was no adequate remedy at law. Also found that diversity of citizenship existed as to all appellees, except as to the city of Sioux Falls; also, that the method of attempted assessment was discriminatory and arbitrary. The injunctions as prayed were granted.

N. B. Bartlett and E. O. Jones, both of Sioux Falls, S. D., for appellants.

A. B. Fairbank, of Sioux Falls, S. D. (Edward S. Stringer, Thomas D. O'Brien, and Alexander E. Horn, all of St. Paul, Minn., on the brief), for appellee Chicago, R. I. & P. Ry. Co.

C. O. Bailey, of Sioux Falls, S. D., and E. L. Grantham, of Aberdeen, S. D. (H. H. Field, of Chicago, Ill., and J. H. Voorhees, P. G. Honegger, T. M. Bailey, and C. O. Bailey, Jr., all of Sioux Falls, S. D., on the brief), for appellee Chicago, M. & St. P. Ry. Co.

C. O. Bailey, of Sioux Falls, S. D. (R. L. Kennedy, of St. Paul, Minn., and J. H. Voorhees, P. G. Honegger, T. M. Bailey, and C. O. Bailey, Jr., all of Sioux Falls, S. D., on the brief), for appellee Chicago, St. P., M. & O. Ry. Co.

Harold E. Judge, of Sioux Falls, S. D. (R. M. Campbell, of Chicago, Ill., on the brief), for appellee Northern States Power Co.

C. O. Bailey, of Sioux Falls, S. D. (Roy B. Marker, of Sioux Falls, S. D., on the brief), for appellee City of Sioux Falls.

Harold E. Judge, of Sioux Falls, S. D., for appellee Great Northern Ry. Co.

Before KENYON, Circuit Judge, and TRIEBER and DYER, District Judges.

KENYON, Circuit Judge (after stating the facts as above). [1] It is earnestly contended by appellees that the entire South Dakota drainage law is unconstitutional, not only as violative of the due process clause of the Fourteenth Amendment of the Federal Constitution, but also sections 2 and 13 of article 6 of the South Dakota Constitution. The constitutional questions raised are grave, serious, and doubtful. Their determination is not necessary to the solution of these cases. Therefore, under the well-established rule that federal courts will not pass upon the constitutionality of statutes unless absolutely necessary, we leave the questions aside. Howat et al. v. State of Kansas, 258 U. S. 181, 42 Sup. Ct. 277, 66 L. Ed. 550; Weyman-Bruton Co. v. Ladd, 231 Fed. 898, 146 C. C. A. 94; Allen, U. S. Atty., v. Omaha Live Stock Commission Co. et al. (C. C. A.) 275 Fed. 1.

[2] The original drainage ditches No. 1 and No. 2 were properly established for the drainage of agricultural lands. When the spillway washed out, the maintenance of the ditches was impaired. Not only that, but the situation was fraught with grave consequence to many interests. The steep bluff was being torn away by the uncontrolled waters; the waterworks and water supply of the city of Sioux Falls, as well as the penitentiary lands of the state, were endangered. A not improbable result of the Big Sioux river breaking through the natural barrier into the lateral ditch would be the enttire diversion of its waters from their natural channel causing them to flow through said ditches and empty into the river north of the city, leaving Sioux Falls with an intermittent dry river bed.

The board of county commissioners under these conditions took steps to remedy the situation, and upon petition filed stating its object in its caption as follows: "To Reconstruct and Improve Drainage Ditches Numbers One and Two in Minnehaha County, South Dakota, and to Construct a New Spillway or Outlet to Said Drainage Ditches Numbers One and Two and to Pay Therefor by an Assessment upon Property, Persons and Corporations Benefited Thereby," proceeded to establish what is termed drainage ditch No. 1 and 2, Minnehaha county, S. D.

Appellees who have property within the area of the original drainage ditches, No. 1 and No. 2, insist that the proceedings established a new drain-

age ditch known as No. 1 and 2, which is also the position taken by appellants. Other appellees claim that the work was in truth and in fact a project for the repair of drainage ditches No. 1 and No. 2. The court held that the forming of the new ditch was a pretense and subterfuge resorted to for the purpose of attempting to burden appellees with the cost of maintenance of ditches theretofore constructed; that the commisisoners did not act as by law provided for the maintenance and repair of the ditches; and that the proceedings attempting to establish the new drainage ditch were void. We think the court was correct in this holding. It clearly expressed the situation as follows:

"Under these circumstances the board of county commissioners had absolutely no authority, no right or color of right, were not acting under the provision of any statute of the state when they assumed the right to reach out and attempt to assess the benefits for the repair and maintenance of said ditches against the property of the various plaintiffs. They were mere trespassers, for the reason that no drainage ditch No. 1 and 2 was ever established and has no existence.

"I am of opinion that the proceedings of the board of commissioners in the repair and maintenance of these ditches, No. 1 and No. 2, by assuming the right to constitute a new drainage district, calling it district No. 1 and 2, and to assess benefits to the property of the plaintiffs, in so far as they are located in the city of Sioux Falls, are void. Entertaining this view, it follows that plaintiffs' prayer for an injunction should be granted."

Record, p. 90, Case No. 6313.

The proceedings, regardless of how designated, were in fact for repaiar and maintenance, and were governed as to assessments to pay for the same by section 8470 of the South Dakota Statutes, which section is as follows:

"*Assessments for Maintenance.*—For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the landowners affected in the proportions determined for such drainage at any time upon the petition of any person setting forth the necessity thereof, and after due inspection by the board of county commissioners. Such assessments shall be made as other assessments for the construction of drainage, certificates may be issued thereon and such assessments and certificates shall be liens, interest-bearing, perpetual and enforceable, in all respects as original assessments and may be sold at not less than par by the board of county commissioners, turned over to persons contracting for such cleaning and maintenance, or may be collected directly by the board of county commissioners." Section 13, c. 98, 1905; section 13, c. 134, 1907.

There is no provision in this statute for the taking in of other lands to help bear the assessment of burdens created in maintaining the original drainage. This was the statute under which the board of county commissioners could have provided for payment of maintenance and repairs to the established ditches.

Section 8489 provides for a method of abandonment of drains under certain circumstances and the construction of new ones in the same location. Said statute is as follows:

"*Invalid or Abandoned Proceedings.*—If any proceeding for the location, establishment or construction of any drain under the provisions of a previous law has been heretofore enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned, or if any such proceeding or like proceeding under this article be hereafter enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned in consequence of any error, defect, irregularity or want of jurisdiction affecting the validity of such proceeding or for any cause, the board of county commissioners may nevertheless proceed to locate a drain or drains under the same or different names and in the same or different locations from those described in the invalid or abandoned proceedings under the provisions of this article. In case any new proceeding be had resulting in the location of a drain in the same or substantially the same location as that described in the invalid or abandoned proceeding, the board of county commissioners shall proceed to ascertain the real value of the services rendered, money expended and work done under such invalid, abandoned or dismissed proceeding, and the extent to which the same will contribute to the location, establishment or completion of such new drain. Such value shall be determined at a hearing upon the same notice as the equalization of benefits or assessments, and may be at the same time or at

any other time, and the notice of such hearing may be a part of the notice of the hearing upon the equalization of benefits or assessments or separate therefrom, but the board shall in any case notify all persons interested to show cause why the determination of the board thereupon shall not be final. When finally fixed such value shall become a part of the cost of the new drainage. No use shall be made by any board of county commissioners in the laying out or completion of any drain or ditch under this article of any map, chart, survey, or other work done under any former law or under this article without having paid therefor; and all sums allowed for any work or material or money expended under the provisions of any previous law or under this article shall be paid to the persons who have paid therefor in proportion to the amounts severally paid by such persons." Section 33, c. 134, 1907.

The proceedings establishing drainage ditches No. 1 and 2 have never been set aside or abandoned under this statute. It is true a small portion of old ditch No. 1 was abandoned by the resolution adopted in the Covell's Lake proceeding, but the ditches were in no way abandoned. The Covell's Lake proceeding was itself abandoned and the ditches were left as they originally were, so it is apparent that the action of the board was not taken under section 8489. Either the proceedings were to repair and maintain ditches already constructed, or they were to take care of a situation resulting from their imperfect or inadequate construc-

tion. By reason of the water of the river breaking through into the lateral threatening a change of the river's course and the possible destruction of state lands, a situation was presented, not with relation to the drainage of agricultural lands, but rather to the failure of the ditches, due to inadequate or imperfect construction, to carry the increased flow of water. In other words, the project, if an entirely new one, was not for the drainage of agricultural lands. The court said in his opinion:

"Pursuant to this provision of the Constitution, the Legislature of the state has provided for the drainage of agricultural lands; but nowhere is there any statutory enactment under which drainage districts may be formed for the drainage of lands 'for any public use.'"

[3] We are satisfied that under the South Dakota Constitution, section 6, art. 21, drainage of lands for any public use other than the drainage of agricultural lands, must be carried out by drainage districts, and no legislation at the time of these proceedings had been provided for the establishment of such drainage districts. Whichever way, therefore, the matter is viewed, the board was acting without legal authority in its apportionment of benefits and threatened assessment of taxes.

[4, 5] Appellants challenge the jurisdiction of the court, claiming there was a plain, adequate, and complete remedy at law; that there was no equity in the bill; that action was premature, and that the necessary jurisdictional amount was not involved. These in their order.

It is fundamental that equity cannot give relief where there is a plain, adequate, and complete remedy at law. It is provided by the federal Judicial Code, Compiled Stat. 1918, § 1244, as follows:

"*Suits in Equity.*—Suits in equity shall not be sustained in any court of the United States in any case where a plain, adequate, and complete remedy may be had at law. (R. S. § 723. March 3, 1911, c. 231, § 267, 36 Stat. 1163.)"

It must be a remedy as certain, complete, prompt, and efficient to attain the ends of justice as that in equity. Monmouth Inv. Co. et al. v. Means, 151 Fed. 159, 80 C. C. A. 527; McMullen Lumber Co. v. Strother et al., 136 Fed. 295, 69 C. C. A. 433; Morgan v. Beloit, City and Town, 74 U. S. (7 Wall.) 613, 19 L. Ed. 203; McConihay v. Wright, 121 U. S. 201, 7 Sup. Ct. 940, 30 L. Ed. 932; Tyler v. Savage, 143 U. S. 79, 12 Sup. Ct. 340, 36 L. Ed. 82; Boise Artesian Hot & Cold Water Co. v. Boise City, 213 U. S. 276, 29 Sup. Ct. 426, 53 L. Ed. 796; Greene, Auditor, et al., etc., v. Louisville & Interurban Railroad Co., 244 U. S. 499, 37 Sup. Ct. 673, 61 L. Ed. 1280, Ann. Cas. 1917E, 88; Coler et al. v. Board of Com'rs of Stanly County et al. (C. C.) 89 Fed. 257.

It must be a remedy on the law side of the federal court. A remedy in the state court that cannot be pursued in the federal court is not an adequate remedy. Sheffield Furnace Co. v. Witherow, 149 U. S. 574, 13 Sup. Ct. 936, 37 L. Ed. 853; Smyth v. Ames, 169 U. S. 466, 516 18 Sup. Ct. 418, 42 L. Ed. 819; United States Life Ins. Co. in

City of New York v. Cable, 98 Fed. 761, 39 C. C. A. 264; Brun et al. v. Mann, 151 Fed. 145, 80 C. C. A. 513, 12 L. R. A. (N. S.) 154.

[6] The question is: Has party the adequate remedy at law in the federal court?

In Reagan v. Farmers' Loan & Trust Co., 154 U. S. 362, 391, 14 Sup. Ct. 1047, 1052 (38 L. Ed. 1014), the court said:

"Nor can it be said in such a case that relief is obtainable only in the courts of the state. For it may be laid down as a general proposition that, whenever a citizen of a state can go into the courts of a state to defend his property against the illegal acts of its officers, a citizen of another state may invoke the jurisdiction of the federal courts to maintain a like defense. A state cannot tie up a citizen of another state, having property rights within its territory invaded by unauthorized acts of its own officers, to suits for redress in its own courts. Given a case where a suit can be maintained in the courts of the state to protect property rights, a citizen of another state may invoke the jurisdiction of the federal courts."

It has been held that where the state statute provided an action at law against the county for the recovery of sums paid on account of invalid taxes that the same constitutes a plain, speedy, and adequate remedy at law. Union Pac. R. Co. v. Board of Com'rs of Weld County, Colo., 217 Fed. 540, 133 C. C. A. 392. The Supreme Court of the United States has held that the North Dakota statute permitting actions respecting title of the property or accruing on contract to be brought

against the state the same as against a private person does not clearly allow an adequate remedy; and there, injunction restraining defendants from taking steps to enjoin certain taxes, was upheld. Wallace et al. v. Hines, Director General of Railroads, et al., 253 U. S. 66, 40 Sup. Ct. 435, 64 L. Ed. 782. There was no such proceeding as discussed in Union Pac. R. Co. v. Board of Com'rs of Weld County, Colo., supra, in the South Dakota statutes. The only remedy was to appear before the board of county commissioners (claimed by appellees to be acting without authority), and then appeal from their finding to the state court. Such was not the adequate remedy contemplated by the federal statute.

[7] While the frequent exercise of equity jurisdiction is in staying the collection of taxes illegal in whole or in part, a suit in equity will not lie to restrain the assessment or collection of a tax on the sole ground that it is illegal. There must be special circumstances bringing the case under some recognized head of equity jurisdiction. The right to such equitable relief must be clear where it is asked to restrain the collection of a state tax.

In Hannewinkle v. Georgetown, 15 Wall. 547, 548 (21 L. Ed. 231), it is said:

"It has been the settled law of the country for a great many years, that an injunction bill to restrain the collection of a tax, on the sole ground of the illegality of the tax, cannot be maintained. There must be an allegation of fraud; that it creates a cloud upon the title; that there is appre-

hension of multiplicity of suits, or some cause presenting a case of equity jurisdiction."

In Union Pacific Railway Co. v. Cheyenne, 113 U. S. 516, 525, 526, 5 Sup. Ct. 601, 605 (28 L. Ed. 1098), the rule is clearly laid down by the court:

"It cannot be denied that bills in equity to restrain the collection of taxes illegally imposed have frequently been sustained. But it is well settled that there ought to be some equitable ground for relief besides the mere illegality of the tax; for it must be presumed that the law furnishes a remedy for illegal taxation. It often happens, however, that the case is such that the person illegally taxed would suffer irremediable damage, or be subject to vexatious litigation, if he were compelled to resort to his legal remedy alone. For example, if the legal remedy consisted only of an action to recover back the money after it had been collected by distress and sale of the tax-payer's lands, the loss of his freehold by means of a tax sale would be a mischief hard to be remedied. Even the cloud upon his title by a tax under which such a sale could be made, would be a grievance which would entitle him to go into a court of equity for relief. Judge Cooley fairly sums up the law on this subject as follows: 'To entitle a party to relief in equity against an illegal tax, he must by his bill bring his case under some acknowledged head of equity jurisdiction. The illegality of the tax alone, or the threat to sell property for its satisfaction, cannot, of themselves, furnish any grounds for equitable interposition. In ordinary cases a

party must find his remedy in the courts of law, and it is not to be supposed he will fail to find one adequate to his proper relief. Cases of fraud, accident or mistake, cases of cloud upon the title to one's property, and cases where one is threatened with irremediable mischief, may demand other remedies than those the common law can give, and these, in proper cases, may be afforded in courts of equity.' This statement is in general accordance with the decisions of this court as well as of many state courts."

See, also, Dows v. City of Chicago, 78 U. S. (11 Wall.) 108, 20 L. Ed. 65; State Railroad Tax Cases, 92 U. S. 575, 23 L. Ed. 663; Ogden City v. Armstrong, 168 U. S. 224, 18 Sup. Ct. 98, 42 L. Ed. 444; Pittsburgh, etc., Railway v. Board of Public Works of W. Va., 172 U. S. 32, 19 Sup. Ct. 90, 43 L. Ed. 354; Singer Sewing Mach. Co. v. Benedict, 229 U. S. 481, 33 Sup. Ct. 942, 57 L. Ed. 1288; Ohio Tax Cases, 232 U. S. 576, 34 Sup. Ct. 372, 58 L. Ed. 737.

In Keokuk & Hamilton Bridge Co. v. Salm et al., 258 U. S. 122, 42 Sup. Ct. 207, 66 L. Ed. 496, the alleged invalidity consisted in discriminatory overvaluation. There was no claim of absolute illegality in the assessment. Appellant had a remedy with the board of review to correct the assessment, and the court said that resort to the suit to prevent either a sale for an illegal tax creating a cloud upon title or other irreparable injury had no basis.

In Union Pacific R. Co. v. Board of Com'rs of Weld County, 217 Fed. 540, 133 C. C. A. 392, this

court said with reference to the casting of a cloud upon real property creating an "equitable circumstance" that the remedy which the statute prescribes will dissipate any such cloud, and says:

"Those cases which hold that a cloud upon the title to real property affords a ground for equitable relief are not applicable, when the taxpayer is given the remedy of paying his taxes and recovering back any sum which the courts shall hold to have been illegally exacted."

There is no such provision in the South Dakota statute.

In Boise Artesian Hot & Cold Water Co. v. Boise City, 213 U. S. 276, 29 Sup. Ct. 426, 53 L. Ed. 796, it was held that equity should not enjoin the collection of a tax on the ground of cloud on title when the tax can only be collected in suit at law in which the defense of its illegality is open, and further it not appearing that the tax is a lien on any of complainant's property.

In Indiana Manufacturing Co. v. Koehne, 188 U. S. 681, 23 Sup. Ct. 452, 47 L. Ed. 651, certain assessments upon shares of stock in a corporation were involved. The court found that as there was no lien created on real estate there was no cloud on title.

[8, 9] It is well settled that an assessment that will put a cloud on title gives rise to equitable jurisdiction unless there is an adequate remedy at law. Union Pacific Railway Co. v. Cheyenne, 113 U. S. 516, 5 Sup. Ct. 601, 28 L. Ed. 1098; Greene, Auditor, et al., etc., v. Louisville & Interurban

Railroad Co., 244 U. S. 499, 37 Sup. Ct. 673, 61 L. Ed. 1280, Ann. Cas. 1917E, 88.

Section 8463 of the South Dakota Statutes provides for the board of county commissioners fixing the proportion of benefits of proposed drainage among the lands affected.

Section 8464 provides for the board making an assessment against each tract and property affected, and this is collectible by the treasurer's office. Clearly the assessment would create a cloud upon the title. Fixing the proportion of benefits being preliminary to the assessment and a part of the machinery of assessment, likewise, we think, creates a cloud upon the title and gives equity jurisdiction. Shelton v. Platt, 139 U. S. 591, 11 Sup. Ct. 646, 35 L. Ed. 273; Ohio Tax Cases, 232 U. S. 576, 34 Sup. Ct. 372, 58 L. Ed. 737; Hopkins et al. v. Walker et al., 244 U. S. 486, 37 Sup. Ct. 711, 61 L. Ed. 1270.

[10] Was the case prematurely brought? It is claimed that inasmuch as the board of county commissioners had not assessed the taxes complained of consequently the suit is premature.

In Western Union Telegraph Co. v. Howe et al., 180 Fed. 44, 103 C. C. A. 398, it was held by this court that the suit was prematurely brought because the telegraph company did not pursue the remedy afforded by law to have its assessment corrected by the state board of equalization. That was not a case, however, where it was claimed that the entire proceedings were without authority and illegal, as is the case here. The jurisdiction to act was not questioned.

In Keokuk & Hamilton Bridge Co. v. Salm et al., 258 U. S. 122, 42 Sup. Ct. 207, 66 L. Ed. 496, the question involved was the amount of the tax. It was not claimed that the proceedings were illegal.

In the late case of Milheim et al. v. Moffat Tunnel Improvement District et al., 262 U. S. 710, 43 Sup. Ct. 694, 67 L. Ed. 1194, there was no question of jurisdiction of the taxing body as there is here. Plaintiff's property was by legislative act placed within the taxing district.

The proceeding here involved, being without authority, the situation is quite different from where the only question involved is the inequality of taxes levied by a board having jurisdiction to act. The actions, we are satisfied, were not premature.

[11] Appellants urgently insist that it does not appear from the record that the amount in controversy, exclusive of interest or costs, exceeds the sum or value of $3,000, and that the statements in the various complaints of appellees so alleging are false, and stated with the fraudulent purpose of imposing upon the jurisdiction of the federal court; that no tax has in fact been assessed; that the apportionment of benefits is tentative and subject to correction; and that there is no way of determining what the amount of the assessment against the respective appellees would have been had the proceedings not been interrupted by the injunctions; and that there is in fact no sum whatsoever in controversy between the parties hereto.

It has been held that future, undetermined, unaccrued, or unspecified taxes cannot be taken into

consideration to give jurisdiction; that the court cannot engage in speculation as to such taxes. Holt v. Indiana Manufacturing Co., 176 U. S. 68, 20 Sup. Ct. 272, 44 L. Ed. 374; New England Mortgage Security Co. v. Gay, 145 U. S. 123, 12 Sup. Ct. 815, 36 L. Ed. 646; Citizens' Bank v. Cannon, 164 U. S. 319, 17 Sup. Ct. 89, 41 L. Ed. 451; Washington & Georgetown R. R. Co. v. District of Columbia, 146 U. S. 227, 13 Sup. Ct. 64, 36 L. Ed. 951. Also, that where there is a suit to enjoin collection of a tax the amount of the tax is the test of jurisdiction. Linehan Ry. Transfer Co. v. Pendergrass, 70 Fed. 1, 16 C. C. A. 585; Eachus v. Hartwell et al. (C. C.) 112 Fed. 564; Washington & Georgetown R. R. Co. v. District of Columbia, 146 U. S. 227, 13 Sup. Ct. 64, 36 L. Ed. 951; Board of Trustees of Whitman College v. Berryman et al. (C. C.) 156 Fed. 112; Citizens' Bank v. Cannon, 164 U. S. 319, 17 Sup. Ct. 89, 41 L. Ed. 451; City of Ottumwa, Iowa, v. City Water Supply Co., 119 Fed. 315, 56 C. C. A. 219, 59 L. R. A. 604.

It has also been held that where the complaint alleges the amount in controversy to equal the jurisdictional requirement and the contrary does not appear to a certainty from the evidence, that the jurisdiction will be sustained. Maffet v. Quine (C. C.) 95 Fed. 199; Von Schroeder v. Brittan (C. C.) 93 Fed. 9.

What is the situation here? Each one of the appellees is threatened with an assessment of more than $3,000. The Northern States Power Company is threatened with one of $50,000. And fur-

ther, certain appellees who have no property within the original drainage districts No. 1 and No. 2 are brought into the district and made liable to future assessments for maintenance and repair of ditches. It appears from the record that the board of county commissioners had fixed against the different appellees the proportion of benefits on a unit basis. It is without question that the county commissioners have issued approximately $255,000 worth of warrants for this work, and that the amount due thereon is about $300,000. It is a matter then of mere mathematical calculation to arrive at the threatened assessment against each one of appellees.

Exhibit C is the notice to the various parties against whom proportions of benefits have been fixed. It provides as follows, to wit:

"All such owners and all persons interested are hereby notified and summoned to show cause at the time and place aforesaid why the proportion of benefits shall not be fixed as stated, and the said determination of said board made final."

If no action whatever were taken by appellees the amounts would be final, and under these circumstances we believe the amount in dispute in each case exceeds the jurisdictional requirement. The claim of amount is evidently made in good faith, and not for the mere purpeos of giving the federal courts jurisdiction. We do not believe that where the board has passed a resolution fixing benefits which exceed the jurisdictional amount and are the basis of a proposed assessment, and which

parties claim are fixed by the board without authority, that because said board may equalize the benefits or even find that no benefits exists the parties must wait until the final action of the board. It is suggested that the board may so equalize benefits that the jurisdictional amount will not be involved, but as the matter stood when the case was brought each appellee was threatened with the levying of a tax for more than the jurisdictional amount, and some of the necessary steps had already been taken.

As the proportion of benefits had been fixed subject to change by the board only if appellees should convince them that their conclusion was erroneous, and in view of the claim in apparent good faith in each of the bills that the amount involved exceeded the jurisdictional amount, we hold, from a careful survey of the entire record, that the necessary amount existed in each case to give jurisdiction to the federal court.

[12] All bills of complaint raise questions under the federal Constitution that are substantial and not merely colorable. Hence the court has jurisdiction exclusive of diversity of citizenship, which existed as to all appellees except the city of Sioux Falls, necessary amount being involved, to determine all questions in the record, and it has not lost jurisdiction by omitting to decide the constitutional ones. Siler et al., etc., v. Louisville & Nashville R. R. Co., 213 U. S. 175, 29 Sup. Ct. 451, 53 L. Ed. 753; Ohio Tax Cases, 232 U. S. 576, 34 Sup. Ct. 372, 58 L. Ed. 737; Louis. & Nash. R. R

Co. v. Finn, 235 U. S. 601, 35 Sup. Ct. 146, 59 L. Ed. 379; Greene, Auditor, et al., etc., v. Louis. & Interurban R. R. Co., 244 U. S. 499, 37 Sup. Ct. 673, 61 L. Ed. 1280, Ann. Cas. 1917E, 88.

[13] Appellants plead estoppel against all of the appellees, and claim that appellees are not in position to maintain their actions, for the reason that as to some of the railroad companies the engineering departments have been in close touch with the drainage ditch proceedings; that some of them were assessed for benefits received upon the construction of the original drainage ditches in the same territory, received benefit thereby, and have not protested before the bringing of this action. As to some of the appellees it is claimed that their officers showed interest in the construction work and encouraged the board of commissioners to do the work; that some of the appellees, for instance, the Chicago, Milwaukee & St. Paul Railway Company, hauled men and materials used in the construction work, and stopped trains between stations to unload men and materials. As to the city of Sioux Falls, it is claimed by way of estoppel that under due authority the mayor and city auditor signed the petition for the project. There can certainly be no just claim of estoppel as to those appellees whose property was not within the area of the original drainage ditches No. 1 and No. 2. As to the other appellees, the decree related only to the property outside of the original assessment areas of drainage ditches No. 1 and No. 2. So we are to consider the situation as bearing on the

question of estoppel only as to the property outside of the original assessment areas up to the time of the notice of the fixing of benefits. The various appellees as to such property had no notice, when the acts constituting the alleged estoppel took place, that the same was to be affected by the drainage construction or would be assessed for the cost thereof. Hence the claimed acts of agents and officers of appellees would not constitute estoppel. The situation is quite different from that presented in Gilseth v. Risty (S. D.) 193 N. W. 132—at least as to all appellees except the city of Sioux Falls. We do not pass on the question of estoppel as to any appellees, as to assessments that may be made on their property within the original area of ditch No. 1 and ditch No. 2, for the purpose of maintaining such ditches.

Other questions are presented which we think are not involved in the determination of these cases.

The decree of the trial court in each case is affirmed.

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1925.

No. 95.

A. G. RISTY, et al, as County Commissioners, etc. et al.,
Appellants,

vs.

CHICAGO, ROCK ISLAND AND PACIFIC RAILWAY COMPANY,
Appellee.

BRIEF OF APPELLEE.

STATEMENT OF FACTS.

This is an appeal from a judgment of the Circuit Court of Appeals of the Eighth Circuit, affirming a judgment of the District Court of the District of South Dakota, Southern Division. For the opinion of the courts below, see

Chicago, R. I. & P. Ry. Co. v. Risty et al., 282 Fed. 364 (District Court);

Risty et al. v. C. R. I & P. Ry. Co., 297 Fed. 710 (Circuit Court of Appeals).

The Circuit Court's judgment of affirmance was entered March 18, 1924. The record was filed in this court on June 16, 1924, and was printed and in the hands of counsel prior to November 11, 1924. Almost a year later, on October 26, 1925, appellants' brief was served.

Appellants' brief would indicate that the facts are complicated. While the case is an important one, the facts necessary to a decision are comparatively simple. A concrete statement of the essential facts for which we have searched appellants' brief in vain, will, we think, be of aid to the court.

This action was originally brought by the Chicago, Rock Island & Pacific Railway Company, a corporation organized under the laws of Illinois, against the Board of County Commissioners of Minnehaha County, South Dakota, and the Auditor and Treasurer of that County, to enjoin the defendants (the appellants in this court) from making any apportionment of benefits, or from levying or collecting any assessment against the property of the Railway Company on account of the construction of "Drainage Ditch No. 1 and 2", in Minnehaha County.

Pursuant to permission duly granted (R. 21-22), certain banks which had purchased warrants of the County for this work, intervened, aligning themselves on the side of the county officials. The case was heard by Judge Elliott, Judge of the District Court of South Dakota, who filed an exhaustive opinion, holding that plaintiff was entitled to the injunction prayed for (R. 81-101). This opinion is reported in

Chicago, R. I. & P. Ry. Co. v. Risty et al., 282 Fed. 364.

A final decree was entered perpetually restraining the defendants (appellants here) from apportioning, levying or collecting any assessment against plaintiff's property (R. 101-103).

From this decree the county officials and the intervening banks appealed to the Circuit Court of Appeals. It was claimed by the appellants that the assessment in question was authorized by Sections 8458 to 8491, Revised Code South Dakota, 1919. This law is said to be reproduced in full in Appendix B of Appellants' Brief, pages II-XVI, but appellants have omitted printing Sec. 8470, upon which the case was decided against them. See appendix to this brief.

The Circuit Court of Appeals affirmed the lower court, the opinion being found on pages 249-263 of the Record, and reported in 297 Fed. 710. From the Circuit Court of Appeals, the intervening bankers and the county officials appealed to this court (R. 265). They likewise, at the same time, filed an application for a writ of certiorari, but this application this court denied.

The statement of facts contained in Judge Kenyon's opinion in the Circuit Court of Appeals cannot be improved upon (R. 249-253). For a ready grasp of the situation however, it may be shortened by eliminating certain facts not bearing directly upon the points to be decided.

On July 1, 1917, William H. Lyon filed with the County Board of Minnehaha County, his petition for the establishment of a drainage ditch (R. 123-124). On December 31, 1907, the County Board pursuant to this petition, passed a resolution establishing "Drainage Ditch No. 1" (R. 125, 126). On April 11, 1908, the County Board passed a resolution assessing benefits for this ditch against the property benefited (R. 129-130). Later these assessments were equalized, levied, and fully paid. The entire cost of Drainage Ditch No. 1, was $46,600.10 (R. 131).

On April 10, 1908, Iver R. Peterson, et al., filed with the County Board a petition for the establishment of another

drainage ditch through territory adjacent to that served by Drainage Ditch No. 1 (R. 131-133). On January 8, 1909, a petition by A. L. Berg, et al. was filed asking for an extension of this ditch (R. 133-134). On May 6, 1918, the Board passed a resolution acting on these petitions, establishing "Drainage Ditch No. 2" (R. 137-138). On October 7, 1910, the Board assessed the benefits arising by reason of the construction of this Drainage Ditch No. 2. These assessments were equalized, levied and thereafter paid. The total cost of Drainage Ditch No. 2, was $81,006.19 (R. 138-144).

In none of the proceedings with respect to either Drainage Ditch No. 1, or Drainage Ditch No. 2, were any of the properties of the Chicago, Rock Island & Pacific Railway Company mentioned as being subject to assessment, nor was any assessment of benefits made against the Railway Company, or any of its properties.

Drainage Ditch No. 1, combined with Drainage Ditch No. 2, ran in a general northerly and southerly direction, adjacent to the Sioux River. The two ditches were in reality one, although established separately. Ditch No. 2 emptied into Ditch No. 1, which in turn emptied into Sioux River by a spillway. A reference to Great Northern's Exhibit 1, page 185 of the Record, shows the situation at a glance. In red is shown "Drainage Ditch No. 1 and 2" which will presently be mentioned and which is the subject of this suit, but as appears from the Record and will be hereafter pointed out, "Drainage Ditch No. 1 and 2" was located in exactly the same place and along the identical route as that traversed by Drainage Ditch No. 1 and Drainage Ditch No. 2 combined.

Will the Court please distinguish between "Drainage Ditch No. 1" and "Drainage Ditch No. 2," and "Drainage Ditch No. 1 and 2." It is important that this distinction be borne in mind.

Hereafter, for convenience, we shall refer to the property which was assessed for the establishment of Drainage Ditch No. 1 and Drainage Ditch No. 2, as the "old assessment district." This appellee, the Chicago, Rock Island & Pacific Railway Company had no property whatever in the old assessment district and was not assessed for the construction of either Drainage Ditch No. 1 or Drainage Ditch No. 2.

In 1915, the spillway through which Drainage Ditch No. 1 emptied into the Sioux River, was washed away. What occurred at this time can best be stated by quoting from the opinion of the trial court:

> "In 1915 the force of the waters conducted by these two drainage ditches was so great as to wash out what is called the spillway, through the bluff adjacent to the point where the waters from the ditches entered the river. The ditches in the meantime also became out of repair, and at one point several miles above the City where the ditch approached the river, the water was cutting from the river into the ditch, threatening to turn the entire course of the Sioux River at this point into the ditch, and through the ditch back into the river, leaving the Sioux River from that point and for about twelve miles around to where the ditch flowed into the river, without water. The spillway from the ditch through the bluff down into the river was so unskillfully, inefficiently and unscientifically constructed that it would not stand the force of the water with a fall of one hundred feet into the river. It was washed out, and the bluff being of soil and sand, washed out of the entire depth of the river and began washing back through the bluffs, threatening to cut clear back to a point where the water cut through from the river to the ditch, thus taking away from the City of Sioux Falls the benefits of the river, its sewer system and the advantages of the stream, and take the water from the plaintiff, The Northern States Power Company, that naturally

flowed down the river except for the interference by this drainage ditch. And in the cutting into this bluff also threatened to cut into the gravel bed in which the water supply of the City is located, a few miles west of it, and thus drain and destroy and take away from the City of Sioux Falls, its water supply. This was the situation in 1916." (R. 92.)

In this situation is was of course necessary that something be done. A petition was filed asking that a portion of Drainage Ditch No. 1 be abandoned. Later this petition was withdrawn, and on August 3, 1916, F. L. Blackman, et al. filed a petition reciting that Drainage Ditch No. 1, and Drainage Ditch No. 2, were insufficient, and asking for the establishment of a ditch along the same identical route as that traversed by the two ditches theretofore established. This petition was entitled: "A petition to reconstruct and improve Drainage Ditches Nos. 1 and 2, etc." (R. 42). The petition recited that it would be necessary to "reconstruct, deepen, widen and improve said Drainage Ditches Nos. 1 and 2 (R. 43-44). It was obvious that in order to make either of the ditches function at all, it was necessary to spend a large amount of money, and to accomplish this purpose, the Board conceived the plan of going through the form of making a new ditch out of the two old ones. Therefore, on October 2, 1916, it passed a resolution establishing what it was pleased to term "Drainage Ditch No. 1 and 2" *over the same identical territory and located along exactly the same route* which was traversed by Drainage Ditch No. 1, combined with Drainage Ditch No. 2 (R. 50-54). A notice of this hearing was given by publication to "all persons affected." While certain railways were mentioned in this notice as likely to be benefited by the establishment of the ditch, the Rock Island was not mentioned (R. 55-64).

The only difference between "Drainage Ditch No. 1 and 2," and Drainage Ditch No. 1 combined with Drainage Ditch No. 2, was that the old ditches were widened, and the spillway strengthened and improved. As already indicated "Drainage Ditch No. 1 and 2" so-called, traversed the identical route occupied by the two old ditches. The only work done in constructing this new ditch so-called, was to clean out and widen the old ditches, and rebuild the spillway. The Board proposed to assess for this new ditch so-called, not only all property included in the old assessment district, but also certain additional property, which additional property will be designated for convenience as the "new assessment district." The Rock Island had as indicated no property in the old assessment district, but it did have property within the new district, although it never had any notice of intention to assess this property within the new assessment district until the tentative assessment was made.

On June 10, 1921, the Board, without notice of any kind or character to anyone, by resolution fixed the proportion of benefits on "Drainage Ditch No. 1 and 2." The properties of the Rock Island all in the new "assessment district, were assessed 839.45 units, out of 32,549.62 units. Each unit was fixed at $9.50. A mere mathematical computation shows that the amount of the Rock Island assessment was therefore $7,974.78. As already indicated, the Rock Island had no notice that the Board contemplated assessing its properties until it fixed the proportion of benefits on June 10, 1921.

After the proportion of benefits were fixed, the Board fixed August 1, 1921, in the Auditor's office "as the time and place for equalizing the proportion of benefits" (Exhibit C, R. 19). This notice was the first intimation to the Rock Island of any assessment.

On July 25, 1921, this action was commenced; and the defendants restrained from proceeding with the assessment. After a hearing before three judges, as required by the Judicial Code, a temporary injunction was issued. The case was thereafter heard before Judge Elliott, and on Feb. 8, 1922, a final decree permanently enjoining the defendants from in any way proceeding with the assessment was issued (R. 101-103).

Five other cases were commenced by certain other railways, the Northern States Power Company, and the City of Sioux Falls, to restrain similar assessments against their property. All six cases were tried together, and substantially similar decrees entered in each. Upon appeal to the Circuit Court of Appeals, all six cases were argued together and determined by one opinion (R. 247-264). Each one of these cases is now by separate appeal before this court, appellants having presented their views in all six cases by one brief.

In the bill of complaint, the following grounds were asserted as the basis of an injunction against the assessment:

(1) The statute of South Dakota, under which the Board assumed to establish the ditch, was unconstitutional and repugnant to the due process of law clause of the Fourteenth Amendment to the Constitution of the United States.

(2) Even though the Statute were not unconstitutional, yet the establishment of "Drainage Ditch No. 1 and 2" the new ditch so-called, was a mere evasion and subterfuge for repairing Drainage Ditch No. 1 and Drainage Ditch No. 2, and that since by the South Dakota statute, the Board was limited to assessing for repairs, the lands which had been originally assessed for building the two old ditches, the Board had no jurisdiction to assess for "Drainage Ditch No. 1 and 2," any lands not originally assessed for building Drainage Ditch No. 1 and Drainage Ditch No. 2.

(3) That the assessment was partial, inequal and discriminatory in that the lands of plaintiff were assessed upon an entirely different basis from other lands.

The District Court held against us on the first proposition; ruling that the South Dakota drainage statute was not repugnant to the Federal Constitution, but ordered an injunction upon the second and third grounds.

The Circuit Court of Appeals upheld the District Court on one ground alone, namely that the South Dakota drainage statute properly construed did not authorize an assessment for repairs to a drainage ditch except upon the land originally assessed for its construction, and that the establishment of this new ditch, so-called, was a subterfuge, and that no lands lying outside of the old assessment district were subject to assessment. As to the constitutionality of the drainage statute, the Circuit Court of Appeals said:

> "It is earnestly contended by the appellee that the entire South Dakota drainage law is unconstitutional not only as violative of the due process of law clause of the Fourteenth Amendment of the Federal Constitution, but also Sections 2 and 13, of Article VI of the South Dakota Constitution. The constitutional questions raised are grave, serious and doubtful. Their determination is not necessary to the solution of this case. Therefore under the well established rule that the Federal courts will not pass upon the constitutionality of statutes unless absolutely necessary, we leave the questions aside." (R. 253-254).

The claims of the appellee are particularly set forth in the summary of the argument immediatly following.

SUMMARY OF ARGUMENT.

I.

There is no Federal question now in the case, because the only Federal question was decided by the lower courts in appellants' favor. Hence the appeal should be dismissed.

Defiance Water Co. v. Defiance, 191 U. S. 184,
Arbuckle v. Blackburn, 191 U. S. 405,
Empire State Co. v. Hanley, 198 U. S. 292,
Shulthis v. McDougal, 225 U. S. 561,
Lovell v. Newman & Son, 227 U. S. 412,
Henningsen v. U. S. Fidelity & Guaranty Co., 208 U. S. 404,
Anglo-American Provision Co. v. Davis Provision Co., 191 U. S. 376,
Browne v. Union Pacific, 267 U. S. 255.
Hammond v. Johnston, 142 U. S. 73,
Enterprise Irrigation District v. Canal Co., 243 U. S. 157,
United States v. Jahn, 155 U. S. 109,
McLish v. Roff, 141 U. S. 661,
Robinson v. Caldwell, 165 U. S. 359.

II.

The court below had Federal equity jurisdiction because of diversity of citizenship and because:

(a) Plaintiff (appellee) had no adequate remedy at law.
Upshur v. Rich, 135 U. S. 467,
U. S. Life Ins. Co. v. Cable, 98 Fed. 761,
Reagan v. Farmers Loan & Trust Co., 154 U. S. 362.
Smyth v. Ames, 169 U. S. 466,
Sheffield v. Witherow, 149 U. S. 574,

Paine v. Ward, 138 Pac. 967,
Union Pacific v. Cheyenne, 113 U. S. 516,
Green v. Railway, 244 U. S. 499,
Union Pacific Ry. v. Board, 217 Fed. 540.

(b) More than $3,000 was in controversy in this action.
Western and Atlantic Ry. v. Railroad Commissioners, 261 U. S. 264,
Butte & Superior Copper Co. v. Clark, 249 U. S. 12.

(c) The suit was not prematurely brought.
Milheim v. Moffat Tunnel Imp. Dist., 262 U. S. 710.

III.

The South Dakota drainage statute is unconstitutional because repugnant to the Fourteenth Amendment to the Federal Constitution.

Norwood v. Baker, 172 U. S. 269,
Gast Realty Co. v. Snyder Granite Co., 240 U. S. 55,
Martin v. District of Columbia, 205 U. S. 135,
Road Improvement Dist. No. 2 v. Missouri Pacific, 275 Fed. 600,
Turner v. Wade, 254 U. S. 64,
Central Railway of Georgia v. Wright, 207 U. S. 127,
Londoner v. City and County of Denverm, 210 U. S. 373,
Fall Brook Irrigation Dist. v. Bradley, 164 U. S. 12,
Soliah v. Heskin, 222 U. S. 522,
Kansas City Ry. Co. v. Road Improvement District No. 6, 256 U. S. 658.

IV.

The establishment of "Drainage Ditch No. 1 and 2" was a mere subterfuge for repairing the old ditches, hence is governed by the South Dakota law relating to repairs. Since assessments for repairs can only be made against the property assessed for the original construction of the ditch, such assessments cannot be levied against the Rock Island property in the new assessment district which was not assessed for the original construction of the old ditches.

Gilseth v. Risty, 193 N. W. 132.

Sec. 8470, Revised Code of South Dakota 1919.

V.

The assessment of plaintiff's property constitutes a discrimination so palpable and arbitrary as to amount to a denial of the equal protection of the law.

Thomas v. Kansas City Southern Ry Co., 277 Fed. 708,

Thomas v. Kansas City Southern Ry. Co., 261 U. S. 481.

VI.

Plaintiff (appellee) is not estopped by its conduct to contest the validity of the assessment of its property.

ARGUMENT.

I.

THERE IS NO FEDERAL QUESTION FOR THIS COURT'S DETERMINATION, AND THE APPEAL SHOULD BE DISMISSED.

The exact situation in which this case reaches this court, should be borne in mind. The bill alleged two grounds for Federal jurisdiction: (1) diversity of citizenship and jurisdictional amount; and (2) that the case arose under the Constitution of the United States because the state drainage statute under which the defendants were proceeding violated the Fourteenth Amendment.

The District Court held that the state statute was valid, but construing it, held that it did not permit the assessment which the county authorities were making. In other words, the appellants were successful on the only Federal question.

The Circuit Court of Appeals in affirming the lower court, expressly refused to consider the Federal question, because a determination of it was unnecessary but sustained the lower court on non-federal grounds, to-wit: in its construction of the statute. Again, appellants were successful in repelling an attack on the law on constitutional grounds.

In other words, the court below has eliminated from this cause any claim of invalidity of the statute, by holding that the statute is valid, leaving the case at the present time so far as the merits are concerned, exactly as though the appellee had never attempted to insist that the statute should be stricken down. Counsel vigorously assert that the constitutional question asserted in our bill is so frivolous and unsubstantial as not to present a Federal question, or to constitute the basis

of Federal jurisdiction. Although both courts below refused to sustain our position as to the unconstitutionality of the statute, both courts held that the question was substantial. However, assuming counsel's position that the Federal question was without sufficient substance to form a basis of Federal jurisdiction, it certainly does not help counsel in sustaining this court's jurisdiction, because if his claim is true the only basis of Federal jurisdiction was diversity of citizenship.

Clearly under the act of February 13, 1925, appellants would have no right to appeal to this court. But since the judgment below was entered and the appeal taken prior to May 13, 1925, the question of this court's jurisdiction depends upon the law as it existed prior to the amendment.

Under Section 241 of the Judicial Code, this court had appellate jurisdiction of the Circuit Court of Appeal's judgments involving $1,000 "where the judgment or decree of the Circuit Court of Appeals is not made final." Section 128 of the Judicial Code provided that "the judgments and decrees of the Circuit Court of Appeals shall be final in all cases in which the jurisdiction is dependent entirely on the opposite parties being * * * citizens of different states." If counsel are right in their position that the claim of unconstitutionality of the state statute asserted in the bill is so unsubstantial as to give no basis of Federal jurisdiction, then the only basis of jurisdiction of the court below is diversity of citizenship, and the judgment of the Circuit Court of Appeals is under the broadest construction of Section 128, final. But while we assert that the courts below had jurisdiction on two grounds, it is our position that since appellants were successful in the court below in resisting an attack on the statute, they cannot make the issue upon which they were successful a basis of appeal to this court on another proposition. If this court

should consider the constitutionality of the statute it could not affect the ultimate result. If this court held the statute constitutional, it would leave the case exactly where the Circuit Court of Appeals started. If it held the statute unconstitutional, it would only add another reason for affirmance of the court below.

It is well established that a suit does not arise under the Constitution of the United States "unless it really and substantially involves a dispute or controversy as to the effect or construction of the Constitution *upon the determination of which the result depends.*

Defiance Water Co. v. Defiance, 191 U. S. 184,
Arbuckle v. Blackburn, 191 U. S. 405,
Empire State Co. v. Hanley, 198 U. S. 292,
Shulthis v. McDougal, 225 U. S. 561,
Lovell v. Newman & Son, 227 U. S. 412,
Henningsen v. U. S. Fidelity & Guaranty Co., 208 U. S. 404.

It is apparent that the result of this case in this court does not in any way depend upon the determination of whether the statute of South Dakota is constitutional or unconstitutional. So far as this court is concerned it depends only upon the construction to be given to the state statute. No decision of this court could place appellants in any stronger position so far as may concern the validity of the state statute than did the decision of the Circuit Court of Appeals. Appellants were entirely successful on that issue. They cannot therefore in effect appeal from a decision in their own favor by making their success a means of access to this court.

This court has squarely decided this proposition at least twice; (1) in the case of *Empire State Co. v. Hanley,* 198 U. S. 292, where the court said:

> "Appellants succeded in their defense as to the one-third interest, and Hanley accepted the result on the second appeal. *They now make a grievance of their own success* and ask that the supposed *constitutional question* as to the third interest only be made the basis of jurisdiction here, although, if the decree disposed of any such question, *it was in their favor.* In our opinion this cannot be permitted.

(2) In the case of *Anglo-American Provision Co. v. Davis Provision Co.*, 191 U. S. 376, the court said:

> "If a party comes into the Circuit Court alleging that a state law is unconstitutional, and the Circuit Court decides for him on that point, the mere fact that there was such a question in the case does not authorize him to appeal to this court on grounds that otherwise would not support an appeal."

It is true that this language was used with reference to a direct appeal to this court from a Circuit (now District) Court. But it applies with equal force to our situation.

In *Brown v. Union Pacific*, 267 U. S. 255, 45 Supreme Court Reporter, 315, this court affirmed the rule laid down in *Hammond v. Johnston*, 142 U. S. 73, and *Enterprise Irrigation District v. Canal Co.*, 243 U. S. 157, and numerous other cases cited in the last mentioned decision, that where a decision of the court below is placed upon two grounds, one Federal and the other nonfederal, this court will not consider the Federal question when the nonfederal ground is sufficient to support the judgment. It is true that these cases dealt with writs of error to the state courts, but no reason is perceived why the same doctrine should not apply to an appeal from the Circuit Court of Appeals.

In short, there is nothing for the court to determine here but the construction of the South Dakota statute. This is purely a nonfederal question with which this court is not concerned.

It is true that the appellants have attacked the jurisdiction of the court below on many grounds which will be discussed later, among them, lack of jurisdictional amount and lack of ground for equitable relief. It is perhaps true that appellants could have gone directly to this court on these jurisdictional questions under Section 238 of the Judicial Code. See *United States v. Jahn*, 155 U. S. 109, where the court said on page 155:

> "If the question of jurisdiction is in issue, and the jurisdiction sustained and judgment on the merits is rendered in favor of the plaintiff, then the defendant can elect either to have the question certified and come directly to this court, or carry the whole case to the Circuit Court of Appeals, and the question of jurisdiction can be certified by that court."

But since appellants elected to go to the Circuit Court of Appeals on all questions, the only right to obtain a decision of this court on the question of jurisdiction was by writ of certiorari from this court under Section 240, or by the Circuit Court of Appeals certifying the question to this court under Section 239.

Appellants did not ask the Circuit Court of Appeals to certify the question under Section 239, nor did that court do it of its own motion. Appellants did apply for a writ of certiorari from this court under Section 240, but that writ was denied.

Appellants are not entitled as a matter of right, to a decision of this court on the jurisdiction question after they have appealed to the Circuit Court of Appeals. They would perhaps be entitled to a determination of it by certiorari, if this court saw

fit to grant such a writ, but this court has already refused such an application. See

McLish v. Roff, 141 U. S. 661,

Robinson v. Caldwell, 165 U. S. 359.

In the latter case, this court said:

> "After the final decree upon the merits in the Circuit Court of Appeals this court under the circumstances stated, could properly take cognizance of the case in respect to any question involved in it *only upon certiorari.*"

This court should therefore decline jurisdiction.

What is said in the remainder of this brief becomes material only in the event that this court should reach the conclusion that it will consider on the merits the various propositions asserted in appellants' brief.

II.

Jurisdiction of Court Below.

It has been determined by three courts that the court below properly exercised its equitable jurisdiction to-wit by:

(1) The three judge court.

(2) The District Court.

(3) The Circuit Court of Appeals.

Nevertheless, appellants again urge that the District Court had no jurisdiction to determine the case at all, because:

(a) Plaintiff had an equitable remedy at law.

(b) The jurisdictional amount of $3,000 was not in controversy.

(c) The action was prematurely brought.

(a) *Adequate Remedy at Law.*

It is urged by the appellants that the plaintiff had a plain, adequate remedy at law, the contention being that such remedy at law consisted in the right to appear before the County Commissioners in response to the notice of equalization of benefits, and if dissatisfied with the decision of the Board, to appeal to the state court. This is not true for several reasons, (1) If with respect to the plaintiff, the county officials have acted in excess of the authority given them by law, they have no jurisdiction, and plaintiff cannot be required to submit to a body without jurisdiction. (2) It has been uniformly held that the plain, adequate and complete remedy at law referred to by Section 267 of the Judicial Code refers to a common law remedy in the Federal courts.

Counsel asserts without citation of authority that after appeal to the state court the Railway Company could remove the case to the Federal Court. This is not correct, because such a proceeding is not a suit "of a civil nature," and it is only a suit of a civil nature that can be removed.

Upshur v. Rich, 135 U. S. 467.

In the case of *United States Life Insurance Co. v. Cable,* 98 Fed. 761, 31 C. C. A. 264, a decision by the Circuit Court of Appeals of the Seventh Circuit, the following rule is laid down:

> "It must, we think, be conceded that the bill in this case alleges facts constituting a good cause of action in equity for the cancellation of the policy unless the plaintiff has a full and adequate remedy at law for the same cause. A suit at law has been commenced in the state court of Illinois to recover upon the policy, and if it be an adequate remedy at law to turn the plaintiff over for litigation of its rights in the state court under the circumstances set out in the bill, then the United States Circuit Court in equity

should disclaim jurisdiction. But there are two reasons why we think the remedy thus open to the plaintiff of having its rights determined in an action at law does not meet the requirements of the rule. The first is that the plaintiff, being a citizen of New York and the defendant a citizen of Illinois, the plaintiff under the constitution has the right to come to the federal court for an adjudication. *For a person entitled to litigate in the federal court, it is not an adequate remedy at law to be invited into a state court by his antagonist to adjudicate his rights.* * * * The remedy at law in order to defeat the right to proceed in equity should be full and adequate. It should be as practical and efficient to the ends of justice and its prompt administration as the remedy in equity. * * * In the federal courts it is well settled that the court will not turn a suitor in equity over to a remedy at law in the state courts, but only to the law side of the federal court."

In the case of *Reagan v. Farmers Loan & Trust Co.*, 154 U. S. 362, the Supreme Court of the United States said:

> "Whenever a citizen of a state can go into the courts of a state to defend his property against the illegal acts of its officers, a citizen of another state may invoke the jurisdiction of the federal courts to maintain a like defense. *A state cannot tie up a citizen of another state having property rights within its territory invaded by unauthorized acts of its officers to suits for redress in its own courts.*"

This was quoted and cited with approval in the case of *Smythe v. Ames*, 169 U. S. 466 (517).

See also *Sheffield v. Witherow*, 149 U. S. 574.

The plaintiff was entitled to litigate the validity of the assessment in a Federal court because of diversity of citizenship,

and as we shall later point out, more than $3,000 was involved. Since it was entitled to maintain its rights in the Federal Court, and since there was no law action maintainable *in the Federal courts* available to the plaintiff, there was no plain and adequate remedy at law, and plaintiff was entitled to equitable relief in the Federal courts.

This sufficiently establishes that there was no adequate remedy at law, but in addition under Section 8464, these assessments when and if made, would be "valid and perpetual liens upon the respective tracts so assessed." These apparently valid but in reality invalid liens would cast a cloud on plaintiff's title. Such facts furnish a further ground for equitable relief because of no adequate remedy at law.

Paine v. Ward, 138 Pac. 967,

Union Pacific v. Cheyenne, 113 U. S. 516,

Green v. Railway, 244 U. S. 499.

Of course if the cloud upon the title to plaintiff's property could be removed by paying the assessment, and suing (in the Federal courts) to get the amount so paid back, this might provide an edequate remedy at law.

Union Pac. Ry. v. Board, 217 Fed. 540.

But there is no such remedy under the South Dakota statute. Once the assessment attaches there is no way in which its lien can be removed other than by a suit in equity.

b. *Jurisdictional Amount.*

The bill of complaint alleges that the amount in controversy is more than three thousand dollars ($3,000.00). The record shows that the Board of County Commissioners by resolution fixed the proportion of benefits against the Rock Island as

839.45 units out of a total of 32,549.62 units. The records of the County Commissioners show that approximately $255,000 worth of warrants had been issued, and that the amount due on them at the time the suit was brought was about $300,000. A mere mathematical computation, therefore, shows that a unit is about $9.50, and that the amount as fixed by the board against the Rock Island is slightly less than $8,000.

It is our contention that this amount has been fixed by the board against the plaintiff and that the only redress which the plaintiff has is to convince the board that this proportion was wrong. The board has therefore already acted and it has determined that the amount due from the Rock Island is about $8,000, unless the railroad should in some way convince them that their conclusion was erroneous.

Furthermore, this is not the end of the liability sought to be imposed against the railroad company. If the property of the railroad is brought within the territory benefited by the ditch, this property will be within that district for all time to come, and any future repairs whic hhave to be made against this ditch or spillway will be assessed in the same proportion against the railway property. The evidence shows that already the present spillway is being endangered by the washing out of water at its foot, and the time is soon coming when more money will have to be expended for its maintenance, and if this spillway should wash out there is no way in which it can be determined what amount will be in the future assessed against the Railway Company.

In view of these facts and the decision of this Court in the case of *Western & Atlantic Ry. v. Railroad Commission*, 261 U. S. 264, it can hardly be contended that $3,000 is not involved in this suit. This also shows conclusively that there was an irreparable injury.

Appellants claim, as we understand it, that since all steps necessary to make this assessment a lien to an amount exceeding $3,000 had not been completed that $3,000 was not involved in the proceeding. Appellants' claim is that it does not appear that there *was any amount whatever involved* (Pages 72-75 of their brief).

But in their petition for the allowance of an appeal, they allege (R. 267-270) "The controversy between appellants and appellee involves an actual controversy of over more than $1,000."

If it does not appear that anything is involved, how can $1,000 be involved to sustain the jurisdiction of this court? The very claim which appellants make, if taken seriously, deprives this court of appellate jurisdiction.

Butte & Sup. Copper Co. v. Clark, 249 U. S. 12, does not help counsel out of this dilemma in the least. This case rules that litigants both plaintiff and defendant must be consistent in their claims as to the amount in controversy. They cannot claim in one breath that nothing is involved, and in the next when it is to their advantage so to do, claim that more than $1,000 is involved. Of course appellee would be precluded from claiming that less than $1,000 is involved by the allegations of its bill, but no such claim is made. On the contrary we again assert that much more than $7,000 is involved. In view of the careful analysis of the situation in Judge Kenyon's opinion in the court below, further argument on this proposition seems unnecessary.

c. *Suit Prematurely Brought.*

As we understand appellant's claim it is that it was improper to restrain the board from proceeding with an assess-

ment until the hearing of August 1, 1921, because the board might have changed its mind and concluded not to levy any assessment on plaintiff's property at all. As indicated, however, the board had already passed a resolution apportioning the assessment. The only thing that the plaintiff could have done was to have asked the board to change its conclusion which it already arrived at.

Throughout appellants' lengthy brief it is vigorously insisted that the board had the right to levy an assessment on plaintiff's property. Nowhere is there a suggestion that it does not intend to levy an assessment as charged in the bill. It is therefore rather refreshing to have counsel claim that at this stage of the case the suit is premature until the board has determined whether it will in fact levy an assessment.

We charge in the bill that any assessment would be invalid and void because (1) the law was invalid, and (2) in any event the law did not permit any such assessment. The learned courts below upheld the latter contention. If *any assessment* which the board might make will be invalid, it can be enjoined at any stage of the proceedings. We complain not so much that the assessment made by the board's resolution was made upon an improper basis, *but that it was made at all.*

Since we charge that the board intends to levy an absolutely void assessment and the defendants admit at least inferentially that they expect so to do, claiming the right under the law to do so, such action on the part of the board may be properly restrained at any stage. This case is entirely different from the case of *Milheim v. Moffat, Tunnel Improvement District,* 262 U. S. 710. In that case the complaint was that the assessment made or to be made was on an improper basis, to-wit, an ad valorem basis, and the court merely held that an injunction would not lie until the final action by the board, upon the

theory that if the basis was erroneous it would probably be modified on hearing. Had it appeared that *they had no right to assess at all*, a different conclusion would have been reached.

III.

THE DRAINAGE DITCH STATUTE IS UNCONSTITUTIONAL IN THAT IT TAKES PROPERTY WITHOUT DUE PROCESS OF LAW, CONTRARY TO THE 14TH AMENDMENT OF THE FEDERAL CONSTITUTION.

There are a few things in regard to drainage ditches well established by the decisions which are essential to due process of law as applied to such special assessments. They are as follows:

1. The only basis for a special assessment is a special benefit and, therefore, the assessment cannot be greater than the benefit conferred upon the party assessed.

Norwood v. Baker, 172 U. S. 269.
Gast Reality Co. v. Snyder Granite Co., 240 U. S. 55.
Martin v. District of Columbia, 205 U. S. 135.

In *Norwood v. Baker* Mr. Justice Harlan stated:

> "The principle underlying special assessments to meet the cost of public improvements is that the property upon which they are imposed is peculiarly benefited and, therefore, the owners do not in fact pay anything in excess of what they receive by reason of such improvement."

The court further said:

> "In our judgment the exaction from the owner of private property of the cost of a public improvement in substantial excess of the special benefits accruing to him is to the extent of such excess a taking under the guise of taxation a private property for public use without compensation."

In *Gast Realty Company v. Snyder Granite Company* Mr. Justice Holmes said:

> "The Legislature may create taxing districts to meet the expense of local improvements and may fix the basis of taxation without encountering the 14th Amendment, unless its action is palpably arbitrary or a plain abuse. The front foot rule has been sanctioned for the cost of paving a street. In such a case it is not likely that the cost will exceed the benefit and the law does not attempt an imaginary exactness or go beyond the reasonable probabilities. * * * If the law is of such a character that there is no reasonable presumption that substantial justice generally will be done, but the probability is that the parties will be taxed disproportionately to each other and to the benefit conferred, the law cannot stand against the complaint of one so taxed in fact."

From these decisions and many others the law is settled that a special assessment cannot exceed the benefit conferred upon a given tract of land and there must, therefore, be some tribunal which determines this fact and a hearing must be had for that purpose, unless the Legislature has itself determined that fact when it passed the law.

2. It is also well settled that where the Legislature has not determined what lands are benefitted and the amount of the benefit, but leaves it to some Board or Commission to determine what will be benefitted and what the amount of the benefit is to each, the inquiry is of a judicial nature and property owners are entitled to an opportunity to be heard upon due notice.

Road Improvement District No. 2 v. Missouri Pacific Ry. Co., 275 Fed. 600.

Turner v. Wade, 254 U. S. 64.

Central Railway of Georgia v. Wright, 207 U. S. 127.

Londoner v. City and County of Denver, 210 U. S. 373.

Fall Brook Irrigation District v. Bradley, 164 U. S. 112.

In the case of *Road Improvement District No. 2 v. Missouri Railway Company,* 8th Circuit, Judge Sanborn said:

> "But in the case in hand the Legislature did not undertake itself to make the assessment on the property in this district, but it delegated that power to and imposed that duty upon the Board of the district, and when the Legislature delegates to a Board or to Commissioners the determination of the question of what lands will be benefitted or what the amount of benefit to such lands will be the inquiry becomes in its nature judicial in such a sense that property owners are entitled to a hearing or an opportunity to be heard after notice before these questions are determined."

In the case of *Turner v. Wade,* Mr. Justice Day said:

> "In considering certain sections of the Georgia tax laws this court held in Central Railway Company v. Wright, 207 U. S. 127, 52 L. Ed. 134, that due process of law requires that after such notice as may be appropriate the tax payer have opportunity to be heard as to the validity of the tax and the amount thereof, by giving him the right to appear for that purpose at some stage of the proceedings. This case with others was cited with approval in Londoner v. Denver, 210 U. S. 373, 52 L. Ed. 1103, wherein we said that if the Legislature of a state instead of fixing the tax itself commits to the subordinate body the duty of determining where and in what amount and upon whom the tax shall be levied, due process of law requires that at some stage of the proceedings before the tax becomes irrevocably fixed the tax payer must have the opportunity to be heard, of which he must have notice, whether personal, by publication or by some statute fixing the time and place of the hearing."

With these two general principles in mind let us examine the South Dakota Drainage Act. We contend that the South Dakota Act nowhere provides for any hearing upon the cost

of the drain or other improvement, the amount of the tax to be levied, what lands are benefited or whether the tax upon any particular piece of land exceeds the benefits to that piece of land and hence does not measure up to the standard of "due process of law" required by this court to be shown.

There are only two hearings provided for in the South Dakota Drainage Act. The first, under Section 8462, is the hearing upon the original petition. Upon that hearing the Board decides whether the proposed ditch is conducive to public health, convenience or welfare or is practicable for draining agricultural lands. The notice of this hearing does not describe any land except that through which the ditch passes. *In this particular case no property belonging to the Rock Island Railroad was described in that notice, nor was any notice given to the Railroad that its right of way and bridges were liable to be assessed to pay for the drainage ditch.* This hearing does not establish a drainage district as it does in Iowa where notice is served upon every tract of land that is to be included within the district. At this hearing the County Commissioners are not called upon to decide whether the benefits to the land will be greater than the cost of the ditch. The North Dakota statute contains such a provision and the Supreme Court sustained the constitutionality of that statute upon that theory.

Soliah v. Heskin, 222 U. S. 522.

We call the court's attention to the fact that at the time this hearing is had no survey has been made, no estimate of the cost of the ditch has been filed, no plans have been made, no contracts have been let and no one knows what the undertaking will cost. It is, therefore, impossible for the County Commissioners at the time of this first hearing to decide whether the *benefits received by the land sought to be taxed will be equal*

to or greater than the assessment. For the reasons pointed out this hearing certainly cannot be sufficient to comply with the rule which requires that a tax payer have an opportunity to be heard upon the amount of the tax and whether the assessment against him is greater than the benefit he has derived.

The second hearing is had under Section 8463. This hearing determines what lands are benefitted and fixes the proportion of benefits between the various lands. The statute states that the Board of County Commissioners shall fix the proportion of benefits of the proposed drainage among the lands affected and shall appoint a time and place for equalizing the same. At the hearing the Board fixes the proportion of benefits for each tract of land, taking any particular tract as a unit, and the benefit which any Railroad Company may obtain for its property by such construction shall be fixed and equalized together with the proportion of benefits to tracts of land.

The statute contemplates that this hearing for fixing the proportion of benefits shall be had before the ditch has been constructed and before anyone knows how much will be actually expended in its construction. The hearing may be put off until after the ditch has been built, but at this hearing the amount of tax which any party will have to pay is not determined and there is no opportunity to determine whether the assessment will be greater than the benefit received. The statute provides that if further expense is incurred, or if for any reason some of the parties assessed do not have to pay the tax, a new proportion of benefits shall be fixed and new assessments made. At this hearing the tax payer cannot raise the question that the proceedings have been illegal, that the money has been wrongfully expended, that the cost of the improvement has been greater than the benefits derived from it, or that the tax which he will be required to pay is in excess

of any benefit which his property will receive. *The only thing passed upon at this hearing is the equalizing of the benefits between the different tracts.* It is of no value to the Rock Island Railroad to have a right to see that its taxes are no greater than those assessed against the Milwaukee Railroad provided that both of them are in excess of the amount of the benefit received and are confiscatory of their property.

Therefore, we contend that this hearing does not comply with the due process of law required in such matters.

3. A third proposition which has been well established in drainage matters is that the method provided for determining the proportion of benefits and the tax to be levied against particular person must be reasonable and not arbitrary.

This was well stated in the case of *Kansas City Railway Company v. Road Improvement District No. 6, Arkansas*, 256 U. S. 658. The court said:

> "The settled general rule is that a state legislature may create taxing districts to meet the expense of local improvements and may fix the basis of taxation without encountering the 15th Amendment, unless its action is palpably arbitrary or plain abuse. * * * Ordinarily the levy may be upon lands specially benefitted according to value, position, area or the front foot rule. * * * If, however, the statute providing for the tax is of such a character that there is no reasonable presumption that substantial justice generally will be done, but the probability is that the parties will be taxed disproportionately to each other and to the benefit conferred, the law cannot stand against the complaint of one so taxed in fact."

The court further said:

> "The statute under consideration prescribed no definite standard for determining benefits from proposed improvements. The assessors made estimates as to farm lands and

to town lots according to area and position and wholly without regard to their value, improvements thereon or their present or prospective uses. On the other hand disregarding both area and position they undertook to estimate benefits to the property of plaintiffs in error without disclosing any basis therefor, but apparently according to some vague speculation as to present worth and possible future increased receipts from freight and passengers which would inhance its value considered as a component part of the system."

The court held the Arkansas law unreasonable and unjust and not due process of law. We call the court's attention to the statute there passed upon. Section 11 of Act 338 of the Laws of 1915 of Arkansas provides the method of assessment as follows:

"The assessors shall assess the benefits to be received by the several and particular tracts of land, railroads, tram roads and other real property within the district by reason of the improvement. All lands embraced in said district shall be entered upon said book in convenient sub-divisions as surveyed by the United States and appear upon the assessment books in force at the time in said county in appropriate columns showing: (1) Name of the Owner. (2) Subdivision of the land. (3) Number of acres. (4) Present assessed value. (5) Assessed benefits per acre. (6) Assessed benefits to each tract. And if it be a railroad or tram road the name of the owner thereof, the supposed mileage in said district, the present assessed value of said railroad and other property belonging to said company, and the amount of assessed benefits per mile and the total amount of benefits assessed against said railroad or tram road."

Under the Arkansas statute above quoted they apparently did the same thing that they have done under the South Dakota statute. They compared tracts of land according to acreage

and value and determined thereby the benefit to each tract, but when they came to a railroad they had no method of comparison but simply assessed what they though fit against the railroad without any basis of comparison. This sort of an assessment the Supreme Court held to be arbitrary and unreasonable.

Will the Court please note the statute on the equalization of benefits, (Section 8463). The first part of the section states:

> "The Board of County Commissioners shall fix the proportion of the proposed drainage among the lands affected and shall appoint a time and place for equalizing the same."

This does not provide for the equalizing of benefits between the lands effected and between a railroad bridge or a railroad right of way, and there is nothing in the section which authorizes the County Commissioners to fix a proportion of benefits between a tract of land and a railroad company.

The part of the section in regard to notice provides for notice of such equalization of proportion of benefits to be given as therein designated. Since there is no proportion of benefits between the land and a railroad company's property, there is no notice provided for the railroad company and the notice served in this case that a day had been set for equalizing the proportion of benefits between a tract of land and the railroad right of way or railroad bridge is without any authority in the statute.

It will be noted that this section provides what the notice shall contain. It says:

> "Such notice shall state the description of each tract of land effected by the proposed drainage and the names of the owners thereof, as appears from the tax records in the County Treasurer's office, and the proportion of benefits

fixed for each tract of property, taking any particular tract as a unit, and shall notify all such owners to show cause why the proportion of benefits shall not be fixed as stated."

This clearly does not contemplate the giving of notice to a railroad company that any proportion of benefits has been fixed against the company's right of way or its bridges, because the railroad property is not a tract of land and is not included in the proportion of benefits fixed upon tracts of land.

The statute then says:

"And the benefits which any railroad company, or other corporation or property owner, may obtain for its property by such construction shall be fixed and equalized together with the proportion of benefits to tracts of land."

This clearly draws a distinction between the method of fixing the proportion of benefits upon tracts of land and the method for fixing the benefit to a railroad company. There is in this section no provision for the fixing of a proportion of benefits between a tract of land and a railroad right of way and railroad bridges, such as has been attempted in this case. The statute clearly says that tracts of land be treated in one way by fixing the proportion of benefits between the different tracts, taking any particular tract as a unit, but the property of a railroad company shall be treated in an entirely different manner by arbitrarily assessing against the railroad company an amount of benefits which the County Commissioners may decide in their own judgment should be assessed against the railroad, without in any way comparing it with the assessment made against tracts of land. This we say is an entirely arbitrary assessment, is unreasonable and is not based upon any method of comparison which it can be assumed with result in justice to the parties taxed.

This brings the attempted assessment in this case under the South Dakota Statute clearly within the case of the *Kansas City Southern Railway Company v. Road Improvement District No. 6*, decided under the Arkansas law above cited. In that case the court said:

> "Obviously the railroad companies have not been treated like individual owners, and we think the discrimination so palpable and arbitrary as to amount to a denial of the equal protection of the law.

In the case at bar the engineer for the County Commissioners has worked out an elaborate and ingenius scheme for determining the amount of benefit which a railroad company has received. It is, however, a scheme not contemplated by the statute and does not treat the railroad company the same as a private land owner is treated, for instance; he says that there are only about twelve acres of land belonging to the Rock Island which are considered in any way benefitted by the drainage ditch. This twelve acres is the mile of track between the city limits and the bridge southwest of town. If this was treated the same as the agricultural land the assessment against it would be about One Hundred Twenty Dollars ($120), but the assessment levied here against the Rock Island property is about Eight Thousand Dollars ($8,000).

So far as the method of assessment is concerned the statute might be held to be constitutional as to agricultural lands and at the same time be unconstitutional as to railroads as was said in *Gast Realty Company v. Schneider Granite Company*, 240 U. S. 55:

> "If the law is of such a character that there is no reasonable presumption that substantial justice generally will be done, but the probability is that the parties will be taxed disproportionately to each other and to the benefit conferred, the law cannot stand against the complaint of one so taxed in fact."

We contend that the evidence in this case shows from the manner in which the statute is sought to be applied to a railroad company that there is no reasonable presumption that substantial justice will be done under this statute. After all the elaborate calculation made by the engineer of the County Commissioners as to benefits to a railroad company the assessment to be levied against the company is purely a guess, speculative and arbitrary and the act itself provides no method of determining the amount of the tax or of equalizing it with the tax against agricultural land.

To re-state the proposition, the legislature has left it to the County Commissioners to determine what lands are benefited and what the amount of assessment against each shall be. The proceedings are of a judicial nature and the Rock Island Railroad must be brought within the jurisdiction of the Board of County Commissioners in some manner. No drainage district is formed. No notice of the hearing for establishing the ditch is served in any manner upon the Rock Island Railroad. Without notifying the railroad that its property is to be included within the property benefited or that it is in any way interested in the construction of the drainage ditch the County Commissioners go ahead, build the ditch and spend the money. Then after everything is done and complete they make a proposed assessment against the property of the railroad company and serve notice upon the company that it is supposed to be benefited by the building of the ditch and that an assessment has been made against it and ordered to show cause why this assessment should not become conclusive. At this hearing the only question that is to be determined is the proportion of benefits among the different parties assessed. This we claim does not constitute due process of law and does not furnish the railroad company with a reasonable notice and a legal hearing before taking its property.

IV.

THE DITCH PROCEEDINGS HAD SINCE 1916 ARE ASSESSMENTS FOR MAINTENANCE UNDER SECTION 8470 OF THE CODE, AND THE ATTEMPT TO ESTABLISH "DRAINAGE DITCH NO. 1 AND 2" WAS A SUBTERFUGE IN ORDER TO INCLUDE NEW TERRITORY TO HELP PAY FOR THE MAINTENANCE OF THE OLD DITCHES.

Section 8470 of the Code is as follows:

> "Assessments for Maintenance. For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the land owners effected in the proportions detremined for such drainage at any time upon the petition of any person setting forth the necessity thereof, and after due inspection by the Board of County Commissioners." (See appendix.)

The so called Drainage Ditch No. 1 and 2 is not a new ditch and not a new enterprise. It is simply the two old ditches cleaned out, embankments raised, a new spillway put in to handle the water and controlling gates placed at the head of the new ditches.

The parties responsible for the building of Drainage Ditches No. 1 and No. 2 were responsible for what they did with the water that they had diverted from the Sioux River. They could not bring this water out of the Sioux River and carry it down to the hill above the City of Sioux Falls and turn it loose. Having brought the water out of its natural water course they must take care of it. The first spillway washed out. The ditch filled up. A new spillway had to be built and the ditch had to be cleaned out. The expense of the maintenance, however, under the statute and under the laws would have to be paid by the parties responsible for the building of

the ditch. Under the statute the new assessment for the cost of maintenance is levied upon the lands which were found benefited in the original ditch proceedings, and in the same proportion as the lands were originally benefited. Under this statute the Rock Island Railroad is not liable for the cleaning out of the ditch or the building of the spillway or any other repairs placed upon the ditch.

There is no provision in this statute for taking any other lands to assist in the maintaining of a ditch after it has been construed and the benefits for its building assessed.

In 1916 a petition was filed to have Drainage Ditches No. 1 and 2 repaired and to build a new outlet through Covells' Lake down to the Big Sioux River west of the city. Defendant's Exhibit 42 (page 228) is the resolution of the Board establishing a drainage ditch as an extension to the outlet of Drainage Ditch No. 1 and for the repair of Drainage Ditch No. 1 and 2. This project was later abandoned and a new petition was filed for the building of a new spillway, the cleaning out of the old ditch, the building of controlling gates and straightening of the river. This project was not the construction of a new ditch, but was the required improvement and maintenance of the old ditch, and the filing of a new petition and the attempt to take any new territory as if it were a new project is purely a subterfuge and both courts below have so found.

Section 8489 in regard to invalid and abandoned proceedings cannot be applied to what was done by the County Commissioners in this case. That section applies to proceedings where a drainage ditch has been enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned, and provides for the re-establishment of a ditch over the same territory, and that the new ditch shall assume the expense of the old ditch and give credit for any payment made upon the old ditch by

people benefited thereby. No such proceeding was had in this case. The old proceedings establishing Drainage Ditches No. 1 and No. 2 have never been held void, set aside or abandoned. They are in full force today. The assessments have been levied, the land benefited, determined and the assessments have been paid.

It is, therefore, the contention of the appellee that what was done under the proceedings of 1916 to Drainage Ditch No. 1 and Drainage Ditch No. 2 was in the nature of repair and maintenance and under the statute could be assessed only against the lands originally found to be benefited by the old ditches, to-wit: the old assessment district, and in the same proportion.

In this case the court below specifically found that the establishment of "drainage ditch No. 1 and 2" was a mere evasion and subterfuge to avoid the effect of the law of South Dakota, that for maintenance and repair of an existing ditch only the lands within the original district can be assessed, and that the work done was only a repair of the old ditches.

Such finding is amply and overwhelmingly supported by the evidence, and this court will not be behind the determination of the lower court. Road Improvement Dist. No. 2 v. Missouri Pac., 275 Fed. 600. Nothing could be added to the opinions of the trial court and the circuit court of appeals as to their reasons for arriving at this conclusion (R. 93 to 96; 255-257).

It is, however, asserted and re-asserted in appellant's brief that the case of *Gilseth v. Risty*, 193 N. W. 132, by the Supreme Court of South Dakota, reached a conclusion contrary to that of the Circuit Court of Appeals as to the construction of the South Dakota Drainage Statute. That the Gilseth case dealt with this same "drainage ditch No. 1 and 2" is true; but that there is anything in it in conflict with Judge Elliott's or with Judge Kenyon's decision, we deny.

To refresh the Court's recollection as to the meaning of the terms employed in this brief, as we have already indicated, the term "old asesssment district" means the property originally assessed for Drainage Ditch No. 1 and Drainage Ditch No. 2. The term "new assessment district" means the additional property attempted to be assessed for "Drainage Ditch No. 1 and 2".

This case at bar involves the right to assess property in the *new* assessment district, both Courts below holding that such property could not be assessed because the new project so-called, was a repair of the old ditches, assessments for which were by statute limited to the old assessment district.

On the other hand, Gilseth was the owner of property in the *old* district, and participated actively in the establishment of this new subterfuge ditch. Although one of the prime movers, when it came to paying his assessment, he attempted to avoid liability. He contested the assessment upon the ground that the Board was without juirsdiction because there were irregularities in the proceedings (this is not involved in our case) and because the establishment of this ditch was a repair only of the old ditch. The Supreme Court of South Dakota, after being careful to say "plaintiff in this action is the owner of agricultural land within the drainage area of drainage district No. 2", (the *old* assessment district), said in effect:

(1) That the fact that the new project might be a repair of the old ditch made no difference because the law "gives the board the same authority to repair an old ditch as it does to construct a new one." Therefore, as, under Section 8470, the Board was authorized to assess property in the old assessment district for repairs, and as Gilseth's property lay in the old district the Board had jurisdiction to levy the assessment.

The attempted assessment of property in the new assessment district was not involved.

(2) But (and this is clearly the reason for the decision the reference to the repair proposition being clearly by way of argument only) Gilseth was estopped by his conduct from contesting his assessment.

Will the Court please note the last portion of the South Dakota Supreme Court's opinion:

> "Appellant having stood by and seen all the work performed without protest and having received all the benefits that can result therefrom, should not now be permitted to escape payment for the same. The relief asked by appellant is equitable in its nature, but because of circumstances above shown, all the equities of the case are against appellant and in favor of the Board."

Taking the view of the Gilseth case most favorable to appellants, and eliminating entirely the question of estoppel, although we assert that the South Dakota Supreme Court did decide the case on the ground of estoppel solely, the most that could be claimed from its decision is that the *court held that land WITHIN the old district COULD be assessed for Ditch 1 and 2. The Circuit Court of Appeals held that land WITHOUT the old district COULD NOT be assessed for Ditch 1 and 2.*

The Gilseth case neither decides nor intimates anything contrary to the decision of the Circuit Court of Appeals as to the construction of the Drainage Statute.

V.

THE ASSESSMENT OF PLAINTIFF'S PROPERTY CONSTITUTES A DISCRIMINATION SO PALPABLE AND ARBITRARY AS TO AMOUNT TO A DENIAL OF THE EQUAL PROTECTION OF THE LAW.

Exhibit A (p. 175) is a map of the Rock Island tracks and right of way in the City of Sioux Falls. The acreage is slightly less than thirty acres. None of it is agricultural lands. It is all used for railroad purposes only. Its tracks are located from eight to fifteen feet above the average water of the Sioux River. (See testimony of B. F. Wait, pp. 174-180; Dean, at 180-182; Burkes, 182; Pilcher, 182-183.) As already indicated, the County Engineer estimated that the property of the Rock Island benefited by this ditch amounted to 12⅛ acres, (page 241) upon which were located one mile of track and two bridges. Assessing the Rock Island property upon the same basis as agricultural lands would put the assessment at about twelve units, or a little less than $120. Because, apparently there was a railroad track and two bridges upon this property, the property was actually assessed 839.45 units, or about $8,000. Therefore, the railway track and two bridges are assessed 827 units, or considerably over $7,000, in spite of the fact that the evidence conclusively shows that the water of the Sioux River at its highest point had never reached the track. Since the only possible theory upon which a benefit could accrue to the Rock Island track is that the ditch prevented overflow, it is apparent how arbitrary and discriminatory such assessment is as compared with the assessment against the lands of others. The case clearly falls within the rule announced in *Thomas v. Kansas City Southern Railway Co.*, 277 Fed. 708, where this court said:

> "Where a railroad in a drainage district comprising 12,000 acres owned only 40.43 acres and 3.61 miles of track along the extreme west and northwest boundaries, constructed mostly on high hills and a trestle above overflow, an assessment of one-half of the cost of the improvement which would increase land values at least $250,000 was so palpably discriminatory and arbitrary as to deny equal protection of the laws."

This case was affirmed in *Thomas v. Kansas City So. Ry.*, 261 U. S. 481.

No better argument could be made upon this proposition than that contained in the court's opinion (pp. 97-100 of the Record).

VI.

Estoppel.

Under this head appellant asserts that because the Railway Company's agent knew that the spillway was being rebuilt and the old ditches repaired the Railway Company is estopped to claim that the statute under which the county assumed to do this is repugnant to the Fourteenth Amendment, or that the Board had, under the law, no jurisdiction to assess its property. No such novel proposition has, in our experience, ever been asserted in any court. It is too elementary to require the citation of authorities that in order to constitute an estoppel the party against whom the estoppel operates must have done or omitted to do some act and that relying upon such act or omission the other party has changed his position to his detriment. When Mr. Pilcher, the company's agent, saw the spillway being rebuilt, the only thing possible would have been to go through the form of notifying the county authorities that the Railway Company claimed it was not benefited. This was,

however, the time when no one had ever asserted that it was so liable. The Railway Company was not required to take any action against an assessment under an unconstitutional statute or an unauthorized assumption of jurisdiction by the Board until such time as it is actually threatened with an assessment. This was not until June, 1921, when the Railway Company was for the first time notified that it was claimed that its properties were benefited. Promptly upon receipt of this notice it commenced this action. Under the circumstances we do not feel justified in consuming time by arguing the proposition that the company has not lost its constitutional rights because it saw the spillway being constructed. Neither court below had any difficulty with the proposition.

For the foregoing reasons, the decree appealed from was correct and should be affirmed, or the appeal dismissed.

Respectfully submitted,

M. L. Bell,

Counsel for Appellee.

APPENDIX.

Sec. 8470. ASSESSMENTS FOR MAINTENANCE. For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the landowners affected in the proportions determined for such drainage at any time upon the petition of any person setting forth the necessity thereof, and after due inspection by the board of county commissioners. Such assessments shall be made as other assessments for the construction of drainage, certificates may be issued thereon and such assessments and certificates shall be liens, interest-bearing, perpetual and enforcible, in all respects as original assessments and may be sold at not less than par by the board of county commissioners, turned over to persons contracting for such cleaning and maintenance, or may be collected directly by the board of county commissioners.

Brief and Argument for Appellee

Supreme Court of the United States

October Term 1925

No. 96.

A. G. RISTY *et al*, as County Commissioners, etc., *et al.*,
Appellants,

vs

CHICAGO, MILWAUKEE & ST. PAUL RAILWAY COMPANY
Appellee

APPEAL FROM THE CIRCUIT COURT OF APPEALS OF THE EIGHTH CIRCUIT.

BRIEF AND ARGUMENT FOR APPELLEE

The Chicago, Milwaukee & St. Paul Railway Company, Plaintiff and Appellee, filed its bill in the District Court of the District of South Dakota praying for an injunction. From a decree granting an injunction the Defendants and Appellants appealed to the Circuit Court of Appeals of the Eighth Circuit, in which latter court the decree of the District Court was affirmed. From the decision of the Circuit Court of Appeals the defendants appeal to this Court.

This suit involves the constitutionality of the Drainage Ditch Statute of the state of South Dakota under both the federal and state constitutions and also involves the regularity and validity of proceedings taken under that statute. The facts out of which this suit arises, are, as follows:

J43899

STATEMENT OF FACTS

At the election in November, 1906, there was adopted an amendment to the constitution of South Dakota which is known as Section 6 of Article XXI of that constitution and which is as follows:

"§ 6. The drainage of agricultural lands is hereby "declared to be a public purpose and the legislature may "provide therefor, and may provide for the organization "of drainage districts for the drainage of lands for any "public use, and may vest the corporate authorities there- "of, and the corporate authorities of counties, townships "and municipalities, with power to construct levees, drains "and ditches, and to keep in repair all drains, ditches and "levees heretofore constructed under the laws of this "state, by special assessments upon the property bene- "fited thereby, according to benefits received."

The legislature of South Dakota has never enacted any law to carry into effect the powers, conferred upon it by the foregoing constitutional amendment providing for the organization of drainage districts, but has enacted, or attempted to enact various laws vesting the corporate authorities of the several counties of the state with power to construct levees, drains, and ditches and to keep the same in repair by special assessments upon the property benefited thereby.

The first drainage ditch enactment was Chapter 98 of the Session Laws of South Dakota, 1905, which was passed prior to the adoption of Section 6 of Article XXI of the South Dakota constitution. After the adoption of that section a new law was passed which is known as Chapter 134 of the Session Laws of South Dakota, 1907. The 1907 law was amended by Chapter 102 of the Session Laws of South Dakota, 1909. The 1907 law was further amended by Chapters 207 and 208 of the Session Laws of South Dakota, 1917. In 1919 the entire drainage law was recompiled and re-enacted as Sections 8458 to 8507, South Dakota Revised Code of 1919. Further amendments were enacted in 1919 which appear as Chapter 46 of the Session Laws of the First Special Session of the Sixteenth Legislature of South Dakota and by Chapters 193, 194, 195, 196, 197 and 198 of the Session Laws of South Dakota, 1921.

For the convenience of the court we are printing as Appendix A of this brief the portions of the South Dakota constitution, and as Appendix B the portions of the South Dakota laws which bear upon the questions at issue in this suit.

The Big Sioux river has its origin in a lake in the northeastern part of South Dakota and runs thence in a generally southerly direction, and in the eastern part of South Dakota, (of which state it is in places the boundary line) for about 100 miles and empties into the Missouri river at a point a short distance north of Sioux City, Iowa. In its course the Big Sioux river passes through the center of the city of Sioux Falls. It strikes Minnehaha county, in which Sioux Falls is situated, at its north line and flows in a generally southerly direction, but with many bends and curves, for a distance, in a straight line, of twenty-four miles, running in its course two and one-half miles west of the business center of the city of Sioux Falls and south to a point three miles south of the business center. It then flows in an easterly direction for about three miles and then turns north, running through the business center of the city of Sioux Falls and northerly to a point two miles from the business center. It then runs in an easterly direction for several miles when it again resumes its southerly course towards its junction with the Missouri river. The consequence is that at the city of Sioux Falls the river runs like an inverted letter "S," upon the bar of which Sioux Falls is situated.

From a point about five miles south of where the Big Sioux enters Minnehaha county it runs through a valley or flat from two to four miles in width until it reaches a point about three miles southwest of the business center of the city of Sioux Falls. From there on until it reaches the northeastern portion of the city the river is confined by high banks on either side and with no valley interposing between them.

There is comparatively little fall between the point where the Big Sioux river enters the flat about fifteen miles north of the city of Sioux Falls and the northeastern section of the city where the river passes over a series of falls of an aggregate height of more than one hundred feet. The result is that the level of the river bed, as it

passes over the falls in the northeastern portion of the city of Sioux Falls, is over one hundred feet below the level of the river at a point, four miles to the westward, where it passes to the west of the city of Sioux Falls.

About 1878, a dam was constructed for water power purposes across the Big Sioux river within the limits of the city of Sioux Falls a short distance above the falls and, between that dam and the falls, other dams were subsequently constructed, all of which were in existence long prior to any of the transactions out of which this suit arises. These dams for many years have been utilized, without complaint from any source, by the Northern States Power Company and its predecessors, as a source of water power, and upon the dams and power works several hundreds of thousands of dollars have been expended with the consent, express or implied, of the public authorities of Minnehaha county and of the city of Sioux Falls and of the property owners along the Big Sioux river.

The city of Sioux Falls, something over twenty years ago, located its municipal waterworks upon the flat north of the city, between the Big Sioux river where it flows in a southerly direction to the westward of the city and where it flows to the northward after it passes over the falls in the northeastern portion of the city. The flat where the waterworks are situated is a few feet higher than the level of the river bed to the westward of the waterworks plant and more than one hundred feet higher than the level of the river bed to the eastward. Between the two channels of the river (at this point about 3½ miles apart) there is an extensive gravel bed underlying the surface of the ground, which gravel bed is filled with water and is the source from which the city of Sioux Falls obtains its municipal water supply.

For many years, and from in fact shortly after the settlement of Minnehaha county in the late sixties and early seventies, complaints arose in regard to the flooding of the land in the valley of the Big Sioux river north of the city of Sioux Falls. The topography of the country along this valley being level and there being but little fall in the river bed for a distance of nearly thirty miles, between the north end of the flats and the falls of the Big

Sioux river, the surface waters, in times of freshets, would accumulate upon the flats and remain there for several days, and sometimes for weeks, before they gradually flowed off through the narrow river channel south of the city of Sioux Falls and through the city until they reached the falls. This situation was made still worse by the construction of the dam upon the river above the falls in 1878 which hindered still further the passage of the water along the river bed before it reached the falls. As the state of South Dakota became more and more densely settled in the counties along the Big Sioux river north of Minnehaha county, numerous drainage ditches were established, the effect of which was still further to accelerate the flow of surface water during freshets and to cause a still greater volume of water to accumulate upon the flats north of the city of Sioux Falls.

In December, 1907, the Board of County Commissioners of Minnehaha county, purporting to act under the authority of Chapter 134 Session Laws of South Dakota, 1907, established a drainage ditch known as Drainage Ditch No. 1. This ditch was some three miles in length and extended, from a point on the Big Sioux river below the falls, northward to a point on the flat north of the city of Sioux Falls. In 1910, the Board of County Commissioners, again purporting to be acting under the authority of Chapter 134 of the Session Laws of South Dakota, 1907, as amended by Chapter 102, Session Laws of South Dakota, 1909, established a second ditch, known as Drainage Ditch No. 2, which commenced at the north end of Drainage Ditch No. 1 and extended in a northerly direction for about twelve miles.

At the point Drainage Ditch No. 1 empties into the Big Sioux river below the falls it passed over a hill in a descent of about one hundred feet. The bottom of the ditch was covered along this descent with concrete, making a spillway through which the water accumulating upon the flats could run to reach the channel of the Big Sioux river below the falls.

Drainage Ditch No. 1 and Drainage Ditch No. 2 operated more or less successfully in draining the flats until the spring of 1916 at which time, during a somewhat heavy rainfall, the concrete bottom of Drainage Ditch No.

1, (or its spillway) washed out and the water began cutting a channel through the hill.

The fact that the concrete spillway had washed out did not in any manner decrease the efficiency of Drainage Ditch No. 1 and Drainage Ditch No. 2 as drainage propositions. In fact, the washout of the spillway made them still more efficient for draining purposes, and if they had been left alone they would very speedily have settled the question of drainage for the lands upon the flats. The effect of the washout was to open a passage for all of the water which accumulated upon the flats into the channel of the Big Sioux river below the falls and this channel was amply sufficient to have taken care of all of the water which ever accumulated upon the flats. In fact, it was a perfect success as a drainage proposition.

Unfortunately, while Drainage Ditch No. 1, after its spillway was washed out, succeeded in doing all in the way of drainage that the owners of the lands upon the flats desired to have done, it seriously affected other interests. If the water had been allowed to go without hindrance through the new channel it would, within a very short time, have diverted the entire course of the water in the Big Sioux river and would have formed a new channel for the river across the flats north of the city of Sioux Falls, in which channel all of the water coming down the river could have flowed into the channel below the falls without passing around and through the city of Sioux Falls and over the falls, thus cutting off about twelve miles of the river channel. The further effect would have been to destroy the waterpower formed by the dams across the Big Sioux river in the city of Sioux Falls above the falls, as the only water which would have flowed in the Big Sioux river channel through the city of Sioux Falls and over the falls would have been the water from Skunk creek, a tributary of the Big Sioux river, emptying into that stream south of the city of Sioux Falls. Another effect of allowing the river to run through its new channel would have been to destroy the municipal water plant of the city of Sioux Falls by draining the water from the gravel bed from which the city obtained its water supply.

After the spillway at the outlet of Drainage Ditch No. 1 had washed out in March, 1916, various plans were

proposed looking toward the control of the water which flowed through the ditch. Many conferences were had between the Board of County Commissioners and the representatives of the various interests affected. The Appellee was not represented at any of these conferences and never took any part in any manner in them or in the subsequent proceedings.

In October, 1916, the Board of County Commissioners took proceedings by which they attempted to establish a new ditch project which they named "Drainage Ditch No. 1 and 2." Thereafter, all proceedings with respect to Drainage Ditch No. 1 and with respect to Drainage Ditch No. 2 were abandoned and all subsequent work was done by the Board of County Commissioners upon the new project, "Drainage Ditch No. 1 and 2."

The Board of County Commissioners, after attempting to organize Drainage Ditch No. 1 and 2, proceeded to construct additional ditches, cut-offs, and dams in the flats above the city of Sioux Falls, and at the former outlet of Drainage Ditch No. 1, to construct a spillway, and other water retaining works for the purpose of controlling the flow of the water through the ditches. This work was done by the Board of County Commissioners without any regard to the requirements of the South Dakota drainage statutes and without having first had plans therefore prepared and approved by the state engineer. The most of the work was done by the board without letting a contract therefor and upon the cost-plus plan. The result was, that at the end of the construction period, the cost of the work done by the Board of County Commissioners upon Drainage Ditch No. 1 and 2 had amounted to a sum in excess of $250,000, of which upwards of $150,000 was expended upon the spillway and other water retaining works at the outlet of the ditch. For the amount expended, the Board of County Commissioners issued warrants upon the Drainage Ditch No. 1 and 2. These warrants were taken by the laborers and material men employed upon the construction work and were in most instances discounted to the local banks in Minnehaha county.

After a number of abortive attempts to levy an assessment for the purpose of raising the money to pay the warrants issued for the work done upon Drainage Ditch No.

1 and 2, the Board of County Commissioners, in June, 1921, adopted a notice of time and place for equalizing the proportion of benefits for the construction of the work on Drainage Ditch No. 1 and 2, in which notice the proportion of benefits assessed against Appellee was 1681 units out of a proposed total of 32549.62 units, upon the basis of which proportion the assessment against Appellee and its property would be in excess of $15,000.

The plaintiff and Appellee brought this suit to enjoin the making of any assessment upon its property for the work done upon Drainage Ditch No. 1 and 2. A temporary injunction was granted *pendente lite*. The defendants named in the bill were the Board of County Commissioners of Minnehaha County, the Auditor, and the Treasurer of that county. Subsequently, the various banks and other persons holding drainage ditch warrants filed a petition for leave to intervene in the suit. This petition was granted and answers were filed both by the defendants and by the intervenors. Upon the hearing of the suit upon its merits, a final decree was entered enjoining the Board of County Commissioners from making any assessment for the expense of the work done under the proceedings establishing Drainage Ditch No. 1 and 2. The decree by its terms was without prejudice to the right of Appellee to contest any assessment upon the property owned by it which had formerly been assessed for Drainage Ditch No. 1 and Drainage Ditch No. 2. (*Chicago, Rock Island & Pacific Railway Company vs Risty,* 282 Fed. 364.)

In its bill Appellee set up the facts concerning the construction of Drainage Ditches No. 1 and No. 2 and the subsequent construction of a spillway and attacked the constitutionality of the South Dakota Drainage Statute in the following allegations:

"That said purported statute of the state of South "Dakota 'Exhibit A' hereto, is unconstitutional and void, "in that the same is in violation of Section 2 of Article "VI, of the Constitution of the State of South Dakota, "and in that the same is in violation of the Fourteenth "Amendment of the Constitution of the United States; "that said Statute, 'Exhibit A', is further void and un- "constitutional in that the same provides no fixed and

"determinable method or rule for the apportionment of "benefits upon the property and property owners situat- "ed within the drainage area, and especially in that said "purported statute furnishes no fixed or determinable "basis for the apportionment of benefits upon the prop- "erty of railroad companies and other corporations, and "upon the property of municipal and quasi-municipal cor- "porations, and upon platted property in cities and vil- "lages. Said purported law, 'Exhibit A', is further un- "constitutional and void in that the same provides for an "assessment against property without the right of the "property owner to be heard thereon and without notice "of any character to the property owner; that if said ap- "portionment of benefits be made as threatened by the "said Board of County Commissioners of said Minnehaha "County, and as is provided in said notice, 'Exhibit C', "the same will constitute the taking of the property of "plaintiff and of the other property owner affected by "said notice without due process of law; that a cloud will "be placed upon the title of the plaintiff to its real prop- "erty situated within said drainage area affected by "said notice, 'Exhibit C' and that there will result a mul- "tiplicity of suits and that plaintiff and other property "owners affected will suffer irreparable injury." (Rec- ord, p. 15).

The bill also attacked the acts of the Board of County Commissioners of Minnehaha County in its proceedings relative to the construction of the spillway and other drainage works as being without jurisdiction on account of the unconstitutionality of the South Dakota Drainage Statute and also on account of such proceedings not being had in accordance with the provisions of the Statute. (Record, pp. 14-15). The apportionment of benefits made against the property of Appellee was further attacked as exorbitant, disproportionate to the assessment of other property and made upon an arbitrary and discriminatory basis. (Record, pp. 72-73).

In their answer, Appellants took issue upon the un- constitutionality of the South Dakota Drainage law and specifically set up the establishment by the Board of County Commissioners of a new ditch project under the title of "Drainage Ditch No. 1 and 2."

Upon the trial in the district court the issues involved were, under the pleadings:

1. The constitutionality of the South Dakota Drainage Ditch Statute.

2. The regularity of the proceedings of the Board of County Commissioners of Minnehaha county under the Statute.

3. The proper construction to be given to the provisions of the South Dakota Drainage Statute.

There was practically no dispute as to the facts out of which this suit arises. It was admitted by all parties to the controversy that originally the Board of County Commissioners of Minnehaha county had established two drainage ditches known respectively as Drainage Ditch No. 1 and Drainage Ditch No. 2. It was also conceded that after the spillway, at the outlet of Drainage Ditch No. 1, had been washed out, the Board of County Commissioners established a new ditch project known as Drainage Ditch No. 1 and 2.

This suit was one of six cases involving this same ditch project, but the positions taken by the plaintiffs in the various cases differed upon the proposition as to whether Drainage Ditch No. 1 and 2 was a new and independent proposition or whether it was merely a project for the maintenance and repair of Drainage Ditch No. 1 and Drainage Ditch No. 2 and consequently a continuation of those two propositions. In all of the six cases the contention of counsel for Appellants was that Drainage Ditch No. 1 and 2 was a new and independent proposition. This position was contested by plaintiffs in some of the cases who took the position that it was merely a maintenance and repair project. In the case at bar, the plaintiff (Appellee in this court) was content to coincide with the position taken by the defendants (Appellants in this court) and to base its right to an injunction upon a state of facts in which it conceded that Drainage Ditch No. 1 and 2 was a new and independent ditch proposition and not a continuation of the old Drainage Ditch No. 1 and Drainage Ditch No. 2.

In the District Court injunctions were granted to the plaintiffs in all the six cases, but in his opinion filed in the District Court, the District Judge took the position that

Drainage Ditch No. 1 and 2 was merely a maintenance and repair project and a continuation of Drainage Ditch No. 1 and Drainage Ditch No. 2. (*Chicago, Rock Island & Pacific Railway Company vs Risty,* 282 Fed. 364).

While we contend in this court, as we did in the Circuit Court of Appeals, that the decree of the District Court was properly entered and should be affirmed, we do not act as the defenders of the decree upon the grounds upon which it was based by the District Judge. The decree was, in our view of the controversy, properly entered, but the same decree should have been entered had the court been of the opinion that Drainage Ditch No. 1 and 2 was an independent and original ditch proposition and not a continuation and repair project of Drainage Ditch No. 1 and Drainage Ditch No. 2. In this position we do not coincide with the views expressed by counsel for the Appellees in other of the six cases now before this court. We accept the position of counsel for the Appellants that Drainage Ditch No. 1 and 2 was an original and independent ditch proposition and upon that basis shall proceed with our argument in support of the decree of the District Court and the decision of the Circuit Court of Appeals.

An appeal was taken by the defendants and by the intervenors to the Circuit Court of Appeals for the Eighth Circuit, in which court the decree of the District Court was affirmed. *Risty vs Chicago, Rock Island & Pacific Railway Company,* 297 Fed 710. The defendants and intervenors then filed a petition in this Court for a writ of certiorari and, at the same time, took this appeal. The application for a certiorari was denied. *Risty vs Chicago, Milwaukee & St. Paul Railway Company,* 266 U. S. 622. The case is now before this court upon the appeal.

The foregoing being the facts in this suit, we submit on behalf of the Appellee, the Chicago, Milwaukee & St. Paul Railway Company, the following:

BRIEF AND ARGUMENT

I.

THE SOUTH DAKOTA DRAINAGE LAW IS IN VIOLATION OF THE FOURTEENTH AMENDMENT TO THE CONSTITUTION OF THE UNITED STATES AND IS THEREFORE UNCONSTITUTIONAL.

The first proposition which we desire to present for the consideration of the Court is that the entire South Dakota drainage law is unconstitutional, our contention being that it is in violation of the "due process of law" clause of the fourteenth amendment to the federal constitution. The consideration of this question involves an analysis of the provisions of the South Dakota drainage statute as it existed at the time the Board of County Commissioners of Minnehaha county attempted to establish Drainage Ditch No. 1 and 2 and did the work thereunder.

The first statutory step in the establishment of a drainage ditch is the filing of a petition. (§2, ch. 134, Laws of 1907; §8459, R. S. 1919). This petition must "set forth "the necessity for the drainage, a description of the pro- "posed route by its initial and terminal points and its "general course, or by its exact course in whole or in part, "and a *general statement of the territory likely to be "affected thereby*". It will be noticed that in the petition, which is the initial and jurisdictional step in the formation of a drainage ditch, it is not necessary to include a description of the property which will be affected and upon which assessments will be levied to pay the costs of the construction of the ditch. All that is required is a "general statement of the territory likely to be affected "thereby." The next step in the proceeding is for the County Auditor to transmit a copy of the petition to the State Engineer, who, together with the Board of County Commissioners is required to inspect the proposed route and "if in the opinion of the Board and the State Engi- "neer it is necessary," the Board of County Commissioners causes a survey of the proposed drainage to be made by a competent engineer, selected by the Board, but under the general supervision of the State Engineer. This survey is primarily for the purpose of aiding the Board in determining the necessity for the proposed drainage but

it may be a complete survey such as will be required for the construction of the drainage and the assessment of its cost. All this is within the jurisdiction of the Board of County Commissioners. The survey may extend to other lands than those affected by the proposed drainage for the purpose of determining the best practical method of draining the entire section of country of which the lands proposed to be drained, or a portion of them, are a part. (§ 3, ch. 134, Laws of 1907; § 1, ch. 102, Laws of 1909; §8460, R. S., 1919). While the survey may, at the option of the Board of County Commissioners, be a complete survey for the purpose of ascertaining all facts required for the construction of the proposed drainage and the assessment of its cost, such complete survey is not rendered obligatory by the statute and the Board of County Commissioners may have made only so much of the survey as may be necessary to determine the necessity for the proposed drainage.

After receiving the report of the surveyor, the Board of County Commissioners is required to determine the "exact line and width of the ditch, if the same shall not "be fixed in the petition, and shall file its determination "with the petition." The Board then fixes the time and place for the hearing of the petition and gives notice by publication in a newspaper for two weeks and by posting copies of the notice in three public places near the route of the proposed drainage. The notice "shall describe the "route of the proposed drainage and the tract of country "likely to be affected thereby in general terms, the sep-"arate tracts of land through which the proposed drain-"age will pass and give the names of the owners thereof "as appears from the records of the office of the Register "of Deeds on the date of the filing of the petition, and "shall refer to the files in the proceeding for further par-"ticulars." The notice shall also "summon *all persons* "*affected* by the proposed drainage to appear at such "hearing and show cause why the proposed drainage shall "not be established and constructed." (§ 4, ch. 134, Laws of 1907; § 2, ch. 102, Laws of 1909; § 8461, R. S. 1919). This notice is the only notice given to property owners prior to the establishment of a drainage ditch and is the only notice under which the Board can acquire jurisdic-

tion to make an assessment. The owners are named of the separate tracts of land through which the proposed drainage will pass but no description is given of the property *affected by the proposed drainage ditch or which will be assessed for the cost of the construction thereof.* The notice merely describes the route of the proposed drainage and the "tract of country likely to be affected thereby *"in general terms"* and then summons *"all persons af-"fected by the proposed drainage"* to appear at the hearing. A notice designating as the tract of country "likely "to be affected thereby in general terms" would be sufficient, if it named as such "tract of country" the entire county in which the drainage ditch is to be constructed. Nothing whatever is required in the notice by which any property owner, other than one owning land through which the ditch is to be constructed, is appraised that he is affected or that his land will be assessed for the construction of the proposed drainage ditch. In fact, all that the South Dakota law requires is for the Board of County Commissioners of a South Dakota county to publish and post a general notice summoning "all persons affected" to appear at the hearing, in order to support an assessment, for the construction of the ditch, upon all of the real property situated within the county limits. There is absolutely nothing in the statutory notice to inform any property owner that he will be called upon to pay an assessment. After the ditch is constructed, the Board of County Commissioners is at liberty, under the South Dakota statute, to extend the assessment to all property in every direction up to the county boundary lines. If this be sufficient notice, then after it is given, the Board of County Commissioners has the power to assess for the cost of the construction of any ditch every acre of property within the county limits.

At the hearing upon the petition, the South Dakota statute kindly permits "any person interested" to appear and contest the statements of the petition and matters set forth in the surveyor's report and the finding of the Board as to the width and route of the proposed ditch. After the hearing, the County Board may establish the drainage ditch. (§ 5, ch. 134, Laws of 1907; § 3, ch. 102, Laws of 1909; § 8462, R. S. 1919).

After the establishment of the drainage ditch, the Board of County Commissioners "shall fix the proportion of benefits of the proposed drainage among the lands affected and shall appoint a time and place for equalizing the same." (§6, ch. 134, Laws of 1907; § 4, ch. 102, Laws of 1909; § 8463, R. S. 1919). There is no statutory requirement as to how soon after the establishment of the drainage ditch this shall be done and it is not necessary that it be done before the drainage project has been completed. It must be done before an assessment is made for the purpose of paying the cost of the establishment of the drainage project but the assessment, when made, includes all costs already incurred, or thereafter to be incurred. (§ 7, ch. 134, Laws of 1907; § 5, ch. 102, Laws of 1909; ch. 130, Laws of 1911; § 8464, R. S. 1919.)

The notice of equalization of proportion of benefits is given by publication once in each week for two consecutive weeks in a newspaper of the county and by posting copies of the notice in three public places near the route of the proposed drainage. The law requires that the "notice "shall state the route and the width of the drainage estab- "lished, a description of each tract of land affected by "the proposed drainage and the names of the owners of "the several tracts of land as appears from the records "of the office of the Register of Deeds, at the date of filing "of the petition, and the proportion of benefits fixed by "each tract of property, taking any particular tract as a "unit, and shall notify all such owners to show cause why "the proportion of benefits shall not be fixed as stated." (§ 6, ch. 134, Laws of 1907; § 4, ch. 102, Laws of 1909; § 8463, R. S. 1919). Here for the first time there is published a description of each tract of land "affected" by the proposed drainage and the names of the owners of such tracts. As in the case at bar, the work may have been completed and an expense of over a quarter of a million dollars incurred before the Board of County Commissioners determines what particular lands are "affected" by the proposed drainage and gives notice to the owners of such lands. A property owner for the first time notified that his land is "affected" by the proposed drainage has no right to object in any manner to the establishment of the drainage project. He has nothing to say in re-

gard to its manner or cost of construction; he has no voice in the selection of the particular tract of land taken as a unit; and all concerning which he can be heard is as to whether the proportion of benefits "shall not be fixed "as stated."

It is now too late for the property owner to escape. He is like a rat in a trap. All that he can do is to appear before the Board of County Commissioners and object to the proportion of benefits which has been assessed against him and ask to have that proportion reduced by raising the proportion of some other property owner. He is precluded from raising any question whatsoever as to the right to include his property within the drainage area. He has nothing to say as to the necessity for the drainage project or as to its manner of construction or its cost. Without any notice, either personal or constructive, his property has been included in the drainage area under the general proclamation of the Board of County Commissioners and he has no redress.

Theirs not to make reply,
Theirs not to reason why,
Theirs but to do and die,

even though

Someone had blundered.

The property owner cannot question the validity of the proceedings. All that is left for him to do is to pay.

Our contention is that the South Dakota drainage statute is in violation of the due process of law clause of the fourteenth amendment to the federal constitution for the reason that no opportunity is given a property owner, whose property is "affected" by the proposed drainage project, to appear prior to the doing of the work and the making of the assessment for the construction cost.

In support of the constitutionality of the South Dakota drainage statute, counsel for appellants have cited *Spencer vs. Merchant*, 125 U. S. 345. That case was decided by a divided court. The legislature of the state of New York had, by express enactment, determined that certain lands should be included within an assessment district in which the cost of the improvement was to be proportioned. The majority of the court held "that the deter-"mination of the territorial district which should be taxed

"for local improvement is within the province of legisla-
"tive discretion." The courts in this and a line of suc-
ceeding cases have made a clear distinction between cases in which a taxing district has been established by an act of the legislature and cases in which special assessments are to be made by some taxing body upon the property "beneficially affected" but not included within any taxing district established by legislative enactment. In the cases of taxing districts established by act of the legislature no notice need be given to the property owners of the inclusion of their property within the district, but a different rule applies in cases in which the taxing district is determined by the area of the land "beneficially affected."

Fallbrook Irrigation District vs Bradley, 164 U. S. 112, also cited by counsel in support of the constitutionality of the South Dakota drainage law, is, when carefully read, a strong authority against the constitutionality of the South Dakota statute. In the very elaborate opinion in this case the Court (p. 167) says:

"The legislature not having itself described the dis-
"trict, has not decided that any particular land would or
"could possibly be benefited as described, and, therefore,
"it would be necessary to give a hearing at some time to
"those interested upon the question of fact whether or
"not the land of any owner which was intended to be in-
"cluded would be benefited by the irrigation proposed. If
"such a hearing were provided for by the act, the de-
"cision of the tribunal thereby created would be sufficient.
"Whether it is provided for will be discussed when we
"come to the question of the proper construction of the
"act itself."

Later on in the opinion the court discusses the question whether the statute does provide for a hearing prior to the formation of the district and holds that under the provision of the statute under consideration and under the construction given it by the supreme court of California, by which state it was enacted, the right of hearing is given the property owner prior to the formation of the district. The court discusses the statute (pp. 170-172):

"We come now to the question of the true construc-
"tion of the act. Does it provide for a hearing as to
"whether the petitioners are of the class mentioned and

"described in the act and as to their compliance with the "conditions of the act in regard to the proceedings prior "to the presentation of the petition for the formation of "the district? Is there any opportunity provided for a "hearing upon notice to the land owners interested in the "question whetheir their lands will be benefited by the "proposed irrigation? We think the right to a hearing "in regard to all these facts is given by the act and that it "has been practically so construed by the Supreme Court "of California in some of the cases, above cited from the "reports of that court and in the case cited in the briefs "of counsel. We should come to the same conclusion from "a perusal of the act. The first two sections provide for "the petition and a hearing. The petition is to be signed "by a majority of the holders of title to lands susceptible "of one mode of irrigation, etc. This petition is to be pre-"sented to the board of supervisors at a regular meeting, "and notice of intended presentation must be published "two weeks before the time at which it is to be presented. "The board shall hear the same, shall establish and de-"fine the boundaries, although it cannot modify those de-"scribed in the petition, so as to except from the district "lands susceptible of irrigation by the same system of "works applicable to the other lands in the proposed dis-"trict, and the board cannot include in the district, even "though included in the description in the petition, lands "which shall not, in the judgment of the board, be bene-"fited by irrigation by said system.

"If the board is to hear the petition upon notice, and "is not to include land which will not, in its judgment, be "benefited by irrigation by the system, we think it fol-"lows as a necessary and a fair implication that the per-"sons interested in or who may be affected by the pro-"posed improvement have the right under the notice to "appear before the board and contest the facts upon which "the petition is based, and also the fact of benefit to any "particular land included in the description of that pro-"posed district.

"It is not an accurate construction of the statute to "say that no opportunity is afforded the landowner to test "the sufficiency of the petition in regard to the signers "thereof and in regard to the other conditions named in

"the act; nor is it correct to say that the power of the "board of supervisors is, in terms, limited to making such "changes in the boundaries proposed by the petitioners "as it may deem proper, subject to the conditions named "in the act.

"When the act speaks of a hearing of the petition, "what is meant by it? Certainly it must extend to a "hearing of the facts stated in the petition, and whether "those who sign it are sufficient in number and are among "the class of persons mentioned in the act as alone having "the right to sign the same. The obvious purpose of the "publication of the notice of the intended presentation of "the petition is to give those who are in any way interest-"ed in the proceeding an opportunity to appear before "the board and be heard upon all the questions of fact, "including the question of benefits to lands described in "the petition. As there is to be a hearing before the "board, and the board is not to include any lands which "in its judgment will not be benefited, the plain construc-"tion of the act is that the hearing before the board in-"cludes the question as to the benefits of the lands, be-"cause that is one of the conditions upon which the final "determination of the board is based, and the act cannot "in reason be so construed as to provide that while the "board is to give a hearing on the petition it must never-"theless decide in favor of the petitioners, and must estab-"lish and define the boundaries of the district, although "the signers may not be fifty, or a majority of the hold-"ers of title, as provided by the act, and notwithstanding "some other defect may become apparent upon the hear-"ing."

It will be seen in *Fallbrook Irrigation District vs Bradley* that the California statute differs from the South Dakota statute in that the petition must "particularly de-"scribe the proposed boundaries of such districts" and the petition itself must be published. After the petition is published and has been passed upon by the Board of Supervisors the question of the formation of the irriga-tion district is submitted to an election of the electors of the district who are also freeholders. (*Fallbrook Irriga-tion District vs Bradley*, 164 U. S. 112, pp. 116-117). These facts differentiate the statute passed upon in *Fall-*

brook Irrigation District vs Bradley from the South Dakota statute under consideration. Under the California statute the boundaries of the proposed district are fixed in the first instance and after they have been determined then the question of the formation of the district is put to a vote of the freeholder electors. We submit therefore, that the decision in *Fallbrook Irrigation District vs Bradley* is a distinct authority in favor of our position that the South Dakota drainage statute is unconstitutional. The court expressly determines in that case that notice must be given to the property owner of the formation of the district before his property can be included in it, and one of the requisites of notice is that the property owner be advised in some manner, either actually or constructively, that his land will be included within the limits of the proposed project.

Embree vs Kansas City Road District, 240 U. S. 242, is another case relied upon by counsel in support of the constitutionality of the South Dakota law. Here, again, is a case which we submit directly sustains our contention as to the invalidity of the South Dakota statute. The Court in the opinion (pp. 246-248) says:

"The district was not established or defined by the "legislature, but by an order of the county court made "under a general law. Whether there was need for the "district and, if so, what lands should be included and "what excluded was committed to the judgment and dis"cretion of that court subject to these qualifications: "First, that the district should contain at least 640 acres "of contiguous land and be wholly within the county; sec"ond, that the court's action should be invoked by a peti"tion signed by the owners of a majority of the acres in "the proposed district, and, third, that public notice—con"ceded to be adequate—should be given, by the clerk of "the court, of the presentation of the petition and the "date when it would be considered, and that owners of "land within the proposed district should be accorded an "opportunity to appear, either collectively or separately, "and oppose its formation. In this connection the statute "says: 'The court shall hear such petition and remon" 'strance, and shall make such change in the boundaries " 'of such proposed district as the public good may re-

"'quire and make necessary, and if after such changes "'are made it shall appear to the court that such petition "'is signed or in writing consented to by the owners of "'a majority of all the acres of land within the district "'as so changed, the court shall make a preliminary order "'establishing such public road district, and such order "'shall set out the boundaries of such district as estab- "'lished . . . but the boundaries of no district shall be "'so changed as to embrace any land not included in the "'notice made by the clerk unless the owner thereof shall "'in writing consent thereto, or shall appear at the hear- "'ing and is notified in open court of such fact and given "'an opportunity to file or join in a remonstrance.' The "order actually made shows that four of the present plain- "tiffs, with three others, appeared in opposition to the "petition, recites that 'the court, after hearing and con- "'sidering said petition and said protests and remon "'strances and all evidence offered in support thereof, "'finds that the public good requires and makes necessary "'the organization, formation and creation of such pro- "'posed public road district . . . with boundaries as stated "'in said petition,' and sets out the boundaries of the "district as established.

"The sole purpose in creating the district, as the "statute shows, was to accomplish the improvement of "public roads therein—the particular roads to be desig- "nated by the district commissioners and an approving "vote of the land owners.

"As the district was not established by the legisla- "ture but by an exercise of delegated authority, there was "no legislative decision that its location, boundaries and "needs were such that the lands therein would be benefit- "ed by its creation and what it was intended to accom- "plish, and, this being so, it was essential to due process "of law that the land owners be accorded an opportunity "to be heard upon the question whether their lands would "be thus benefited. If the statute provided for such a "hearing, the decision of the designated tribunal would be "sufficient, unless made fraudulently or in bad faith. "*Fallbrook Irrigation District vs Bradley,* 164 U. S. 112, "174-175.

"Did the statute contemplate such a hearing? We

"have seen that it required that adequate public notice "be given of the presentation of the petition for the crea- "tion of the district and the time when it would be con "sidered, made provision for the presentation of remon- "strances by owners of lands within the proposed district, "and directed that the petition and remonstrances be "heard by the county court, that the court make such "change in the boundaries 'as the public good may re- "'quire' and that the boundaries be not enlarged unless "the owners of the lands not before included consent in "writing or appear at the hearing and be given an oppor- "tunity to present objections. That a hearing of some "kind was contemplated is obvious, and conceded."

The case of *Soliah vs Heskin*, 222 U. S. 522, is strongly relied upon by counsel. That is a case arising under the North Dakota drainage law. The opinion at first glance would seem to support the contention of counsel for Appellants but an examination of the North Dakota statute, upon which the case arose, discloses the fact that the North Dakota law was not subject to the same objections which are urged against the South Dakota enactment. Under the North Dakota statute, a petition for the construction of the drain is filed with the board of drain commissioners. This petition designates the starting point and terminus and general course of the proposed drain. The board of drain commissioners then employs surveyors who prepare profiles, plans, and specifications of the proposed drain, an estimate of the cost thereof, and a map or plat of the lands to be drained in duplicate, showing the regular subdivisions thereof, one copy of which is filed in the office of the county auditor in the county in which the drain is proposed to be constructed and the other with the board of drain commissioners, subject to inspection. Upon the filing of the surveyor's report, the board of drain commissioners fixes a date and public place for hearing objections to the petitions and gives notice of such hearing. The notices must contain a copy of the petition and a statement of the date of filing of the surveyor's report and the date when the board will act upon the petition, must be signed by a majority of the members of the drainage board and "shall be sent by "registered mail to the last known address of each and

"every *owner of land which may be affected* by the pro-"posed drain." The North Dakota statute therefore requires that the names of "each and every owner of land "which may be affected" be determined and actual notice given these at the very inception of the project and this notice must be given by sending to each owner a copy of the petition and of a statement of the date of filing the surveyor's report and the date upon which the board will act upon the petition. That is a very different proposition from merely publishing notice "to all persons whose "property is affected" without first determining who are affected, as required by the South Dakota statute. The opinion in the case of *Soliah vs Heskin* must consequently be read in the light of the North Dakota statute which provides for the giving of notice at two stages of the proceedings to the property owner, first, a notice before the drainage district is formed, and, second, a notice when the assessment of benefits is made. The North Dakota statute provides exactly the thing for the want of which the South Dakota statute is unconstitutional.

Counsel for Appellants place great reliance upon the recent case of *Milheim vs Moffat Tunnel District*, 262 U. S. 710. That case is clearly to be distinguished from the case at bar. It is a case arising upon an assessment made in a taxing district, the limits of which had been fixed by act of the legislature of the state of Colorado. The supreme court held, following *Spencer vs Merchant*, 125 U. S. 345, and other similar cases, that the legislative authority of a state extends to the formation of taxing districts and that a state legislature can enact a law fixing the boundaries of a taxing district without giving notice to the owners of property included therein. That is an entirely different proposition from the one arising under the South Dakota drainage law and the decision of the supreme court in *Milheim vs. Moffat Tunnel District* is not an authority in support of the South Dakota statute which on its face does not attempt to form a taxing district by legislative enactment.

The case of *Voight vs Detroit City*, 184 U. S. 115, was cited by JUDGE ELLIOTT in his opinion deciding this case in the District Court. This case is one of a line of cases involving the making of special assessments in cities

for various municipal purposes. See also *St. Louis Land Company vs Kansas City*, 241 U. S. 419. In this line of cases the courts hold that cities organized under general laws or special acts of the legislature may impose special assessments under general statutes authorizing the levying of assessments in proportion to benefits. In all such cases, it is held by the courts, some opportunity must be given the taxpayer to be heard as to the proportion of the benefits to be assessed against his property but the property owner is not entitled to a hearing upon the question of the determination whether the improvements shall be made for which the special assessment is levied.

In the case of *Central of Georgia Railway Company vs Wright*, 207 U. S. 127, the Supreme Court held (quoting from the syllabus): "Due process of law requires "that opportunity to be heard as to the validity of the tax "and the amount of the assessment be given to a taxpay- "er, who, without fraudulent intent and in the honest be- "lief that it is not taxable, withholds property from tax "returns, and this requirement is not satisfied where the "taxpayer is allowed to attack the assessment only for "fraud and corruption."

In *Londoner vs Denver*, 210 U. S. 373, the Court, passing upon a Colorado statute, says:

"In the assessment, apportionment and collection of "taxes upon property within their jurisdiction the Con- "stitution of the United States imposes few restrictions "upon the States. In the enforcement of such restric- "tion as the Constitution does impose this court has re- "garded substance and not form. But where the legis- "lature of a State, instead of fixing the tax itself, com- "mits to some subordinate body the duty of determin- "ing whether, in what amount, and upon whom it shall "be levied, and of making its assessment and apportion- "ment, due process of law requires that at some stage "of the proceedings before the tax becomes irrevocably "fixed, the taxpayer shall have an opportunity to be "heard, of which he must have notice, either personal, by "publication, or by a law fixing the time and place of the "hearing. *Hager vs Reclamation District*, 111 U. S. 701; "*Kentucky Railroad Tax Cases*, 115 U. S. 321; *Winona &* "*St. Peter Land Co. vs Minnesota*, 159 U. S. 526, 537;

"*Lent vs Tillson,* 140 U. S. 316; *Glidden vs Harrington,* "189 U. S. 255; *Hibben vs Smith,* 191 U. S. 310; *Security* "*Trust Co. vs. Lexington,* 203 U. S. 323; *Central of* "*Georgia vs Wright,* 207 U. S. 127. It must be remem- "bered that the law of Colorado denies the landowner "the right to object in the courts to the assessment, upon "the ground that the objections are cognizable only by "the boards of equalization.

"If it is enough that, under such circumstances, an op- "portunity is given to submit in writing all objections to "and complaints of the tax to the board, then there was a "hearing afforded in the case at bar. But we think that "something more than that, even in proceedings for tax- "ation, is required by due process of law. Many require- "ments essential in strictly judicial proceedings may be "dispensed with in proceedings of this nature. But even "here a hearing in its very essence demands that he who "is entitled to it shall have the right to support his alle- "gations by argument however brief, and, if need be, by "proof, however informal. *Pittsburg &c Railway Co. vs* "*Backus,* 154 U. S. 421, 426; *Fallbrook Irrigation District* "*vs Bradley,* 164 U. S. 112, 171, *et seq.* It is apparent "that such a hearing was denied to the plaintiffs in error. "The denial was by the city council, which, while acting "as a board of equalization, represents the state. *Ray-* "*mond vs Chicago Traction Co.,* 207 U. S. 20. The as- "sessment was therefore void, and the plaintiffs in error "were entitled to a decree discharging their lands from "a lien on account of it."

In *Turner vs Wade,* 254 U. S. 64, the Court held (quoting from the syllabus) as follows:

"The Georgia Tax Equalization Act (Laws, 1913, p. "123 §§ 6-7), empowers the Board of County Tax Assess- "ors to assess property for taxation and requires it to "notify the taxpayer of changes made in his returns; it "gives him, if dissatisfied, the right to demand an arbitra- "tion, and provides that a majority of three arbitrators, "one appointed by him, one by the Board and the third by "the two so selected, shall fix the assessment; but the "arbitrators must render their decision within ten days "from the naming of the arbitrator by the board, other- "wise the Board's decision—i. e., its assessment—stands

"affirmed; and no notice is afforded the taxpayer before "the making of the Board's assessment, nor any oppor- "tunity to be heard concerning it save that before the "arbitrators. Held, that an assessment so made by the "Board of County Tax Assessors, increasing the valua- "tion returned by a property owner, without notice or "hearing, was without due process of law, where his rem- "edy by arbitration proved abortive because the arbitra- "tors, though agreeing that the assessment was excessive, "could no two of them unite on a new assessment before "the ten day limitation expired."

We contend that an examination of the decisions of this Court pertinent to this case discloses that the following principles of law have been laid down:

First: That "due process of law" requires that at some stage of the proceedings the taxpayer must have an opportunity to appear and be heard *both as to the validity of the tax and as to its amount.*

Second: That the state legislature possesses the authority, by direct legislative enactment, to establish taxing districts and to fix the boundaries thereof without notice to the property owners included within such district.

Third: That where, by direct legislative enactment, certain territory has been formed into a taxing district the taxing authorities of such district may impose special assessments upon the property situated within the taxing district, pursuant to powers conferred by the legislature upon the taxing authorities, without first giving the property owner an opportunity to be heard as to the necessity for the making of the improvement, but in such cases the taxpayer must be given an opportunity to be heard as to the amount of the tax which he is to be compelled to pay.

Fourth: That in cases in which a taxing area or district is not formed by direct act of the legislature but is formed for the making of some public improvement by special assessments upon the property contained in the area or district, by local officers through authority delegated to them by the legislature to act upon petition of property owners, it is *absolutely essential to the validity of the proceedings that notice be given to the property owners whose interests are affected before the taxing area or dis-*

trict can be formed, the work done, and a tax imposed. The notice is not necessarily a personal one and may be by publication *but a notice of some character is essential.*

Analyzing all of the cases upon the subject, there cannot be found a single case in which a law containing the provisions of the South Dakota drainage law has been sustained by the courts. In every instance in which a law has been held valid there was a positive requirement that notice should be given to the taxpayer of a hearing upon the question of the making of the proposed improvements. In every instance the property affected has been definitely determined before the hearing and the property owner has been advised in some manner that his property is included within the area upon which it is intended that a tax or asssesment be imposed.

Search the law reports through; there cannot be found a case in which a mere general notice directed to "all persons affected" has been held to be a sufficient notice to a property owner that his property is to be included within an assessment area.

The inequity of a law like that of South Dakota is well illustrated by the results of the proceedings of the Board of County Commissioners of Minnehaha county in the case at bar. Under a notice to "all persons affected" it is sought to assess for the construction of the works in Drainage Ditch No. 1 and 2 not only the area formerly assessed for the construction of Drainage Ditch No. 1 and for the construction of Drainage Ditch No. 2, but to assess also property situated several miles from any of the work done in Drainage Ditch No. 1 and 2 and miles away from any of the land in the area assessed for the original construction of Drainage Ditch No. 1 or of Drainage Ditch No. 2. Property, that could not by any possibility be drained by the work done in Drainage Ditch No. 1 and 2 and that could not even remotely be benefited by that work, was included in the assessment area, and under the notice there could have been included just as well any other property situate within the limits of the 800 square miles comprising Minnehaha county.

If the County Commissioners of Minnehaha county had been required by the South Dakota drainage law to obtain, in the first instance, a survey and plat of the pro-

posed drainage area, and then to notify, either personally or by mail, publication, or posting, the property owners interested in that area, their proceedings might have had a semblance of legality, but under the South Dakota statute no such procedure is required. The County Commissioners have before them the names of the property owners through whose lands the drainage ditch passes but neither the Board of County Commissioners nor any one else has the slightest idea of what lands will be assessed for the cost of the construction of the drainage ditch. The only notice that is given to anyone is the general notice to "all persons affected." After the drainage works are completed, then for the first time a survey is made for the purpose of ascertaining what lands are "affected" and shall be assessed. The County Commissioners fix the proportion of benefits and publish the notice which, for the first time, informs the property owner that his land is liable for the assessment. It is then too late to lock the barn door. The horse has already been stolen. The drainage project has been constructed, the cost incurred, and all that is left for the property owner to do is to pay his assessment and "look pleasant." We reiterate, that never has a law of this character been sustained by this Court. All decisions of this Court, cited in support of the constitutionality of the South Dakota statute, can be easily distinguished as they are all of them based upon facts and principles of law which are not found in this case.

The bill in this case attacked directly the constitutionality of the South Dakota Drainage Statute. In the District Court the District judge upheld the constitutionality of the statute but granted an injunction upon other grounds (*Chicago, Rock Island & Pacific Railway Co. vs Risty*, 282 Fed. 364). In the Circuit Court of Appeals JUDGE KENYON, in delivering the opinion of the Court, expressly avoided passing upon the constitutional questions involved and while he expressly admitted that these questions were very grave ones, he held that their determination was not necessary to the decision of the case in that court and affirmed on other grounds the decision of the District Court.

Upon this appeal in this court, the constitutionality of the South Dakota Drainage Statute is again brought

before the court by the averments of the bill and answers and by the evidence introduced upon the trial in the District Court and preserved in the record in this Court. The position taken by the Plaintiff and Appellant is, that the South Dakota Drainage Law is in violation of the provisions of the Fourteenth Amendment to the Constitution and while, as will be discussed in a later portion of our argument, we contend that the proceedings taken by the Board of County Commissioners of Minnehaha County were so irregular as to render them invalid even if the statute were constitutional, we now submit, that on account of the unconstitutional provisions of the South Dakota Drainage Law the Board of County Commissioners of Minnehaha County possessed no authority to make assessments against the property of Appellee for the purpose of defraying the costs of the construction of Drainage Ditch No. 1 and 2.

In concluding our discussion upon this branch of this case we submit that the South Dakota drainage statute is unconstitutional in that no notice to property owners is required before a drainage assessment area is established or the work constructed and consequently the statute is unconstitutional as authorizing the taking of property without due process of law, contrary to the fourteenth amendment to the federal constitution.

II.

THE SOUTH DAKOTA DRAINAGE LAW IS IN VIOLATION OF SECTIONS 2 AND 13 OF ARTICLE VI OF THE SOUTH DAKOTA STATE CONSTITUTION AND IS THEREFORE UNCONSTITUTIONAL.

We now come to the question of the constitutionality of the South Dakota drainage law under the provisions of the South Dakota State Constitution. Section 2 of Article VI of the South Dakota Constitution provides as follows:

"§ 2. No person shall be deprived of life, liberty or "property without due process of law."

Section 13 of Article VI of the South Dakota Constitution provides as follows:

"§ 13. Private property shall not be taken for public "use, or damaged without compensation * * * * *"

It will thus be seen that the South Dakota state constitution contains not only the due process of law clause contained in the fourteenth amendment to the federal constitution but also the just compensation clause contained in the fifth amendment to the federal constitution, thus making the provisions applicable to the state which by the fifth amendment are made applicable to the federal government.

The South Dakota drainage statute has a number of times been before the South Dakota supreme court for construction in various of its phases but the question as to the constitutionality of the statute, by reason of its failure to provide a notice to property owners before the assessment area is determined, has never been presented to the South Dakota supreme court or passed upon by that court. Shortly prior to the institution of the case at bar, a suit was commenced in the circuit court of Minnehaha county, South Dakota, by one Oluf O. Gilseth against the Board of County Commissioners of Minnehaha county and other persons, to restrain certain acts with relation to the making of an apportionment of benefits for the construction of the drainage works in controversy in the case at bar. Gilseth, the plaintiff in that case, was a property owner residing upon the flats north of the city of Sioux Falls upon whose land the County Commissioners were attempting to make an assessment. The South Dakota supreme court held that Gilseth was estopped by his actions with respect to the construction of the drainage works from objecting to an assessment to pay for their cost of construction, and the decision appears as *Gilseth vs Risty*, 46 S. D. 374. In the opinion of the majority of the Court, the Court says: "We do not understand that "appellant questions the constitutionality of the law un- "der which the said project was carried out." The Court thereupon proceeds to determine the case under the assumption that the law is constitutional and that the plaintiff, Gilseth, makes no attack upon it. In the dissenting opinion filed by one of the Judges of the Supreme Court of South Dakota in *Gilseth vs Risty*, the question of the constitutionality of the statute is discussed but the opinion

of the majority of the Court decides the case under the express reservation that the question of constitutionality is not involved.

The Supreme Court of South Dakota, in the case of *Evans vs Fall River County*, 9 S. D. 130, stated the law in that jurisdiction in the following language:

"Notice to the taxpayer is a jurisdictional matter, "and his right to be heard in opposition to an assessment, "or to the amount thereof, is vitally essential to the valid- "ity of every assessment. *Black, Tax Titles*, 488; 2 "*Blackw. Tax Titles*, 953; *Cooley, Tax'n*, 227; *County of* "*Santa Clara vs Southern Pac. R. Co.*, 18 Fed. 385; *Pow-* "*ers vs. Larrabee (N. D.)*, 49 N. W. 724; *Bank vs. Maher*, "9 Fed. 884."

From the foregoing citation it will be seen that the Supreme Court of South Dakota recognizes the doctrine laid down by the Supreme Court of the United States to the effect that in a special assessment proceeding the taxpayer must have the right, at some time or other, and in some manner or other, to be heard both as to the validity and as to the amount of the assessment.

The same argument which we have made relating to the unconstitutionality of the South Dakota drainage statute under the fourteenth amendment to the federal constitution applies with equal force to the statute considered in the light of the provisions of the South Dakota constitution.

We therefore contend that the South Dakota drainage law is unconstitutional under the constitution of that State for the reason that no notice is given the property owner of the proceedings precedent to the determination of the boundaries of the assessment area.

Counsel for Appellants argue that the proceedings had in the case at bar are valid for the reason that, as a matter of fact, the drainage notice did contain a description of the property sufficient to give notice to each property owner whose lands were affected. We do not by any means concede that the notice given was sufficient to apprise property owners that their lands were to be subject to assessment for the payment of the cost of the construction of the drainage project, but even if the Board of County Commissioners of Minnehaha county had pub-

lished a notice sufficient for that purpose it would not have helped the situation. The statute does not require any such notice to be published and is consequently unconstitutional. Validity cannot be injected into an unconstitutional and void statute by taking under it the proceedings which would have to be taken under a constitutional and valid status. The law being unconstitutional, all proceedings under it are invalid *ab initio*.

III.

THE LEGISLATURE OF SOUTH DAKOTA HAS NEVER EXERCISED THE AUTHORITY GRANTED TO IT BY SECTION 6 OF ARTICLE XXI OF THE SOUTH DAKOTA CONSTITUTION PROVIDING FOR THE ORGANIZATION OF DRAINAGE DISTRICTS.

To the proper determination of this case, there is necessary a consideration of just what of the powers granted to it by the South Dakota constitution the legislature of that state has attempted to exercise by the enactment of the South Dakota drainage statute. This involves an analysis of the exact phraseology of the constitutional provision under which the legislature obtained its power to act. Section 6 of Article XXI of the constitution constitutes that authority and is as follows:

"§ 6. The drainage of agricultural lands is hereby "declared to be a public purpose and the legislature may "provide therefor, and may provide for the organization "of drainage districts for the drainage of lands for any "public use, and may vest the corporate authorities there-"of, and the corporate authorities of counties, townships "and municipalities, with power to construct levees, drains "and ditches, and to keep in repair all drains, ditches and "levees heretofore constructed under the laws of this "state, by special assessments upon the property bene-"fited thereby, according to benefits received."

The first clause of the foregoing section declares that the drainage of agricultural lands is a public purpose, and gives the legislature power to "provide therefor." This clause is complete in itself and to determine its meaning and intent requires no aid from the remainder of the section.

The section then goes further and gives the legislature authority to "provide for the organization of drain-"age districts for the drainage of lands for any public "use." This is a power conferred upon the legislature distinct and in addition to that contained in the first clause of the section. It gives the legislature authority to establish drainage districts for the purpose, not only of carrying into effect the power to drain agricultural lands, but for the purpose of carrying on any drainage project for "any public use."

As the section stands, when the first and second clauses are considered together, it appears that three things are provided for: (a) the drainage of agricultural lands is made a public purpose, (b) the legislature is given power to provide for the drainage of agricultural lands, and (c) the legislature is given power to provide for the organization of drainage districts for the drainage of land for any public use.

The constitutional section then continues giving to the legislature authority, (a) to vest the corporate authorities of drainage districts with power to construct levees, drains and ditches and keep in repair all drains, ditches and levees theretofore constructed under the laws of the state, by special assessments upon property benefited thereby, according to benefits received, and (b) to vest the corporate authorities of counties, townships, and municipalities with power to construct levees, drains and ditches and keep in repair all drains, ditches, and levees theretofore constructed under the laws of the state, by special assessments upon the property benefited thereby, according to the benefits received.

Throughout the entire section there appears a clear intent to authorize the legislature to proceed in matters respecting drainage of lands in either of two ways, (a) by the organization of drainage districts with corporate authorities, and (b) by empowering the corporate authorities of counties, townships and municipalities with power to enter upon and carry out drainage projects. It is not made obligatory upon the legislature to follow either system for the construction of drainage. The constitution gives the legislature the option to carry on drainage work by drainage districts organized as separate en-

tities, or to carry on the work through the regularly constituted authorities of counties, townships, and municipalities. The legislature of South Dakota, acting under the constitutional option given it by Section 6 of Article XXI of the constitution, has declined to provide for the organization of drainage districts as separate corporate entities, and has provided for the doing of all drainage work through the corporate authorities of the various counties, to-wit, the Board of County Commissioners, county auditor, county treasurer, and other county officers.

It follows that in the case at bar there was not and could not under the law have been formed any drainage districts. The drainage projects, known as Drainage Ditch No. 1, and Drainage Ditch No. 2, and Drainage Ditch No. 1 and 2, were all conceived and carried out by the county authorities of Minnehaha county under the constitutional provision giving the legislature the power to vest in the county authorities the power to construct levees, drains, ditches, etc. The legislature never attempted to exercise the power given it by the constitution to organize drainage districts, and the application of the term "district" to the assessment area of Drainage Ditch No. 1, Drainage Ditch No. 2, or Drainage Ditch No. 1 and 2 is a misnomer. That term is reserved by the South Dakota constitution for an entirely different sort of organization and should not be used in connection with a drainage project carried on by the Board of County Commissioners under the South Dakota statute.

The situation with respect to this matter was pointed out by Judge Elliott in his opinion upon the trial of this case in the District Court. *Chicago, Rock Island & Pacific Railway Company vs Risty,* 282 Fed. 364. In this opinion, Judge Elliott says, (p. 368): "Pursuant to this "provision of the constitution, the legislature of the state "has provided for the drainage of agricultural lands: "*but nowhere is there any statutory enactment under "which drainage districts may be formed for the drain-"age of lands 'for any public use.'*"

A further examination of the particular wording of Section 6 of Article XXI of the South Dakota constitution discloses the important bearing which the failure of

the legislature to exercise the authority of establishing drainage districts has upon the decision of the case at bar. The wording of the constitutional provision is that the legislature "may provide for the organization of drain-"age districts for the drainage of lands for any public use," and may vest "the corporate authorities thereof," etc. Eliminate the quoted words (which are the only ones in the section referring to drainage districts) from the section and the result would be that the section would read, "The drainage of agricultural lands is hereby de-"clared to be a public purpose and the legislature may "provide therefor, and may vest the corporate authori-"ties of counties, townships and municipalities with pow-"er to construct levees, drains, and ditches, etc."

In other words, the South Dakota legislature is given authority to carry on drainage projects either through the formation of drainage districts as corporate entities, or through the municipal authorities of the counties, townships, and municipalities, but while drainage "for "any public use" may be constructed through corporate drainage districts, drainage of lands for agricultural purposes only may also be carried on by the county, townships and other municipal authorities. The constitution nowhere gives the legislature power to provide that drainage for "any public use" other than the drainage of agricultural lands may be constructed by the county, township, or other municipal authorities. Drainage for any other public purpose must be constructed by districts specially organized therefor.

It consequently follows that the legislature of South Dakota cannot, under the provisions of the state constitution, authorize drainage projects, for other than agricultural lands, to be conducted by the county, township, or other municipal authorities. Such authorities may construct drainage projects for the drainage of agricultural lands, but for any other public purposes the works must be constructed by the corporate authorities of drainage districts established for that purpose.

While the legislature of South Dakota had the right, under the state constitution, to enact a law authorizing the Board of County Commissioners of Minnehaha county to construct a drainage project for the drainage of agri-

cultural lands, it could not, under the constitution, authorize the Board of County Commissioners to carry on any drainage project for any public use other than the drainage of agricultural lands.

It follows, therefore, that if Drainage Ditch No. 1 and 2 was initiated by the Board of County Commissioners of Minnehaha county for a purpose other than the drainage of agricultural lands, the Board exceeded their powers in constructing the dams, ditches, spillway, and other works in Drainage Ditch No. 1 and 2, for which Appellee is now asked to pay a proportionate part. The question whether Drainage Ditch No. 1 and 2 was a project for the drainage of agricultural lands or for some other purpose we will discuss in a separate section of this brief.

IV.

DRAINAGE DITCH NO. 1 AND 2 WAS NOT A PROJECT FOR THE DRAINAGE OF AGRICULTURAL LANDS, AND THE ACTION OF THE BOARD OF COUNTY COMMISSIONERS OF MINNEHAHA COUNTY IN ENTERING UPON THE PROJECT AND IN CARRYING IT ON WAS *ULTRA VIRES*.

We now come to the consideration of the question as to whether Drainage Ditch No. 1 and 2 was a project for the drainage of agricultural lands or for the carrying out of some other purpose. There are at this time before this court pending appeals in six cases involving Drainage Ditch No. 1 and 2, and there is a divergence of views of the Appellees in various of the six cases as to the status of the drainage proposition. In some of the cases, the Appellees contend that Drainage Ditch No. 1 and 2 was simply a continuation of Drainage Ditch No. 1 and of Drainage Ditch No. 2, and that the work was initiated and carried on by the Board of County Commissioners of Minnehaha county as a project for the repairing of Drainage Ditch No. 1 and of Drainage Ditch No. 2. In the case at bar, the position which we take is that Drainage Ditch No. 1 and 2 must be considered as an independent project entered upon by the Board of County Commissioners and that it is not a mere project for the re-

pair of Drainage Ditch No. 1 and of Drainage Ditch No. 2, and is not in any manner controlled by the original proceedings for the construction of the old ditches. We contend that Drainage Ditch No. 1 and 2 must be considered as if it were an entirely new proposition entered upon after the spillway at the outlet of Drainage Ditch No. 1 had been washed out in the spring of 1916.

In the bill in this suit, it is alleged that the Board of County Commissioners of Minnehaha county has spent a sum in excess of $255,000 in the construction of a spillway, dams, and retaining gates, "designed not for the "purpose of drainage of agricultural lands, but solely "for the purpose of controlling and retarding the flow "of water, through the outlet of said Drainage Ditches "No. 1 and No. 2 into the Big Sioux river for the pur-"pose of preventing a change in the channel of said river "and of preventing the drainage of the gravel bed through "which the said city of Sioux Falls obtains its water "supply." It is further alleged that less than five per cent of such money has been expended for any purpose legitimately connected with the construction and maintenance of Drainage Ditch No. 1 and of Drainage Ditch No. 2. The bill further sets up the alleged proceedings for the organization of Drainage Ditch No. 1 and 2.

The answer sets up the organization of Drainage Ditch No. 1 and 2 as a separate organization from Drainage Ditch No. 1 and Drainage Ditch No. 2, and the theory of Appellants is that Drainage Ditch No. 1 and 2 was a separate and independent organization and not a mere continuation of Drainage Ditch No. 1 and Drainage Ditch No. 2, and that its formation was compelled for the purpose of saving the water supply of the city of Sioux Falls, and preventing the change of the channel of the Big Sioux river, and the imperiling of the interests of various property owners.

The position of Appellants throughout this case has been that Drainage Ditch No. 1 and 2 was a new and separate organization. They have so pleaded, and with their allegations in this regard we have no contention to make. The Appellee in this case is satisfied to rest this proposition upon the allegations of the answer and to concede that Drainage Ditch No. 1 and 2 was a new or-

ganization and was entirely independent of the original ditches. As we have said, in others of the six cases tried at the same time and upon the same record as this case, the plaintiffs (Appellees in this court) contested the claim of the defendants and intervenors (Appellants in this court) that Drainage Ditch No. 1 and 2 was a new and independent proposition and contended that all of the work done by the Board of County Commissioners was done merely as a continuation of the work upon the original ditches, Drainage Ditch No. 1 and Drainage Ditch No. 2. JUDGE ELLIOTT, in his opinion filed in the District Court, arrived at the conclusion that Drainage Ditch No. 1 and 2 was not a new and independent organization but was simply a continuation of the old original ditches. *Chicago, Rock Island & Pacific Railway vs Risty*, 282 Fed. 364 (p. 374 *et seq*).

With due respect to the opinion of the learned District Judge (who evidently felt inclined to hold so as not to preclude the holders of the drainage ditch warrants from a right to recover the amount of their investments from the property owners within the original assessment area of the Drainage Ditch No. 1 and of Drainage Ditch No. 2), we respectfully submit, that under the allegations of the bill and answer in this case, and under the evidence contained in the record, Drainage Ditch No. 1 and 2 must be deemed to be a new and independent organization and must stand or fall as such. If it possesses no life of its own, life cannot be injected into it by treating it as a continuation of the old original ditch organizations.

It appears from the evidence in this case that after the outlet of Drainage Ditch No. 1 had been washed out in the spring of 1916, various plans were proposed for the controlling of the water so as to prevent the formation of a new river channel and the draining of the gravel bed, from which the city of Sioux Falls obtained its water supply. No changes in Drainage Ditch No. 1 and Drainage Ditch No. 2 were required for the purpose of draining agricultural lands in the flats north of the city of Sioux Falls. The two ditches were working beautifully, so far as that purpose was concerned. They formed a perfect, complete and satisfactory system for the drainage of the flats. The property owners in the

flats could not have asked for any drainage system more complete. The trouble was, that instead of draining too little, the ditches drained too much, and were too efficient in their operation. No change in them was required for any purpose connected with the drainage of agricultural lands. The only people interested were those who objected to the formation of a new channel for the Big Sioux river and who were interested in maintaining a water supply for the city of Sioux Falls. The change in the course of the river, if made, would have operated to destroy various industries dependent upon the water power at the dams south of the falls. It would also have prevented the flow of the water through the city limits, and would have forced the city of Sioux Falls to seek some other municipal water supply.

The Board of County Commissioners, after various plans had been considered and for one reason after another abandoned, finally formed a new organization under the name of Drainage Ditch No. 1 and 2, and went ahead and expended upwards of $250,000 in the construction of a spillway, retaining walls, retaining dams, ditches, etc. The greater part of the money was invested in a spillway, dam and retaining walls which were purposely intended to retard, rather than to accelerate the flow of the surface water which collected upon the flats north of the city of Sioux Falls, and which consequently were intended to hinder rather than to facilitate the drainage of the flats.

After $255,000 and over had been expended upon the spillway and other water retaining works, the Board of County Commissioners proceeded to make an apportionment of benefits upon the lands "affected" by the improvement. In the assessment area, the Board of County Commissioners included not only the territory which had been included in the assessment area of the original ditches, Drainage Ditch No. 1 and Drainage Ditch No. 2, but also included all of the lands and lots within a considerable distance on either side of the Big Sioux river between the south boundary of the property in the assessment areas of the original ditches, along the channel of the Big Sioux river for a distance of some nine miles, along where the river runs west and south of

the city of Sioux Falls and through the city, and up to a point a short distance north of Sioux Falls. The ostensible reason for the inclusion of all this additional territory was the alleged fact that the property along the river was subject to floods at the time of freshets which would be relieved by the construction of the spillway and other water retaining works. Upon the trial, it was shown that with the exception of a small tract of territory immediately south of the original ditch assessment areas, the remainder of the lands, for a space of eight or nine miles along the channel of the Big Sioux river, had never suffered from flood waters, excepting in the spring of 1881, and that the occasion for the flood in that year was not the collection of water upon the flats north of the city of Sioux Falls, but the forming of an ice gorge at a point in the river in the southeast portion of the city. There was consequently a total lack of any proof in the record that the territory, along the channel of the river and through the city of Sioux Falls attempted to be included in the assessemnt area, was in any manner affected, beneficially or otherwise, by the construction of the spillway and other water retaining works.

In addition, the Board of County Commissioners attempted to proportion "benefits" to the City of Sioux Falls, the Northern States Power Company (owners of the waterpower on the Big Sioux river above the falls), and upon four railroad companies (one of which was Appellee) having railroad tracks and station grounds situated within the attempted assessment area. In the case of Appellee, and of one of the other railroad companies sought to be assessed, the railroad owned right of way and trackage both in the assessment areas of the original ditches and in the additional territory attempted to be included within the assessment area of Drainage Ditch No. 1 and 2. The other two railroads owned trackage and property only in the new territory and had no mileage or station grounds in the original assessment areas. In the decrees entered in the various railroad cases, the District Court enjoined the assessment of the railroad properties not included in the original assessment areas but reserved, without prejudice, the deter-

mination of the question whether Appellee and the other railroad companies having land both in the original assessment areas and in the new assessment area should be held liable for an assessment upon its property in the original assessment area.

The question therefore arises whether, under the record in this case, the Board of County Commissioners of Minnehaha county possesses authority to make any apportionment of benefits whatsoever, or any assessment upon any property whatsoever, for the cost of the construction of the works in Drainage Ditch No. 1 and 2. Our contention in this regard is as follows:

It is alleged by the defendants and Appellants in their answer, and Appellee admits it to be a fact, that Drainage Ditch No. 1 and 2 was a new and independent proposition and not a continuation of Drainage Ditch No. 1 and of Drainage Ditch No. 2, and cannot be considered as a proposition for the repair of the original ditches. It is a project which must stand or fall upon its own footing.

Under the evidence in this case, Drainage Ditch No. 1 and 2 was not a project for the drainage of agricultural lands but was a project for another "public use," to-wit, the preservation of the water flowage in the channel of the Big Sioux river and of the supply of water in the gravel bed from which the city of Sioux Falls obtains its water supply. Neither of these propositions involves the drainage of agricultural lands. Drainage Ditch No. 1 and Drainage Ditch No. 2 had completely accomplished the object of draining the flats north of the city of Sioux Falls. If those drainage works were damaging other property interests, the remedy for the persons interested was to have the ditches abated as nuisances. Instead of pursuing this course, the Board of County Commissioners of Minnehaha county entered upon the construction of an elaborate system of water retaining works by which the water, which was collected from the flats into Drainage Ditch No. 1 and Drainage Ditch No. 2, could be retained until it could be passed off gradually into the Big Sioux river. To have abated Drainage Ditch No. 1 and Drainage Ditch No. 2 as nuisances, would have been to permit

the water, accumlating upon the flats, to remain there until it could flow off through its natural channel around the bends in the Big Sioux river, the same as it did before Drainage Ditch No. 1 and Drainage Ditch No. 2 were constructed. Instead, however, of doing this, the Board of County Commissioners proceeded to construct a new water retaining system by which the water could be retained upon the flats until it could gradually be drawn off, partly through the natural channel of the river and partly through a restricted passageway formed by the spillway and its attendant retaining walls and dams. In other words, the Board of County Commissioners proceeded to spend $250,000 and over for the purpose of accomplishing the same object that could have been accomplished by damming up the original ditches and leaving the flats in the same condition that they were before the original ditches were constructed. While some evidence was introduced, tending to show that a portion of the water collecting upon the flats passed off through the spillway, it remained in the evidence almost uncontradicted that the situation in the flats above the city of Sioux Falls is as bad as it was before any drainage ditches were constructed.

From all of the evidence in the record in this case, it would appear that the construction of the spillway and other works, under the organization of Drainage Ditch No. 1 and 2, was not for the purpose of draining agricultural lands but was for an entirely different purpose. This is the conclusion to which JUDGE ELLIOTT came in his opinion in the District Court, and upon this subject JUDGE ELLIOTT says, *Chicago, Rock Island and Pacific Railway Company vs. Risty,* 282 Fed. 364 (p. 378):

"There is another and further suggestion: I am of "the opinion that this reconstruction of the old spillway "without change of location, the repair of the break from "the river into the ditch, the cleaning of the ditch, the "change of the headgates where the flood waters are "taken from the river, everything that was done under "this pretended establishment of a new ditch, could not "have been viewed in the same light or as serving the "same purpose as the construction of the original ditches,

"because the thing that caused the board of commis-
"sioners to take any action with reference to the condi-
"tion that then existed was the danger that existed be-
"cause of the conduct of the water down through these
"two drainage ditches to and through this spillway. The
"danger that was threatened was not that the agricultural
"lands would not be drained, but that immense damage
"was threatened, that the course of the river was to be
"diverted to this cut-off, that great areas of land were
"threatened to be cut away by this river 100 feet deep,
"and that the water supply of the city was threatened
"to be taken away because of this drainage ditch and
"this imperfect spillway, because the water was to be
"taken from the river and all of the benefits of the river
"for several miles, through and around the city of Sioux
"Falls, would be destroyed. The power of the Northern
"States Power Company would be destroyed, by taking
"the water from the river. If it had not been for those
"conditions, for these threatened dangers, no action would
"have been taken; the ditches would have continued to
"function as they had functioned before. If the spill-
"way had been properly constructed originally, and if it
"had not proven inadequate, there would have been no
"cause for any action by the board in the year 1916.
"Every consideration that impelled action by the board
"was some phase of the threatened danger by reason
"of the inadequate and imperfect construction of these
"two ditches. Neither of these considerations that in-
"fluenced the action of the board *had anything to do with*
"draining agricultural lands."

As has been shown, the legislature of South Dakota has never passed an act, putting into effect the authority vested by the constitution in the legislature to create drainage districts. As has also been shown, while drainage of agricultural lands can be carried on by county, township, and other municipal authorities, drainage for other "public uses" can only be constructed by drainage districts through their corporate authorities. It appearing from the record in this case that the work done under the organization of Drainage Ditch No. 1 and 2 was not for the purpose of agricultural lands but for other "public uses," it follows that the Board of County

Commissioners of Minnehaha county exceeded its authority in attempting to organize Drainage Ditch No. 1 and 2 and to construct the spillway and attendant works. Upon this proposition, JUDGE ELLIOTT, in his opinion, says:

"It may be said that to remedy these wrongs consti-
"tuted a public use, as referred to in the constitution of
"the state of South Dakota. Admitting that that is true,
"we are confronted with the proposition that there has
"been no legislation, conforming with the provisions of
"the constitution, authorizing the legislature to provide
"for the establishment of drainage districts and in the
"naming of officers with the powers therein referred to.
"If, therefore, any claim were made that the commis-
"sioners were acting under this authority, independent
"of the provision of law with reference to the drainage
"of agricultural lands, the answer is that the provision
"of the constitution is not selfexecuting, and that no leg-
"islation has been provided carrying this provision of
"the constitution into effect."

We therefore submit, that as the construction of the spillway and other attendant works was not a project for the drainage of agricultural lands, and as drainage for public uses other than the drainage of agricultural lands can, in South Dakota, only be carried on by the corporate authorities of drainage districts, and as the legislature of South Dakota has never authorized the organization of drainage districts with corporate authorities, all of the acts of the Board of County Commissioners of Minnehaha county, in attempting to organize Drainage Ditch No. 1 and 2, and in constructing the spillway and attendant works under such organization, were *ultra vires*, and that no apportionment of benefits or assessment for the cost of such construction can be made upon the property of Appellee.

V.

THE SOUTH DAKOTA DRAINAGE LAW IS UNCONSTITUTIONAL, SO FAR AS RESPECTS ASSESSMENTS OF RAILROAD PROPERTY, IN THAT IT PROVIDES FOR THE GIVING OF NO NOTICE WHATEVER OF THE APPORTIONMENT AND

EQUALIZATION OF BENEFITS TO RAILROAD COMPANIES.

In the preceding discussion of the South Dakota drainage law, we have considered the subject of the notice required by the statute to be given to property owners in general. We now desire to call the attention of the court to the provisions (or want of provisions) in the statute, relating to the notice to be given to railroad companies.

So far as concerns the statutory provisions relating to the notice to be given before a drainage project is entered upon by the Board of County Commissioners under the South Dakota drainage law, there is no difference as respects railroads and other property owners. The only notice, as has been seen, is a general notice to all persons "affected" by the proposed drainage project.

When we come to the matter of the notice given for the equalization of benefits, a singular situation is presented by the provisions of the statute in, that while the law provides for the publication of a notice to the owners of land, there is no provision whatever for the publication of any notice to railroad companies.

The provisions respecting the notice to be given of the equalization of proportion of benefits is found in Section 8463, South Dakota Revised Code, 1919. This section was evidently originally drafted for the purpose of providing a method for the equalization of assessments upon agricultural lands. The method, provided by the statute, for arriving at the assessment and equalization of benefits, is to take some "particular tract as a unit" and then with this tract as a measuring stick to determine, in number of units, the benefits received by the remaining tracts of land. This system is one which is in its nature applicable to agricultural lands, but which cannot well be applied to other classes of property, such as railroads and the property of municipalities. In the case of railroads, the taking of a particular tract of land as the unit, or measuring stick cannot be made to work out successfully unless the taxing authorities are content to assess railroads merely by virtue of the railroad ownership of the tracts of land comprised in the right of way within the assessment area. In other words, the

only way in which the proportion of benefits to railroad property could be determined, under the system provided by the statute, would be to consider merely the area of the right of way and proportion benefits to it the same as to the other agricultural land within the assessment area.

Evidently the legislature, in enacting the South Dakota drainage law, was not satisfied to have railroad companies and municipal organizations pay assessments for the construction of drainage works upon the same basis as the owners of agricultural lands, and in enacting Section 8463, South Dakota Revised Code, 1919, after providing the method for the assessment of the proportion of benefits upon lands by selecting some particular tract as a unit, there was added to the Section (something in the nature of an afterthought) the clause, "the pro- "portion of benefits which any county, city, town or "township may obtain by the construction of such drain- "age to highways or otherwise, and *the benefits which "any railroad company may obtain for its property by "such construction,* shall be fixed and equalized together "with the proportion of benefits to tracts of land." No method of arriving at the assessment and equalization is provided by the statute. The "particular tract as a unit" system is selfevidently inapplicable in such cases but the legislature has provided nothing to take its place. The law gives the Board of County Commissioners the naked power to fix and equalize the proportion of benefits to counties, cities, towns, townships, and railroad companies, but provides no method upon which the assessment and equalization can be based.

The notice of equalization of proportion of benefits, provided by Section 8463, "shall state the route and "width of the drainage established, a description of each "tract of land affected by the proposed drainage and the "names of the owners of the several tracts of land as "appears from the records of the office of the Register of "Deeds, at the date of the filing of the petition, and the "proportion of benefits fixed for each tract of property, "taking any particular tract as a unit, and shall notify "all such owners to show cause why the proportion of "benefits shall not be fixed as stated." This is a notice

directed solely to the owners of tracts of land within the assessment area. It does not purport to be a notice to a county, city, town, township, or railroad company respecting the assessment or the equalization of proportion of benefits upon the property belonging to any of such organizations. The statute authorizes the Board of County Commissioners to assess the "proportion of benefits" which any county, city, town or township may obtain by the construction of drainage to highways or otherwise, but does not provide for the giving of any notice to the municipality affected. With respect to railroad companies, the statute authorizes the Board of County Commissioners to "fix and equalize" the "benefits", but seems to make a distinction between railroad property and other classes of property by using the words "proportion of benefits" with respect to other property, but the term "benefits" with respect to railroad property. This would seem to indicate that it was not the intent of the legislature that railroad companies should be assessed in the same proportionate manner as are agricultural lands, or as are counties, cities, towns or townships.

The fact, however, remains that the legislature of South Dakota has made no provision whatever for the giving of notice to railroad companies, cities, towns, or townships, of the assessment or equalization of benefits supposed to be derived from the construction of the drainage works. It consequently follows that as far as railroad companies, counties, cities, towns, and townships are concerned, the statute provides for no notice whatever, at any stage of the proceeding, of the assessment or of the tax. Even if the South Dakota drainage statute should be held valid as far as respect the matter of notice to the owners of agricultural lands, it is clearly unconstitutional as to railroads and municipalities by reason of its failure to provide for any notice whatever at any stage of the proceedings. It clearly comes within the inhibition of the Fourteenth Amendment and within the doctrine laid down by the Supreme Court in numerous cases.

Central of Georgia Railway Company vs Wright, 207 U. S. 127,

Londoner vs Denver, 210 U. S. 373,
Soliah vs Heskin, 222 U. S. 522,
Turner vs Wade, 254 U. S. 64

The South Dakota drainage statute having failed to provide for the giving of any notice, at any stage of the proceedings prior to the time the tax becomes absolute, to railroad companies or municipalities, any assessment or tax imposed upon each corporation or municipality under the statute is without due process of law and void.

VI.

THE ATTEMPTED ASSESSMENT UPON THE PROPERTY OF APPELLEE WAS ARBITRARY, UNJUST, AND ILLEGAL, AND CONSTITUTES A DISCRIMINATION SO PALPABLE AND ARBITRARY AS TO AMOUNT TO A DENIAL OF THE EQUAL PROTECTION OF THE LAW.

Under the proposed assessment of benefits, out of a total of 32,549.62 units there were assessed against Appellee 1681 units, upon which the assessment of Appellee would be in excess of $15,000. The methods used by the Board of County Commissioners in arriving at these figures is disclosed by the testimony of H. Rettinghouse, a civil engineer employed by the Board of County Commissioners to make a survey of the assessment area, and who made the computations contained in the assessment of benefits adopted by the Board. Mr. Rettinghouse was called by Appellants as a witness and upon the trial testified (Record pp. 350-3951), as follows:

"We used this unit selected as one and compared "the other real estate with it. It was decided by the "Board that the acre in question was worth one hundred "dollars prior to the improvements and that it was "worth one hundred twenty-five dollars subsequent to the "improvements. Therefore the actual value of benefit "to the unit selected was twenty-five dollars. All the "agricultural land was assessed in relation to this unit. "Many of the lands were only 30 or 40 per cent depend-"ing upon the amount of benefit derived, as compared "with this unit, being one hundred per cent. There were "other lands that were as high as three hundred and fifty

"per cent of this unit. I am familiar with the cost of "construction and upkeep of highways. In arriving at "the benefit to the highways within this drainage area "we estimated the benefit in this way. There is a certain "amount of annual maintenance necessary for any road, "and there is more than that amount under flood con- "ditions. That is to say, a road that is periodically "flooded as against a road that never is flooded. The "difference in the estimated cost of maintenance was "capitalized, or represented the interest on a certain "sum of money, and we consider the capitalized portion "as a real benefit. We then, after obtaining that re- "sult after making a great many calculations, taking "into consideration the various locations, some of them "benefitted more than others.

"We divided the amount arrived at by the value of "the unit of $25, thereby obtaining the number of units "as a proportional benefit for these roads. The sum "we divided by the unit represented the capitalized value "to that part of the highway; we applied the same "method to the streets and highways of the City of "Sioux Falls. We did not apply the acreage basis to "the city property, excepting possibly the grounds where "the waterworks are located. In applying the benefit "to the unit and what the Board took into consideration "as elements of benefit to the Milwaukee Railway Com- "pany, we took into consideration the fact that in the "first place there were practically three elements. First "was the right-of-way on the acreage basis, which was "estimated in proportion to the adjacent lands. Second, "that it was possible to shorten or abandon certain "bridges. In order to determine the benefits derived "therefrom is simply a mathematical proposition. It "costs a certain amount of money each year in order "to maintain a bridge, whether it is a pile bridge or a "steel bridge. We know how long these structures will "last. We figure the cost of a bridge and divide it by "the number of years in order to get the amount that "is necessary to be expended each year for replace- "ment. Taking the amount in dollars and cents multi- "plied by the length of the bridge and divide that and "capitalize that at 7 per cent, which is the usual rate

"of interest, and that determines the amount of benefit. "This is the second element. The third element is "the fact that by reason of the flooding of the territory "in which railroads are located, washouts often occur. "We obtained data and from my personal knowledge and "experience I have a very good idea what it costs to re- "pair washouts periodically appearing and we estimated "as close as possible how much it would amount to every "year and capitalized that amount again.

"Again as an additional element, a road-bed is solid- "ified or made stronger by not being subject to floods. "A road-bed that is constantly or for great lengths of "time subjected to submersion is certainly weakened, "and again, so far as humanly possible, we figured the "amount of benefits in dollars and cents and after get- "ting all of these results or capitalized amounts, we di "vided that by twenty-five as our measure and determined "the number of units of benefit. That system and general "method and plan was used to determine the amount "of benefits that each railroad received from these "separate elements."

The statement of Mr. Rettinghouse, the engineer who made the assessment of benefits for the Board of County Commissioners of Minnehaha county, is upon its face sufficient to demonstrate the fact that in arriving at the proportion of benefits to be assessed against Appellee, the other railroad companies, and the city of Sioux Falls, the Board used as a basis for arriving at the assessment a method so wholly different from that used for ascertaining the contribution demanded of individual owners as necessarily to produce manifest inequality. The assessment was clearly upon a fanciful view of benefits to be derived by the railroad companies from the drainage project. The basis used was not authorized by any provision of the South Dakota drainage law but was evolved from the inner consciousness of the County Commissioners of Minnehaha county and of the civil engineer employed by them. The basis was so wholly different from that used for ascertaining the contribution demanded of individual owners as necessarily to produce manifest inequality. It constituted a dis-

crimination so palpable and arbitrary as to amount to a denial of the equal protection of the law.

We do not deem it necessary to discuss this proposition at further length. In the recent case of *Kansas City Southern Railway Company vs Road Improvement District No. 6*, 256 U. S. 658, this Court has emphatically condemned similar methods of assessment.

We respectfully submit, that even if the South Dakota drainage were constitutional and there were no other valid objections to the proceedings of the Board of County Commissioners of Minnehaha County in the organization of Drainage Ditch No. 1 and 2, and in the construction work done thereunder, the assessment made upon Appellee cannot be sustained for the reason that it is so arbitrary and unjust and so confessedly founded upon a fanciful basis as to deprive Appellee of the equal protection of the law.

VII.

THE DECREE MUST BE SUSTAINED REGARDLESS OF WHETHER THE DRAINAGE DITCH NO. 1 AND 2 BE REGARDED AS AN ORIGINAL DITCH PROCEEDING OR AS A MAINTENANCE AND REPAIR PROPOSITION.

Section 2, ch. 134, Laws of 1907; Section 8459 R. S. 1919, provides for the initiation of the proceedings by filing a petition. Section 4, ch. 134, Laws of 1907, Section 2, ch. 102, Laws of 1919; Section 8461 R. S. 1919, provides for notice of hearing thereof given to property owners, and is the only notice given prior to the establishment of the ditch. This notice is, therefore, jurisdictional. We have already contended that this statute, not requiring a description of the property claimed to be affected, does not satisfy the constitutional requirements of due process of law. All parties affected have a right to be heard upon the question of the establishment of the proposed drainage. They must have notice that such property will be claimed to be affected, otherwise the major step in the proceeding for which they are ultimately bound to pay, has been taken without jurisdiction of the person or property.

If the said Section R. S. 8461 requires a description of the property to be affected, then the notice itself is insufficient. Upon this theory, perhaps, the decision of the trial court was based. The notice of the hearing upon the petition for the establishment of the ditch 1 and 2 refers generally to the lands affected thereby. There is nothing to indicate that the new ditch would extend beyond or occupy a position different, from the old ditches 1 and 2. The evidence shows that there was no change or extension. The lands therefore presumed to be affected by the new ditch, if held to be a new ditch, or by the improvement of the old ditches, could not, in the absence of the description in the notice, be deemed or expected to include other lands than those included within the drainage area of the old ditches 1 and 2. There was no such description and nothing upon which it could have been apprehended that the area was intended to be extended. There was, therefore, want of notice in fact to the owners of property not included within the original drainage area. The undisputed evidence is that a considerable property of the Appellee not included in the original area, is attempted to be assessed under the guise of a new drainage ditch and this without any notice that the old drainage area was to be extended. There was, therefore, a failure to give notice, jurisdiction was not acquired of the proposed added area affected by the injunction and decree of the trial court. The reference made in the Appellants' brief to the Gilseth case may be disposed of by this situation; the lands involved in the Gilseth case were in the original drainage area, while the assessments sought here to be enjoined by the court affect areas not included within such area. The court by its decree in this case excepted from the effect of the decree the right to make an assessment upon the railroad property within the original drainage area.

The court was, therefore, justified in finding that the proposed assessment upon property not included within the original drainage area was an afterthought for the purpose of raising money. It matters not whether such determination be upon the theory that this was an attempted establishment of the new ditch or whether such proceedings for the new ditch was a mere subterfuge for

raising money to repair and improve the old ditch. The decision of the court equally sustains either theory.

As the court properly determined, no attempt was made to take the statutory steps for the repair, improvement or continuation of the old ditch, but an attempt was made to follow statutory requirements to establish a new ditch—hence it matters not whether this was a mere subterfuge to raise money or any ineffectual attempt to establish a new ditch.

Appellants challenge the record on account of the insufficiency of the facts to support the findings and conclusions of the trial court affirmed by the court of appeals. The proposition as to the amount in controversy, that the proceedings and proposed assessments are arbitrarily determined without notice of hearing in advance of a determination of benefits upon a hearing, as well as the amount in controversy, is fully presented and made to appear from Exhibit B attached to bill of complaint, from which it appears that before any notice of equalization or the apportionment of benefits, it had already been arbitrarily determined by the Board that the different classes of property as different in character and as differently affected, if at all, as the agricultural lands from either by the so-called drainage should be assessed a certain percentage of the cost. There was no rule of comparisons prescribed by statute, or adopted by the Board, but it had already been determined that 14.5% should be assessed against the railroads, 33.4% against farm lands, 1% on city lots, 9.7% on city of Sioux Falls and 16.5% on the Northern States Power Company. This was a percentage of the $309,221.40 to be raised. It was then proposed that by Exhibit C attached to the bill of complaint that the various railroads should be assessed upon certain property in specific amounts. Upon this a hearing was proposed to be had. This situation is fairly conceded by argument of Appellants on page 80, paragraph III wherein Appellants say: "But passing that, it is "plain on this record so far as the present appeal is "concerned there is more than $1,000.00 in controversy "* * *. It is admitted that no assessment has yet been "made and not a dollar of tax yet collected. There has "been an expenditure of over $250,000; drainage warrants

"for that amount are outstanding, and they must be "paid if at all by collecting the assessment that this in- "junction stopped. The tentative apportionment against "the Appellees is roundly, $112,000. (Page 13 in N., P., "R., S., O. and M.) But on the point under discussion "little attention need be paid that fact. There is at this "time more than $1,000.00 in dispute no matter how this "$112,000.00 is treated." In other words, Appellants concede that by the apportionment already made, the sum of $112,000.00 must be raised upon the property of the Appellees and that by no course of reasoning can it be determined that less than $1,000.00 is involved in each of the appeals.

By the same course of reasoning, not only had the amount been determined, but also a division of the expenses as between different classes of property. The amount to be raised upon railroads had already been determined as 14.5% of the entire expense, regardless of benefits. However that be apportioned, neither could be less than $1,000.00. The testimony shows the dissimilarity of the property and the theory of the arbitrary assessment so that it clearly appears from the pleadings and the proof that not only more than $3,000.00 is involved but that the amount to be borne by the railroads had already been determined in advance and the apportionment, according to Appellants' concession, is to be made among the railroads of the 14.5%. Consequently these Appellees have been deprived of their right to be heard upon the controlling and important question, that is, as to the amount and basis of the assessment against railroads.

VIII.

THE DISTRICT COURT POSSESSED JURISDICTION TO ENTERTAIN AND DETERMINE THIS SUIT.

Counsel for Appellants have filled a great portion of their brief with arguments upon objections to the jurisdiction of the District Court in this suit. We do not deem it necessary to take up these various objections and discuss them *seriatum*. The questions at issue, involving as they do the constitutionality of the Federal

Constitution, together with the amount involved and the diversity of citizenship, are amply sufficient to sustain the jurisdiction of the court.

Counsel for Appellants strenuously contend that Appellee should have waited until after the Board of County Commissioners of Minnehaha county had finished the equalization of benefits before instituting this suit. This case is, however, not one in which any such delay of proceedings was necessary. The law, under which the Board of County Commissioners was proceeding, was unconstitutional. The Board was a trespasser from the very commencement of the assessment proceedings. After the Board of County Commissioners had committed one illegal act, in making the assessment of benefits, it was certainly not incumbent upon Appellee to wait before instituting legal proceedings until after the Board had committed further illegal acts. Jurisdiction to maintain a suit to restrain the commission of a tort becomes fixed as soon as the first tortuous step has been taken by the tort feasor. It is not necessary for the person injured to wait until after the threatened damage has been completed. The Board of County Commissioners of Minnehaha county invaded the rights of Appellee when it made the assessment of benefits, and the right of action then became complete.

In our view of the issues involved in this case, the points which we have raised in the foregoing discussions in this brief are a sufficient answer to all questions concerning the jurisdiction of the court.

IX.

APPELLEE IS NOT ESTOPPED BY ITS ACTS FROM MAINTAINING THIS SUIT.

In their brief, counsel for Appellants make a somewhat elaborate attempt to show that Appellee is estopped from maintaining this suit. It was in evidence that the railroad tracks of the Appellee extend through the flats north of the city of Sioux Falls, and are in some places not far distant from the drainage ditch. It also appeared in the evidence that Appellee is the owner of a spur track to the South Dakota penitentiary, which is situated not

far from the place where the spillway is constructed, and that freight used in the construction of the spillway was delivered to the workmen building the spillway at the terminus of this spur track at the penitentiary. It further appears that one of the contractors, employed by the Board of County Commissioners to do dredging upon the ditch, shipped his dredging machines over the lines of railroad of the Appellee from the city of Sioux Falls to Renner, a station about five miles north of Sioux Falls. It further appears that upon one occasion, Appellee transported, as a common carrier, a gang of workmen, employed by the contractors engaged upon the construction of the drainage works, to the point where the flat was flooded north of Sioux Falls, and stopped the passenger train to let the gang off at the place where they were to do work, and stopped again in the evening to take the gang on board, and bring them back to Sioux Falls. The foregoing are all of the facts upon which counsel seek to base their theory of estoppel.

All the evidence of estoppel contained in the records amounts to is, first, that Appellee operates a railroad through the flats upon which the ditches were constructed, and, second, that Appellee, as a common carrier, transported men and materials used in the construction of the works. There is not a scintilla of evidence that Appellee or any of its officers ever consented to the drainage construction or approved it in any manner whatsoever. It is, therefore, a sufficient answer to the estoppel proposition, that there is no evidence of any facts which would create an estoppel.

A further answer to the estoppel plea is this: Under the South Dakota drainage law, no notice was required to be given Appellee until the assessment of benefits had been made. Up to that time, Appellee had no knowledge that its property, situated outside of the original assessment areas of Drainage Ditch No. 1 and of Drainage Ditch No. 2, was "affected" by the drainage construction, or would be assessed for the cost thereof (it will be remembered that in the decree in this case, an injunction was issued in favor of Appellee only as to its property outside of the original assessment areas, and that as to the property within such areas the decree is

without prejudice to the rights of Appellee. In this proceeding, therefore, only the property outside of the original assessment areas is to be taken into consideration). We do not concede that, under the South Dakota statute, any notice was ever given to Appellee that an assessment had been made upon its property for the statute, as has been seen, does not provide for the giving of any notice whatever to railroad companies. If, however, it should be conceded, for the sake of argument, that the notice published by the Board of County Commissioners, after the assessment had been made, was a notice to Appellee, it was the first notice that Appellee had ever received. All of the acts under which an estoppel is claimed by Appellants were done during the time of the construction work and long prior to the making of the assessment of benefits and to the publishing of the equalization notice.

We respectfully submit that even if the acts set forth in the record were sufficient to constitute an estoppel upon the part of Appellee that such acts could not constitute an estoppel for the reason that, at the time they were done, Appellee had received no notice that its property within the new territory sought to be assessed was within the assessment area of Drainage Ditch No. 1 and 2, and had no knowledge that an assessment was in contemplation. We deem it unnecessary to discuss the estoppel proposition at further length.

X.

IN CONCLUSION

In the record of this case there is ample evidence of the greatest ignorance, ineffeciency, and extravagance upon the part of the Board of County Commissioners of Minnehaha county in the construction of the spillway, retaining walls, dams, and other works under the organization known as Drainage Ditch No. 1 and 2. Plans for the work were adopted and then the adoption rescinded. Plans and specifications for the construction of a spillway were obtained and bids advertised for and received for the construction in accordance with the plans. The bids were rejected upon the ground that they were too high, the plans were then thrown into the waste basket and contractors were employed to construct a spillway upon

the cost-plus plan, the contractors to receive compensation for the material and labor used and, in addition, a profit of nine per cent. The construction of the spillway was entered upon without any plans therefor being made, and the plans were drawn after the spillway had been completed, or practically completed. The cost of the spillway so constructed was approximately $150,000, or more than three hundred per cent of the amount of the bids which were rejected by the Board as being too high. The spillway and other works, when completed, have failed to accomplish successfully the drainage of the flats north of the city of Sioux Falls. The property owners in the flats are in practically the same, or possibly in a worse condition, than they were prior to the original construction of Drainage Ditch No. 1 and of Drainage Ditch No. 2. The works constructed, under the organization of Drainage Ditch No. 1 and 2, simply operate to retain the surface water upon the flats and not to drain it off. They are successful in preventing the diversion of the channel of the Big Sioux river and in preventing the draining of the gravel bed from which the city of Sioux Falls obtains its water supply. Those two objects have successfully been accomplished but the same results could have been attained by placing, at a trifling expense, earthwork dams in proper places along the course of Drainage Ditch No. 1 and of Drainage Ditch No. 2. The spillway and other works, as completed in Drainage Ditch No. 1 and 2, have operated to destroy the efficiency of the original ditches as drainage propositions, but have accomplished nothing that could not have been accomplished at a trifling expense by simply abandoning the old ditches and preventing the flow of water through the bluff and into the Big Sioux river below the falls.

The Board of County Commissioners of Minnehaha county, in the work done by them on Drainage Ditch No. 1 and 2, seem to have acted at haphazard and without any well defined plan of procedure. The one thing which they have accomplished successfully has been to expend upwards of $250,000 upon works which are useless as a drainage proposition, and, with interest, the entire indebtedness which has now accumulated is in excess of $300,000. The intervening Appellants, who hold

the drainage ditch warrants issued by the Board of County Commissioners of Minnehaha county upon Drainage Ditch No. 1 and 2, are certainly in an unfortunate position. That they are in a fair way to lose their investment is, however, no reason why Appellee, an "innocent bystander," should be "made the goat" and forced to pay for the errors, mistakes, and wild extravagances of the Board of County Commissioners of Minnehaha county. It was not through any fault of Appellee that Drainage Ditch No. 1 and 2 was organized and the spillway and other works constructed. It is in no manner responsible for the acts of the Board of County Commissioners or for the mistakes of judgment of the intervening Appellants, in investing in the warrants.

In conclusion, we submit, that for the reasons which we have hereinbefore set forth, the South Dakota drainage law is unconstitutional under both the federal and the state constitutions; that the proceedings under which Drainage Ditch No. 1 and 2 was organized were illegal and void; that the work done under such organization was without authority of law; that the attempted assessment upon the property of Appellee is founded upon a fanciful, arbitrary, and illegal basis; that the District Court possessed jurisdiction to hear and determine this suit; and that, for these and the other reasons hereinbefore set forth, the decree of the District Court and the decision of the Circuit Court of Appeals should be affirmed.

Respectfully submitted,

E. L. GRANTHAM,
C. O. BAILEY,
J. H. VOORHEES,
T. M. BAILEY,
Solicitors for Appellee.

APPENDIX A

PROVISIONS OF SOUTH DAKOTA CONSTITUTION

SECTION 2 OF ARTICLE VI.

§ 2. No person shall be deprived of life, liberty or property without due process of law.

SECTION 13 OF ARTICLE VI

§ 13. Private property shall not be taken for public use, or damaged, without just compensation as determined by a jury, which shall be paid as soon as it can be ascertained, and before possession is taken. No benefit which may accrue to the owner as the result of an improvement made by any private corporation shall be considered in fixing the compensation for property taken or damaged. The fee of land taken for railroad tracks or other highways shall remain in such owners, subject to the use for which it is taken.

SECTION 6 OF ARTICLE XXI

§ 6. The drainage of agricultural lands is hereby declared to be a public purpose and the legislature may provide therefor, and may provide for the organization of drainage districts for the drainage of lands for any public use, and may vest the corporate authorities thereof, and the corporate authorities of counties, townships and municipalities, with power to construct levees, drains and ditches, and to keep in repair all drains, ditches and levees heretofore constructed under the laws of this state, by special assessments upon the property benefited thereby, according to benefits received.

APPENDIX B

SOUTH DAKOTA DRAINAGE STATUTES

(NOTE: The section numbers at the beginning of each paragraph are those of the South Dakota Revised Code of 1919. The references at the end of each paragraph are to the Session Laws of the various years. The paragraphs as printed constitute the law as it stood at the time of the transactions involved in this suit.)

§ 8458. POWER OF COUNTY COMMISSIONERS. The Board of County Commissioners, at any regular or special session, may establish and cause to be constructed any ditch or drain; may provide for the straightening or enlargement of any watercourse or drain previously constructed, and may provide for the maintenance of such ditch, drain or watercourse whenever such ditch, drain or watercourse shall be conducive to the public health, convenience or welfare, or whenever the same shall be for the purpose of draining agricultural land. (§ 1, ch. 98, 1905; § 1, ch. 134, 1907).

§ 8459. PETITION. Such board shall act only upon a written petition signed by one or more owners of land likely to be affected by the proposed drainage. Such petition shall set forth the necessity for the drainage, a description of the proposed route by its initial and terminal points and its general course, or by its exact course in whole or in part, and a general statement of the territory likely to be affected thereby. The petition shall be accompanied by a bond with sufficient sureties to be approved by the county auditor, conditioned to pay all expenses incurred in case the board does not grant the petition or the same is denied on appeal. Such petition may be presented at any regular or special meeting of the board, and, if sufficient in form, shall be ordered filed with the county auditor. (§ 2, ch. 98, 1905; § 2, ch. 134, 1907).

§ 8460. INSPECTION OF PROPOSED ROUTE. It shall be the duty of such board to act promptly upon all drainage petitions. Upon filing such petition the county auditor shall transmit a copy thereof to the state engineer, who, together with the board of county commissioners shall as soon as practicable, inspect the proposed route and, if in the opinion of such board and the state engineer it is necessary, the board shall cause a survey of the proposed drainage to be made by such competent surveyor as such board may select, but such survey shall be under the general supervision of the state engineer. Such survey shall primarily be for the purpose of aiding the board in determining the necessity of the proposed drainage, but may be a complete survey such as will be required for the construction of the proposed drainage and

assessment of its cost, or as much less as the board may require. Such survey may extend to other lands than those affected by the proposed drainage for the purpose of determining the best practical method of draining the entire section of country of which the lands proposed to be drained, or a portion of them, are a part. For the purpose of inspection or surveys, the county commissioners, surveyors or their employes may enter upon any lands traversed by the proposed drainage or in their judgment likely to be affected thereby. The county auditor shall promptly furnish the state engineer with a copy of the surveyor's report mentioned in the succeeding section and of all maps and plans filed by such surveyor and also with a copy of such further files as the state engineer may ask for. In case the drainage is established the preparation of plans and specifications upon which the contract of construction is to be awarded and also the work of construction, shall be under the supervision of the state engineer. It shall be the duty of the state engineer to render such assistance and advice to the board of county commissioners in regard to such drainage as the duties of his office will permit and he shall be reimbursed by such board for his expenses incident thereto; provided, that in case of minor ditches the state engineer shall not be required to attend with the board of county commissioners at the first inspection, nor to perform subsequent services if in his judgment it shall not be necessary for him so to do. (§ 3, ch. 98, 1905; § 3, ch. 134, 1907; § 1, ch. 102, 1909).

§ 8461. SURVEYOR'S REPORT — NOTICE OF HEARING. The surveyor shall report in writing to the board of county commissioners and his report shall be filed with the petition. After personal inspection or after the receipt of the surveyor's report the board shall determine the exact line and width of the ditch, if the same shall not be fixed in the petition, and shall file its determination with the petition. The board shall then fix a time and place for the hearing of the petition and shall give notice thereof by publication at least once each week for two consecutive weeks in a newspaper of the county, to be designated by the board, and by posting copies of such notice in at least three public places near the route

of the proposed drainage. Such notice shall describe the route of the proposed drainage and the tract of country likely to be affected thereby in general terms, the separate tracts of land through which the proposed drainage will pass and give the names of the owners thereof as appears from the records of the office of the register of deeds on the date of the filing of the petition, and shall refer to the files in the proceedings for further particulars. Such notice shall summon all persons affected by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established and constructed, and shall summon all persons deeming themselves damaged by the proposed drainage or claiming compensation for the lands proposed to be taken for the drainage to present their claims therefor at such hearing. (§ 4, ch. 98, 1905; § 4, ch. 134, 1907; § 2, ch. 102, 1909).

§ 8462. HEARING ON PETITION. At such hearing any person interested may appear and contest the statements of the petition and matters set forth in the surveyor's report and the finding of the board as to width and route. The petitioners in like manner may be heard in support of the petition. After full hearing the drainage may be established along the line set forth in the petition or in the finding of the board prior to the hearing, or the board may vary the route thereof, or its width, as deemed practicable or necessary. If the board deems it best to vary the route, or to materially change the initial or terminal points of such proposed drainage so that it will pass through other lands than those described in the notice of hearing, or to increase the width of lands to be taken for the proposed drainage, the board shall adjourn the hearing and give the owners of such lands notice as in case of the original hearing. No open ditch shall be constructed within the limits of any public highway except where the topography of the country makes such construction advisable and in such case the ditch shall be located at a sufficient distance from the center of such highway to permit a roadway of standard width being constructed. If the proposed drainage does not give sufficient fall to drain the lands sought to be drained or will not properly take care of the waters collected by

such drainage, the same shall be extended so as to secure the drainage or properly dispose of the water. The hearing in any such case shall be adjourned and notice given to all parties newly affected as in case of the original hearing. When the board of county commissioners shall have fully heard and considered such petition, and all matters in opposition to or in support of the same, it shall, if it finds the proposed drainage not conducive to the public health, convenience or welfare, or not needed or practicable for the purpose of draining agricultural lands, deny such petition, the petitioners to be jointly and severally liable for the costs of the proceeding, the same to be recovered in a civil action. If it finds the drainage proposed or any variation thereof conducive to the public health, convenience or welfare, or necessary or practicable for draining agricultural lands, it shall establish the drainage and shall assess the damages sustained by each tract of land or other property through which the same shall pass and the damages as compensation for the land taken for the route of such drainage. Any person interested may be heard in the matter of damages or compensation for land and the determination of the board of county commissioners shall be final unless an appeal therefrom, as provided in this article, shall be taken, failure to prosecute such appeal or to appear and contest an award of damages by the board to be deemed conclusively a waiver of any such damages or compensation for land taken or of any claimants right to have the same assessed by the jury. Such drain shall be given a name and the proceeding thereafter taken shall be recorded and indexed in a book kept for that purpose in the auditor's office. (§ 5, ch. 98, 1905; § 5, ch. 134, 1907; § 3, ch. 102, 1908; § 1, ch. 205, 1917).

§ 8463. EQUALIZATION OF BENEFITS. After the establishment of the drainage and the fixing of the damages, if any, the board of county commissioners shall fix the proportion of benefits of the proposed drainage among the lands affected, and shall appoint a time and place for equalizing the same. Notice of such equalization of proportion of benefits shall be given by publication at least once each week for two consecutive weeks in a newspaper of the county to be designated by the

board, and by posting copies of such notice in at least three public places near the route of the proposed drainage. Such notice shall state the route and width of the drainage established, a description of each tract of land affected by the proposed drainage and the names of the owners of the several tracts of land as appears from the records of the office of the register of deeds at the date of the filing of the petition and the proportion of benefits fixed for each tract of property, taking any particular tract as a unit, and shall notify all such owners to show cause why the proportion of benefits shall not be fixed as stated. Upon the hearing of the equalization of the proportion of benefits, the board of county commissioners shall finally equalize and fix the same according to benefits received. The proportion of benefits which any county, city, town or township may obtain by the construction of such drainage to highways or otherwise, and the benefits which any railroad company may obtain for its property by such construction, shall be fixed and equalized together with the proportion of benefits to tracts of land. Benefits to be considered in any case shall be such as accrue directly by the construction of such drainage or indirectly by virtue of such drainage being an outlet for connection drains that may be subsequently constructed. (§ 6, ch. 98, 1905; § 6, ch. 134, 1907; § 4, ch. 102, 1909).

§ 8464. ASSESSMENTS. After the equalization of the proportion of benefits the board may make an assessment against each tract and property affected, in proportion to the benefits as equalized, for the purpose of paying the damages and the cost of establishment thus far incurred or to be incurred. The cost of establishment shall include the costs of the service of the board of county commissioners, surveyors and assistants, plans and profiles, publication and filing, and other fees, interest on bonds issued or to be issued and all other expenses incurred or to be incurred that in any way contributed or will contribute to the establishment or construction of the drainage. At the expiration of thirty days after the making of such assessment, a copy thereof certified by the county auditor shall be filed by him with the county treasurer, but before the same is filed a notice shall be given by the board of the time when the same

will be so filed, by publication at least once each week for two consecutive weeks in a newspaper in the county to be designated by the board and by posting copies of such notice in at least three public places near the route of such drainage. Such notice shall also contain a description of the property assessed, the name of the owner as it appears in such assessment and the amount of each assessment, together with the amount assessed against the county or any city, town, township or railroad company, and shall also give the date when the assessment will become delinquent, together with the amount of penalty which will then accrue and the date from which interest will begin to run.

From the time of filing such certified copy of assessment in the treasurer's office, the same shall be due and payable and shall be valid and perpetual liens upon the respective tracts so assessed against all persons or governments except the state and the United States and, if not paid within ten days, a penalty of five per cent shall attach thereto and such assessment shall bear interest from the date of the order of the assessment at a rate not to exceed eight per cent per annum payable annually. Such assessment shall be paid to and received by the county treasurer and paid over to the holders of the assessment certificates or upon the order of the board of county commissioners. The board of county commissioners may issue separate assessment certificates against each tract assessed for the amount of the assessment thereon, and may sell the same at not less than par value with all accrued interest, or may contract to pay for the construction of such drainage with such assessment certificates or with warrants. Such assessment certificates shall refer to the record in the office of the county auditor of the order of assessment and of the filing of a copy thereof in the county treasurer's office, shall transfer to the holder all interest, claim, or right in or to such assessment, bear the same rate of interest, carry the lien of such assessment and be enforcible as provided by law. Assessments for drainage or installments thereof shall be enforced by the county treasurer by sale of the property at the annual tax sale, provided that no such assessment or installment thereof shall be included in the sale of any

given year unless the same shall have been delinquent on or before August first of each year. The provisions of Chapters 7, 8, 9, Part 9 of this title shall apply to the enforcement of the lien or drainage assessments so far as such provisions are applicable, except that a treasurer's deed issued upon a delinquent drainage assessment shall recite the fact that the title conveyed is subject to all the claims which the state or any political subdivision thereof may have thereon for annual taxes.

Whenever an assessmnet for drainage or an installment thereof has been made against any county, city, town or township, as provided in this chapter, the officers of such county, city, town or township, whose duty it is under the law to make the levy of taxes, shall at the time of the next annual tax levy after the making of such assessment make a levy for drainage purposes of such an amount as shall be necessary to pay such assessment, and return the same to the proper officers as provided by for the other taxes, and such levy and tax shall be enforced and collected in all respects as provided by law for other taxes; provided, that any surplus remaining in any fund at the close of any year may be used by any township to pay and apply on any drainage assessment, as provided herein; provided, further, that in unorganized townships the county commissioners shall be authorized to pay for drainage as provided herein out of any money belonging to such unorganized township, and each succeeding year a like levy shall be made by such authorities until the whole of such assessment for drainage is paid. Instead of making an annual assessment for the purpose of paying the damages allowed in any drainage proceeding and the costs of establishment and construction, the board of county commissioners may issue warrants payable only out of the assessments to be subsequently made, the same to bear interest at a rate not to exceed eight per cent per annum payable annually, and may sell such warrants at not less than the face value thereof and shall with such money so raised pay any damages allowed and cost of establishment and construction. In making assessment for such drainage such warrants and the cost of issuing the same shall be included in the costs of the drainage. (§ 7, ch. 98, 1905; § 7, ch. 134, 1907; § 5, ch. 102, 1909;

ch. 130, 1911, and as amended by § 1, ch. 46, Laws of Second Special Session of the Sixteenth Session of the Legislature of South Dakota 1920).

§ 8465. BIDS—SPECIFICATIONS—CONTRACTS. Whenever sufficient money shall have been collected the damages occasioned by the construction of such drainage and fixed as herein provided shall be paid and thereupon the board of county commissioners shall proceed to construct such drainage and shall let contracts for the construction of the same. Such contracts may require the contractors to take their pay in assessment certificates or in warrants to be thereafter issued. The contract may be for the construction of the entire drainage or for any portion thereof, and shall be let upon competitive bids, the board reserving the right to reject any and all bids. The lowest responsible and capable bidder shall be accepted but if any landowner affected be an equally low, capable and responsible bidder with a nonowner of the lands affected the former shall be preferred. When any contract shall be let the contractor shall give a bond in such sum as shall be approved by the board of county commissioners, conditioned for the faithful performance of his work and full completion of his contract to the satisfaction of such board. For the information of the contractors in bidding upon the proposed drainage, full plans and specifications shall be filed in the office of the county auditor. If in the judgment of the board of county commissioners the entire drainage or any part thereof can be constructed for less money than the amount of any bid submitted therefor, the board may cause such drainage to be constructed, hire the necessary labor and purchase all necessary material for such construction, without letting contracts therefor. Contracts for building bridges or culverts rendered necessary by the construction of such drainage may be let separately and after the drainage is completed. The cost of constructing such bridges or culverts shall be charged in the first instance as part of the cost of drainage and thereafter such bridges and culverts shall be maintained as part of the highway; provided, that the cost of removing, repairing, enlarging or replacing bridges and culverts already existing across the line of a proposed drainage ditch shall

not be charged as a part of the drainage. (§ 8, ch. 98, 1905; § 8, ch. 134, 1907; § 6, ch. 102, 1909; ch. 206, 1917).

§ 8466. BOARD MAY EXTEND TIME FOR COMPLETION OF CONTRACT. The board of county commissioners shall have power to grant a reasonable extension of time for the completion of any contract. When any contract shall not be finished within the time specified or to which it may be extended, such board may in its discretion at any time thereafter relet such unfinished portion of any part thereof after not less than five days' notice thereof to the lowest responsible bidder and shall take security as for the original contract. The cost of completing such parts, over and above the original contract price and the expense of notices and reletting, shall be collected by the board from the first contractor; provided, that in no case shall the board forfeit and annul a contract without five days' notice to the contractor, if found, and if not found then by written notice left at his last known place of residence in the county. (§ 9, ch. 98, 1905; § 9, ch. 134, 1907).

§ 8467. ASSESSMENTS FOR FURTHER COSTS. At any time after the damages arising from the establishment and construction of such drainage are paid and the lands for such drainage are taken, assessments may be made for further costs and expenses of construction. If the contractors are required and agree to take assessment certificates or warrants for their services, assessments need not be made until the completion of the work when an assessment shall be made for the entire balance of cost of construction, including the services of the board of county commissioners, surveyors and assistants, plans and profiles, publication and filing, and other fees, interest on bonds issued or to be issued and all expenses of every kind and nature that contribute to the establishment and construction of the drain and notice of such assessment shall be given by the board of county commissioners in all respects as provided for the first assessment. And such assessment and the certificates issued thereon shall be in like manner perpetual liens upon the tracts assessed, interest-bearing and enforcible as such first assessments and certificates. The board of county commissioners may sell such assessment certificates at not

less than par and thereby raise funds to defray the cost of establishment and construction. If there be no damages to be paid before taking the lands for such drainage, or if the damages have been paid by the proceeds of the sale of warrants only one assessment need be made. In any case, in the discretion of the board, several assessments may be made as the work progresses. Assessments shall be paid to the county treasurer and the money therefrom shall be paid by him to the holders of assessment certificates, or upon the order of the board of county commissioners for the purpose of the particular drainage. (§ 10, ch. 98, 1905; § 10, ch. 134, 1907; § 7, ch. 102, 1909).

§ 8468. ACCEPTANCE OF DRAINAGE BY BOARD. After the work of construction shall have been fully completed and approved by the state engineer, the drainage may be accepted by the board of county commissioners, by order duly made, and payment shall be made therefor unless in the discretion of the board of county commissioners agreement be made for the partial payments; provided, that final payment shall not be made until the expiration of thirty days after the acceptance of the work and in case an appeal has been taken from the order accepting such work final payment shall not be made until the determination of such appeal; provided, further, that no payment shall be made to any engineer whose employment has not been approved by the state engineer, and no payment shall be made upon any contract for the construction of any such drainage project, unless the same shall have been constructed under the supervision of the state engineer; and provided further, that nothing in this section shall apply to minor drainage projects. All claims for compensation or expenses for publishing legal notices or supervising the construction of any such drainage project including the per diem and the mileage of the county commissioners, shall be paid from the general fund of the county, and for all such payments the county treasurer shall reimburse the general fund from the assessments herein provided for. (§ 11, ch. 98, 1905; § 11, ch. 134, 1907; § 8, ch. 102, 1909; ch. 207, 1917).

§ 8469. APPEALS. An appeal shall lie for any final order or determination of the board of county com-

missioners establishing or denying any proposed drainage; fixing damages occasioned by the taking of lands for drainage or caused by such drainage; fixing the proportion of assessments of benefits; or accepting any drainage to the circuit court of the county in which such drainage is located by any one deeming himself aggrieved by any such order or determination. Written notice of such appeal shall be served upon the board of county commissioners and a bond conditioned to pay all the costs of such appeal, in case the contention of appellant be not sustained in some respect, shall be filed in the office of the clerk of courts, to be approved by him in such amount and with such sureties as he deems necessary. Upon the service of such notice and the filing of such bond, the county auditor shall transmit to the clerk of courts the petition and all other papers and records in the matter or certified copies thereof, when the convenience of the auditor's office would be seriously impaired by the transmission of the original records, and such matter shall be heard as an original action in the circuit court. No appeal shall operate as a stay of proceedings by the board of county commissioners, but the court may upon the taking of an appeal, for good cause shown issue an order staying the further proceedings by the board of county commissioners until the hearing and determination of such appeal. Before granting such stay, the court shall require an undertaking in sufficient amount and with sufficient surety to the effect that if the order appealed from be sustained the person upon whose motion the stay is granted shall pay all damages caused by the issuance of such order of stay. Any number of persons interested may join in the same appeal. Appeals shall be in all cases taken within thirty days from the making of the order or determination appealed from. If, on the trial of such action, it be determined that the drainage as petitioned for and established by order of the board is not conducive to the public health, convenience or welfare or is not necessary or practicable for the purpose of draining agricultural lands, the petitioners shall be jointly and severally liable for all the costs thus far incurred. If the contention of the appellant as to the amount of damages or proportion of benefits, the acceptance of the drain-

age, of the practicability of the drainage when the route thereof is varied by the county commissioners over the protest and objection of the petitioners, be sustained in whole or in part, the costs of such trial shall be part of the cost of the drainage. Upon an appeal from an assessment of benefits, the court of jury shall consider not only the relative benefits, to the tract in regard to which the appeal is taken, with reference to the tract taken as a unit, but shall also consider the question as to whether the tract taken as a unit is benefited or not; if benefited, to what extent. (§ 12, ch. 98, 1905; § 12, ch. 134, 1907; § 9, ch. 102, 1909).

§ 8470. ASSESSMENTS FOR MAINTENANCE. For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the landowners affected in the proportion determined for such drainage at any time upon the petition of any person setting forth the necessity thereof, and after due inspection by the board of county commissioners. Such assessments shall be made as other assessments for the construction of drainage, certificates may be issued thereon and assessments and certificates shall be liens, interest-bearing, perpetual and enforcible, in all respects as original assessments and may be sold at not less than par by the board of county commissioners, turned over to persons contracting for such cleaning and maintenance or may be collected directly by the board of county commissioners. (§ 13, ch. 98, 1905; § 13, ch. 134, 1907).

§ 8471. ASSESSMENTS PAID IN INSTALLMENTS. The owner of any tract of land against which an assessment for drainage is made, who shall, within thirty days after the making of such assessment, file with the county auditor an agreement in writing that in consideration of the right to pay his assessment in installments he will not make any objections to the illegality or irregularity of his assessment, if any there be, and will pay the same with interest as fixed by the board of county commissioners, shall have the privilege of paying such assessment in ten annual installments, interest payable annually. Assessment certificates shall not issue until after the expiration of the period of filing such agree-

ments with the county auditor, and when issued for assessments to be payable in installments may be issued in coupon form. The first installment shall be payable within ten days after a certified copy of the assessment has been filed, in the office of the county treasurer, and subsequent installments shall be payable one, two, three, four, five, six, seven, eight and nine years from the date of such assessment, respectively, with interest on the whole sum unpaid payable annually at maturity of the several installments. Such subsequent installments shall become delinquent after the expiration of thirty days from the time the same are payable and thereupon a penalty of five per cent shall attach thereto. Provided, that where bonds shall have been issued for the construction of such drainage, as provided in Section 8472, such assessments shall be made payable in installments sufficient to meet the payment on the bonds, as the same shall become due. Payments of assessments may at any time be received and full discharge thereof given by the county treasurer to any property holder, but after issue of bonds, such payment of assessments can be received only according to the terms of such bonds. (§ 14, ch. 98, 1905; § 14, ch. 134, 1907; § 10, ch. 102, 1909).

§ 8472. BOARD MAY ISSUE BONDS. The board of county commissioners, whenever it has ordered the establishment of any drainage, shall have authority by resolution to be spread upon its records, to provide for the issuance of bonds in such sums as may be necessary for the purpose of defraying the expenses incurred or to be incurred in obtaining the right of way or in locating or constructing any such drainage. Such word "expenses" shall be construed to mean and cover every item of cost of such drainage from its inception to its completion, such bonds to be payable only out of the funds to be derived from special assessments upon the lands benefited thereby. Such bonds shall bear interest at a rate not exceeding 7% per annum, payable annually and be payable not exceeding twenty years from issue. Such bonds shall be signed by the chairman of the board of county commissioners and countersigned by the auditor, who shall keep a record of all such bonds. Such bonds shall be issued for the benefit of the particular drainage,

numbered, recorded and indexed in the office of the county auditor, and shall in no case be issued for a sum exceeding the benefits to the lands affected by such drainage. The board of county commissioners shall have the power to negotiate such bonds at not less than par value, as it may deem best for the interest of all persons affected by such drainage, any premium received on such bonds to be credited to the fund of the particular drainage. Such bonds shall contain a recital that the same are issued pursuant to the authority of this article and that they are to be paid out of the funds to be obtained as herein provided. Assessments shall be made upon all of the lands benefited by such drainage for the payment of the principal and interest of such bonds when the same shall become due. Such assessments may be made by separate assessments for installments of interest and principal or in one proceeding with but one set of notices. When the assessments are finally fixed the same shall be certified to the county treasurer by the county auditor, and the money paid in thereon shall be received by the county treasurer and paid over to the holders of such bonds. Separate funds shall be kept by the treasurer for each drainage project, and no funds for one drainage project shall be applied to any other drainage. No county shall be liable for the payment of any bonds issued under this article, but such bonds shall be paid only out of the funds derived from the special assessments herein provided for. Such bonds may be made payable at such times as the board of county commissioners shall find for the best interests of the persons benefited by the drainage, and may be issued for all or any portion of the expenses of such drainage. (§ 15, ch. 98, 1905; § 15, ch. 134, 1907).

§ 8474. FURTHER POWERS OF BOARD. Where proceedings have been had for the establishment of a ditch, drain, levee, or straightening or enlarging of a natural watercourse under the law as heretofore existing, and the improvement has been established and constructed and assessments made upon the land benefited thereby, or upon any portion thereof, for the cost of such improvement, and where the assessment so made cannot for any reason be enforced, the board shall proceed as in all

lands benefited by such improvement in the same manner as if the appraisement and apportionment of benefits had never been made, and it shall proceed in the manner provided in this article, using as a basis the entire cost of such improvement, and in the assessment of such benefits account shall be taken of the amount of assessments, if any, that have been paid by those benefited and credit therefor shall be given accordingly. (§ 17, ch. 98, 1905; § 17, ch. 134, 1907).

§ 8475. DITCH OR DRAIN MAY BE DECLARED NUISANCE. Any ditch, drain or watercourse, which is now or may hereafter be constructed so as to prevent the sufrace and overflow water from adjacent lands from entering the same is hereby declared a nuisance and may be abated as such. (§ 18, ch. 98, 1905; § 18, ch. 134, 1907).

§ 8476. POWERS DEFINED. The powers conferred by this article for establishing and constructing drains shall also extend to and include the deepening and widening of any drains which have heretofore been or may hereafter be constructed, also to straightening, cleaning out and deepening the channels of creeks and streams and constructing, maintaining, remodeling and repairing levees, dykes and barriers for the purpose of drainage; and the board of county commissioners may relocate or extend the line of any drain if the same is necessary to provide a suitable outlet, and shall cause a survey thereof to be made, but no proceedings affecting the rights of persons or property shall be had under this section except upon notice and the other procedure prescribed herein for the construction of drains. (§ 19, ch. 98, 1905; § 19, ch. 134, 1907).

§ 8477. DRAINS UNDER CHARGE OF COUNTY COMMISSIONERS. All drains that have been constructed under any law of this state, or that may be constructed under the provisions of this article, shall, except as otherwise specifically provided, be under the charge of the board of county commissioners and be by it kept open and in repair. In all cases when any completed drain is or may be situated in more than one county, the care of the portion thereof lying within any county is assigned to the board of county commissioners of such county to be

kept open and in repair. The cost of such repairs shall in all cases be assessed, levied and collected in the same manner as provided in this article for the construction of drains originally and in all cases when no assessments of benefits shall have been made, the board of county commissioners having charge of such drain shall make such assessments. (§ 20, ch. 98, 1905; § 20, ch. 134, 1907).

§ 8478. BOARD MAY MAKE RULES AND REGULATIONS. The board of county commissioners may make such rules and regulations on the subject of drainage as it may deem proper, not inconsistent with the provisions of this article, and especially with regard to clearing out and keeping clear the channels of streams and the construction and maintenance of dams thereupon, with reference to their capacity for drainage. (§ 21, ch. 98, 1905; § 21, ch. 134, 1907).

§ 8482. DRAINS FOR TOWNS AND CITIES. The board of county commissioners shall have authority to establish drainage for or including the whole or any part of any city or incorporated town, including cities acting under special charter, as provided in this article, and it shall have the same authority with respect to the assessment of damages and benefits within such city or town as in other cases provided for in this article, and like notices to such city or town with respect to the establishment of such drainage and the apportionment and assessment of damages and benefits shall be given as is required by this article to be given to the owner of property damaged or benefited by the establishment or construction of such improvement. (§ 24, ch. 98, 1905; § 24, ch. 134, 1907).

§ 8485. COMPENSATION OF COUNTY COMMISSIONERS. The county commissioners shall receive for their services four dollars per day for the time actually spent by them in the performance of the duties of their offices under this chapter, publishers of newspapers shall receive for publishing legal notices the same fees as are allowed by law for publishing proceedings of the county commissioners; but the proceedings of the board of county commissioners when acting in any drainage matter under this article shall not be published as a part of its regular proceedings or at all. The county auditor shall charge a reasonable amount, to be fixed by the

board, for services, to be paid into the general fund of the county. Each county commissioner shall have power to administer any oath required in any drainage proceeding. (§ 27, ch. 98, 1905; § 27, ch. 134, 1907; § 11, ch. 102, 1909).

§ 8486. NOTICES, HOW SERVED. Notice by personal service, as of a summons in a civil action, may be given instead of by publication and posting in all cases where notice is provided for in this article. In any case where notice is required under the provisions of this article and any person affected by the drainage has not been notified, either by publication or personally, and a hearing has been had or determination made, such person may be notified personally or by publication and posting, to show cause at a time and place to be fixed by the board of county commissioners, and to make return or claim damages as in case of the original hearing. Any such omitted person may be brought in on such due notice at any stage of the proceeding, or after it has been otherwise concluded. The enforcement of any assessment shall not be enjoined for want of the notice provided for in this article, except pending an application to the board of county commissioners for the determination of such matters as to which any person deems himself not bound because of want of notice. (§ 28, ch. 134, 1907).

§ 8488. DEFECTS IN PROCEEDINGS DISREGARDED. Any defect or irregularity not affecting the substantial rights of parties interested, occurring in any drainage proceeding, shall be disregarded in any action seeking to avoid an assessment or cancel, annul or declare void any such proceeding. And in case the defect is substantial the court shall of its own motion determine the rights of the parties, validate the proceedings and assess the costs as justice may require, if the court shall find cause for such validation or such action should have been taken in the first instance and all parties interested are before the court. (§ 29, ch. 98, 1905; § 30, ch. 134, 1907).

§ 8489. INVALID OR ABANDONED PROCEEDINGS. If any proceeding for the location, establishment or construction of any drain under the provisions of a previous law has been heretofore enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned,

or if any such proceeding or like proceeding under this article be hereafter enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned in consequence of any error, defect, irregularity or want of jurisdiction affecting the validity of such proceeding or for any cause, the board of county commissioners may nevertheless proceed to locate a drain or drains under the same or different names and in the same or different locations from those described in the invalid or abandoned proceedings under the provisions of this article. In case any new proceeding be had resulting in the location of a drain in the same or substantially the same location as that described in the invalid or abandoned or dismissed proceeding, and the extent to which the same will contribute to the location, establishment or completion of such new drain. Such value shall be determined at a hearing upon the same notice as the equalization of benefits or assessments, and may at the same time or at any other time, and the notice of such hearing may be a part of the notice of the hearing upon the equalization of benefits or assessments or separate thereform, but the board shall in any case notify all persons interested to show cause why the determination of the board thereupon shall not be final. When finally fixed such value shall become a part of the cost of the new drainage. No use shall be made by the board of county commissioners in the laying out or completion of any drain or ditch under this article of any map, chart, survey, or other work done under any former law or under this article without having paid therefor; and all sums allowed for any work or material or money expended under the provisions of any previous law or under this article shall be paid to the persons who have paid therefor in proportion to the amounts severally paid by such persons. (§ 33, ch. 134, 1907).

No. 97.

A. G. RISTY *et al*, as County Commissioners, etc., *et al.*,
Appellants,

vs

CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA RAILWAY COMPANY
Appellee

APPEAL FROM THE CIRCUIT COURT OF APPEALS OF THE EIGHTH CIRCUIT.

BRIEF AND ARGUMENT FOR APPELLEE

The Chicago, St. Paul, Minneapolis & Omaha Railway Company, Plaintiff and Appellee, filed its bill in the District Court of the District of South Dakota praying for an injunction. From a decree granting an injunction the Defendants and Appellants appealed to the Circuit Court of Appeals of the Eighth Circuit, in which latter court the decree of the District Court was affirmed. From the decision of the Circuit Court of Appeals the defendants appeal to this Court.

This suit involves the constitutionality of the Drainage Ditch Statute of the state of South Dakota under both the federal and state constitutions and also involves the regularity and validity of proceedings taken under that statute. The facts out of which this suit arises, are, as follows:

STATEMENT OF FACTS

At the election in November, 1906, there was adopted an amendment to the constitution of South Dakota which is known as Section 6 of Article XXI of that constitution and which is as follows:

"§ 6. The drainage of agricultural lands is hereby "declared to be a public purpose and the legislature may "provide therefor, and may provide for the organization "of drainage districts for the drainage of lands for any "public use, and may vest the corporate authorities there-"of, and the corporate authorities of counties, townships "and municipalities, with power to construct levees, drains "and ditches, and to keep in repair all drains, ditches and "levees heretofore constructed under the laws of this "state, by special assessments upon the property bene-"fited thereby, according to benefits received."

The legislature of South Dakota has never enacted any law to carry into effect the powers, conferred upon it by the foregoing constitutional amendment providing for the organization of drainage districts, but has enacted, or attempted to enact various laws vesting the corporate authorities of the several counties of the state with power to construct levees, drains, and ditches and to keep the same in repair by special assessments upon the property benefited thereby.

The first drainage ditch enactment was Chapter 98 of the Session Laws of South Dakota, 1905, which was passed prior to the adoption of Section 6 of Article XXI of the South Dakota constitution. After the adoption of that section a new law was passed which is known as Chapter 134 of the Session Laws of South Dakota, 1907. The 1907 law was amended by Chapter 102 of the Session Laws of South Dakota, 1909. The 1907 law was further amended by Chapters 207 and 208 of the Session Laws of South Dakota, 1917. In 1919 the entire drainage law was recompiled and re-enacted as Sections 8458 to 8507, South Dakota Revised Code of 1919. Further amendments were enacted in 1919 which appear as Chapter 46 of the Session Laws of the First Special Session of the Sixteenth Legislature of South Dakota and by Chapters 193, 194, 195, 196, 197 and 198 of the Session Laws of South Dakota, 1921.

For the convenience of the court we are printing as Appendix A of this brief the portions of the South Dakota constitution, and as Appendix B the portions of the South Dakota laws which bear upon the questions at issue in this suit.

The Big Sioux river has its origin in a lake in the northeastern part of South Dakota and runs thence in a generally southerly direction, and in the eastern part of South Dakota, (of which state it is in places the boundary line) for about 100 miles and empties into the Missouri river at a point a short distance north of Sioux City, Iowa. In its course the Big Sioux river passes through the center of the city of Sioux Falls. It strikes Minnehaha county, in which Sioux Falls is situated, at its north line and flows in a generally southerly direction, but with many bends and curves, for a distance, in a straight line, of twenty-four miles, running in its course two and one-half miles west of the business center of the city of Sioux Falls and south to a point three miles south of the business center. It then flows in an easterly direction for about three miles and then turns north, running through the business center of the city of Sioux Falls and northerly to a point two miles from the business center. It then runs in an easterly direction for several miles when it again resumes its southerly course towards its junction with the Missouri river. The consequence is that at the city of Sioux Falls the river runs like an inverted letter "S," upon the bar of which Sioux Falls is situated.

From a point about five miles south of where the Big Sioux enters Minnehaha county it runs through a valley or flat from two to four miles in width until it reaches a point about three miles southwest of the business center of the city of Sioux Falls. From there on until it reaches the northeastern portion of the city the river is confined by high banks on either side and with no valley interposing between them.

There is comparatively little fall between the point where the Big Sioux river enters the flat about fifteen miles north of the city of Sioux Falls and the northeastern section of the city where the river passes over a series of falls of an aggregate height of more than one hundred feet. The result is that the level of the river bed, as it

passes over the falls in the northeastern portion of the city of Sioux Falls, is over one hundred feet below the level of the river at a point, four miles to the westward, where it passes to the west of the city of Sioux Falls.

About 1878, a dam was constructed for water power purposes across the Big Sioux river within the limits of the city of Sioux Falls a short distance above the falls and, between that dam and the falls, other dams were subsequently constructed, all of which were in existence long prior to any of the transactions out of which this suit arises. These dams for many years have been utilized, without complaint from any source, by the Northern States Power Company and its predecessors, as a source of water power, and upon the dams and power works several hundreds of thousands of dollars have been expended with the consent, express or implied, of the public authorities of Minnehaha county and of the city of Sioux Falls and of the property owners along the Big Sioux river.

The city of Sioux Falls, something over twenty years ago, located its municipal waterworks upon the flat north of the city, between the Big Sioux river where it flows in a southerly direction to the westward of the city and where it flows to the northward after it passes over the falls in the northeastern portion of the city. The flat where the waterworks are situated is a few feet higher than the level of the river bed to the westward of the waterworks plant and more than one hundred feet higher than the level of the river bed to the eastward. Between the two channels of the river (at this point about 3½ miles apart) there is an extensive gravel bed underlying the surface of the ground, which gravel bed is filled with water and is the source from which the city of Sioux Falls obtains its municipal water supply.

For many years, and from in fact shortly after the settlement of Minnehaha county in the late sixties and early seventies, complaints arose in regard to the flooding of the land in the valley of the Big Sioux river north of the city of Sioux Falls. The topography of the country along this valley being level and there being but little fall in the river bed for a distance of nearly thirty miles, between the north end of the flats and the falls of the Big

Sioux river, the surface waters, in times of freshets, would accumulate upon the flats and remain there for several days, and sometimes for weeks, before they gradually flowed off through the narrow river channel south of the city of Sioux Falls and through the city until they reached the falls. This situation was made still worse by the construction of the dam upon the river above the falls in 1878 which hindered still further the passage of the water along the river bed before it reached the falls. As the state of South Dakota became more and more densely settled in the counties along the Big Sioux river north of Minnehaha county, numerous drainage ditches were established, the effect of which was still further to accelerate the flow of surface water during freshets and to cause a still greater volume of water to accumulate upon the flats north of the city of Sioux Falls.

In December, 1907, the Board of County Commissioners of Minnehaha county, purporting to act under the authority of Chapter 134 Session Laws of South Dakota, 1907, established a drainage ditch known as Drainage Ditch No. 1. This ditch was some three miles in length and extended, from a point on the Big Sioux river below the falls, northward to a point on the flat north of the city of Sioux Falls. In 1910, the Board of County Commissioners, again purporting to be acting under the authority of Chapter 134 of the Session Laws of South Dakota, 1907, as amended by Chapter 102, Session Laws of South Dakota, 1909, established a second ditch, known as Drainage Ditch No. 2, which commenced at the north end of Drainage Ditch No. 1 and extended in a northerly direction for about twelve miles.

At the point Drainage Ditch No. 1 empties into the Big Sioux river below the falls it passed over a hill in a descent of about one hundred feet. The bottom of the ditch was covered along this descent with concrete, making a spillway through which the water accumulating upon the flats could run to reach the channel of the Big Sioux river below the falls.

Drainage Ditch No. 1 and Drainage Ditch No. 2 operated more or less successfully in draining the flats until the spring of 1916 at which time, during a somewhat heavy rainfall, the concrete bottom of Drainage Ditch No.

1, (or its spillway) washed out and the water began cutting a channel through the hill.

The fact that the concrete spillway had washed out did not in any manner decrease the efficiency of Drainage Ditch No. 1 and Drainage Ditch No. 2 as drainage propositions. In fact, the washout of the spillway made them still more efficient for draining purposes, and if they had been left alone they would very speedily have settled the question of drainage for the lands upon the flats. The effect of the washout was to open a passage for all of the water which accumulated upon the flats into the channel of the Big Sioux river below the falls and this channel was amply sufficient to have taken care of all of the water which ever accumulated upon the flats. In fact, it was a perfect success as a drainage proposition.

Unfortunately, while Drainage Ditch No. 1, after its spillway was washed out, succeeded in doing all in the way of drainage that the owners of the lands upon the flats desired to have done, it seriously affected other interests. If the water had been allowed to go without hindrance through the new channel it would, within a very short time, have diverted the entire course of the water in the Big Sioux river and would have formed a new channel for the river across the flats north of the city of Sioux Falls, in which channel all of the water coming down the river could have flowed into the channel below the falls without passing around and through the city of Sioux Falls and over the falls, thus cutting off about twelve miles of the river channel. The further effect would have been to destroy the waterpower formed by the dams across the Big Sioux river in the city of Sioux Falls above the falls, as the only water which would have flowed in the Big Sioux river channel through the city of Sioux Falls and over the falls would have been the water from Skunk creek, a tributary of the Big Sioux river, emptying into that stream south of the city of Sioux Falls. Another effect of allowing the river to run through its new channel would have been to destroy the municipal water plant of the city of Sioux Falls by draining the water from the gravel bed from which the city obtained its water supply.

After the spillway at the outlet of Drainage Ditch No. 1 had washed out in March, 1916, various plans were

proposed looking toward the control of the water which flowed through the ditch. Many conferences were had between the Board of County Commissioners and the representatives of the various interests affected. The Appellee was not represented at any of these conferences and never took any part in any manner in them or in the subsequent proceedings.

In October, 1916, the Board of County Commissioners took proceedings by which they attempted to establish a new ditch project which they named "Drainage Ditch No. 1 and 2." Thereafter, all proceedings with respect to Drainage Ditch No. 1 and with respect to Drainage Ditch No. 2 were abandoned and all subsequent work was done by the Board of County Commissioners upon the new project, "Drainage Ditch No. 1 and 2."

The Board of County Commissioners, after attempting to organize Drainage Ditch No. 1 and 2, proceeded to construct additional ditches, cut-offs, and dams in the flats above the city of Sioux Falls, and at the former outlet of Drainage Ditch No. 1, to construct a spillway, and other water retaining works for the purpose of controlling the flow of the water through the ditches. This work was done by the Board of County Commissioners without any regard to the requirements of the South Dakota drainage statutes and without having first had plans therefore prepared and approved by the state engineer. The most of the work was done by the board without letting a contract therefor and upon the cost-plus plan. The result was, that at the end of the construction period, the cost of the work done by the Board of County Commissioners upon Drainage Ditch No. 1 and 2 had amounted to a sum in excess of $250,000, of which upwards of $150,000 was expended upon the spillway and other water retaining works at the outlet of the ditch. For the amount expended, the Board of County Commissioners issued warrants upon the Drainage Ditch No. 1 and 2. These warrants were taken by the laborers and material men employed upon the construction work and were in most instances discounted to the local banks in Minnehaha county.

After a number of abortive attempts to levy an assessment for the purpose of raising the money to pay the warrants issued for the work done upon Drainage Ditch No.

1 and 2, the Board of County Commissioners, in June, 1921, adopted a notice of time and place for equalizing the proportion of benefits for the construction of the work on Drainage Ditch No. 1 and 2, in which notice the proportion of benefits assessed against Appellee was 839.45 units out of a proposed total of 32549.62 units, upon the basis of which proportion the assessment against Appellee and its property would be in excess of $7,500.

The plaintiff and Appellee brought this suit to enjoin the making of any assessment upon its property for the work done upon Drainage Ditch No. 1 and 2. A temporary injunction was granted *pendente lite*. The defendants named in the bill were the Board of County Commissioners of Minnehaha County, the Auditor, and the Treasurer of that county. Subsequently, the various banks and other persons holding drainage ditch warrants filed a petition for leave to intervene in the suit. This petition was granted and answers were filed both by the defendants and by the intervenors. Upon the hearing of the suit upon its merits, a final decree was entered enjoining the Board of County Commissioners from making any assessment for the expense of the work done under the proceedings establishing Drainage Ditch No. 1 and 2. The decree by its terms was without prejudice to the right of Appellee to contest any assessment upon the property owned by it which had formerly been assessed for Drainage Ditch No. 1 and Drainage Ditch No. 2. (*Chicago, Rock Island & Pacific Railway Company vs Risty*, 282 Fed. 364.)

In its bill Appellee set up the facts concerning the construction of Drainage Ditches No. 1 and No. 2 and the subsequent construction of a spillway and attacked the constitutionality of the South Dakota Drainage Statute in the following allegations:

"That said purported statute of the state of South "Dakota 'Exhibit A' hereto, is unconstitutional and void, "in that the same is in violation of Section 2 of Article "VI, of the Constitution of the State of South Dakota, "and in that the same is in violation of the Fourteenth "Amendment of the Constitution of the United States; "that said Statute, 'Exhibit A', is further void and un- "constitutional in that the same provides no fixed and

"determinable method or rule for the apportionment of "benefits upon the property and property owners situat- "ed within the drainage area, and especially in that said "purported statute furnishes no fixed or determinable "basis for the apportionment of benefits upon the prop- "erty of railroad companies and other corporations, and "upon the property of municipal and quasi-municipal cor- "porations, and upon platted property in cities and vil- "lages. Said purported law, 'Exhibit A', is further un- "constitutional and void in that the same provides for an "assessment against property without the right of the "property owner to be heard thereon and without notice "of any character to the property owner; that if said ap- "portionment of benefits be made as threatened by the "said Board of County Commissioners of said Minnehaha "County, and as is provided in said notice, 'Exhibit C', "the same will constitute the taking of the property of "plaintiff and of the other property owner affected by "said notice without due process of law; that a cloud will "be placed upon the title of the plaintiff to its real prop- "erty situated within said drainage area affected by "said notice, 'Exhibit C' and that there will result a mul- "tiplicity of suits and that plaintiff and other property "owners affected will suffer irreparable injury." (Rec- ord, p. 15).

The bill also attacked the acts of the Board of County Commissioners of Minnehaha County in its proceedings relative to the construction of the spillway and other drainage works as being without jurisdiction on account of the unconstitutionality of the South Dakota Drainage Statute and also on account of such proceedings not being had in accordance with the provisions of the Statute. (Record, pp. 14-15). The apportionment of benefits made against the property of Appellee was further attacked as exorbitant, disproportionate to the assessment of other property and made upon an arbitrary and discriminatory basis. (Record, pp. 72-73).

In their answer, Appellants took issue upon the unconstitutionality of the South Dakota Drainage law and specifically set up the establishment by the Board of County Commissioners of a new ditch project under the title of "Drainage Ditch No. 1 and 2."

Upon the trial in the district court the issues involved were, under the pleadings:

1. The constitutionality of the South Dakota Drainage Ditch Statute.

2. The regularity of the proceedings of the Board of County Commissioners of Minnehaha county under the Statute.

3. The proper construction to be given to the provisions of the South Dakota Drainage Statute.

There was practically no dispute as to the facts out of which this suit arises. It was admitted by all parties to the controversy that originally the Board of County Commissioners of Minnehaha county had established two drainage ditches known respectively as Drainage Ditch No. 1 and Drainage Ditch No. 2. It was also conceded that after the spillway, at the outlet of Drainage Ditch No. 1, had been washed out, the Board of County Commissioners established a new ditch project known as Drainage Ditch No. 1 and 2.

This suit was one of six cases involving this same ditch project, but the positions taken by the plaintiffs in the various cases differed upon the proposition as to whether Drainage Ditch No. 1 and 2 was a new and independent proposition or whether it was merely a project for the maintenance and repair of Drainage Ditch No. 1 and Drainage Ditch No. 2 and consequently a continuation of those two propositions. In all of the six cases the contention of counsel for Appellants was that Drainage Ditch No. 1 and 2 was a new and independent proposition. This position was contested by plaintiffs in some of the cases who took the position that it was merely a maintenance and repair project. In the case at bar, the plaintiff (Appellee in this court) was content to coincide with the position taken by the defendants (Appellants in this court) and to base its right to an injunction upon a state of facts in which it conceded that Drainage Ditch No. 1 and 2 was a new and independent ditch proposition and not a continuation of the old Drainage Ditch No. 1 and Drainage Ditch No. 2.

In the District Court injunctions were granted to the plaintiffs in all the six cases, but in his opinion filed in the District Court, the District Judge took the position that

Drainage Ditch No. 1 and 2 was merely a maintenance and repair project and a continuation of Drainage Ditch No. 1 and Drainage Ditch No. 2. (*Chicago, Rock Island & Pacific Railway Company vs Risty*, 282 Fed. 364).

While we contend in this court, as we did in the Circuit Court of Appeals, that the decree of the District Court was properly entered and should be affirmed, we do not act as the defenders of the decree upon the grounds upon which it was based by the District Judge. The decree was, in our view of the controversy, properly entered, but the same decree should have been entered had the court been of the opinion that Drainage Ditch No. 1 and 2 was an independent and original ditch proposition and not a continuation and repair project of Drainage Ditch No. 1 and Drainage Ditch No. 2. In this position we do not coincide with the views expressed by counsel for the Appellees in other of the six cases now before this court. We accept the position of counsel for the Appellants that Drainage Ditch No. 1 and 2 was an original and independent ditch proposition and upon that basis shall proceed with our argument in support of the decree of the District Court and the decision of the Circuit Court of Appeals.

An appeal was taken by the defendants and by the intervenors to the Circuit Court of Appeals for the Eighth Circuit, in which court the decree of the District Court was affirmed. *Risty vs Chicago, Rock Island & Pacific Railway Company*, 297 Fed 710. The defendants and intervenors then filed a petition in this Court for a writ of certiorari and, at the same time, took this appeal. The application for a certiorari was denied. *Risty vs Chicago, St. Paul, Minneapolis & Omaha*, 266 U. S. 622. The case is now before this court upon the appeal.

The foregoing being the facts in this suit, we submit on behalf of the Appellee, the Chicago, Milwaukee & St. Paul Railway Company, the following:

BRIEF AND ARGUMENT

I.

THE SOUTH DAKOTA DRAINAGE LAW IS IN VIOLATION OF THE FOURTEENTH AMENDMENT TO THE CONSTITUTION OF THE UNITED STATES AND IS THEREFORE UNCONSTITUTIONAL.

The first proposition which we desire to present for the consideration of the Court is that the entire South Dakota drainage law is unconstitutional, our contention being that it is in violation of the "due process of law" clause of the fourteenth amendment to the federal constitution. The consideration of this question involves an analysis of the provisions of the South Dakota drainage statute as it existed at the time the Board of County Commissioners of Minnehaha county attempted to establish Drainage Ditch No. 1 and 2 and did the work thereunder.

The first statutory step in the establishment of a drainage ditch is the filing of a petition. (§2, ch. 134, Laws of 1907; §8459, R. S. 1919). This petition must "set forth "the necessity for the drainage, a description of the pro-"posed route by its initial and terminal points and its "general course, or by its exact course in whole or in part, "and a *general statement of the territory likely to be "affected thereby"*. It will be noticed that in the petition, which is the initial and jurisdictional step in the formation of a drainage ditch, it is not necessary to include a description of the property which will be affected and upon which assessments will be levied to pay the costs of the construction of the ditch. All that is required is a "general statement of the territory likely to be affected "thereby." The next step in the proceeding is for the County Auditor to transmit a copy of the petition to the State Engineer, who, together with the Board of County Commissioners is required to inspect the proposed route and "if in the opinion of the Board and the State Engi-"neer it is necessary," the Board of County Commissioners causes a survey of the proposed drainage to be made by a competent engineer, selected by the Board, but under the general supervision of the State Engineer. This survey is primarily for the purpose of aiding the Board in determining the necessity for the proposed drainage but

it may be a complete survey such as will be required for the construction of the drainage and the assessment of its cost. All this is within the jurisdiction of the Board of County Commissioners. The survey may extend to other lands than those affected by the proposed drainage for the purpose of determining the best practical method of draining the entire section of country of which the lands proposed to be drained, or a portion of them, are a part. (§ 3, ch. 134, Laws of 1907; § 1, ch. 102, Laws of 1909; §8460, R. S., 1919). While the survey may, at the option of the Board of County Commissioners, be a complete survey for the purpose of ascertaining all facts required for the construction of the proposed drainage and the assessment of its cost, such complete survey is not rendered obligatory by the statute and the Board of County Commissioners may have made only so much of the survey as may be necessary to determine the necessity for the proposed drainage.

After receiving the report of the surveyor, the Board of County Commissioners is required to determine the "exact line and width of the ditch, if the same shall not "be fixed in the petition, and shall file its determination "with the petition." The Board then fixes the time and place for the hearing of the petition and gives notice by publication in a newspaper for two weeks and by posting copies of the notice in three public places near the route of the proposed drainage. The notice "shall describe the "route of the proposed drainage and the tract of country "likely to be affected thereby in general terms, the sep-"arate tracts of land through which the proposed drain-"age will pass and give the names of the owners thereof "as appears from the records of the office of the Register "of Deeds on the date of the filing of the petition, and "shall refer to the files in the proceeding for further par-"ticulars." The notice shall also "summon *all persons* "*affected* by the proposed drainage to appear at such "hearing and show cause why the proposed drainage shall "not be established and constructed." (§ 4, ch. 134, Laws of 1907; § 2, ch. 102, Laws of 1909; § 8461, R. S. 1919). This notice is the only notice given to property owners prior to the establishment of a drainage ditch and is the only notice under which the Board can acquire jurisdic-

tion to make an assessment. The owners are named of the separate tracts of land through which the proposed drainage will pass but no description is given of the property *affected by the proposed drainage ditch or which will be assessed for the cost of the construction thereof.* The notice merely describes the route of the proposed drainage and the "tract of country likely to be affected thereby *"in general terms"* and then summons *"all persons af-"fected by the proposed drainage"* to appear at the hearing. A notice designating as the tract of country "likely "to be affected thereby in general terms" would be sufficient, if it named as such "tract of country" the entire county in which the drainage ditch is to be constructed. Nothing whatever is required in the notice by which any property owner, other than one owning land through which the ditch is to be constructed, is appraised that he is affected or that his land will be assessed for the construction of the proposed drainage ditch. In fact, all that the South Dakota law requires is for the Board of County Commissioners of a South Dakota county to publish and post a general notice summoning "all persons affected" to appear at the hearing, in order to support an assessment, for the construction of the ditch, upon all of the real property situated within the county limits. There is absolutely nothing in the statutory notice to inform any property owner that he will be called upon to pay an assessment. After the ditch is constructed, the Board of County Commissioners is at liberty, under the South Dakota statute, to extend the assessment to all property in every direction up to the county boundary lines. If this be sufficient notice, then after it is given, the Board of County Commissioners has the power to assess for the cost of the construction of any ditch every acre of property within the county limits.

At the hearing upon the petition, the South Dakota statute kindly permits "any person interested" to appear and contest the statements of the petition and matters set forth in the surveyor's report and the finding of the Board as to the width and route of the proposed ditch. After the hearing, the County Board may establish the drainage ditch. (§ 5, ch. 134, Laws of 1907; § 3, ch. 102, Laws of 1909; § 8462, R. S. 1919).

After the establishment of the drainage ditch, the Board of County Commissioners "shall fix the proportion of benefits of the proposed drainage among the lands affected and shall appoint a time and place for equalizing the same." (§6, ch. 134, Laws of 1907; § 4, ch. 102, Laws of 1909; § 8463, R. S. 1919). There is no statutory requirement as to how soon after the establishment of the drainage ditch this shall be done and it is not necessary that it be done before the drainage project has been completed. It must be done before an assessment is made for the purpose of paying the cost of the establishment of the drainage project but the assessment, when made, includes all costs already incurred, or thereafter to be incurred. (§ 7, ch. 134, Laws of 1907; § 5, ch. 102, Laws of 1909; ch. 130, Laws of 1911; § 8464, R. S. 1919.)

The notice of equalization of proportion of benefits is given by publication once in each week for two consecutive weeks in a newspaper of the county and by posting copies of the notice in three public places near the route of the proposed drainage. The law requires that the "notice "shall state the route and the width of the drainage estab- "lished, a description of each tract of land affected by "the proposed drainage and the names of the owners of "the several tracts of land as appears from the records "of the office of the Register of Deeds, at the date of filing "of the petition, and the proportion of benefits fixed by "each tract of property, taking any particular tract as a "unit, and shall notify all such owners to show cause why "the proportion of benefits shall not be fixed as stated." (§ 6, ch. 134, Laws of 1907; § 4, ch. 102, Laws of 1909; § 8463, R. S. 1919). Here for the first time there is published a description of each tract of land "affected" by the proposed drainage and the names of the owners of such tracts. As in the case at bar, the work may have been completed and an expense of over a quarter of a million dollars incurred before the Board of County Commissioners determines what particular lands are "affected" by the proposed drainage and gives notice to the owners of such lands. A property owner for the first time notified that his land is "affected" by the proposed drainage has no right to object in any manner to the establishment of the drainage project. He has nothing to say in re-

gard to its manner or cost of construction; he has no voice in the selection of the particular tract of land taken as a unit; and all concerning which he can be heard is as to whether the proportion of benefits "shall not be fixed "as stated."

It is now too late for the property owner to escape. He is like a rat in a trap. All that he can do is to appear before the Board of County Commissioners and object to the proportion of benefits which has been assessed against him and ask to have that proportion reduced by raising the proportion of some other property owner. He is precluded from raising any question whatsoever as to the right to include his property within the drainage area. He has nothing to say as to the necessity for the drainage project or as to its manner of construction or its cost. Without any notice, either personal or constructive, his property has been included in the drainage area under the general proclamation of the Board of County Commissioners and he has no redress.

Theirs not to make reply,
Theirs not to reason why,
Theirs but to do and die,

even though

Someone had blundered.

The property owner cannot question the validity of the proceedings. All that is left for him to do is to pay.

Our contention is that the South Dakota drainage statute is in violation of the due process of law clause of the fourteenth amendment to the federal constitution for the reason that no opportunity is given a property owner, whose property is "affected" by the proposed drainage project, to appear prior to the doing of the work and the making of the assessment for the construction cost.

In support of the constitutionality of the South Dakota drainage statute, counsel for appellants have cited *Spencer vs. Merchant*, 125 U. S. 345. That case was decided by a divided court. The legislature of the state of New York had, by express enactment, determined that certain lands should be included within an assessment district in which the cost of the improvement was to be proportioned. The majority of the court held "that the deter-"mination of the territorial district which should be taxed

"for local improvement is within the province of legisla-
"tive discretion." The courts in this and a line of suc
ceeding cases have made a clear distinction between cases in which a taxing district has been established by an act of the legislature and cases in which special assessments are to be made by some taxing body upon the property "beneficially affected" but not included within any taxing district established by legislative enactment. In the cases of taxing districts established by act of the legislature no notice need be given to the property owners of the inclusion of their property within the district, but a different rule applies in cases in which the taxing district is determined by the area of the land "beneficially affected."

Fallbrook Irrigation District vs Bradley, 164 U. S. 112, also cited by counsel in support of the constitutionality of the South Dakota drainage law, is, when carefully read, a strong authority against the constitutionality of the South Dakota statute. In the very elaborate opinion in this case the Court (p. 167) says:

"The legislature not having itself described the dis-
"trict, has not decided that any particular land would or
"could possibly be benefited as described, and, therefore,
"it would be necessary to give a hearing at some time to
"those interested upon the question of fact whether or
"not the land of any owner which was intended to be in-
"cluded would be benefited by the irrigation proposed. If
"such a hearing were provided for by the act, the de-
"cision of the tribunal thereby created would be sufficient.
"Whether it is provided for will be discussed when we
"come to the question of the proper construction of the
"act itself."

Later on in the opinion the court discusses the question whether the statute does provide for a hearing prior to the formation of the district and holds that under the provision of the statute under consideration and under the construction given it by the supreme court of California, by which state it was enacted, the right of hearing is given the property owner prior to the formation of the district. The court discusses the statute (pp. 170-172):

"We come now to the question of the true construc-
"tion of the act. Does it provide for a hearing as to
"whether the petitioners are of the class mentioned and

"described in the act and as to their compliance with the "conditions of the act in regard to the proceedings prior "to the presentation of the petition for the formation of "the district? Is there any opportunity provided for a "hearing upon notice to the land owners interested in the "question whether their lands will be benefited by the "proposed irrigation? We think the right to a hearing "in regard to all these facts is given by the act and that it "has been practically so construed by the Supreme Court "of California in some of the cases, above cited from the "reports of that court and in the case cited in the briefs "of counsel. We should come to the same conclusion from "a perusal of the act. The first two sections provide for "the petition and a hearing. The petition is to be signed "by a majority of the holders of title to lands susceptible "of one mode of irrigation, etc. This petition is to be pre-"sented to the board of supervisors at a regular meeting, "and notice of intended presentation must be published "two weeks before the time at which it is to be presented. "The board shall hear the same, shall establish and de-"fine the boundaries, although it cannot modify those de-"scribed in the petition, so as to except from the district "lands susceptible of irrigation by the same system of "works applicable to the other lands in the proposed dis-"trict, and the board cannot include in the district, even "though included in the description in the petition, lands "which shall not, in the judgment of the board, be bene-"fited by irrigation by said system.

"If the board is to hear the petition upon notice, and "is not to include land which will not, in its judgment, be "benefited by irrigation by the system, we think it fol-"lows as a necessary and a fair implication that the per-"sons interested in or who may be affected by the pro-"posed improvement have the right under the notice to "appear before the board and contest the facts upon which "the petition is based, and also the fact of benefit to any "particular land included in the description of that pro-"posed district.

"It is not an accurate construction of the statute to "say that no opportunity is afforded the landowner to test "the sufficiency of the petition in regard to the signers "thereof and in regard to the other conditions named in

"the act; nor is it correct to say that the power of the "board of supervisors is, in terms, limited to making such "changes in the boundaries proposed by the petitioners "as it may deem proper, subject to the conditions named "in the act.

"When the act speaks of a hearing of the petition, "what is meant by it? Certainly it must extend to a "hearing of the facts stated in the petition, and whether "those who sign it are sufficient in number and are among "the class of persons mentioned in the act as alone having "the right to sign the same. The obvious purpose of the "publication of the notice of the intended presentation of "the petition is to give those who are in any way interest-"ed in the proceeding an opportunity to appear before "the board and be heard upon all the questions of fact, "including the question of benefits to lands described in "the petition. As there is to be a hearing before the "board, and the board is not to include any lands which "in its judgment will not be benefited, the plain construc-"tion of the act is that the hearing before the board in-"cludes the question as to the benefits of the lands, be-"cause that is one of the conditions upon which the final "determination of the board is based, and the act cannot "in reason be so construed as to provide that while the "board is to give a hearing on the petition it must never-"theless decide in favor of the petitioners, and must estab-"lish and define the boundaries of the district, although "the signers may not be fifty, or a majority of the hold-"ers of title, as provided by the act, and notwithstanding "some other defect may become apparent upon the hear-"ing."

It will be seen in *Fallbrook Irrigation District vs Bradley* that the California statute differs from the South Dakota statute in that the petition must "particularly de-"scribe the proposed boundaries of such districts" and the petition itself must be published. After the petition is published and has been passed upon by the Board of Supervisors the question of the formation of the irriga-tion district is submitted to an election of the electors of the district who are also freeholders. (*Fallbrook Irriga-tion District vs Bradley*, 164 U. S. 112, pp. 116-117). These facts differentiate the statute passed upon in *Fall-*

brook Irrigation District vs Bradley from the South Dakota statute under consideration. Under the California statute the boundaries of the proposed district are fixed in the first instance and after they have been determined then the question of the formation of the district is put to a vote of the freeholder electors. We submit therefore, that the decision in *Fallbrook Irrigation District vs Bradley* is a distinct authority in favor of our position that the South Dakota drainage statute is unconstitutional. The court expressly determines in that case that notice must be given to the property owner of the formation of the district before his property can be included in it, and one of the requisites of notice is that the property owner be advised in some manner, either actually or constructively, that his land will be included within the limits of the proposed project.

Embree vs Kansas City Road District, 240 U. S. 242, is another case relied upon by counsel in support of the constitutionality of the South Dakota law. Here, again, is a case which we submit directly sustains our contention as to the invalidity of the South Dakota statute. The Court in the opinion (pp. 246-248) says:

"The district was not established or defined by the "legislature, but by an order of the county court made "under a general law. Whether there was need for the "district and, if so, what lands should be included and "what excluded was committed to the judgment and dis-"cretion of that court subject to these qualifications: "First, that the district should contain at least 640 acres "of contiguous land and be wholly within the county; sec-"ond, that the court's action should be invoked by a peti-"tion signed by the owners of a majority of the acres in "the proposed district, and, third, that public notice—con-"ceded to be adequate—should be given, by the clerk of "the court, of the presentation of the petition and the "date when it would be considered, and that owners of "land within the proposed district should be accorded an "opportunity to appear, either collectively or separately, "and oppose its formation. In this connection the statute "says: 'The court shall hear such petition and remon-" 'strance, and shall make such change in the boundaries " 'of such proposed district as the public good may re-

"'quire and make necessary, and if after such changes "'are made it shall appear to the court that such petition "'is signed or in writing consented to by the owners of "'a majority of all the acres of land within the district "'as so changed, the court shall make a preliminary order "'establishing such public road district, and such order "'shall set out the boundaries of such district as estab- "'lished . . . but the boundaries of no district shall be "'so changed as to embrace any land not included in the "'notice made by the clerk unless the owner thereof shall "'in writing consent thereto, or shall appear at the hear- "'ing and is notified in open court of such fact and given "'an opportunity to file or join in a remonstrance.' The "order actually made shows that four of the present plain- "tiffs, with three others, appeared in opposition to the "petition, recites that 'the court, after hearing and con- "'sidering said petition and said protests and remon "'strances and all evidence offered in support thereof, "'finds that the public good requires and makes necessary "'the organization, formation and creation of such pro- "'posed public road district . . . with boundaries as stated "'in said petition,' and sets out the boundaries of the "district as established.

"The sole purpose in creating the district, as the "statute shows, was to accomplish the improvement of "public roads therein—the particular roads to be desig- "nated by the district commissioners and an approving "vote of the land owners.

"As the district was not established by the legisla- "ture but by an exercise of delegated authority, there was "no legislative decision that its location, boundaries and "needs were such that the lands therein would be benefit "ed by its creation and what it was intended to accom- "plish, and, this being so, it was essential to due process "of law that the land owners be accorded an opportunity "to be heard upon the question whether their lands would "be thus benefited. If the statute provided for such a "hearing, the decision of the designated tribunal would be "sufficient, unless made fraudulently or in bad faith. "*Fallbrook Irrigation District vs Bradley,* 164 U. S. 112, "174-175.

"Did the statute contemplate such a hearing? We

"have seen that it required that adequate public notice "be given of the presentation of the petition for the crea- "tion of the district and the time when it would be con- "sidered, made provision for the presentation of remon- "strances by owners of lands within the proposed district, "and directed that the petition and remonstrances be "heard by the county court, that the court make such "change in the boundaries 'as the public good may re- "'quire' and that the boundaries be not enlarged unless "the owners of the lands not before included consent in "writing or appear at the hearing and be given an oppor- "tunity to present objections. That a hearing of some "kind was contemplated is obvious, and conceded."

The case of *Soliah vs Heskin*, 222 U. S. 522, is strongly relied upon by counsel. That is a case arising under the North Dakota drainage law. The opinion at first glance would seem to support the contention of counsel for Appellants but an examination of the North Dakota statute, upon which the case arose, discloses the fact that the North Dakota law was not subject to the same objections which are urged against the South Dakota enactment. Under the North Dakota statute, a petition for the construction of the drain is filed with the board of drain commissioners. This petition designates the starting point and terminus and general course of the proposed drain. The board of drain commissioners then employs surveyors who prepare profiles, plans, and specifications of the proposed drain, an estimate of the cost thereof, and a map or plat of the lands to be drained in duplicate, showing the regular subdivisions thereof, one copy of which is filed in the office of the county auditor in the county in which the drain is proposed to be constructed and the other with the board of drain commissioners, subject to inspection. Upon the filing of the surveyor's report, the board of drain commissioners fixes a date and public place for hearing objections to the petitions and gives notice of such hearing. The notices must contain a copy of the petition and a statement of the date of filing of the surveyor's report and the date when the board will act upon the petition, must be signed by a majority of the members of the drainage board and "shall be sent by "registered mail to the last known address of each and

"every *owner of land which may be affected* by the pro-"posed drain." The North Dakota statute therefore requires that the names of "each and every owner of land "which may be affected" be determined and actual notice given these at the very inception of the project and this notice must be given by sending to each owner a copy of the petition and of a statement of the date of filing the surveyor's report and the date upon which the board will act upon the petition. That is a very different proposition from merely publishing notice "to all persons whose "property is affected" without first determining who are affected, as required by the South Dakota statute. The opinion in the case of *Soliah vs Heskin* must consequently be read in the light of the North Dakota statute which provides for the giving of notice at two stages of the proceedings to the property owner, first, a notice before the drainage district is formed, and, second, a notice when the assessment of benefits is made. The North Dakota statute provides exactly the thing for the want of which the South Dakota statute is unconstitutional.

Counsel for Appellants place great reliance upon the recent case of *Milheim vs Moffat Tunnel District*, 262 U. S. 710. That case is clearly to be distinguished from the case at bar. It is a case arising upon an assessment made in a taxing district, the limits of which had been fixed by act of the legislature of the state of Colorado. The supreme court held, following *Spencer vs Merchant*, 125 U. S. 345, and other similar cases, that the legislative authority of a state extends to the formation of taxing districts and that a state legislature can enact a law fixing the boundaries of a taxing district without giving notice to the owners of property included therein. That is an entirely different proposition from the one arising under the South Dakota drainage law and the decision of the supreme court in *Milheim vs. Moffat Tunnel District* is not an authority in support of the South Dakota statute which on its face does not attempt to form a taxing district by legislative enactment.

The case of *Voight vs Detroit City*, 184 U. S. 115, was cited by JUDGE ELLIOTT in his opinion deciding this case in the District Court. This case is one of a line of cases involving the making of special assessments in cities

for various municipal purposes. See also *St. Louis Land Company vs Kansas City,* 241 U. S. 419. In this line of cases the courts hold that cities organized under general laws or special acts of the legislature may impose special assessments under general statutes authorizing the levying of assessments in proportion to benefits. In all such cases, it is held by the courts, some opportunity must be given the taxpayer to be heard as to the proportion of the benefits to be assessed against his property but the property owner is not entitled to a hearing upon the question of the determination whether the improvements shall be made for which the special assessment is levied.

In the case of *Central of Georgia Railway Company vs Wright,* 207 U. S. 127, the Supreme Court held (quoting from the syllabus): "Due process of law requires "that opportunity to be heard as to the validity of the tax "and the amount of the assessment be given to a taxpay- "er, who, without fraudulent intent and in the honest be- "lief that it is not taxable, withholds property from tax "returns, and this requirement is not satisfied where the "taxpayer is allowed to attack the assessment only for "fraud and corruption."

In *Londoner vs Denver,* 210 U. S. 373, the Court, passing upon a Colorado statute, says:

"In the assessment, apportionment and collection of "taxes upon property within their jurisdiction the Con- "stitution of the United States imposes few restrictions "upon the States. In the enforcement of such restric- "tion as the Constitution does impose this court has re- "garded substance and not form. But where the legis- "lature of a State, instead of fixing the tax itself, com- "mits to some subordinate body the duty of determin- "ing whether, in what amount, and upon whom it shall "be levied, and of making its assessment and apportion- "ment, due process of law requires that at some stage "of the proceedings before the tax becomes irrevocably "fixed, the taxpayer shall have an opportunity to be "heard, of which he must have notice, either personal, by "publication, or by a law fixing the time and place of the "hearing. *Hager vs Reclamation District,* 111 U. S. 701; "*Kentucky Railroad Tax Cases,* 115 U. S. 321; *Winona &* "*St. Peter Land Co. vs Minnesota,* 159 U. S. 526, 537;

"*Lent vs Tillson,* 140 U. S. 316; *Glidden vs Harrington,*
"189 U. S. 255; *Hibben vs Smith,* 191 U. S. 310; *Security*
"*Trust Co. vs. Lexington,* 203 U. S. 323; *Central of*
"*Georgia vs Wright,* 207 U. S. 127. It must be remem-
"bered that the law of Colorado denies the landowner
"the right to object in the courts to the assessment, upon
"the ground that the objections are cognizable only by
"the boards of equalization.

"If it is enough that, under such circumstances, an op-
"portunity is given to submit in writing all objections to
"and complaints of the tax to the board, then there was a
"hearing afforded in the case at bar. But we think that
"something more than that, even in proceedings for tax-
"ation, is required by due process of law. Many require-
"ments essential in strictly judicial proceedings may be
"dispensed with in proceedings of this nature. But even
"here a hearing in its very essence demands that he who
"is entitled to it shall have the right to support his alle-
"gations by argument however brief, and, if need be, by
"proof, however informal. *Pittsburg &c Railway Co. vs*
"*Backus,* 154 U. S. 421, 426; *Fallbrook Irrigation District*
"*vs Bradley,* 164 U. S. 112, 171, *et seq.* It is apparent
"that such a hearing was denied to the plaintiffs in error.
"The denial was by the city council, which, while acting
"as a board of equalization, represents the state. *Ray-*
"*mond vs Chicago Traction Co.,* 207 U. S. 20. The as-
"sessment was therefore void, and the plaintiffs in error
"were entitled to a decree discharging their lands from
"a lien on account of it."

In *Turner vs Wade,* 254 U. S. 64, the Court held (quoting from the syllabus) as follows:

"The Georgia Tax Equalization Act (Laws, 1913, p.
"123 §§ 6-7), empowers the Board of County Tax Assess-
"ors to assess property for taxation and requires it to
"notify the taxpayer of changes made in his returns; it
"gives him, if dissatisfied, the right to demand an arbitra-
"tion, and provides that a majority of three arbitrators,
"one appointed by him, one by the Board and the third by
"the two so selected, shall fix the assessment; but the
"arbitrators must render their decision within ten days
"from the naming of the arbitrator by the board, other-
"wise the Board's decision—i. e., its assessment—stands

"affirmed; and no notice is afforded the taxpayer before "the making of the Board's assessment, nor any oppor- "tunity to be heard concerning it save that before the "arbitrators. Held, that an assessment so made by the "Board of County Tax Assessors, increasing the valua- "tion returned by a property owner, without notice or "hearing, was without due process of law, where his rem- "edy by arbitration proved abortive because the arbitra- "tors, though agreeing that the assessment was excessive, "could no two of them unite on a new assessment before "the ten day limitation expired."

We contend that an examination of the decisions of this Court pertinent to this case discloses that the following principles of law have been laid down:

First: That "due process of law" requires that at some stage of the proceedings the taxpayer must have an opportunity to appear and be heard *both as to the validity of the tax and as to its amount.*

Second: That the state legislature possesses the authority, by direct legislative enactment, to establish taxing districts and to fix the boundaries thereof without notice to the property owners included within such district.

Third: That where, by direct legislative enactment, certain territory has been formed into a taxing district the taxing authorities of such district may impose special assessments upon the property situated within the taxing district, pursuant to powers conferred by the legislature upon the taxing authorities, without first giving the property owner an opportunity to be heard as to the necessity for the making of the improvement, but in such cases the taxpayer must be given an opportunity to be heard as to the amount of the tax which he is to be compelled to pay.

Fourth: That in cases in which a taxing area or district is not formed by direct act of the legislature but is formed for the making of some public improvement by special assessments upon the property contained in the area or district, by local officers through authority delegated to them by the legislature to act upon petition of property owners, it is *absolutely essential to the validity of the proceedings that notice be given to the property owners whose interests are affected before the taxing area or dis-*

trict can be formed, the work done, and a tax imposed. The notice is not necessarily a personal one and may be by publication *but a notice of some character is essential.*

Analyzing all of the cases upon the subject, there cannot be found a single case in which a law containing the provisions of the South Dakota drainage law has been sustained by the courts. In every instance in which a law has been held valid there was a positive requirement that notice should be given to the taxpayer of a hearing upon the question of the making of the proposed improvements. In every instance the property affected has been definitely determined before the hearing and the property owner has been advised in some manner that his property is included within the area upon which it is intended that a tax or asssesment be imposed.

Search the law reports through; there cannot be found a case in which a mere general notice directed to "all persons affected" has been held to be a sufficient notice to a property owner that his property is to be included within an assessment area.

The inequity of a law like that of South Dakota is well illustrated by the results of the proceedings of the Board of County Commissioners of Minnehaha county in the case at bar. Under a notice to "all persons affected" it is sought to assess for the construction of the works in Drainage Ditch No. 1 and 2 not only the area formerly assessed for the construction of Drainage Ditch No. 1 and for the construction of Drainage Ditch No. 2, but to assess also property situated several miles from any of the work done in Drainage Ditch No. 1 and 2 and miles away from any of the land in the area assessed for the original construction of Drainage Ditch No. 1 or of Drainage Ditch No. 2. Property, that could not by any possibility be drained by the work done in Drainage Ditch No. 1 and 2 and that could not even remotely be benefited by that work, was included in the assessment area, and under the notice there could have been included just as well any other property situate within the limits of the 800 square miles comprising Minnehaha county.

If the County Commissioners of Minnehaha county had been required by the South Dakota drainage law to obtain, in the first instance, a survey and plat of the pro-

posed drainage area, and then to notify, either personally or by mail, publication, or posting, the property owners interested in that area, their proceedings might have had a semblance of legality, but under the South Dakota statute no such procedure is required. The County Commissioners have before them the names of the property owners through whose lands the drainage ditch passes but neither the Board of County Commissioners nor any one else has the slightest idea of what lands will be assessed for the cost of the construction of the drainage ditch. The only notice that is given to anyone is the general notice to "all persons affected." After the drainage works are completed, then for the first time a survey is made for the purpose of ascertaining what lands are "affected" and shall be assessed. The County Commissioners fix the proportion of benefits and publish the notice which, for the first time, informs the property owner that his land is liable for the assessment. It is then too late to lock the barn door. The horse has already been stolen. The drainage project has been constructed, the cost incurred, and all that is left for the property owner to do is to pay his assessment and "look pleasant." We reiterate, that never has a law of this character been sustained by this Court. All decisions of this Court, cited in support of the constitutionality of the South Dakota statute, can be easily distinguished as they are all of them based upon facts and principles of law which are not found in this case.

The bill in this case attacked directly the constitutionality of the South Dakota Drainage Statute. In the District Court the District judge upheld the constitutionality of the statute but granted an injunction upon other grounds (*Chicago, Rock Island & Pacific Railway Co. vs Risty,* 282 Fed. 364). In the Circuit Court of Appeals JUDGE KENYON, in delivering the opinion of the Court, expressly avoided passing upon the constitutional questions involved and while he expressly admitted that these questions were very grave ones, he held that their determination was not necessary to the decision of the case in that court and affirmed on other grounds the decision of the District Court.

Upon this appeal in this court, the constitutionality of the South Dakota Drainage Statute is again brought

before the court by the averments of the bill and answers and by the evidence introduced upon the trial in the District Court and preserved in the record in this Court. The position taken by the Plaintiff and Appellant is, that the South Dakota Drainage Law is in violation of the provisions of the Fourteenth Amendment to the Constitution and while, as will be discussed in a later portion of our argument, we contend that the proceedings taken by the Board of County Commissioners of Minnehaha County were so irregular as to render them invalid even if the statute were constitutional, we now submit, that on account of the unconstitutional provisions of the South Dakota Drainage Law the Board of County Commissioners of Minnehaha County possessed no authority to make assessments against the property of Appellee for the purpose of defraying the costs of the construction of Drainage Ditch No. 1 and 2.

In concluding our discussion upon this branch of this case we submit that the South Dakota drainage statute is unconstitutional in that no notice to property owners is required before a drainage assessment area is established or the work constructed and consequently the statute is unconstitutional as authorizing the taking of property without due process of law, contrary to the fourteenth amendment to the federal constitution.

II.

THE SOUTH DAKOTA DRAINAGE LAW IS IN VIOLATION OF SECTIONS 2 AND 13 OF ARTICLE VI OF THE SOUTH DAKOTA STATE CONSTITUTION AND IS THEREFORE UNCONSTITUTIONAL.

We now come to the question of the constitutionality of the South Dakota drainage law under the provisions of the South Dakota State Constitution. Section 2 of Article VI of the South Dakota Constitution provides as follows:

"§ 2. No person shall be deprived of life, liberty or "property without due process of law."

Section 13 of Article VI of the South Dakota Constitution provides as follows:

"§ 13. Private property shall not be taken for public "use, or damaged without compensation * * * * *"

It will thus be seen that the South Dakota state constitution contains not only the due process of law clause contained in the fourteenth amendment to the federal constitution but also the just compensation clause contained in the fifth amendment to the federal constitution, thus making the provisions applicable to the state which by the fifth amendment are made applicable to the federal government.

The South Dakota drainage statute has a number of times been before the South Dakota supreme court for construction in various of its phases but the question as to the constitutionality of the statute, by reason of its failure to provide a notice to property owners before the assessment area is determined, has never been presented to the South Dakota supreme court or passed upon by that court. Shortly prior to the institution of the case at bar, a suit was commenced in the circuit court of Minnehaha county, South Dakota, by one Oluf O. Gilseth against the Board of County Commissioners of Minnehaha county and other persons, to restrain certain acts with relation to the making of an apportionment of benefits for the construction of the drainage works in controversy in the case at bar. Gilseth, the plaintiff in that case, was a property owner residing upon the flats north of the city of Sioux Falls upon whose land the County Commissioners were attempting to make an assessment. The South Dakota supreme court held that Gilseth was estopped by his actions with respect to the construction of the drainage works from objecting to an assessment to pay for their cost of construction, and the decision appears as *Gilseth vs Risty*, 46 S. D. 374. In the opinion of the majority of the Court, the Court says: "We do not understand that "appellant questions the constitutionality of the law un- "der which the said project was carried out." The Court thereupon proceeds to determine the case under the assumption that the law is constitutional and that the plaintiff, Gilseth, makes no attack upon it. In the dissenting opinion filed by one of the Judges of the Supreme Court of South Dakota in *Gilseth vs Risty*, the question of the constitutionality of the statute is discussed but the opinion

of the majority of the Court decides the case under the express reservation that the question of constitutionality is not involved.

The Supreme Court of South Dakota, in the case of *Evans vs Fall River County*, 9 S. D. 130, stated the law in that jurisdiction in the following language:

"Notice to the taxpayer is a jurisdictional matter, "and his right to be heard in opposition to an assessment, "or to the amount thereof, is vitally essential to the valid- "ity of every assessment. *Black, Tax Titles*, 488; 2 "*Blackw. Tax Titles*, 953; *Cooley, Tax'n*, 227; *County of* "*Santa Clara vs Southern Pac. R. Co.*, 18 Fed. 385; *Pow-* "*ers vs. Larrabee (N. D.)*, 49 N. W. 724; *Bank vs. Maher*, "9 Fed. 884."

From the foregoing citation it will be seen that the Supreme Court of South Dakota recognizes the doctrine laid down by the Supreme Court of the United States to the effect that in a special assessment proceeding the taxpayer must have the right, at some time or other, and in some manner or other, to be heard both as to the validity and as to the amount of the assessment.

The same argument which we have made relating to the unconstitutionality of the South Dakota drainage statute under the fourteenth amendment to the federal constitution applies with equal force to the statute considered in the light of the provisions of the South Dakota constitution.

We therefore contend that the South Dakota drainage law is unconstitutional under the constitution of that State for the reason that no notice is given the property owner of the proceedings precedent to the determination of the boundaries of the assessment area.

Counsel for Appellants argue that the proceedings had in the case at bar are valid for the reason that, as a matter of fact, the drainage notice did contain a description of the property sufficient to give notice to each property owner whose lands were affected. We do not by any means concede that the notice given was sufficient to apprise property owners that their lands were to be subject to assessment for the payment of the cost of the construction of the drainage project, but even if the Board of County Commissioners of Minnehaha county had pub-

lished a notice sufficient for that purpose it would not have helped the situation. The statute does not require any such notice to be published and is consequently unconstitutional. Validity cannot be injected into an unconstitutional and void statute by taking under it the proceedings which would have to be taken under a constitutional and valid status. The law being unconstitutional, all proceedings under it are invalid *ab initio*.

III.

THE LEGISLATURE OF SOUTH DAKOTA HAS NEVER EXERCISED THE AUTHORITY GRANTED TO IT BY SECTION 6 OF ARTICLE XXI OF THE SOUTH DAKOTA CONSTITUTION PROVIDING FOR THE ORGANIZATION OF DRAINAGE DISTRICTS.

To the proper determination of this case, there is necessary a consideration of just what of the powers granted to it by the South Dakota constitution the legislature of that state has attempted to exercise by the enactment of the South Dakota drainage statute. This involves an analysis of the exact phraseology of the constitutional provision under which the legislature obtained its power to act. Section 6 of Article XXI of the constitution constitutes that authority and is as follows:

"§ 6. The drainage of agricultural lands is hereby "declared to be a public purpose and the legislature may "provide therefor, and may provide for the organization "of drainage districts for the drainage of lands for any "public use, and may vest the corporate authorities there-"of, and the corporate authorities of counties, townships "and municipalities, with power to construct levees, drains "and ditches, and to keep in repair all drains, ditches and "levees heretofore constructed under the laws of this "state, by special assessments upon the property bene-"fited thereby, according to benefits received."

The first clause of the foregoing section declares that the drainage of agricultural lands is a public purpose, and gives the legislature power to "provide therefor." This clause is complete in itself and to determine its meaning and intent requires no aid from the remainder of the section.

The section then goes further and gives the legislature authority to "provide for the organization of drain-"age districts for the drainage of lands for any public "use." This is a power conferred upon the legislature distinct and in addition to that contained in the first clause of the section. It gives the legislature authority to establish drainage districts for the purpose, not only of carrying into effect the power to drain agricultural lands, but for the purpose of carrying on any drainage project for "any public use."

As the section stands, when the first and second clauses are considered together, it appears that three things are provided for: (a) the drainage of agricultural lands is made a public purpose, (b) the legislature is given power to provide for the drainage of agricultural lands, and (c) the legislature is given power to provide for the organization of drainage districts for the drainage of land for any public use.

The constitutional section then continues giving to the legislature authority, (a) to vest the corporate authorities of drainage districts with power to construct levees, drains and ditches and keep in repair all drains, ditches and levees theretofore constructed under the laws of the state, by special assessments upon property benefited thereby, according to benefits received, and (b) to vest the corporate authorities of counties, townships, and municipalities with power to construct levees, drains and ditches and keep in repair all drains, ditches, and levees theretofore constructed under the laws of the state, by special assessments upon the property benefited thereby, according to the benefits received.

Throughout the entire section there appears a clear intent to authorize the legislature to proceed in matters respecting drainage of lands in either of two ways, (a) by the organization of drainage districts with corporate authorities, and (b) by empowering the corporate authorities of counties, townships and municipalities with power to enter upon and carry out drainage projects. It is not made obligatory upon the legislature to follow either system for the construction of drainage. The constitution gives the legislature the option to carry on drainage work by drainage districts organized as separate en-

tities, or to carry on the work through the regularly constituted authorities of counties, townships, and municipalities. The legislature of South Dakota, acting under the constitutional option given it by Section 6 of Article XXI of the constitution, has declined to provide for the organization of drainage districts as separate corporate entities, and has provided for the doing of all drainage work through the corporate authorities of the various counties, to-wit, the Board of County Commissioners, county auditor, county treasurer, and other county officers.

It follows that in the case at bar there was not and could not under the law have been formed any drainage districts. The drainage projects, known as Drainage Ditch No. 1, and Drainage Ditch No. 2, and Drainage Ditch No. 1 and 2, were all conceived and carried out by the county authorities of Minnehaha county under the constitutional provision giving the legislature the power to vest in the county authorities the power to construct levees, drains, ditches, etc. The legislature never attempted to exercise the power given it by the constitution to organize drainage districts, and the application of the term "district" to the assessment area of Drainage Ditch No. 1, Drainage Ditch No. 2, or Drainage Ditch No. 1 and 2 is a misnomer. That term is reserved by the South Dakota constitution for an entirely different sort of organization and should not be used in connection with a drainage project carried on by the Board of County Commissioners under the South Dakota statute.

The situation with respect to this matter was pointed out by Judge Elliott in his opinion upon the trial of this case in the District Court. *Chicago, Rock Island & Pacific Railway Company vs Risty*, 282 Fed. 364. In this opinion, Judge Elliott says, (p. 368): "Pursuant to this "provision of the constitution, the legislature of the state "has provided for the drainage of agricultural lands: "*but nowhere is there any statutory enactment under "which drainage districts may be formed for the drain-"age of lands 'for any public use.'*"

A further examination of the particular wording of Section 6 of Article XXI of the South Dakota constitution discloses the important bearing which the failure of

the legislature to exercise the authority of establishing drainage districts has upon the decision of the case at bar. The wording of the constitutional provision is that the legislature "may provide for the organization of drain-"age districts for the drainage of lands for any public use," and may vest "the corporate authorities thereof," etc. Eliminate the quoted words (which are the only ones in the section referring to drainage districts) from the section and the result would be that the section would read, "The drainage of agricultural lands is hereby de-"clared to be a public purpose and the legislature may "provide therefor, and may vest the corporate authori-"ties of counties, townships and municipalities with pow-"er to construct levees, drains, and ditches, etc."

In other words, the South Dakota legislature is given authority to carry on drainage projects either through the formation of drainage districts as corporate entities, or through the municipal authorities of the counties, townships, and municipalities, but while drainage "for "any public use" may be constructed through corporate drainage districts, drainage of lands for agricultural purposes only may also be carried on by the county, townships and other municipal authorities. The constitution nowhere gives the legislature power to provide that drainage for "any public use" other than the drainage of agricultural lands may be constructed by the county, township, or other municipal authorities. Drainage for any other public purpose must be constructed by districts specially organized therefor.

It consequently follows that the legislature of South Dakota cannot, under the provisions of the state constitution, authorize drainage projects, for other than agricultural lands, to be conducted by the county, township, or other municipal authorities. Such authorities may construct drainage projects for the drainage of agricultural lands, but for any other public purposes the works must be constructed by the corporate authorities of drainage districts established for that purpose.

While the legislature of South Dakota had the right, under the state constitution, to enact a law authorizing the Board of County Commissioners of Minnehaha county to construct a drainage project for the drainage of agri-

cultural lands, it could not, under the constitution, authorize the Board of County Commissioners to carry on any drainage project for any public use other than the drainage of agricultural lands.

It follows, therefore, that if Drainage Ditch No. 1 and 2 was initiated by the Board of County Commissioners of Minnehaha county for a purpose other than the drainage of agricultural lands, the Board exceeded their powers in constructing the dams, ditches, spillway, and other works in Drainage Ditch No. 1 and 2, for which Appellee is now asked to pay a proportionate part. The question whether Drainage Ditch No. 1 and 2 was a project for the drainage of agricultural lands or for some other purpose we will discuss in a separate section of this brief.

IV.

DRAINAGE DITCH NO. 1 AND 2 WAS NOT A PROJECT FOR THE DRAINAGE OF AGRICULTURAL LANDS, AND THE ACTION OF THE BOARD OF COUNTY COMMISSIONERS OF MINNEHAHA COUNTY IN ENTERING UPON THE PROJECT AND IN CARRYING IT ON WAS *ULTRA VIRES*.

We now come to the consideration of the question as to whether Drainage Ditch No. 1 and 2 was a project for the drainage of agricultural lands or for the carrying out of some other purpose. There are at this time before this court pending appeals in six cases involving Drainage Ditch No. 1 and 2, and there is a divergence of views of the Appellees in various of the six cases as to the status of the drainage proposition. In some of the cases, the Appellees contend that Drainage Ditch No. 1 and 2 was simply a continuation of Drainage Ditch No. 1 and of Drainage Ditch No. 2, and that the work was initiated and carried on by the Board of County Commissioners of Minnehaha county as a project for the repairing of Drainage Ditch No. 1 and of Drainage Ditch No. 2. In the case at bar, the position which we take is that Drainage Ditch No. 1 and 2 must be considered as an independent project entered upon by the Board of County Commissioners and that it is not a mere project for the re-

pair of Drainage Ditch No. 1 and of Drainage Ditch No. 2, and is not in any manner controlled by the original proceedings for the construction of the old ditches. We contend that Drainage Ditch No. 1 and 2 must be considered as if it were an entirely new proposition entered upon after the spillway at the outlet of Drainage Ditch No. 1 had been washed out in the spring of 1916.

In the bill in this suit, it is alleged that the Board of County Commissioners of Minnehaha county has spent a sum in excess of $255,000 in the construction of a spillway, dams, and retaining gates, "designed not for the "purpose of drainage of agricultural lands, but solely "for the purpose of controlling and retarding the flow "of water, through the outlet of said Drainage Ditches "No. 1 and No. 2 into the Big Sioux river for the pur-"pose of preventing a change in the channel of said river "and of preventing the drainage of the gravel bed through "which the said city of Sioux Falls obtains its water "supply." It is further alleged that less than five per cent of such money has been expended for any purpose legitimately connected with the construction and maintenance of Drainage Ditch No. 1 and of Drainage Ditch No. 2. The bill further sets up the alleged proceedings for the organization of Drainage Ditch No. 1 and 2.

The answer sets up the organization of Drainage Ditch No. 1 and 2 as a separate organization from Drainage Ditch No. 1 and Drainage Ditch No. 2, and the theory of Appellants is that Drainage Ditch No. 1 and 2 was a separate and independent organization and not a mere continuation of Drainage Ditch No. 1 and Drainage Ditch No. 2, and that its formation was compelled for the purpose of saving the water supply of the city of Sioux Falls, and preventing the change of the channel of the Big Sioux river, and the imperiling of the interests of various property owners.

The position of Appellants throughout this case has been that Drainage Ditch No. 1 and 2 was a new and separate organization. They have so pleaded, and with their allegations in this regard we have no contention to make. The Appellee in this case is satisfied to rest this proposition upon the allegations of the answer and to concede that Drainage Ditch No. 1 and 2 was a new or-

ganization and was entirely independent of the original ditches. As we have said, in others of the six cases tried at the same time and upon the same record as this case, the plaintiffs (Appellees in this court) contested the claim of the defendants and intervenors (Appellants in this court) that Drainage Ditch No. 1 and 2 was a new and independent proposition and contended that all of the work done by the Board of County Commissioners was done merely as a continuation of the work upon the original ditches, Drainage Ditch No. 1 and Drainage Ditch No. 2. JUDGE ELLIOTT, in his opinion filed in the District Court, arrived at the conclusion that Drainage Ditch No. 1 and 2 was not a new and independent organization but was simply a continuation of the old original ditches. *Chicago, Rock Island & Pacific Railway vs Risty*, 282 Fed. 364 (p. 374 *et seq*).

With due respect to the opinion of the learned District Judge (who evidently felt inclined to hold so as not to preclude the holders of the drainage ditch warrants from a right to recover the amount of their investments from the property owners within the original assessment area of the Drainage Ditch No. 1 and of Drainage Ditch No. 2), we respectfully submit, that under the allegations of the bill and answer in this case, and under the evidence contained in the record, Drainage Ditch No. 1 and 2 must be deemed to be a new and independent organization and must stand or fall as such. If it possesses no life of its own, life cannot be injected into it by treating it as a continuation of the old original ditch organizations.

It appears from the evidence in this case that after the outlet of Drainage Ditch No. 1 had been washed out in the spring of 1916, various plans were proposed for the controlling of the water so as to prevent the formation of a new river channel and the draining of the gravel bed, from which the city of Sioux Falls obtained its water supply. No changes in Drainage Ditch No. 1 and Drainage Ditch No. 2 were required for the purpose of draining agricultural lands in the flats north of the city of Sioux Falls. The two ditches were working beautifully, so far as that purpose was concerned. They formed a perfect, complete and satisfactory system for the drainage of the flats. The property owners in the

flats could not have asked for any drainage system more complete. The trouble was, that instead of draining too little, the ditches drained too much, and were too efficient in their operation. No change in them was required for any purpose connected with the drainage of agricultural lands. The only people interested were those who objected to the formation of a new channel for the Big Sioux river and who were interested in maintaining a water supply for the city of Sioux Falls. The change in the course of the river, if made, would have operated to destroy various industries dependent upon the water power at the dams south of the falls. It would also have prevented the flow of the water through the city limits, and would have forced the city of Sioux Falls to seek some other municipal water supply.

The Board of County Commissioners, after various plans had been considered and for one reason after another abandoned, finally formed a new organization under the name of Drainage Ditch No. 1 and 2, and went ahead and expended upwards of $250,000 in the construction of a spillway, retaining walls, retaining dams, ditches, etc. The greater part of the money was invested in a spillway, dam and retaining walls which were purposely intended to retard, rather than to accelerate the flow of the surface water which collected upon the flats north of the city of Sioux Falls, and which consequently were intended to hinder rather than to facilitate the drainage of the flats.

After $255,000 and over had been expended upon the spillway and other water retaining works, the Board of County Commissioners proceeded to make an apportionment of benefits upon the lands "affected" by the improvement. In the assessment area, the Board of County Commissioners included not only the territory which had been included in the assessment area of the original ditches, Drainage Ditch No. 1 and Drainage Ditch No. 2, but also included all of the lands and lots within a considerable distance on either side of the Big Sioux river between the south boundary of the property in the assessment areas of the original ditches, along the channel of the Big Sioux river for a distance of some nine miles, along where the river runs west and south of

the city of Sioux Falls and through the city, and up to a point a short distance north of Sioux Falls. The ostensible reason for the inclusion of all this additional territory was the alleged fact that the property along the river was subject to floods at the time of freshets which would be relieved by the construction of the spillway and other water retaining works. Upon the trial, it was shown that with the exception of a small tract of territory immediately south of the original ditch assessment areas, the remainder of the lands, for a space of eight or nine miles along the channel of the Big Sioux river, had never suffered from flood waters, excepting in the spring of 1881, and that the occasion for the flood in that year was not the collection of water upon the flats north of the city of Sioux Falls, but the forming of an ice gorge at a point in the river in the southeast portion of the city. There was consequently a total lack of any proof in the record that the territory, along the channel of the river and through the city of Sioux Falls attempted to be included in the assessemnt area, was in any manner affected, beneficially or otherwise, by the construction of the spillway and other water retaining works.

In addition, the Board of County Commissioners attempted to proportion "benefits" to the City of Sioux Falls, the Northern States Power Company (owners of the waterpower on the Big Sioux river above the falls), and upon four railroad companies (one of which was Appellee) having railroad tracks and station grounds situated within the attempted assessment area. In the case of Appellee, and of one of the other railroad companies sought to be assessed, the railroad owned right of way and trackage both in the assessment areas of the original ditches and in the additional territory attempted to be included within the assessment area of Drainage Ditch No. 1 and 2. The other two railroads owned trackage and property only in the new territory and had no mileage or station grounds in the original assessment areas. In the decrees entered in the various railroad cases, the District Court enjoined the assessment of the railroad properties not included in the original assessment areas but reserved, without prejudice, the deter-

mination of the question whether Appellee and the other railroad companies having land both in the original assessment areas and in the new assessment area should be held liable for an assessment upon its property in the original assessment area.

The question therefore arises whether, under the record in this case, the Board of County Commissioners of Minnehaha county possesses authority to make any apportionment of benefits whatsoever, or any assessment upon any property whatsoever, for the cost of the construction of the works in Drainage Ditch No. 1 and 2. Our contention in this regard is as follows:

It is alleged by the defendants and Appellants in their answer, and Appellee admits it to be a fact, that Drainage Ditch No. 1 and 2 was a new and independent proposition and not a continuation of Drainage Ditch No. 1 and of Drainage Ditch No. 2, and cannot be considered as a proposition for the repair of the original ditches. It is a project which must stand or fall upon its own footing.

Under the evidence in this case, Drainage Ditch No. 1 and 2 was not a project for the drainage of agricultural lands but was a project for another "public use," to-wit, the preservation of the water flowage in the channel of the Big Sioux river and of the supply of water in the gravel bed from which the city of Sioux Falls obtains its water supply. Neither of these propositions involves the drainage of agricultural lands. Drainage Ditch No. 1 and Drainage Ditch No. 2 had completely accomplished the object of draining the flats north of the city of Sioux Falls. If those drainage works were damaging other property interests, the remedy for the persons interested was to have the ditches abated as nuisances. Instead of pursuing this course, the Board of County Commissioners of Minnehaha county entered upon the construction of an elaborate system of water retaining works by which the water, which was collected from the flats into Drainage Ditch No. 1 and Drainage Ditch No. 2, could be retained until it could be passed off gradually into the Big Sioux river. To have abated Drainage Ditch No. 1 and Drainage Ditch No. 2 as nuisances, would have been to permit

the water, accumlating upon the flats, to remain there until it could flow off through its natural channel around the bends in the Big Sioux river, the same as it did before Drainage Ditch No. 1 and Drainage Ditch No. 2 were constructed. Instead, however, of doing this, the Board of County Commissioners proceeded to construct a new water retaining system by which the water could be retained upon the flats until it could gradually be drawn off, partly through the natural channel of the river and partly through a restricted passageway formed by the spillway and its attendant retaining walls and dams. In other words, the Board of County Commissioners proceeded to spend $250,000 and over for the purpose of accomplishing the same object that could have been accomplished by damming up the original ditches and leaving the flats in the same condition that they were before the original ditches were constructed. While some evidence was introduced, tending to show that a portion of the water collecting upon the flats passed off through the spillway, it remained in the evidence almost uncontradicted that the situation in the flats above the city of Sioux Falls is as bad as it was before any drainage ditches were constructed.

From all of the evidence in the record in this case, it would appear that the construction of the spillway and other works, under the organization of Drainage Ditch No. 1 and 2, was not for the purpose of draining agricultural lands but was for an entirely different purpose. This is the conclusion to which JUDGE ELLIOTT came in his opinion in the District Court, and upon this subject JUDGE ELLIOTT says, *Chicago, Rock Island and Pacific Railway Company vs. Risty,* 282 Fed. 364 (p. 378):

"There is another and further suggestion: I am of "the opinion that this reconstruction of the old spillway "without change of location, the repair of the break from "the river into the ditch, the cleaning of the ditch, the "change of the headgates where the flood waters are "taken from the river, everything that was done under "this pretended establishment of a new ditch, could not "have been viewed in the same light or as serving the "same purpose as the construction of the original ditches,

"because the thing that caused the board of commis-
"sioners to take any action with reference to the condi-
"tion that then existed was the danger that existed be-
"cause of the conduct of the water down through these
"two drainage ditches to and through this spillway. The
"danger that was threatened was not that the agricultural
"lands would not be drained, but that immense damage
"was threatened, that the course of the river was to be
"diverted to this cut-off, that great areas of land were
"threatened to be cut away by this river 100 feet deep,
"and that the water supply of the city was threatened
"to be taken away because of this drainage ditch and
"this imperfect spillway, because the water was to be
"taken from the river and all of the benefits of the river
"for several miles, through and around the city of Sioux
"Falls, would be destroyed. The power of the Northern
"States Power Company would be destroyed, by taking
"the water from the river. If it had not been for those
"conditions, for these threatened dangers, no action would
"have been taken; the ditches would have continued to
"function as they had functioned before. If the spill-
"way had been properly constructed originally, and if it
"had not proven inadequate, there would have been no
"cause for any action by the board in the year 1916.
"Every consideration that impelled action by the board
"was some phase of the threatened danger by reason
"of the inadequate and imperfect construction of these
"two ditches. Neither of these considerations that in-
"fluenced the action of the board *had anything to do with*
"*draining agricultural lands.*"

As has been shown, the legislature of South Dakota has never passed an act, putting into effect the authority vested by the constitution in the legislature to create drainage districts. As has also been shown, while drainage of agricultural lands can be carried on by county, township, and other municipal authorities, drainage for other "public uses" can only be constructed by drainage districts through their corporate authorities. It appearing from the record in this case that the work done under the organization of Drainage Ditch No. 1 and 2 was not for the purpose of agricultural lands but for other "public uses," it follows that the Board of County

Commissioners of Minnehaha county exceeded its authority in attempting to organize Drainage Ditch No. 1 and 2 and to construct the spillway and attendant works. Upon this proposition, JUDGE ELLIOTT, in his opinion, says:

"It may be said that to remedy these wrongs consti-
"tuted a public use, as referred to in the constitution of
"the state of South Dakota. Admitting that that is true,
"we are confronted with the proposition that there has
"been no legislation, conforming with the provisions of
"the constitution, authorizing the legislature to provide
"for the establishment of drainage districts and in the
"naming of officers with the powers therein referred to.
"If, therefore, any claim were made that the commis-
"sioners were acting under this authority, independent
"of the provision of law with reference to the drainage
"of agricultural lands, the answer is that the provision
"of the constitution is not selfexecuting, and that no leg-
"islation has been provided carrying this provision of
"the constitution into effect."

We therefore submit, that as the construction of the spillway and other attendant works was not a project for the drainage of agricultural lands, and as drainage for public uses other than the drainage of agricultural lands can, in South Dakota, only be carried on by the corporate authorities of drainage districts, and as the legislature of South Dakota has never authorized the organization of drainage districts with corporate authorities, all of the acts of the Board of County Commissioners of Minnehaha county, in attempting to organize Drainage Ditch No. 1 and 2, and in constructing the spillway and attendant works under such organization, were *ultra vires*, and that no apportionment of benefits or assessment for the cost of such construction can be made upon the property of Appellee.

V.

THE SOUTH DAKOTA DRAINAGE LAW IS UNCONSTITUTIONAL, SO FAR AS RESPECTS ASSESSMENTS OF RAILROAD PROPERTY, IN THAT IT PROVIDES FOR THE GIVING OF NO NOTICE WHATEVER OF THE APPORTIONMENT AND

EQUALIZATION OF BENEFITS TO RAILROAD COMPANIES.

In the preceding discussion of the South Dakota drainage law, we have considered the subject of the notice required by the statute to be given to property owners in general. We now desire to call the attention of the court to the provisions (or want of provisions) in the statute, relating to the notice to be given to railroad companies.

So far as concerns the statutory provisions relating to the notice to be given before a drainage project is entered upon by the Board of County Commissioners under the South Dakota drainage law, there is no difference as respects railroads and other property owners. The only notice, as has been seen, is a general notice to all persons "affected" by the proposed drainage project.

When we come to the matter of the notice given for the equalization of benefits, a singular situation is presented by the provisions of the statute in, that while the law provides for the publication of a notice to the owners of land, there is no provision whatever for the publication of any notice to railroad companies.

The provisions respecting the notice to be given of the equalization of proportion of benefits is found in Section 8463, South Dakota Revised Code, 1919. This section was evidently originally drafted for the purpose of providing a method for the equalization of assessments upon agricultural lands. The method, provided by the statute, for arriving at the assessment and equalization of benefits, is to take some "particular tract as a unit" and then with this tract as a measuring stick to determine, in number of units, the benefits received by the remaining tracts of land. This system is one which is in its nature applicable to agricultural lands, but which cannot well be applied to other classes of property, such as railroads and the property of municipalities. In the case of railroads, the taking of a particular tract of land as the unit, or measuring stick cannot be made to work out successfully unless the taxing authorities are content to assess railroads merely by virtue of the railroad ownership of the tracts of land comprised in the right of way within the assessment area. In other words, the

only way in which the proportion of benefits to railroad property could be determined, under the system provided by the statute, would be to consider merely the area of the right of way and proportion benefits to it the same as to the other agricultural land within the assessment area.

Evidently the legislature, in enacting the South Dakota drainage law, was not satisfied to have railroad companies and municipal organizations pay assessments for the construction of drainage works upon the same basis as the owners of agricultural lands, and in enacting Section 8463, South Dakota Revised Code, 1919, after providing the method for the assessment of the proportion of benefits upon lands by selecting some particular tract as a unit, there was added to the Section (something in the nature of an afterthought) the clause, "the pro- "portion of benefits which any county, city, town or "township may obtain by the construction of such drain- "age to highways or otherwise, and *the benefits which "any railroad company may obtain for its property by "such construction,* shall be fixed and equalized together "with the proportion of benefits to tracts of land." No method of arriving at the assessment and equalization is provided by the statute. The "particular tract as a unit" system is selfevidently inapplicable in such cases but the legislature has provided nothing to take its place. The law gives the Board of County Commissioners the naked power to fix and equalize the proportion of benefits to counties, cities, towns, townships, and railroad companies, but provides no method upon which the assessment and equalization can be based.

The notice of equalization of proportion of benefits, provided by Section 8463, "shall state the route and "width of the drainage established, a description of each "tract of land affected by the proposed drainage and the "names of the owners of the several tracts of land as "appears from the records of the office of the Register of "Deeds, at the date of the filing of the petition, and the "proportion of benefits fixed for each tract of property, "taking any particular tract as a unit, and shall notify "all such owners to show cause why the proportion of "benefits shall not be fixed as stated." This is a notice

directed solely to the owners of tracts of land within the assessment area. It does not purport to be a notice to a county, city, town, township, or railroad company respecting the assessment or the equalization of proportion of benefits upon the property belonging to any of such organizations. The statute authorizes the Board of County Commissioners to assess the "proportion of benefits" which any county, city, town or township may obtain by the construction of drainage to highways or otherwise, but does not provide for the giving of any notice to the municipality affected. With respect to railroad companies, the statute authorizes the Board of County Commissioners to "fix and equalize" the "benefits", but seems to make a distinction between railroad property and other classes of property by using the words "proportion of benefits" with respect to other property, but the term "benefits" with respect to railroad property. This would seem to indicate that it was not the intent of the legislature that railroad companies should be assessed in the same proportionate manner as are agricultural lands, or as are counties, cities, towns or townships.

The fact, however, remains that the legislature of South Dakota has made no provision whatever for the giving of notice to railroad companies, cities, towns, or townships, of the assessment or equalization of benefits supposed to be derived from the construction of the drainage works. It consequently follows that as far as railroad companies, counties, cities, towns, and townships are concerned, the statute provides for no notice whatever, at any stage of the proceeding, of the assessment or of the tax. Even if the South Dakota drainage statute should be held valid as far as respect the matter of notice to the owners of agricultural lands, it is clearly unconstitutional as to railroads and municipalities by reason of its failure to provide for any notice whatever at any stage of the proceedings. It clearly comes within the inhibition of the Fourteenth Amendment and within the doctrine laid down by the Supreme Court in numerous cases.

Central of Georgia Railway Company vs Wright, 207 U. S. 127,

Londoner vs Denver, 210 U. S. 373,
Soliah vs Heskin, 222 U. S. 522,
Turner vs Wade, 254 U. S. 64

The South Dakota drainage statute having failed to provide for the giving of any notice, at any stage of the proceedings prior to the time the tax becomes absolute, to railroad companies or municipalities, any assessment or tax imposed upon each corporation or municipality under the statute is without due process of law and void.

VI.

THE ATTEMPTED ASSESSMENT UPON THE PROPERTY OF APPELLEE WAS ARBITRARY, UNJUST, AND ILLEGAL, AND CONSTITUTES A DISCRIMINATION SO PALPABLE AND ARBITRARY AS TO AMOUNT TO A DENIAL OF THE EQUAL PROTECTION OF THE LAW.

Under the proposed assessment of benefits, out of a total of 32,549.62 units there were assessed against Appellee 839.45 units, upon which the assessment of Appellee would be in excess of $7,500. The methods used by the Board of County Commissioners in arriving at these figures is disclosed by the testimony of H. Rettinghouse, a civil engineer employed by the Board of County Commissioners to make a survey of the assessment area, and who made the computations contained in the assessment of benefits adopted by the Board. Mr. Rettinghouse was called by Appellants as a witness and upon the trial testified (Record pp. 350-3951), as follows:

"We used this unit selected as one and compared "the other real estate with it. It was decided by the "Board that the acre in question was worth one hundred "dollars prior to the improvements and that it was "worth one hundred twenty-five dollars subsequent to the "improvements. Therefore the actual value of benefit "to the unit selected was twenty-five dollars. All the "agricultural land was assessed in relation to this unit. "Many of the lands were only 30 or 40 per cent depend- "ing upon the amount of benefit derived, as compared "with this unit, being one hundred per cent. There were "other lands that were as high as three hundred and fifty

"per cent of this unit. I am familiar with the cost of "construction and upkeep of highways. In arriving at "the benefit to the highways within this drainage area "we estimated the benefit in this way. There is a certain "amount of annual maintenance necessary for any road, "and there is more than that amount under flood con- "ditions. That is to say, a road that is periodically "flooded as against a road that never is flooded. The "difference in the estimated cost of maintenance was "capitalized, or represented the interest on a certain "sum of money, and we consider the capitalized portion "as a real benefit. We then, after obtaining that re- "sult after making a great many calculations, taking "into consideration the various locations, some of them "benefitted more than others.

"We divided the amount arrived at by the value of "the unit of $25, thereby obtaining the number of units "as a proportional benefit for these roads. The sum "we divided by the unit represented the capitalized value "to that part of the highway; we applied the same "method to the streets and highways of the City of "Sioux Falls. We did not apply the acreage basis to "the city property, excepting possibly the grounds where "the waterworks are located. In applying the benefit "to the unit and what the Board took into consideration "as elements of benefit to the Milwaukee Railway Com- "pany, we took into consideration the fact that in the "first place there were practically three elements. First "was the right-of-way on the acreage basis, which was "estimated in proportion to the adjacent lands. Second, "that it was possible to shorten or abandon certain "bridges. In order to determine the benefits derived "therefrom is simply a mathematical proposition. It "costs a certain amount of money each year in order "to maintain a bridge, whether it is a pile bridge or a "steel bridge. We know how long these structures will "last. We figure the cost of a bridge and divide it by "the number of years in order to get the amount that "is necessary to be expended each year for replace- "ment. Taking the amount in dollars and cents multi- "plied by the length of the bridge and divide that and "capitalize that at 7 per cent, which is the usual rate

"of interest, and that determines the amount of benefit. "This is the second element. The third element is "the fact that by reason of the flooding of the territory "in which railroads are located, washouts often occur. "We obtained data and from my personal knowledge and "experience I have a very good idea what it costs to re- "pair washouts periodically appearing and we estimated "as close as possible how much it would amount to every "year and capitalized that amount again.

"Again as an additional element, a road-bed is solid- "ified or made stronger by not being subject to floods. "A road-bed that is constantly or for great lengths of "time subjected to submersion is certainly weakened, "and again, so far as humanly possible, we figured the "amount of benefits in dollars and cents and after get- "ting all of these results or capitalized amounts, we di "vided that by twenty-five as our measure and determined "the number of units of benefit. That system and general "method and plan was used to determine the amount "of benefits that each railroad received from these "separate elements."

The statement of Mr. Rettinghouse, the engineer who made the assessment of benefits for the Board of County Commissioners of Minnehaha county, is upon its face sufficient to demonstrate the fact that in arriving at the proportion of benefits to be assessed against Appellee, the other railroad companies, and the city of Sioux Falls, the Board used as a basis for arriving at the assessment a method so wholly different from that used for ascertaining the contribution demanded of individual owners as necessarily to produce manifest inequality. The assessment was clearly upon a fanciful view of benefits to be derived by the railroad companies from the drainage project. The basis used was not authorized by any provision of the South Dakota drainage law but was evolved from the inner consciousness of the County Commissioners of Minnehaha county and of the civil engineer employed by them. The basis was so wholly different from that used for ascertaining the contribution demanded of individual owners as necessarily to produce manifest inequality. It constituted a dis-

crimination so palpable and arbitrary as to amount to a denial of the equal protection of the law.

We do not deem it necessary to discuss this proposition at further length. In the recent case of *Kansas City Southern Railway Company vs Road Improvement District No. 6*, 256 U. S. 658, this Court has emphatically condemned similar methods of assessment.

We respectfully submit, that even if the South Dakota drainage were constitutional and there were no other valid objections to the proceedings of the Board of County Commissioners of Minnehaha County in the organization of Drainage Ditch No. 1 and 2, and in the construction work done thereunder, the assessment made upon Appellee cannot be sustained for the reason that it is so arbitrary and unjust and so confessedly founded upon a fanciful basis as to deprive Appellee of the equal protection of the law.

VII.

THE DECREE MUST BE SUSTAINED REGARDLESS OF WHETHER THE DRAINAGE DITCH NO. 1 AND 2 BE REGARDED AS AN ORIGINAL DITCH PROCEEDING OR AS A MAINTENANCE AND REPAIR PROPOSITION.

Section 2, ch. 134, Laws of 1907; Section 8459 R. S. 1919, provides for the initiation of the proceedings by filing a petition. Section 4, ch. 134, Laws of 1907, Section 2, ch. 102, Laws of 1919; Section 8461 R. S. 1919, provides for notice of hearing thereof given to property owners, and is the only notice given prior to the establishment of the ditch. This notice is, therefore, jurisdictional. We have already contended that this statute, not requiring a description of the property claimed to be affected, does not satisfy the constitutional requirements of due process of law. All parties affected have a right to be heard upon the question of the establishment of the proposed drainage. They must have notice that such property will be claimed to be affected, otherwise the major step in the proceeding for which they are ultimately bound to pay, has been taken without jurisdiction of the person or property.

If the said Section R. S. 8461 requires a description of the property to be affected, then the notice itself is insufficient. Upon this theory, perhaps, the decision of the trial court was based. The notice of the hearing upon the petition for the establishment of the ditch 1 and 2 refers generally to the lands affected thereby. There is nothing to indicate that the new ditch would extend beyond or occupy a position different, from the old ditches 1 and 2. The evidence shows that there was no change or extension. The lands therefore presumed to be affected by the new ditch, if held to be a new ditch, or by the improvement of the old ditches, could not, in the absence of the description in the notice, be deemed or expected to include other lands than those included within the drainage area of the old ditches 1 and 2. There was no such description and nothing upon which it could have been apprehended that the area was intended to be extended. There was, therefore, want of notice in fact to the owners of property not included within the original drainage area. The undisputed evidence is that a considerable property of the Appellee not included in the original area, is attempted to be assessed under the guise of a new drainage ditch and this without any notice that the old drainage area was to be extended. There was, therefore, a failure to give notice, jurisdiction was not acquired of the proposed added area affected by the injunction and decree of the trial court. The reference made in the Appellants' brief to the Gilseth case may be disposed of by this situation; the lands involved in the Gilseth case were in the original drainage area, while the assessments sought here to be enjoined by the court affect areas not included within such area. The court by its decree in this case excepted from the effect of the decree the right to make an assessment upon the railroad property within the original drainage area.

The court was, therefore, justified in finding that the proposed assessment upon property not included within the original drainage area was an afterthought for the purpose of raising money. It matters not whether such determination be upon the theory that this was an attempted establishment of the new ditch or whether such proceedings for the new ditch was a mere subterfuge for

raising money to repair and improve the old ditch. The decision of the court equally sustains either theory.

As the court properly determined, no attempt was made to take the statutory steps for the repair, improvement or continuation of the old ditch, but an attempt was made to follow statutory requirements to establish a new ditch—hence it matters not whether this was a mere subterfuge to raise money or any ineffectual attempt to establish a new ditch.

Appellants challenge the record on account of the insufficiency of the facts to support the findings and conclusions of the trial court affirmed by the court of appeals. The proposition as to the amount in controversy, that the proceedings and proposed assessments are arbitrarily determined without notice of hearing in advance of a determination of benefits upon a hearing, as well as the amount in controversy, is fully presented and made to appear from Exhibit B attached to bill of complaint, from which it appears that before any notice of equalization or the apportionment of benefits, it had already been arbitrarily determined by the Board that the different classes of property as different in character and as differently affected, if at all, as the agricultural lands from either by the so-called drainage should be assessed a certain percentage of the cost. There was no rule of comparisons prescribed by statute, or adopted by the Board, but it had already been determined that 14.5% should be assessed against the railroads, 33.4% against farm lands, 1% on city lots, 9.7% on city of Sioux Falls and 16.5% on the Northern States Power Company. This was a percentage of the $309,221.40 to be raised. It was then proposed that by Exhibit C attached to the bill of complaint that the various railroads should be assessed upon certain property in specific amounts. Upon this a hearing was proposed to be had. This situation is fairly conceded by argument of Appellants on page 80, paragraph III wherein Appellants say: "But passing that, it is "plain on this record so far as the present appeal is "concerned there is more than $1,000.00 in controversy "* * *. It is admitted that no assessment has yet been "made and not a dollar of tax yet collected. There has "been an expenditure of over $250,000; drainage warrants

"for that amount are outstanding, and they must be "paid if at all by collecting the assessment that this in- "junction stopped. The tentative apportionment against "the Appellees is roundly, $112,000. (Page 13 in N., P., "R., S., O. and M.) But on the point under discussion "little attention need be paid that fact. There is at this "time more than $1,000.00 in dispute no matter how this "$112,000.00 is treated." In other words, Appellants concede that by the apportionment already made, the sum of $112,000.00 must be raised upon the property of the Appellees and that by no course of reasoning can it be determined that less than $1,000.00 is involved in each of the appeals.

By the same course of reasoning, not only had the amount been determined, but also a division of the expenses as between different classes of property. The amount to be raised upon railroads had already been determined as 14.5% of the entire expense, regardless of benefits. However that be apportioned, neither could be less than $1,000.00. The testimony shows the dissimilarity of the property and the theory of the arbitrary assessment so that it clearly appears from the pleadings and the proof that not only more than $3,000.00 is involved but that the amount to be borne by the railroads had already been determined in advance and the apportionment, according to Appellants' concession, is to be made among the railroads of the 14.5%. Consequently these Appellees have been deprived of their right to be heard upon the controlling and important question, that is, as to the amount and basis of the assessment against railroads.

VIII.

THE DISTRICT COURT POSSESSED JURISDICTION TO ENTERTAIN AND DETERMINE THIS SUIT.

Counsel for Appellants have filled a great portion of their brief with arguments upon objections to the jurisdiction of the District Court in this suit. We do not deem it necessary to take up these various objections and discuss them *seriatum*. The questions at issue, involving as they do the constitutionality of the Federal

Constitution, together with the amount involved and the diversity of citizenship, are amply sufficient to sustain the jurisdiction of the court.

Counsel for Appellants strenuously contend that Appellee should have waited until after the Board of County Commissioners of Minnehaha county had finished the equalization of benefits before instituting this suit. This case is, however, not one in which any such delay of proceedings was necessary. The law, under which the Board of County Commissioners was proceeding, was unconstitutional. The Board was a trespasser from the very commencement of the assessment proceedings. After the Board of County Commissioners had committed one illegal act, in making the assessment of benefits, it was certainly not incumbent upon Appellee to wait before instituting legal proceedings until after the Board had committed further illegal acts. Jurisdiction to maintain a suit to restrain the commission of a tort becomes fixed as soon as the first tortuous step has been taken by the tort feasor. It is not necessary for the person injured to wait until after the threatened damage has been completed. The Board of County Commissioners of Minnehaha county invaded the rights of Appellee when it made the assessment of benefits, and the right of action then became complete.

In our view of the issues involved in this case, the points which we have raised in the foregoing discussions in this brief are a sufficient answer to all questions concerning the jurisdiction of the court.

IX.

APPELLEE IS NOT ESTOPPED BY ITS ACTS FROM MAINTAINING THIS SUIT.

In their brief, counsel for Appellants make a somewhat elaborate attempt to show that Appellee is estopped from maintaining this suit. It was in evidence that the railroad tracks of the Appellee extend through the flats north of the city of Sioux Falls, and are in some places not far distant from the drainage ditch.

All the evidence of estoppel contained in the records amounts to is, that Appellee operates a railroad through

the flats upon which the ditches were constructed. There is not a scintilla of evidence that Appellee or any of its officers ever consented to the drainage construction or approved of it in any manner whatsoever. It is, therefore, a sufficient answer to the estoppel proposition, that there is no evidence of any facts which would create an estoppel.

A further answer to the estoppel plea is this: Under the South Dakota drainage law, no notice was required to be given Appellee until the assessment of benefits had been made. Up to that time, Appellee had no knowledge that its property, situated outside of the original assessment areas of Drainage Ditch No. 1 and of Drainage Ditch No. 2, was "affected" by the drainage construction, or would be assessed for the cost thereof (it will be remembered that in the decree in this case, an injunction was issued in favor of Appellee only as to its property outside of the original assessment areas, and that as to the property within such areas the decree is without prejudice to the rights of Appellee. In this proceeding, therefore, only the property outside of the original assessment areas is to be taken into consideration). We do not concede that, under the South Dakota statute, any notice was ever given to Appellee that an assessment had been made upon its property for the statute, as has been seen, does not provide for the giving of any notice whatever to railroad companies. If, however, it should be conceded, for the sake of argument, that the notice published by the Board of County Commissioners, after the assessment had been made, was a notice to Appellee, it was the first notice that Appellee had ever received. All of the acts under which an estoppel is claimed by Appellants were done during the time of the construction work and long prior to the making of the assessment of benefits and to the publishing of the equalization notice.

We respectfully submit that even if the acts set forth in the record were sufficient to constitute an estoppel upon the part of Appellee that such acts could not constitute an estoppel for the reason that, at the time they were done, Appellee had received no notice that its property within the new territory sought to be assessed was within the assessment area of Drainage Ditch No. 1 and 2, and

had no knowledge that an assessment was in contemplation. We deem it unnecessary to discuss the estoppel proposition at further length.

X.

IN CONCLUSION

In the record of this case there is ample evidence of the greatest ignorance, ineffeciency, and extravagance upon the part of the Board of County Commissioners of Minnehaha county in the construction of the spillway, retaining walls, dams, and other works under the organization known as Drainage Ditch No. 1 and 2. Plans for the work were adopted and then the adoption rescinded. Plans and specifications for the construction of a spillway were obtained and bids advertised for and received for the construction in accordance with the plans. The bids were rejected upon the ground that they were too high, the plans were then thrown into the waste basket and contractors were employed to construct a spillway upon the cost-plus plan, the contractors to receive compensation for the material and labor used and, in addition, a profit of nine per cent. The construction of the spillway was entered upon without any plans therefor being made, and the plans were drawn after the spillway had been completed, or practically completed. The cost of the spillway so constructed was approximately $150,000, or more than three hundred per cent of the amount of the bids which were rejected by the Board as being too high. The spillway and other works, when completed, have failed to accomplish successfully the drainage of the flats north of the city of Sioux Falls. The property owners in the flats are in practically the same, or possibly in a worse condition, than they were prior to the original construction of Drainage Ditch No. 1 and of Drainage Ditch No. 2. The works constructed, under the organization of Drainage Ditch No. 1 and 2, simply operate to retain the surface water upon the flats and not to drain it off. They are successful in preventing the diversion of the channel of the Big Sioux river and in preventing the draining of the gravel bed from which the city of Sioux Falls obtains its water supply. Those two objects have successfully been accomplished but the same results could have

been attained by placing, at a trifling expense, earthwork dams in proper places along the course of Drainage Ditch No. 1 and of Drainage Ditch No. 2. The spillway and other works, as completed in Drainage Ditch No. 1 and 2, have operated to destroy the efficiency of the original ditches as drainage propositions, but have accomplished nothing that could not have been accomplished at a trifling expense by simply abandoning the old ditches and preventing the flow of water through the bluff and into the Big Sioux river below the falls.

The Board of County Commissioners of Minnehaha county, in the work done by them on Drainage Ditch No. 1 and 2, seem to have acted at haphazard and without any well defined plan of procedure. The one thing which they have accomplished successfully has been to expend upwards of $250,000 upon works which are useless as a drainage proposition, and, with interest, the entire indebtedness which has now accumulated is in excess of $300,000. The intervening Appellants, who hold the drainage ditch warrants issued by the Board of County Commissioners of Minnehaha county upon Drainage Ditch No. 1 and 2, are certainly in an unfortunate position. That they are in a fair way to lose their investment is, however, no reason why Appellee, an "innocent bystander," should be "made the goat" and forced to pay for the errors, mistakes, and wild extravagances of the Board of County Commissioners of Minnehaha county. It was not through any fault of Appellee that Drainage Ditch No. 1 and 2 was organized and the spillway and other works constructed. It is in no manner responsible for the acts of the Board of County Commissioners or for the mistakes of judgment of the intervening Appellants, in investing in the warrants.

In conclusion, we submit, that for the reasons which we have hereinbefore set forth, the South Dakota drainage law is unconstitutional under both the federal and the state constitutions; that the proceedings under which Drainage Ditch No. 1 and 2 was organized were illegal and void; that the work done under such organization was without authority of law; that the attempted assessment upon the property of Appellee is founded upon a fanciful, arbitrary, and illegal basis; that the District Court pos-

sessed jurisdiction to hear and determine this suit; and that, for these and the other reasons hereinbefore set forth, the decree of the District Court and the decision of the Circuit Court of Appeals should be affirmed.

Respectfully submitted,

C. O. BAILEY,
J. H. VOORHEES,
T. M. BAILEY,
Solicitors for Appellee.

R. L. KENNEDY, *of Counsel.*

APPENDIX A

PROVISIONS OF SOUTH DAKOTA CONSTITUTION

SECTION 2 OF ARTICLE VI.

§ 2. No person shall be deprived of life, liberty or property without due process of law.

SECTION 13 OF ARTICLE VI

§ 13. Private property shall not be taken for public use, or damaged, without just compensation as determined by a jury, which shall be paid as soon as it can be ascertained, and before possession is taken. No benefit which may accrue to the owner as the result of an improvement made by any private corporation shall be considered in fixing the compensation for property taken or damaged. The fee of land taken for railroad tracks or other highways shall remain in such owners, subject to the use for which it is taken.

SECTION 6 OF ARTICLE XXI

§ 6. The drainage of agricultural lands is hereby declared to be a public purpose and the legislature may provide therefor, and may provide for the organization of drainage districts for the drainage of lands for any public use, and may vest the corporate authorities thereof, and the corporate authorities of counties, townships and municipalities, with power to construct levees, drains and ditches, and to keep in repair all drains, ditches and levees heretofore constructed under the laws of this state, by special assessments upon the property benefited thereby, according to benefits received.

APPENDIX B

SOUTH DAKOTA DRAINAGE STATUTES

(NOTE: The section numbers at the beginning of each paragraph are those of the South Dakota Revised Code of 1919. The references at the end of each paragraph are to the Session Laws of the various years. The paragraphs as printed constitute the law as it stood at the time of the transactions involved in this suit.)

§ 8458. POWER OF COUNTY COMMISSIONERS. The Board of County Commissioners, at any regular or special session, may establish and cause to be constructed any ditch or drain; may provide for the straightening or enlargement of any watercourse or drain previously constructed, and may provide for the maintenance of such ditch, drain or watercourse whenever such ditch, drain or watercourse shall be conducive to the public health, convenience or welfare, or whenever the same shall be for the purpose of draining agricultural land. (§ 1, ch. 98, 1905; § 1, ch. 134, 1907).

§ 8459. PETITION. Such board shall act only upon a written petition signed by one or more owners of land likely to be affected by the proposed drainage. Such petition shall set forth the necessity for the drainage, a description of the proposed route by its initial and terminal points and its general course, or by its exact course in whole or in part, and a general statement of the territory likely to be affected thereby. The petition shall be accompanied by a bond with sufficient sureties to be approved by the county auditor, conditioned to pay all expenses incurred in case the board does not grant the petition or the same is denied on appeal. Such petition may be presented at any regular or special meeting of the board, and, if sufficient in form, shall be ordered filed with the county auditor. (§ 2, ch. 98, 1905; § 2, ch. 134, 1907).

§ 8460. INSPECTION OF PROPOSED ROUTE. It shall be the duty of such board to act promptly upon all drainage petitions. Upon filing such petition the county auditor shall transmit a copy thereof to the state engineer, who, together with the board of county commissioners shall as soon as practicable, inspect the proposed route and, if in the opinion of such board and the state engineer it is necessary, the board shall cause a survey of the proposed drainage to be made by such competent surveyor as such board may select, but such survey shall be under the general supervision of the state engineer. Such survey shall primarily be for the purpose of aiding the board in determining the necessity of the proposed drainage, but may be a complete survey such as will be required for the construction of the proposed drainage and

assessment of its cost, or as much less as the board may require. Such survey may extend to other lands than those affected by the proposed drainage for the purpose of determining the best practical method of draining the entire section of country of which the lands proposed to be drained, or a portion of them, are a part. For the purpose of inspection or surveys, the county commissioners, surveyors or their employes may enter upon any lands traversed by the proposed drainage or in their judgment likely to be affected thereby. The county auditor shall promptly furnish the state engineer with a copy of the surveyor's report mentioned in the succeeding section and of all maps and plans filed by such surveyor and also with a copy of such further files as the state engineer may ask for. In case the drainage is established the preparation of plans and specifications upon which the contract of construction is to be awarded and also the work of construction, shall be under the supervision of the state engineer. It shall be the duty of the state engineer to render such assistance and advice to the board of county commissioners in regard to such drainage as the duties of his office will permit and he shall be reimbursed by such board for his expenses incident thereto; provided, that in case of minor ditches the state engineer shall not be required to attend with the board of county commissioners at the first inspection, nor to perform subsequent services if in his judgment it shall not be necessary for him so to do. (§ 3, ch. 98, 1905; § 3, ch. 134, 1907; § 1, ch. 102, 1909).

§ 8461. SURVEYOR'S REPORT — NOTICE OF HEARING. The surveyor shall report in writing to the board of county commissioners and his report shall be filed with the petition. After personal inspection or after the receipt of the surveyor's report the board shall de termine the exact line and width of the ditch, if the same shall not be fixed in the petition, and shall file its determination with the petition. The board shall then fix a time and place for the hearing of the petition and shall give notice thereof by publication at least once each week for two consecutive weeks in a newspaper of the county, to be designated by the board, and by posting copies of such notice in at least three public places near the route

of the proposed drainage. Such notice shall describe the route of the proposed drainage and the tract of country likely to be affected thereby in general terms, the separate tracts of land through which the proposed drainage will pass and give the names of the owners thereof as appears from the records of the office of the register of deeds on the date of the filing of the petition, and shall refer to the files in the proceedings for further particulars. Such notice shall summon all persons affected by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established and constructed, and shall summon all persons deeming themselves damaged by the proposed drainage or claiming compensation for the lands proposed to be taken for the drainage to present their claims therefor at such hearing. (§ 4, ch. 98, 1905; § 4, ch. 134, 1907; § 2, ch. 102, 1909).

§ 8462. HEARING ON PETITION. At such hearing any person interested may appear and contest the statements of the petition and matters set forth in the surveyor's report and the finding of the board as to width and route. The petitioners in like manner may be heard in support of the petition. After full hearing the drainage may be established along the line set forth in the petition or in the finding of the board prior to the hearing, or the board may vary the route thereof, or its width, as deemed practicable or necessary. If the board deems it best to vary the route, or to materially change the initial or terminal points of such proposed drainage so that it will pass through other lands than those described in the notice of hearing, or to increase the width of lands to be taken for the proposed drainage, the board shall adjourn the hearing and give the owners of such lands notice as in case of the original hearing. No open ditch shall be constructed within the limits of any public highway except where the topography of the country makes such construction advisable and in such case the ditch shall be located at a sufficient distance from the center of such highway to permit a roadway of standard width being constructed. If the proposed drainage does not give sufficient fall to drain the lands sought to be drained or will not properly take care of the waters collected by

such drainage, the same shall be extended so as to secure the drainage or properly dispose of the water. The hearing in any such case shall be adjourned and notice given to all parties newly affected as in case of the original hearing. When the board of county commissioners shall have fully heard and considered such petition, and all matters in opposition to or in support of the same, it shall, if it finds the proposed drainage not conducive to the public health, convenience or welfare, or not needed or practicable for the purpose of draining agricultural lands, deny such petition, the petitioners to be jointly and severally liable for the costs of the proceeding, the same to be recovered in a civil action. If it finds the drainage proposed or any variation thereof conducive to the public health, convenience or welfare, or necessary or practicable for draining agricultural lands, it shall establish the drainage and shall assess the damages sustained by each tract of land or other property through which the same shall pass and the damages as compensation for the land taken for the route of such drainage. Any person interested may be heard in the matter of damages or compensation for land and the determination of the board of county commissioners shall be final unless an appeal therefrom, as provided in this article, shall be taken, failure to prosecute such appeal or to appear and contest an award of damages by the board to be deemed conclusively a waiver of any such damages or compensation for land taken or of any claimants right to have the same assessed by the jury. Such drain shall be given a name and the proceeding thereafter taken shall be recorded and indexed in a book kept for that purpose in the auditor's office. (§ 5, ch. 98, 1905; § 5, ch. 134, 1907; § 3, ch. 102, 1908; § 1, ch. 205, 1917).

§ 8463. EQUALIZATION OF BENEFITS. After the establishment of the drainage and the fixing of the damages, if any, the board of county commissioners shall fix the proportion of benefits of the proposed drainage among the lands affected, and shall appoint a time and place for equalizing the same. Notice of such equalization of proportion of benefits shall be given by publication at least once each week for two consecutive weeks in a newspaper of the county to be designated by the

board, and by posting copies of such notice in at least three public places near the route of the proposed drainage. Such notice shall state the route and width of the drainage established, a description of each tract of land affected by the proposed drainage and the names of the owners of the several tracts of land as appears from the records of the office of the register of deeds at the date of the filing of the petition and the proportion of benefits fixed for each tract of property, taking any particular tract as a unit, and shall notify all such owners to show cause why the proportion of benefits shall not be fixed as stated. Upon the hearing of the equalization of the proportion of benefits, the board of county commissioners shall finally equalize and fix the same according to benefits received. The proportion of benefits which any county, city, town or township may obtain by the construction of such drainage to highways or otherwise, and the benefits which any railroad company may obtain for its property by such construction, shall be fixed and equalized together with the proportion of benefits to tracts of land. Benefits to be considered in any case shall be such as accrue directly by the construction of such drainage or indirectly by virtue of such drainage being an outlet for connection drains that may be subsequently constructed. (§ 6, ch. 98, 1905; § 6, ch. 134, 1907; § 4, ch. 102, 1909).

§ 8464. ASSESSMENTS. After the equalization of the proportion of benefits the board may make an assessment against each tract and property affected, in proportion to the benefits as equalized, for the purpose of paying the damages and the cost of establishment thus far incurred or to be incurred. The cost of establishment shall include the costs of the service of the board of county commissioners, surveyors and assistants, plans and profiles, publication and filing, and other fees, interest on bonds issued or to be issued and all other expenses incurred or to be incurred that in any way contributed or will contribute to the establishment or construction of the drainage. At the expiration of thirty days after the making of such assessment, a copy thereof certified by the county auditor shall be filed by him with the county treasurer, but before the same is filed a notice shall be given by the board of the time when the same

will be so filed, by publication at least once each week for two consecutive weeks in a newspaper in the county to be designated by the board and by posting copies of such notice in at least three public places near the route of such drainage. Such notice shall also contain a description of the property assessed, the name of the owner as it appears in such assessment and the amount of each assessment, together with the amount assessed against the county or any city, town, township or railroad company, and shall also give the date when the assessment will become delinquent, together with the amount of penalty which will then accrue and the date from which interest will begin to run.

From the time of filing such certified copy of assessment in the treasurer's office, the same shall be due and payable and shall be valid and perpetual liens upon the respective tracts so assessed against all persons or governments except the state and the United States and, if not paid within ten days, a penalty of five per cent shall attach thereto and such assessment shall bear interest from the date of the order of the assessment at a rate not to exceed eight per cent per annum payable annually. Such assessment shall be paid to and received by the county treasurer and paid over to the holders of the assessment certificates or upon the order of the board of county commissioners. The board of county commissioners may issue separate assessment certificates against each tract assessed for the amount of the assessment thereon, and may sell the same at not less than par value with all accrued interest, or may contract to pay for the construction of such drainage with such assessment certificates or with warrants. Such assessment certificates shall refer to the record in the office of the county auditor of the order of assessment and of the filing of a copy thereof in the county treasurer's office, shall transfer to the holder all interest, claim, or right in or to such assessment, bear the same rate of interest, carry the lien of such assessment and be enforcible as provided by law. Assessments for drainage or installments thereof shall be enforced by the county treasurer by sale of the property at the annual tax sale, provided that no such assessment or installment thereof shall be included in the sale of any

given year unless the same shall have been delinquent on or before August first of each year. The provisions of Chapters 7, 8, 9, Part 9 of this title shall apply to the enforcement of the lien or drainage assessments so far as such provisions are applicable, except that a treasurer's deed issued upon a delinquent drainage assessment shall recite the fact that the title conveyed is subject to all the claims which the state or any political subdivision thereof may have thereon for annual taxes.

Whenever an assessmnet for drainage or an installment thereof has been made against any county, city, town or township, as provided in this chapter, the officers of such county, city, town or township, whose duty it is under the law to make the levy of taxes, shall at the time of the next annual tax levy after the making of such assessment make a levy for drainage purposes of such an amount as shall be necessary to pay such assessment, and return the same to the proper officers as provided by for the other taxes, and such levy and tax shall be enforced and collected in all respects as provided by law for other taxes; provided, that any surplus remaining in any fund at the close of any year may be used by any township to pay and apply on any drainage assessment, as provided herein; provided, further, that in unorganized townships the county commissioners shall be authorized to pay for drainage as provided herein out of any money belonging to such unorganized township, and each succeeding year a like levy shall be made by such authorities until the whole of such assessment for drainage is paid. Instead of making an annual assessment for the purpose of paying the damages allowed in any drainage proceeding and the costs of establishment and construction, the board of county commissioners may issue warrants payable only out of the assessments to be subsequently made, the same to bear interest at a rate not to exceed eight per cent per annum payable annually, and may sell such warrants at not less than the face value thereof and shall with such money so raised pay any damages allowed and cost of establishment and construction. In making assessment for such drainage such warrants and the cost of issuing the same shall be included in the costs of the drainage. (§ 7, ch. 98, 1905; § 7, ch. 134, 1907; § 5, ch. 102, 1909;

ch. 130, 1911, and as amended by § 1, ch. 46, Laws of Second Special Session of the Sixteenth Session of the Legislature of South Dakota 1920).

§ 8465. BIDS—SPECIFICATIONS—CONTRACTS. Whenever sufficient money shall have been collected the damages occasioned by the construction of such drainage and fixed as herein provided shall be paid and thereupon the board of county commissioners shall proceed to construct such drainage and shall let contracts for the construction of the same. Such contracts may require the contractors to take their pay in assessment certificates or in warrants to be thereafter issued. The contract may be for the construction of the entire drainage or for any portion thereof, and shall be let upon competitive bids, the board reserving the right to reject any and all bids. The lowest responsible and capable bidder shall be accepted but if any landowner affected be an equally low, capable and responsible bidder with a nonowner of the lands affected the former shall be preferred. When any contract shall be let the contractor shall give a bond in such sum as shall be approved by the board of county commissioners, conditioned for the faithful performance of his work and full completion of his contract to the satisfaction of such board. For the information of the contractors in bidding upon the proposed drainage, full plans and specifications shall be filed in the office of the county auditor. If in the judgment of the board of county commissioners the entire drainage or any part thereof can be constructed for less money than the amount of any bid submitted therefor, the board may cause such drainage to be constructed, hire the necessary labor and purchase all necessary material for such construction, without letting contracts therefor. Contracts for building bridges or culverts rendered necessary by the construction of such drainage may be let separately and after the drainage is completed. The cost of constructing such bridges or culverts shall be charged in the first instance as part of the cost of drainage and thereafter such bridges and culverts shall be maintained as part of the highway; provided, that the cost of removing, repairing, enlarging or replacing bridges and culverts already existing across the line of a proposed drainage ditch shall

not be charged as a part of the drainage. (§ 8, ch. 98, 1905; § 8, ch. 134, 1907; § 6, ch. 102, 1909; ch. 206, 1917).

§ 8466. BOARD MAY EXTEND TIME FOR COMPLETION OF CONTRACT. The board of county commissioners shall have power to grant a reasonable extension of time for the completion of any contract. When any contract shall not be finished within the time specified or to which it may be extended, such board may in its discretion at any time thereafter relet such unfinished portion of any part thereof after not less than five days' notice thereof to the lowest responsible bidder and shall take security as for the original contract. The cost of completing such parts, over and above the original contract price and the expense of notices and reletting, shall be collected by the board from the first contractor; provided, that in no case shall the board forfeit and annul a contract without five days' notice to the contractor, if found, and if not found then by written notice left at his last known place of residence in the county. (§ 9, ch. 98, 1905; § 9, ch. 134, 1907).

§ 8467. ASSESSMENTS FOR FURTHER COSTS. At any time after the damages arising from the establishment and construction of such drainage are paid and the lands for such drainage are taken, assessments may be made for further costs and expenses of construction. If the contractors are required and agree to take assessment certificates or warrants for their services, assessments need not be made until the completion of the work when an assessment shall be made for the entire balance of cost of construction, including the services of the board of county commissioners, surveyors and assistants, plans and profiles, publication and filing, and other fees, interest on bonds issued or to be issued and all expenses of every kind and nature that contribute to the establishment and construction of the drain and notice of such assessment shall be given by the board of county commissioners in all respects as provided for the first assessment. And such assessment and the certificates issued thereon shall be in like manner perpetual liens upon the tracts assessed, interest-bearing and enforcible as such first assessments and certificates. The board of county commissioners may sell such assessment certificates at not

less than par and thereby raise funds to defray the cost of establishment and construction. If there be no damages to be paid before taking the lands for such drainage, or if the damages have been paid by the proceeds of the sale of warrants only one assessment need be made. In any case, in the discretion of the board, several assessments may be made as the work progresses. Assessments shall be paid to the county treasurer and the money therefrom shall be paid by him to the holders of assessment certificates, or upon the order of the board of county commissioners for the purpose of the particular drainage. (§ 10, ch. 98, 1905; § 10, ch. 134, 1907; § 7, ch. 102, 1909).

§ 8468. ACCEPTANCE OF DRAINAGE BY BOARD. After the work of construction shall have been fully completed and approved by the state engineer, the drainage may be accepted by the board of county commissioners, by order duly made, and payment shall be made therefor unless in the discretion of the board of county commissioners agreement be made for the partial payments; provided, that final payment shall not be made until the expiration of thirty days after the acceptance of the work and in case an appeal has been taken from the order accepting such work final payment shall not be made until the determination of such appeal; provided, further, that no payment shall be made to any engineer whose employment has not been approved by the state engineer, and no payment shall be made upon any contract for the construction of any such drainage project, unless the same shall have been constructed under the supervision of the state engineer; and provided further, that nothing in this section shall apply to minor drainage projects. All claims for compensation or expenses for publishing legal notices or supervising the construction of any such drainage project including the per diem and the mileage of the county commissioners, shall be paid from the general fund of the county, and for all such payments the county treasurer shall reimburse the general fund from the assessments herein provided for (§ 11, ch. 98, 1905; § 11, ch. 134, 1907; § 8, ch. 102, 1909; ch. 207, 1917).

§ 8469. APPEALS. An appeal shall lie for any final order or determination of the board of county com-

missioners establishing or denying any proposed drainage; fixing damages occasioned by the taking of lands for drainage or caused by such drainage; fixing the proportion of assessments of benefits; or accepting any drainage to the circuit court of the county in which such drainage is located by any one deeming himself aggrieved by any such order or determination. Written notice of such appeal shall be served upon the board of county commissioners and a bond conditioned to pay all the costs of such appeal, in case the contention of appellant be not sustained in some respect, shall be filed in the office of the clerk of courts, to be approved by him in such amount and with such sureties as he deems necessary. Upon the service of such notice and the filing of such bond, the county auditor shall transmit to the clerk of courts the petition and all other papers and records in the matter or certified copies thereof, when the convenience of the auditor's office would be seriously impaired by the transmission of the original records, and such matter shall be heard as an original action in the circuit court. No appeal shall operate as a stay of proceedings by the board of county commissioners, but the court may upon the taking of an appeal, for good cause shown issue an order staying the further proceedings by the board of county commissioners until the hearing and determination of such appeal. Before granting such stay, the court shall require an undertaking in sufficient amount and with sufficient surety to the effect that if the order appealed from be sustained the person upon whose motion the stay is granted shall pay all damages caused by the issuance of such order of stay. Any number of persons interested may join in the same appeal. Appeals shall be in all cases taken within thirty days from the making of the order or determination appealed from. If, on the trial of such action, it be determined that the drainage as petitioned for and established by order of the board is not conducive to the public health, convenience or welfare or is not necessary or practicable for the purpose of draining agricultural lands, the petitioners shall be jointly and severally liable for all the costs thus far incurred. If the contention of the appellant as to the amount of damages or proportion of benefits, the acceptance of the drain-

age, of the practicability of the drainage when the route thereof is varied by the county commissioners over the protest and objection of the petitioners, be sustained in whole or in part, the costs of such trial shall be part of the cost of the drainage. Upon an appeal from an assessment of benefits, the court of jury shall consider not only the relative benefits, to the tract in regard to which the appeal is taken, with reference to the tract taken as a unit, but shall also consider the question as to whether the tract taken as a unit is benefited or not; if benefited, to what extent. (§ 12, ch. 98, 1905; § 12, ch. 134, 1907; § 9, ch. 102, 1909).

§ 8470. ASSESSMENTS FOR MAINTENANCE. For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the landowners affected in the proportion determined for such drainage at any time upon the petition of any person setting forth the necessity thereof, and after due inspection by the board of county commissioners. Such assessments shall be made as other assessments for the construction of drainage, certificates may be issued thereon and assessments and certificates shall be liens, interest-bearing, perpetual and enforcible, in all respects as original assessments and may be sold at not less than par by the board of county commissioners, turned over to persons contracting for such cleaning and maintenance or may be collected directly by the board of county commissioners. (§ 13, ch. 98, 1905; § 13, ch. 134, 1907).

§ 8471. ASSESSMENTS PAID IN INSTALLMENTS. The owner of any tract of land against which an assessment for drainage is made, who shall, within thirty days after the making of such assessment, file with the county auditor an agreement in writing that in consideration of the right to pay his assessment in installments he will not make any objections to the illegality or irregularity of his assessment, if any there be, and will pay the same with interest as fixed by the board of county commissioners, shall have the privilege of paying such assessment in ten annual installments, interest payable annually. Assessment certificates shall not issue until after the expiration of the period of filing such agree-

ments with the county auditor, and when issued for assessments to be payable in installments may be issued in coupon form. The first installment shall be payable within ten days after a certified copy of the assessment has been filed, in the office of the county treasurer, and subsequent installments shall be payable one, two, three, four, five, six, seven, eight and nine years from the date of such assessment, respectively, with interest on the whole sum unpaid payable annually at maturity of the several installments. Such subsequent installments shall become delinquent after the expiration of thirty days from the time the same are payable and thereupon a penalty of five per cent shall attach thereto. Provided, that where bonds shall have been issued for the construction of such drainage, as provided in Section 8472, such assessments shall be made payable in installments sufficient to meet the payment on the bonds, as the same shall become due. Payments of assessments may at any time be received and full discharge thereof given by the county treasurer to any property holder, but after issue of bonds, such payment of assessments can be received only according to the terms of such bonds. (§ 14, ch. 98, 1905; § 14, ch. 134, 1907; § 10, ch. 102, 1909).

§ 8472. BOARD MAY ISSUE BONDS. The board of county commissioners, whenever it has ordered the establishment of any drainage, shall have authority by resolution to be spread upon its records, to provide for the issuance of bonds in such sums as may be necessary for the purpose of defraying the expenses incurred or to be incurred in obtaining the right of way or in locating or constructing any such drainage. Such word "expenses" shall be construed to mean and cover every item of cost of such drainage from its inception to its completion, such bonds to be payable only out of the funds to be derived from special assessments upon the lands benefited thereby. Such bonds shall bear interest at a rate not exceeding 7% per annum, payable annually and be payable not exceeding twenty years from issue. Such bonds shall be signed by the chairman of the board of county commissioners and countersigned by the auditor, who shall keep a record of all such bonds. Such bonds shall be issued for the benefit of the particular drainage,

numbered, recorded and indexed in the office of the county auditor, and shall in no case be issued for a sum exceeding the benefits to the lands affected by such drainage. The board of county commissioners shall have the power to negotiate such bonds at not less than par value, as it may deem best for the interest of all persons affected by such drainage, any premium received on such bonds to be credited to the fund of the particular drainage. Such bonds shall contain a recital that the same are issued pursuant to the authority of this article and that they are to be paid out of the funds to be obtained as herein provided. Assessments shall be made upon all of the lands benefited by such drainage for the payment of the principal and interest of such bonds when the same shall become due. Such assessments may be made by separate assessments for installments of interest and principal or in one proceeding with but one set of notices. When the assessments are finally fixed the same shall be certified to the county treasurer by the county auditor, and the money paid in thereon shall be received by the county treasurer and paid over to the holders of such bonds. Separate funds shall be kept by the treasurer for each drainage project, and no funds for one drainage project shall be applied to any other drainage. No county shall be liable for the payment of any bonds issued under this article, but such bonds shall be paid only out of the funds derived from the special assessments herein provided for. Such bonds may be made payable at such times as the board of county commissioners shall find for the best interests of the persons benefited by the drainage, and may be issued for all or any portion of the expenses of such drainage. (§ 15, ch. 98, 1905; § 15, ch. 134, 1907).

§ 8474. FURTHER POWERS OF BOARD. Where proceedings have been had for the establishment of a ditch, drain, levee, or straightening or enlarging of a natural watercourse under the law as heretofore existing, and the improvement has been established and constructed and assessments made upon the land benefited thereby, or upon any portion thereof, for the cost of such improvement, and where the assessment so made cannot for any reason be enforced, the board shall proceed as in all

lands benefited by such improvement in the same manner as if the appraisement and apportionment of benefits had never been made, and it shall proceed in the manner provided in this article, using as a basis the entire cost of such improvement, and in the assessment of such benefits account shall be taken of the amount of assessments, if any, that have been paid by those benefited and credit therefor shall be given accordingly. (§ 17, ch. 98, 1905; § 17, ch. 134, 1907).

§ 8475. DITCH OR DRAIN MAY BE DECLARED NUISANCE. Any ditch, drain or watercourse, which is now or may hereafter be constructed so as to prevent the sufrace and overflow water from adjacent lands from entering the same is hereby declared a nuisance and may be abated as such. (§ 18, ch. 98, 1905; § 18, ch. 134, 1907).

§ 8476. POWERS DEFINED. The powers conferred by this article for establishing and constructing drains shall also extend to and include the deepening and widening of any drains which have heretofore been or may hereafter be constructed, also to straightening, cleaning out and deepening the channels of creeks and streams and constructing, maintaining, remodeling and repairing levees, dykes and barriers for the purpose of drainage; and the board of county commissioners may relocate or extend the line of any drain if the same is necessary to provide a suitable outlet, and shall cause a survey thereof to be made, but no proceedings affecting the rights of persons or property shall be had under this section except upon notice and the other procedure prescribed herein for the construction of drains. (§ 19, ch. 98, 1905; § 19, ch. 134, 1907).

§ 8477. DRAINS UNDER CHARGE OF COUNTY COMMISSIONERS. All drains that have been constructed under any law of this state, or that may be constructed under the provisions of this article, shall, except as otherwise specifically provided, be under the charge of the board of county commissioners and be by it kept open and in repair. In all cases when any completed drain is or may be situated in more than one county, the care of the portion thereof lying within any county is assigned to the board of county commissioners of such county to be

kept open and in repair. The cost of such repairs shall in all cases be assessed, levied and collected in the same manner as provided in this article for the construction of drains originally and in all cases when no assessments of benefits shall have been made, the board of county commissioners having charge of such drain shall make such assessments. (§ 20, ch. 98, 1905; § 20, ch. 134, 1907).

§ 8478. BOARD MAY MAKE RULES AND REGULATIONS. The board of county commissioners may make such rules and regulations on the subject of drainage as it may deem proper, not inconsistent with the provisions of this article, and especially with regard to clearing out and keeping clear the channels of streams and the construction and maintenance of dams thereupon, with reference to their capacity for drainage. (§ 21, ch. 98, 1905; § 21, ch. 134, 1907).

§ 8482. DRAINS FOR TOWNS AND CITIES. The board of county commissioners shall have authority to establish drainage for or including the whole or any part of any city or incorporated town, including cities acting under special charter, as provided in this article, and it shall have the same authority with respect to the assessment of damages and benefits within such city or town as in other cases provided for in this article, and like notices to such city or town with respect to the establishment of such drainage and the apportionment and assessment of damages and benefits shall be given as is required by this article to be given to the owner of property damaged or benefited by the establishment or construction of such improvement. (§ 24, ch. 98, 1905; § 24, ch. 134, 1907).

§ 8485. COMPENSATION OF COUNTY COMMISSIONERS. The county commissioners shall receive for their services four dollars per day for the time actually spent by them in the performance of the duties of their offices under this chapter, publishers of newspapers shall receive for publishing legal notices the same fees as are allowed by law for publishing proceedings of the county commissioners; but the proceedings of the board of county commissioners when acting in any drainage matter under this article shall not be published as a part of its regular proceedings or at all. The county auditor shall charge a reasonable amount, to be fixed by the

board, for services, to be paid into the general fund of the county. Each county commissioner shall have power to administer any oath required in any drainage proceeding. (§ 27, ch. 98, 1905; § 27, ch. 134, 1907; § 11, ch. 102, 1909).

§ 8486. NOTICES, HOW SERVED. Notice by personal service, as of a summons in a civil action, may be given instead of by publication and posting in all cases where notice is provided for in this article. In any case where notice is required under the provisions of this article and any person affected by the drainage has not been notified, either by publication or personally, and a hearing has been had or determination made, such person may be notified personally or by publication and posting, to show cause at a time and place to be fixed by the board of county commissioners, and to make return or claim damages as in case of the original hearing. Any such omitted person may be brought in on such due notice at any stage of the proceeding, or after it has been otherwise concluded. The enforcement of any assessment shall not be enjoined for want of the notice provided for in this article, except pending an application to the board of county commissioners for the determination of such matters as to which any person deems himself not bound because of want of notice. (§ 28, ch. 134, 1907).

§ 8488. DEFECTS IN PROCEEDINGS DISREGARDED. Any defect or irregularity not affecting the substantial rights of parties interested, occurring in any drainage proceeding, shall be disregarded in any action seeking to avoid an assessment or cancel, annul or declare void any such proceeding. And in case the defect is substantial the court shall of its own motion determine the rights of the parties, validate the proceedings and assess the costs as justice may require, if the court shall find cause for such validation or such action should have been taken in the first instance and all parties interested are before the court. (§ 29, ch. 98, 1905; § 30, ch. 134, 1907).

§ 8489. INVALID OR ABANDONED PROCEEDINGS. If any proceeding for the location, establishment or construction of any drain under the provisions of a previous law has been heretofore enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned,

or if any such proceeding or like proceeding under this article be hereafter enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned in consequence of any error, defect, irregularity or want of jurisdiction affecting the validity of such proceeding or for any cause, the board of county commissioners may nevertheless proceed to locate a drain or drains under the same or different names and in the same or different locations from those described in he invalid or abandoned proceedings under the provisions of this article. In case any new proceeding be had resulting in the location of a drain in the same or substantially the same location as that described in the invalid or abandoned or dismissed proceeding, and the extent to which the same will contribute to the location, establishment or completion of such new drain. Such value shall be determined at a hearing upon the same notice as the equalization of benefits or assessments, and may at the same time or at any other time, and the notice of such hearing may be a part of the notice of the hearing upon the equalization of benefits or assessments or separate thereform, but the board shall in any case notify all persons interested to show cause why the determination of the board thereupon shall not be final. When finally fixed such value shall become a part of the cost of the new drainage. No use shall be made by the board of county commissioners in the laying out or completion of any drain or ditch under this article of any map, chart, survey, or other work done under any former law or under this article without having paid therefor; and all sums allowed for any work or material or money expended under the provisions of any previous law or under this article shall be paid to the persons who have paid therefor in proportion to the amounts severally paid by such persons. (§ 33, ch. 134, 1907).

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1924

No. 453

A. G. RISTY, ET AL, AS COUNTY COMMISSIONERS ETC. ET AL, PETITIONERS,

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA RAILWAY COMPANY, RESPONDENT.

BRIEF FOR RESPONDENT ON PETITION FOR WRIT OF CERTIORARI

The Chicago, St. Paul, Minneapolis & Omaha Railway Company, plaintiff in the District Court and respondent in this Court, brought its bill in the District Court for the District of South Dakota against A. G. Risty and others, as County Commissioners of Minnehaha county, South Dakota, defendants, praying for an injunction restraining the making of an assessment upon the property of respondent for the cost of the construction of certain drainage works. The holders of warrants issued in payment of expenses incurred in the drainage project became interveners in the suit. A decree was entered in the District Court in favor of the plaintiff in that Court and respondent in this Court, (282 Fed. 364). From this decree the defendants and the interveners in the District Court appealed to the Circuit Court of Appeals for the Eighth Circuit in which Court the decree of the District Court was affirmed (297 Fed. 710). The defendants and interveners in the District Court, appellants in the Circuit Court of Appeals, have taken an appeal to this Court and have also, as petitioners, filed in this Court their petition for a writ of certiorari.

The main ground upon which petitioners ask that this Court grant a writ of certiorari is that a conflict has arisen between the decisions of the Circuit Court of Appeals for the Eighth Circuit and the decisions of the Supreme Court of the State of South Dakota in a matter relating to the construction of a statute of the state of South Dakota; and petitioners pray for the granting of a writ of certiorari upon the strength of *Forsyth vs Hammond*, 166 U. S. 506.

Our reply to the contention of petitioners is that no conflict exists between the decision of the Circuit Court of Appeals in this case and the decisions of the Supreme Court of South Dakota.

This case involves the construction of the drainage ditch statute of South Dakota. In the Circuit Court of Appeals this statute was attacked by respondent as unconstitutional. The Circuit Court of Appeals deemed it unnecessary to pass upon this contention but decided the case upon the ground that the proceedings, had under the statute in the instance of the particular drainage project under consideration, were irregular.

In *Gilseth vs Risty*, 46 S. D. 374, the Supreme Court of South Dakota rendered a decision in a case between other parties, but involving the same drainage project. The records in the two cases were entirely different and the Supreme Court of South Dakota held that the plaintiff in the case before it was estopped by his own laches from complaining of irregularities in the proceedings. There was in that case no conflict with the holding of the Circuit Court of Appeals in the present case.

In none of the other South Dakota cases cited by counsel for petitioners is there involved the drainage ditch project in controversy in the present case or any of the questions involved in the present case which were resolved by the Circuit Court of Appeals in favor of respondent.

For the foregoing reasons we submit that no showing is made whereby a writ of certiorari should be issued under *Forsyth vs Hammond*, 166 U. S. 506.

The remaining points raised by counsel for petitioners are, we believe, best answered by the opinion of JUDGE KENYON in the Circuit Court of Appeals. We, therefore, append a copy of this opinion to this brief as being the most apt reply which we can make to the contentions of counsel for petitioners.

Respectfully Submitted,

CHARLES O. BAILEY,
R. L. KENNEDY,
J. H. VOORHEES,
T. M. BAILEY,
Counsel for Respondent.

(297 FEDERAL REPORTER, 710)

A. G. RISTY, *et al*, as
County Commissioners, etc., *et al*,

vs.

CHICAGO, ROCK ISLAND & PACIFIC
RAILWAY COMPANY,
(*and five other cases*)

CIRCUIT COURT OF APPEALS, EIGHTH CIRCUIT

MARCH 18, 1924

OPINION OF THE COURT

Appeal from the District Court of the United States for the District of South Dakota; James D. Elliott, Judge.

Suits, by the Chicago, Rock Island & Pacific Railway Company, by the Chicago, Milwaukee & St. Paul Railway Company, by the Chicago, St. Paul, Minneapolis & Omaha Railway Company, by the Northern States Power Company, by the City of Sioux Falls, and by the Great Northern Railway Company, respectively, against A. G. Risty and others, as County Commissioners, and others. From decrees for plaintiffs (282 Fed. 364) the defendants in each case appeal. Affirmed.

In the year 1907 the board of county commissioners of Minnehaha county, S. D., acting under the drainage statutes of that state, established and had constructed a drainage ditch known as drainage ditch No. 1, bottom width of 40 feet, at an expense of $46,600. This ditch was north of Sioux Falls and ran first in a southerly direction from its initial point; thence easterly past the pumping station of the city of Sioux Falls; thence southeasterly about 1,000 feet to the Big Sioux river near the north limits of Sioux Falls. It passed through a ridge and descended approximately 100 feet in the terminal thousand feet. A spillway was constructed to carry the water down the descent. This ditch was approximately three miles in length, and there was a spur 670 feet long extending northwest into a bayou about 2,000 feet south of the initial point.

In 1910 the board of county commissioners established another drainage ditch known as drainage ditch No. 2, which extended north from the northern terminal of drainage ditch No. 1, for a distance of about 12 miles. This ditch likewise had a 40-foot bottom and was constructed at a cost of $81,106.19. These two ditches, making in fact one continuous ditch, drained certain agricultural lands, and traversed the land north of the city of Sioux Falls near the gravel bed from which the city obtained its water supply. It also passed near the state penitentiary lands and emptied into the Big Sioux river north of the falls in said river.

In the year 1916 there was a breaking of the river through the natural barrier into the bayou drained by the lateral branch. This, coupled with the large volume of water passing through these ditches, made it impossible for the spillway to carry the same, and it was washed out and destroyed. The waters therefore being uncontrolled descended from the steep bluff to the level of the Big Sioux river, and serious damage was threatened to various interests. There was danger that the Big Sioux river which flowed through the city of Sioux Falls would be diverted from its course and flow through these ditches cutting off the water supply of the city of Sioux Falls, injuring the Northern States Power Company, and depriving it of its water power.

The board of county commissioners attempted to devise some plan to reconstruct the spillway and to protect these various interests from the threatened damages.

April 8, 1916, certain parties filed a petition with the board of county commissioners asking that that portion of drainage ditch No. 1 containing the old spillway be closed and abandoned, and the course of said ditch extended in a southerly direction through Covell's Lake to the Big Sioux river; and said board did pass a resolution that said drainage ditch No. 1 be permanently closed above the present spillway or outlet thereof.

August 3, 1916, a petition of F. L. Blackman and other parties was filed entitled, "To Reconstruct and Improve Drainage Ditches Numbers One and Two in Minnehaha County, South Dakota, and to Construct a New Spillway or Outlet to said Drainage Ditches Numbers One and Two and to Pay Therefor by an Assessment upon the Property Persons and Corporations Benefited Thereby." This petition was transmitted by the board to the state engineer, and on August 14, 1916, a survey was ordered.

September 13, 1916, a report of the survey was made and filed by the engineer in charge. A resolution was thereupon adopted by the board fixing the line and width of said new proposed ditch in the exact location of old ditches No. 1 and No. 2, and providing for the time and place of hearing the petition. Notice was published for three successive weeks describing the route of the proposed drainage, and the tract of country likely to be affected thereby, in the general terms provided by the statute; also, the separate tracts of land through which the proposed ditch would pass, and the names of the owners of said tracts. Such notice informed all persons affected by the proposed drainage to appear at such hearing and show cause why the same should not be established. Upon the return date of the notice the commissioners adopted a resolution purporting to establish the so-called drainage ditch No. 1 and 2, and providing for the reconstruction of the spillway.

No appeal was taken from this order establishing the purported new project.

The commissioners then caused ditches No. 1 and No. 2 to be cleaned out, widened, deepened, and diked so as to increase the carrying capacity; caused the spillway to be reconstructed, and

certain portions of the Big Sioux river to be straightened. This work cost approximately $255,000, and drainage warrants were issued to be paid out of taxes assessed against the property determined to be benefited within the area of the purported new drainage ditch No. 1 and 2. The largest holders of these warrants are interveners in this action.

In April, 1919, notice was published of a hearing upon the matter of equalizing benefits resulting from said drainage ditch No. 1 and 2, and this was the first intimation that certain of appellees had that benefits might be assessed against them. The property of some of the appellees was not covered by the notice. However, the proceedings under this notice were abandoned.

June 10, 1921, appellant board by resolution fixed a proportion of benefits in units, which had been decided upon as a fair method of arriving at the same, on drainage ditch No. 1 and 2, and designated Monday August 1, 1921, at the office of the county auditor, as the time and place for hearing on the question of equalizing benefits, and caused notice of such hearing to be published as provided by the statute. Under the unit system adopted by the board upon recommendation of their engineer, the various appellees had units allotted against them as follows:

Chicago, Rock Island & Pacific Railway Company, out of a total of 32,569.62 units, 839.45.

Chicago, Milwaukee & St. Paul Railway Company, 1,681.

Chicago, St. Paul, Minneapolis & Omaha Railway Company, 839.45.

Northern States Power Company, 5,351.63.

Great Northern Railway, 613.85.

City of Sioux Falls, 3,147.95.

The amount due on warrants issued for this work at the time the actions were brought was about $300,000. The total units of benefit aggregate 32,549.62, so each unit of benefit amounts to slightly in excess of $9. If no changes had been made by the board, had they been permitted to proceed; the amounts charged against various appellees would have ranged from $50,000 against the Northern States Power Company to substantially $6,000 against the Great Northern Railway Company.

Appellees brought suit to restrain appellants from proceeding further with the equalization of said purported benefits and from levying any assessment upon their property to pay therefor. Some of the appellees had no property in original ditch district No. 1 and No. 2; others of appellees did have, and some difference is made in the contention of those not having property in the original ditch district and those who did have, but the issues in the main were the same as to all the parties.

All of the appellees contended in the trial court that the South Dakota drainage law was unconstitutional, violating the Fourteenth Amendment to the Constitution of the United States; that it also violated sections 2 and 3 of article 6 of the Constitution of the State of South Dakota. Some of the appellees contended

that the board exceeded its powers in what it attempted to do, in that the same was not for the drainage of agricultural lands, but being for other public purposes, could only be carried on by the corporate authority of drainage district entities established for that purpose, which had not been done, and that consequently the proceedings were void.

Others of the appellees contended that the proceeding seeking to establish drainage ditch No. 1 and 2 was a subterfuge to impose liability on new territory to pay for the maintenance of the former ditches, and that the proceedings were for maintenance and repair of the old drainage ditch and were not carried on as provided by section 8470 of the Code of South Dakota relating to assessments for the maintenance of drainage already established; that drainage ditch No. 1 and 2 was not a new ditch and not a new enterprise.

Further claim is made by the railroad appellees that the South Dakota drainage law is unconstitutional so far as respects assessments of railroad property, in that it provides for the giving of notice whatever of the apportionment and equalization of benefits to railroad companies.

All appellees claim that the attempted assessments upon their property are arbitrary, unjust and illegal, and constitute a discrimination so palpable and arbitrary as to amount to a denial of the equal protection of the law; and that the proceedings create a cloud upon their title.

It was the position of appellants, on the other hand, that the statutes referred to were constitutional; that the federal court in equity had no jurisdiction because there was a complete remedy at law; that there was no equitable question involved; no irreparable injury shown; no facts sufficiently pleaded to show any threatened cloud upon title; that the amount involved was not sufficient to give jurisdiction; that the bringing of the suit was premature; that ditch No. 1 and 2 was legally established as a new drainage project under the statute of South Dakota; and that the board of county commissioners had full jurisdiction to do each and every act which they performed.

The trial court held that section 8461 of the Reversed Statutes of South Dakota, being the statute particularly attacked as unconstitutional, gave sufficient notice and opportunity to be heard before an assessment became a lien against the property, and was constitutional. The court also held that the proceedings of the commissioners were proceedings for the maintenance of the original ditches No. 1 and No. 2; that there was no abandonment of the old ditches; that the formation of the new ditch was a pretense and subterfuge carried on for the purpose of compelling property outside of the original ditches No. 1 and No. 2 to share the burden of the repair and maintenance of these ditches, and held that the proceedings of the commissioners with relation to ditches No. 1 and No. 2, by attempting to constitute a new drainage district and calling it district No. 1 and 2, were void.

The court further found that the complaints presented a real and substantial question under the Constitution of the United States; that the amount involved was in excess of $3,000 exclusive of interest and costs, and that each complainant stated a case in his bill cognizable in equity in the federal court; and that there was no adequate remedy at law. Also found that diversity of citizenship existed as to all appellees, except as to the city of Sioux Falls; also, that the method of attempted assessment was discriminatory and arbitrary. The injunctions as prayed were granted.

N. B. Bartlett and E. O. Jones, both of Sioux Falls, S. D., for appellants.

A. B. Fairbank, of Sioux Falls, S. D. (Edward S. Stringer, Thomas D. O'Brien, and Alexander E. Horn, all of St. Paul, Minn., on the brief), for appellee Chicago, R. I. & P. Ry. Co.

C. O. Bailey, of Sioux Falls, S. D., and E. L. Grantham, of Aberdeen, S. D. (H. H. Field, of Chicago, Ill., and J. H. Voorhees, P. G. Honegger, T. M. Bailey, and C. O. Bailey, Jr., all of Sioux Falls, S. D., on the brief), for appellee Chicago, M. & St. P. Ry. Co.

C. O. Bailey, of Sioux Falls, S. D. (R. L. Kennedy, of St. Paul, Minn., and J. H. Voorhees, P. G. Honegger, T. M. Bailey, and C. O. Bailey, Jr., all of Sioux Falls, S. D., on the brief), for appellee Chicago, St. P., M. & O. Ry. Co.

Harold E. Judge, of Sioux Falls, S. D. (R. M. Campbell, of Chicago, Ill., on the brief), for appellee Northern States Power Co.

C. O. Bailey, of Sioux Falls, S. D. (Roy B. Marker, of Sioux Falls, S. D., on the brief), for appellee City of Sioux Falls.

Harold E. Judge, of Sioux Falls, S. D., for appellee Great Northern Ry. Co.

Before KENYON, Circuit Judge, and TRIEBER and DYER, District Judges.

KENYON, Circuit Judge (after stating the facts as above). It is earnestly contended by appellees that the entire South Dakota drainage law is unconstitutional, not only as violative of the due process clause of the Fourteenth Amendment of the Federal Constitution, but also sections 2 and 13 of article 6 of the South Dakota Constitution. The constitutional questions raised are grave, serious, and doubtful. Their determination is not necessary to the solution of these cases. Therefore, under the well-established rule that federal courts will not pass upon the constitutionality of statutes unless absolutely necessary, we leave the questions aside. Howat et al. v. State of Kansas, 258 U. S. 181, 42 Sup. Ct. 277, 66 L. Ed. 550; Weyman-Bruton Co. v. Ladd, 231 Fed. 898, 146 C. C. A. 94; Allen, U. S. Atty., v. Omaha Live Stock Commission Co. et al. (C. C. A.) 275 Fed. 1.

The original drainage ditches No. 1 and No. 2 were properly established for the drainage of agricultural lands. When the spillway washed out, the maintenance of the ditches was impaired. Not only that, but the situation was fraught with grave

consequence to many interests. The steep bluff was being torn away by the uncontrolled waters; the waterworks and water supply of the city of Sioux Falls, as well as the penitentiary lands of the state, were endangered. A not improbable result of the Big Sioux river breaking through the natural barrier into the lateral ditch would be the entire diversion of its waters from their natural channel causing them to flow through said ditches and empty into the river north of the city, leaving Sioux Falls with an intermittent dry river bed.

The board of county commissioners under these conditions took steps to remedy the situation, and upon petition filed stating its object in its caption as follows: "To Reconstruct and Improve Drainage Ditches Numbers One and Two in Minnehaha County, South Dakota, and to Construct a New Spillway or Outlet to Said Drainage Ditches Numbers One and Two and to Pay Therefor by an Assessment upon the Property, Persons and Corporations Benefited Thereby," proceeded to establish what is termed drainage ditch No. 1 and 2, Minnehaha county, S. D.

Appellees who have property within the area of the original drainage ditches, No. 1 and No. 2, insist that the proceedings established a new drainage ditch known as No. 1 and 2, which is also the position taken by appellants. Other appellees claim that the work was in truth and in fact a project for the repair of drainage ditches No. 1 and No. 2. The court held that the forming of the new ditch was a pretense and subterfuge resorted to for the purpose of attempting to burden appellees with the cost of maintenance of ditches theretofore constructed; that the commissioners did not act as by law provided for the maintenance and repair of the ditches; and that the proceedings attempting to establish the new drainage ditch were void. We think the court was correct in this holding. It clearly expressed the situation as follows:

"Under these circumstances the board of county commissioners had absolutely no authority, no right or color of right, were not acting under the provision of any statute of the state when they assumed the right to reach out and attempt to assess the benefits for the repair and maintenance of said ditches against the property of the various plaintiffs. They were mere trespassers, for the reason that no drainage ditch No. 1 and 2 was ever established and has no existence.

"I am of opinion that the proceedings of the board of commissioners in the repair and maintenance of these ditches, No. 1 and No. 2, by assuming the right to constitute a new drainage district, calling it district No. 1 and 2, and to assess benefits to the property of the plaintiffs, in so far as they are located in the city of Sioux Falls, are void. Entertaining this view, it follows that plaintiff's prayer for an injunction should be granted."

Record, p. 90, Case No. 6313.

The proceedings, regardless of how designated, were in fact for repair and maintenance, and were governed as to assessments to pay for the same by section 8470 of the South Dakota Statutes, which section is as follows:

"*Assessments for Maintenance.*—For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the landowners affected in the proportions determined for such drainage at any time upon the petition of any person setting forth the necessity thereof, and after due inspection by the board of county commissioners. Such assessments shall be made as other assessments for the construction of drainage, certificates may be issued thereon and such assessments and certificates shall be liens, interest-bearing, perpetual and enforceable, in all respects as original assessments and may be sold at not less than par by the board of county commissioners, turned over to persons contracting for such cleaning and maintenance, or may be collected directly by the board of county commissioners." Section 13, c. 98, 1905; section 13, c. 134, 1907.

There is no provision in this statute for the taking in of other lands to help bear the assessment of burdens created in maintaining the original drainage. This was the statute under which the board of county commissioners could have provided for payment of maintenance and repairs to the established ditches.

Section 8489 provides for a method of abandonment of drains under certain circumstances and the construction of new ones in the same location. Said statute is as follows:

"*Invalid or Abandoned Proceedings.*—If any proceeding for the location, establishment or construction of any drain under the provisions of a previous law has been heretofore enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned, or if any such proceeding or like proceeding under this article be hereafter enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned in consequence of any error, defect, irregularity or want of jurisdiction affecting the validity of such proceeding or for any cause, the board of county commissioners may nevertheless proceed to locate a drain or drains under the same or different names and in the same or different locations from those described in the invalid or abandoned proceedings under the provisions of this article. In case any new proceeding be had resulting in the location of a drain in the same or substantially the same location as that described in the invalid or abandoned proceeding, the board of county commissioners shall proceed to ascertain the real value of the services rendered, money expended and work done under such invalid, abandoned or dismissed proceeding, and the extent to which the same will contribute to the location, establishment or completion of such new drain. Such value shall be determined at a hearing upon the same notice as the equalization of benefits or assessments, and may be at the same time or at any other time, and the notice of such hearing may be a part of the notice of the hearing upon the equalization of benefits or assessments or separate therefrom, but the board shall in any case notify all persons interested to show cause why the determination of the board thereupon shall not be final. When finally fixed such value shall become a part

of the cost of the new drainage. No use shall be made by any board of county commissioners in the laying out or completion of any drain or ditch under this article of any map, chart, survey, or other work done under any former law or under this article without having paid therefor; and all sums allowed for any work or material or money expended under the provisions of any previous law or under this article shall be paid to the persons who have paid therefor in proportion to the amounts severally paid by such persons." Section 33, c. 134, 1907.

The proceedings establishing drainage ditches No. 1 and No. 2 have never been set aside or abandoned under this statute. It is true a small portion of old ditch No. 1 was abandoned by the resolution adopted in the Covell's Lake proceeding, but the ditches were in no way abandoned. The Covell's Lake proceeding was itself abandoned and the ditches were left as they originally were, so it is apparent that the action of the board was not taken under section 8489. Either the proceedings were to repair and maintain ditches already constructed, or they were to take care of a situation resulting from their imperfect or inadequate construction. By reason of the water of the river breaking through into the lateral threatening a change of the river's course and the possible destruction of state lands, a situation was presented, not with relation to the drainage of agricultural lands, but rather to the failure of the ditches, due to inadequate or imperfect construction, to carry the increased flow of water. In other words, the project, if an entirely new one, was not for the drainage of agricultural lands. The court said in his opinion:

"Pursuant to this provision of the Constitution, the Legislature of the state has provided for the drainage of agricultural lands; but nowhere is there any statutory enactment under which drainage districts may be formed for the drainage of lands 'for any public use.' "

We are satisfied that under the South Dakota Constitution, section 6, art. 21, drainage of lands for any public use other than the drainage of agricultural lands, must be carried out by drainage districts, and no legislation at the time of these proceedings had been provided for the establishment of such drainage districts. Whichever way, therefore, the matter is viewed, the board was acting without legal authority in its apportionment of benefits and threatened assessment of taxes.

Appellants challenge the jurisdiction of the court, claiming there was a plain, adequate, and complete remedy at law; that there was no equity in the bill; that action was premature, and that the necessary jurisdictional amount was not involved. These in their order.

It is fundamental that equity cannot give relief where there is a plain, adequate, and complete remedy at law. It is provided by the federal Judicial Code, Compiled Stat. 1918, § 1244, as follows:

"*Suits in Equity.*—Suits in equity shall not be sustained in any court of the United States in any case where a plain, ade-

quate, and complete remedy may be had at law. (R. S. § 723. March 3, 1911, c. 231, § 267, 36 Stat. 1163.)"

It must be a remedy as certain, complete, prompt, and efficient to attain the ends of justice as that in equity. Monmouth Inv. Co. et al. v. Means, 151 Fed. 159, 80 C. C. A. 527; McMullen Lumber Co. v. Strother et al., 136 Fed. 295, 69 C. C. A. 433; Morgan v. Beloit, City and Town, 74 U. S. (7 Wall.) 613, 19 L. Ed. 203; McConihay v. Wright, 121 U. S. 201, 7 Sup. Ct. 940, 30 L. Ed. 932; Tyler v. Savage, 143 U. S. 79, 12 Sup. Ct. 340, 36 L. Ed. 82; Boise Artesian Hot & Cold Water Co. v. Boise City, 213 U. S. 276, 29 Sup. Ct. 426, 53 L. Ed. 796; Greene, Auditor, et al., etc., v. Louisville & Interurban Railroad Co., 244 U. S. 499, 37 Sup. Ct. 673, 61 L. Ed. 1280, Ann. Cas. 1917E, 88; Coler et al. v. Board of Com'rs of Stanly County et al. (C. C.) 89 Fed. 257.

It must be a remedy on the law side of the federal court. A remedy in the state court that cannot be pursued in the federal court is not an adequate remedy. Sheffield Furnace Co. v. Witherow, 149 U. S. 574, 13 Sup. Ct. 936, 37 L. Ed. 853; Smyth v. Ames, 169 U. S. 466, 516, 18 Sup. Ct. 418, 42 L. Ed. 819; United States Life Ins. Co. in City of New York v. Cable, 98 Fed. 761, 39 C. C. A. 264; Brun et al. v. Mann, 151 Fed. 145, 80 C. C. A. 513, 12 L. R. A. (N. S.) 154.

The question is: Has party the adequate remedy at law in the federal court?

In Reagan v. Farmers' Loan & Trust Co., 154 U. S. 362, 391, 14 Sup. Ct. 1047, 1052 (38 L. Ed. 1014), the court said:

"Nor can it be said in such a case that relief is obtainable only in the courts of the state. For it may be laid down as a general proposition that, whenever a citizen of a state can go into the courts of a state to defend his property against the illegal acts of its officers, a citizen of another state may invoke the jurisdiction of the federal courts to maintain a like defense. A state cannot tie up a citizen of another state, having property rights within its territory invaded by unauthorized acts of its own officers, to suits for redress in its own courts. Given a case where a suit can be maintained in the courts of the state to protect property rights, a citizen of another state may invoke the jurisdiction of the federal courts."

It has been held that where the state statute provided an action at law against the county for the recovery of sums paid on account of invalid taxes that the same constitutes a plain, speedy, and adequate remedy at law. Union Pac. R. Co. v. Board of Com'rs of Weld County, Colo., 217 Fed. 540, 133 C. C. A. 392. The Supreme Court of the United States has held that the North Dakota statute permitting actions respecting title of the property or accruing on contract to be brought against the state the same as against a private person does not clearly allow an adequate remedy; and there, injunction restraining defendants from taking steps to enjoin certain taxes, was upheld. Wallace et al. v. Hines, Director General of Railroads, et al., 253 U. S. 66, 40 Sup. Ct. 435, 64 L. Ed. 782. There was no such proceeding as discuss-

ed in Union Pac. R. Co. v. Board of Com'rs of Weld County, Colo., supra, in the South Dakota statutes. The only remedy was to appear before the board of county commissioners (claimed by appellees to be acting without authority), and then appeal from their finding to the state court. Such was not the adequate remedy contemplated by the federal statute.

While the frequent exercise of equity jurisdiction is in staying the collection of taxes illegal in whole or in part, a suit in equity will not lie to restrain the assessment or collection of a tax on the sole ground that it is illegal. There must be special circumstances bringing the case under some recognized head of equity jurisdiction. The right to such equitable relief must be clear where it is asked to restrain the collection of a state tax.

In Hannewinkle v. Georgetown, 15 Wall. 547, 548 (21 L. Ed. 231), it is said:

"It has been the settled law of the country for a great many years, that an injunction bill to restrain the collection of a tax, on the sole ground of the illegality of the tax, cannot be maintained. There must be an allegation of fraud; that it creates a cloud upon the title; that there is apprehension of multiplicity of suits, or some cause presenting a case of equity jurisdiction."

In Union Pacific Railway Co. v. Cheyenne, 113 U. S. 516, 525, 526, 5 Sup. Ct. 601, 605 (28 L. Ed. 1098), the rule is clearly laid down by the court:

"It cannot be denied that bills in equity to restrain the collection of taxes illegally imposed have frequently been sustained. But it is well settled that there ought to be some equitable ground for relief besides the mere illegality of the tax; for it must be presumed that the law furnishes a remedy for illegal taxation. It often happens, however, that the case is such that the person illegally taxed would suffer irremediable damage, or be subject to vexatious litigation, if he were compelled to resort to his legal remedy alone. For example, if the legal remedy consisted only of an action to recover back the money after it had been collected by distress and sale of the tax-payer's lands, the loss of his freehold by means of a tax sale would be a mischief hard to be remedied. Even the cloud cast upon his title by a tax under which such a sale could be made, would be a grievance which would entitle him to go into a court of equity for relief. Judge Cooley fairly sums up the law on this subject as follows: 'To entitle a party to relief in equity against an illegal tax, he must by his bill bring his case under some acknowledged head of equity jurisdiction. The illegality of the tax alone, or the threat to sell property for its satisfaction, cannot, of themselves, furnish any grounds for equitable interposition. In ordinary cases a party must find his remedy in the courts of law and it is not to be supposed he will fail to find one adequate to his proper relief. Cases of fraud, accident or mistake, cases of cloud upon the title to one's property, and cases where one is threatened with irremediable mischief, may demand other remedies than those the common law can give, and these in proper cases, may be afforded

in courts of equity.' This statement is in general accordance with the decisions of this court as well as of many state courts."

See, also, Dows v. City of Chicago, 78 U. S. (11 Wall.) 108, 20 L. Ed. 65; State Railroad Tax Cases, 92 U. S. 575, 23 L. Ed. 663; Ogden City v. Armstrong, 168 U. S. 224, 18 Sup. Ct. 98, 42 L. Ed. 444; Pittsburgh, etc., Railway v. Board of Public Works of W. Va., 172 U. S. 32, 19 Sup. Ct. 90, 43 L. Ed. 354; Singer Sewing Mach. Co. v. Benedict, 229 U. S. 481, 33 Sup. Ct. 942, 57 L. Ed. 1288; Ohio Tax Cases, 232 U. S. 576, 34 Sup. Ct. 372, 58 L. Ed. 737.

In Keokuk & Hamilton Bridge Co. v. Salm et al., 258 U. S. 122, 42 Sup. Ct. 207, 66 L. Ed. 496, the alleged invalidity consisted in discriminatory overvaluation. There was no claim of absolute illegality in the assessment. Appellant had a remedy with the board of review to correct the assessment, and the court said that resort to the suit to prevent either a sale for an illegal tax creating a cloud upon title or other irreparable injury had no basis.

In Union Pacific R. Co. v. Board of Com'rs of Weld County, 217 Fed. 540, 133 C. C. A. 392, this court said with reference to the casting of a cloud upon real property creating an "equitable circumstance" that the remedy which the statute prescribes will dissipate any such cloud, and says:

"Those cases which hold that a cloud upon the title to real property affords a ground for equitable relief are not applicable, when the taxpayer is given the remedy of paying his taxes and recovering back any sum which the courts shall hold to have been illegally exacted."

There is no such provision in the South Dakota statute.

In Boise Artesian Hot & Cold Water Co. v. Boise City, 213 U. S. 276, 29 Sup. Ct. 426, 53 L. Ed. 796, it was held that equity should not enjoin the collection of a tax on the ground of cloud on title when the tax can only be collected in suit at law in which the defense of its illegality is open, and further it not appearing that the tax is a lien on any of complaint's property.

In Indiana Manufacturing Co. v. Koehne, 188 U. S. 681, 23 Sup. Ct. 452, 47 L. Ed. 651, certain assessments upon shares of stock in a corporation were involved. The court found that as there was no lien created on real estate there was no cloud on title.

It is well settled that an assessment that will put a cloud on titles gives rise to equitable jurisdiction unless there is an adequate remedy at law. Union Pacific Railway Co. v. Cheyenne, 113 U. S. 516, 5 Sup. Ct. 601, 28 L. Ed. 1098; Green, Auditor, et al., etc., v. Louisville & Interurban Railroad Co., 244 U. S. 499, 37 Sup. Ct. 673, 61 L. Ed. 1280, Ann. Cas. 1917E, 88.

Section 8463 of the South Dakota Statutes provides for the board of county commissioners fixing the proportion of benefits of proposed drainage among the lands affected.

Section 8464 provides for the board making an assessment against each tract and property affected, and this is collectible

by the treasurer's office. Clearly the assessment would create a cloud upon the title. Fixing the proportion of benefits being preliminary to the assessment and a part of the machinery of assessment, likewise, we think, creates a cloud upon the title and gives equity jurisdiction. Shelton v. Platt, 139 U. S. 591, 11 Sup. Ct. 646, 35 L. Ed. 273; Ohio Tax Cases, 232 U. S. 576, 34 Sup. Ct. 372, 58 L. Ed. 737; Hopkins et al. v. Walker et al., 244 U. S. 486, 37 Sup. Ct. 711, 61 L. Ed. 1270.

Was the case prematurely brought? It is claimed that inasmuch as the board of county commissioners had not assessed the taxes complained of consequently the suit is premature.

In Western Union Telegraph Co. v. Howe et al., 180 Fed. 44, 103 C. C. A. 398, it was held by this court that the suit was prematurely brought because the telegraph company did not pursue the remedy afforded by law to have its assessment corrected by the state board of equalization. That was not a case, however, where it was claimed that the entire proceedings were without authority and illegal, as is the case here. The jurisdiction to act was not questioned.

In Keokuk & Hamilton Bridge Co. v. Salm et al., 258 U. S. 122, 42 Sup. Ct. 207, 66 L. Ed. 496, the question involved was the amount of the tax. It was not claimed that the proceedings were illegal.

In the late case of Milheim et al. v. Moffat Tunnel Improvement District et al., 262 U. S. 710, 43 Sup. Ct. 694, 67 L. Ed. 1194, there was no question of jurisdiction of the taxing body as there is here. Plaintiff's property was by legislative act placed within the taxing district.

The proceeding here involved, being without authority, the situation is quite different from where the only question involved is the inequality of taxes levied by a board having jurisdiction to act. The actions, we are satisfied, were not premature.

Appellants urgently insist that it does not appear from the record that the amount in controversy, exclusive of interest or costs, exceeds the sum or value of $3,000, and that the statements in the various complaints of appellees so alleging are false, and stated with the fraudulent purpose of imposing upon the jurisdiction of the federal court; that no tax has in fact been assessed; that the apportionment of benefits is tentative and subject to correction; and that there is no way of determining what the amount of the assessment against the respective appellees would have been had the proceedings not been interrupted by the injunctions; and that there is in fact no sum whatsoever in controversy between the parties hereto.

It has been held that future, undetermined, unaccrued, or unspecified taxes cannot be taken into consideration to give jurisdiction; that the court cannot engage in speculation as to such taxes. Holt v. Indiana Manufacturing Co., 176 U. S. 68, 20 Sup. Ct. 272, 44 L. Ed. 374; New England Mortgage Security Co. v. Gay, 145 U. S. 123, 12 Sup. Ct. 815, 36 L. Ed. 646; Citizens' Bank

v. Cannon, 164 U. S. 319, 17 Sup. Ct. 89, 41 L. Ed. 451; Washington & Georgetown R. R. Co. v. District of Columbia, 146 U. S. 227, 13 Sup. Ct. 64, 36 L. Ed. 951. Also, that where there is a suit to enjoin collection of a tax the amount of the tax is the test of jurisdiction. Linehan Ry. Transfer Co. v. Pendergrass, 70 Fed. 1, 16 C. C. A. 585; Eachus v. Hartwell et al. (C. C.) 112 Fed. 564; Washington & Georgetown R. R. Co. v. District of Columbia, 146 U. S. 227, 13 Sup. Ct. 64, 36 L. Ed. 951; Board of Trustees of Whitman College v. Berryman et al. (C. C.) 156 Fed. 112; Citizen's Bank v. Cannon, 164 U. S. 319, 17 Sup. Ct. 89, 41 L. Ed. 451; City of Ottumwa, Iowa, v. City Water Supply Co., 119 Fed. 315, 56 C. C. A. 219, 59 L. R. A. 604.

It has also been held that where the complaint alleges the amount in controversy to equal the jurisdictional requirement and the contrary does not appear to a certainty from the evidence, that the jurisdiction will be sustained. Maffet v. Quine (C. C.) 95 Fed. 199; Von Schroeder v. Brittan (C. C.) 93 Fed. 9.

What is the situation here? Each one of the appellees is threatened with an assessment of more than $3,000. The Northern States Power Company is threatened with one of $50,000. And further, certain appellees who have no property within the original drainage districts No. 1 and No. 2 are brought into the district and made liable to further assessments for maintenance and repair of ditches. It appears from the record that the board of county commissioners had fixed against the different appellees the proportion of benefits on a unit basis. It is without question that the county commissioners have issued approximately $255,000 worth of warrants for this work, and that the amount due thereon is about $300,000. It is a matter then of mere mathematical calculation to arrive at the threatened assessment against each one of appellees.

Exhibit C is the notice to the various parties against whom proportions of benefits have been fixed. It provides as follows, to wit:

"All such owners and all persons interested are hereby notified and summoned to show cause at the time and place aforesaid why the proportion of benefits shall not be fixed as stated, and the said determination of said board made final."

If no action whatever were taken by appellees the amounts would be final, and under these circumstances we believe the amount in dispute in each case exceeds the jurisdictional requirement. The claim of amount is evidently made in good faith, and not for the mere purpose of giving the federal courts jurisdiction. We do not believe that where the board has passed a resolution fixing benefits which exceed the jurisdictional amount and are the basis of a proposed assessment, and which parties claim are fixed by the board without authority, that because said board may equalize the benefits or even find that no benefits exists the parties must wait until the final action of the board. It is suggested that the board may so equalize benefits that the jurisdictional amount will not be involved, but as the matter

stood when the case was brought each appellee was threatened with the levying of a tax for more than the jurisdictional amount, and some of the necessary steps had already been taken.

As the proportion of benefits had been fixed subject to change by the board only if appellees should convince them that their conclusion was erroneous, and in view of the claim in apparent good faith in each of the bills that the amount involved exceeded the jurisdictional amount, we hold, from a careful survey of the entire record, that the necessary amount existed in each case to give jurisdiction to the federal court.

All bills of complaint raise questions under the federal Constitution that are substantial and not merely colorable. Hence the court has jurisdiction exclusive of diversity of citizenship, which existed as to all appellees except the city of Sioux Falls, necessary amount being involved, to determine all questions in the record, and it has not lost jurisdiction by omitting to decide the constitutional ones. Silver et al., etc., v. Louisville & Nashville R. R. Co., 213 U. S. 175, 29 Sup. Ct. 451, 53 L. Ed. 753; Ohio Tax Cases, 232 U. S. 576, 34 Sup. Ct. 372, 58 L. Ed. 737; Louis. & Nash. R. R. Co. v. Finn, 235 U. S. 601, 35 Sup. Ct. 146, 59 L. Ed. 379; Greene, Auditor, et al., etc., v. Louis. & Interurban R. R. Co., 244 U. S. 499, 37 Sup. Ct. 673, 61 L. Ed. 1280, Ann. Cas. 1917E, 88.

Appellants plead estoppel against all of the appellees, and claim that appellees are not in position to maintain their actions, for the reason that as to some of the railroad companies the engineering departments have been in close touch with the drainage ditch proceedings; that some of them were assessed for benefits received upon the construction of the original drainage ditches in the same territory, received benefit thereby, and have not protested before the bringing of this action. As to some of the appellees it is claimed that their officers showed interest in the construction work and encouraged the board of commissioners to do the work; that some of the appellees, for instance, the Chicago, Milwaukee & St. Paul Railway Company, hauled men and materials used in the construction work, and stopped trains between stations to unload men and materials. As to the city of Sioux Falls, it is claimed by way of estoppel that under due authority the mayor and city auditor signed the petition for the project. There can certainly be no just claim of estoppel as to those appellees whose property was not within the area of the original drainage ditches No. 1 and No. 2. As to the other appellees, the decree related only to the property outside of the original assessment areas of drainage ditches No. 1 and No. 2. So we are to consider the situation as bearing on the question of estoppel only as to the property outside of the original assessment areas up to the time of the notice of the fixing of benefits. The various appellees as to such property had no notice, when the acts constituting the alleged estoppel took place, that the same was to be affected by the drainage construction or would be assessed for the cost thereof. Hence the claimed acts of agents and officers of appellees would not constitute estoppel. The situation

is quite different from that presented in Gilseth v. Risty (S. D.) 193 N. W. 132—at least as to all appellees except the city of Sioux Falls. We do not pass on the question of estoppel as to any appellees, as to assessments that may be made on their property within the original area of ditch No. 1 and ditch No. 2, for the purpose of maintaining such ditches.

Other questions are presented which we think are not involved in the determination of these cases.

The decree of the trial court in each case is affirmed.

IN THE

SUPREME COURT OF THE UNITED STATES.

OCTOBER TERM, 1924.

No. 454.

A. G. RISTY, ET AL., AS COUNTY COMMISSIONERS, ETC., ET AL., PETITIONERS,

vs.

NORTHERN STATES POWER COMPANY, RESPONDENT

STATEMENT AND BRIEF IN RESISTANCE OF PETITION FOR CERTIORARI

Believing that if the court is fully and correctly informed with reference to the questions involved in this case it will not deem such questions of sufficient importance or of such nature as to induce it to exercise its power in certiorari, we respectfully ask consideration of the following in resistance of the petition for certiorari filed herein.

STATEMENT OF CASE

The Big Sioux River flows from the north in a southerly direction west of the city of Sioux Falls to a point southwest of the city, thence easterly and thence northerly through the city to a point where it is intersected by the outlet of the drainage ditch or ditches in controversy.

Respondent owns and operates an hydro-electric plant in the city of Sioux Falls operated partly by water power from the falls of the Big Sioux River and partly by steam power. All of its real property is of granite rock formation, the rock appearing at the surface of the ground without soil

thereon, and no part of such property is or ever can be suitable for agricultural purposes.

In or about the years 1907 to 1909, petitioners, county commissioners (hereinafter referred to as "The commissioners") caused to be constructed what was then known as Drainage Ditch No. 1, having its origin at a point about three and one-half to four miles north of the city of Sioux Falls, and emptying into the Big Sioux River at a point north of and below respondent's hydro-electric plant.

While the proceedings for the construction of Drainage Ditch No. 1 were pending a petition was filed for the construction of what was first known as Ditch No. 2. Subsequently another petition was filed, seeking the extension of proposed Ditch No. 2, and praying that it be made a part of Ditch No. 1. The commissioners finally, by resolution, established and caused to be constructed Drainage Ditch No. 2, having its origin at a point approximately fifteen miles north of the outlet of Ditch No. 1 on the east side of the Big Sioux River, and running thence in a southerly direction, intersecting the Big Sioux River at one point, and so close to the river at other points that the river subsequently cut into the ditch, and connecting with and emptying into Ditch No. 1 at its point of origin.

The commissioners, by resolution, determined that all of the property theretofore included within what they had determined to be the area of Drainage Ditch No. 1 was also benefited by Drainage Ditch No. 2; that the two ditches were mutually interdependent and should virtually be considered as one drainage system, and they assessed all of said property for the construction of both ditches. The system of drainage thus established was completed and paid for by assessment upon the property then deemed to be benefited which did not include any property lying south of the outlet of Ditch No. 1. No part of respondent's property was included within the drainage area thus established; it was given no notice of of any kind of the establishment of such drainage and no attempt was made to include its property within the drainage area or assess it for any part of the cost of the drainage.

As originally constructed, and after the connection of Drainage Ditches No. 1 and 2, the outlet of Drainage Ditch No. 1 consisted merely of a concrete apron hereinafter referred to as "spillway," extending from the lower terminus of Drainage Ditch No. 1 down over an abrupt slope to the Big Sioux River at a point below the falls of the river and as heretofore stated north of and below respondent's hydro-electric plant. In the year 1916, the volume of water passing through Ditches No. 1 and No. 2 washed out a portion of this concrete work with the result that the waters in the spillway were at that point uncontrolled and serious damage was threatened by the continued maintenance of the ditches in the absence of properly constructed works for the purpose of controll-

ing and confining the waters at their outlet. It is conceded that with the ditches in the condition in which they were after the washing out of the spillway there was great danger that the Big Sioux River would be diverted from its course around the city of Sioux Falls and caused to flow through the ditches from the point of intersection some miles north of the city returning to the river at the point where the old spillway was located below the falls and below respondent's plant, thus threatening to seriously damage its property, the water supply of the city of Sioux Falls, and many other properties and rights, and in fact, threatening to deprive respondent entirely of its water power.

It appears from the answer and the undisputed evidence that the commissioners started work of some character to attempt to control the waters at the spillway and to prevent the threatened damage; that certain property owners within the area theretofore determined to be benefited by the drainage objected to this work and instituted suit in the state court to restrain the same; that thereafter a petition was filed with petitioners seeking a change of the outlet of the Drainage Ditches No. 1 and No. 2 in such manner as to discharge the water from said ditches into what is known as Covell's Lake, situated in the northwesterly part of the city of Sioux Falls; that thereafter the owners of property within the drainage area as theretofore determined and the parties interested in the Covell's Lake project had numerous conferences with reference to the matter;, that as a result of such conferences and as a compromise between said parties (there being no contention or proof that respondent was a party thereto) the proceedings had under the petition last referred to were abandoned and a petition known as the petition of F. L. Blackman and others was filed, which petition is entitled "Petition to Reconstruct and improve Drainage Ditches No. 1 and No. 2 in Minnehaha County, South Dakota, and to construct a new spillway or outlet to said Drainage Ditches No. 1 and No. 2 and to pay therefor by an assessment upon the property, persons and corporations benefited thereby." Upon this petition, confessedly filed and acted upon by petitioners as a compromise between the owners of property within the drainage area and the promoters of the so-called Covell's Lake project, and not including respondent, the commissioners adopted a resolution providing for its hearing and caused notice of said hearing to be published. Respondent was not named in said notice; its hydroelectric plant and water rights were not referred to, and no part of its property was described. It contained nothing which could be construed as giving any notice whatever to it that any claim would be made of benefit to its property or that any attempt would be made to assess its property in such proceeding.

Upon the return day of such notice, the commissioners adopted a resolution purporting to re-establish Drainage

Ditches No. 1 and No. 2 under the name of Drainage Ditch No. 1 and 2, *along the exact course of their previous construction* and for the re-construction of the outlet or spillway.

Purporting to act under this resolution, the commissioners caused Ditches No. 1 and No. 2 to be cleaned and otherwise repaired and caused the outlet or spillway thereof to be re-constructed, and pursuant to a resolution or resolutions thereafter adopted, without any notice to respondent, caused certain portions of the Big Sioux River to be straightened. The spillway was re-constructed under the cost plus plan without advertising for bids for its re-construction in accordance with the plans finally adopted, and warrants were issued for the cost of such work amounting, with interest, to approximately $300,000.00.

The first intimation contained in the record of any thought of assessment of or attempt to assess any part of respondent's property appears in a notice published in April, 1919, said notice being of a hearing upon the matter of equalization of benefits resulting from said Drainage Ditch No. 1 and 2 and in which certain tracts of real property owned by respondent were described and attempted to be apportioned benefits to the extent of a very few units. The commissioners did not at that time, however, attempt to assess the hydro-electric plant or water rights of respondent and such plant and rights were not referred to in the April, 1919, notice. Proceedings under this notice were abandoned.

Subsequently and in or about the month of July, 1921, the commissioners adopted a resolution apportioning the benefits derived from said Drainage Ditch No. 1 and 2 and apportioned to respondent and to its hydro-electric plant, dam, property rights and water rights benefits to the extent of 5,351.63 units, amounting, as will appear from a mathematical calculation, to approximately $50,000.00. This suit was instituted for the purpose of restraining the commissioners from proceeding further with the equalization of said purported benefits and from spreading an assessment upon respondent's property therefor.

The district court acquired jurisdiction both by virtue of well pleaded federal questions and because of diversity of citizenship.

Respondent predicated its claim that the entire proceedings of the commissioners were void upon the following contentions:

1. That the South Dakota drainage ditch statutes were violative of the Fourteenth Amendment to the Federal Constitution;

2. That the acts of the commissioners were so arbitrary and discriminatory as to deprive it of the equal protection of

the laws, and that such acts were, therefore, in violation of the Federal Constitution;

3. That the acts of the commissioners in attempting to increase the drainage area of Drainage Ditches No. 1 and No. 2, and to assess respondent's property, not included in such area as originally established, were void because not done pursuant to or authorized by any statutes of the state of South Dakota;

4. That the proceedings of the commissioners in attempting to create a new drainage proposition and a new drainage area were a mere subterfuge resorted to by them pursuant to agreement between them and the owners of property in the original drainage area for the purpose of enabling them to assess respondent's property for the cost of such repair and maintenance of the original ditches as was necessary in order to enable them to function without damage to or destruction of the property and rights of respondent and others.

The district court decided that the South Dakota drainage statutes were not violative of the Fourteenth Amendment to the Federal Constitution, but found, in substance, as follows:

1. That the forming of the so-called new ditch was simply a pretense and subterfuge resorted to by the commissioners for the sole purpose of attempting to burden respondent and others with the cost of the maintenance of the ditches theretofore constructed;

2. That the South Dakota statutes did not authorize the assessment of property not included within the drainage area of the ditches in question, as originally determined, for the maintenance of such ditches after they had been constructed and the benefits therefor had been assessed, and that the proceedings of the commissioners in so far as they purported to affect the property and rights of respondent were, therefore, void;

3. That the statutes of the state of South Dakota in so far as they purport to authorize drainage proceedings for any purpose other than the drainage of agricultural lands were in conflict with the constitutional provision of the state of South Dakota requiring the corporate organization of drainage districts as a condition precedent to drainage proceedings for any such other purpose, and further found that the proceedings in question, if treated as new proceedings resulting in the establishment of a new ditch, were void because the work done pursuant to such proceedings was not done for the purpose of draining agricultural lands, and that such proceedings were, therefore, not authorized by the state statutes or Constitution; and

4. That regardless of whether or not the alleged new drainage district had been legally constituted, respondent was entitled to the relief asked because of the arbitrary and dis-

criminatory acts of petitioners, bringing respondent within the rule expressed in the case of *Thomas, et al. v. Kansas City Southern R. R. Co.*, 261 U. S. 481, 67 L. ed. 758.

C. R. I. & P. Ry. Co. v. Risty et al. 282 Fed. 364.

The Circuit Court of Appeals did not pass upon the Federal constitutional questions involved because, although finding them "grave, serious and doubtful," it deemed their determination not necessary "to the solution of the case," but in other respects it approved the decision of the district court, and affirmed the decree restraining assessment of respondent's property lying outside the drainage area as originally established.

Risty et al. v. C. R. I. & P. Ry. Co. 297 Fed. 710.

BRIEF

We believe the foregoing statement, which in all respects is sustained by the record, is all that is necessary to present to the court in support of our suggestion that the importance and nature of the questions involved are not such as to demand the exercise of its power in certiorari. We desire, however, to briefly consider the proposition, apparently chiefly relied upon by petitioners, that the decision of the Circuit Court of Appeals has created a conflict between itself and the decisions of the Supreme Court of the State of South Dakota.

We assume that this court will not find that such conflict exists as to demand the exercise by it of the extraordinary power under consideration unless it clearly and conclusively appears: first, that the nature of the questions involved in this case is such that the decisions of the highest court of this state with reference to them will be regarded as authoritative by this court, and second, that such questions have been so decided by the state court as necessarily to foreclose respondent of such rights and remedies as the Federal courts have held it entitled to.

We shall not discuss the first of these two essentials because one of the questions involved, to-wit: as to whether or not the drainage statutes in so far as they purport to authorize drainage for a purpose other than the drainage of agricultural lands, are in conflict with the state Constitution, is of such nature, while the others are as clearly not. None of such questions, however, has been so passed upon by the Supreme Court of the state as to create any conflict.

The state court has never had before it for determination the question as to whether or not the drainage statutes, in so far as they purport to authorize drainage proceedings for any purpose other than that of draining agricultural lands, are violative of the state Constitution. In all cases in which the constitutionality of the statutes has been passed upon by that court the only questions involved were those with reference

to the drainage of agricultural lands, and the court very correctly held that such drainage might be provided for without the incorporation of drainage districts.

The case of *Gilseth v. Risty*, 193 N. W. 132, decided after the decision of the district court in this case, is chiefly relied upon by petitioners as establishing the alleged conflict between the state and Federal courts. The opinion in that case discloses the following situation: plaintiff was the owner of agricultural land within the drainage area of Drainage Ditches No. 1 and No. 2 as originally constructed; he was a party to the conferences alleged by respondent in this case to have taken place between the parties interested in the original ditch proceedings, which conferences resulted in the filing of the petition "for the re-establishment of Drainage Ditches No. 1 and 2;" he was present at the hearing upon that petition and took no appeal from the order of the county commissioners purporting to establish the new drainage; his property, as we have said, was in the drainage area as originally established and he was one of the parties responsible for the original construction of the ditches in question and for their proper maintenance, and one of the parties for whose benefit petitioners are attempting to assess respondent's property and that of others outside the original drainage area.

The court simply held that as to him, a party to the proceeding, the order establishing the drainage and subsequent orders from which he did not appeal, became final. A careful analysis of the opinion discloses that the court finally based its conclusion upon questions of estoppel and lack of equity in favor of plaintiff. After reciting the situation practically as above stated, it said: "Appellant having stood by and seen all the work performed without protest, and having received all the benefits that could result therefrom, should not now be permitted to escape payment for the same. The relief asked by appellant is equitable in its nature, but because of the circumstances above shown, all the equities of the case are against appellant and in favor of the board."

We submit that nothing that was actually decided in the *Gilseth* case is in conflict with the decision of the Circuit Court of Appeals with reference to the rights of respondent here. There is nothing in the *Gilseth* case which would preclude any able lawyer from conscientiously advising respondent that the questions upon which his rights depend have not been passed upon by the state court.

Respondent had no property within the original drainage area; it was not a party to the original proceedings; it was not named nor any of its property described or referred to in the proceedings resorted to for the purpose of enlarging the drainage area.

No constitutional question or question of the power to assess property outside the original drainage area was involved in the *Gilseth* case, and there could not have been a decision

in that case, based upon the facts as disclosed by the opinion, that would even furnish any assistance to another court in determining respondent's rights here. The Federal courts, in seeking to avoid conflict, are certainly not obliged to follow the dicta of state courts or give any effect to unnecessary or unessential statements in their opinions.

We respectfully submit that the writ of certiorari should not be granted.

Argument on motion to dismiss appeal..... 3

Statement 3

The Supreme Court has no jurisdiction to review the judgment of the lower court on this appeal because the case does not really and substantially involve a dispute or controversy as to the validity, construction or effect of the constitution upon the determination of which the result depends..... 6

Appellants having elected to appeal from the District Court to the Circuit Court of Appeals are bound by the decision on that appeal and cannot have the case again reviewed by appeal to the Supreme Court 9

The Federal questions pleaded having been disposed of in accordance with the contentions of appellants cannot be the basis of jurisdiction on appeal by them 11

IN THE

Supreme Court of the United States.

OCTOBER TERM, 1924.

No. 454

A. G. RISTY ET AL., AS COUNTY COMMISSIONERS, ET AL.,
Appellants,

vs.

NORTHERN STATES POWER COMPANY,
Appellee.

APPEAL FROM THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT.

MOTION TO DISMISS APPEAL.

AND NOW COMES the appellee and moves the court to dismiss the appeal herein for the following reasons:

I. The fact that opposite parties to the suit were citizens of different states was sufficient to give jurisdiction to the Federal courts and the Federal questions raised by the pleadings were disposed of by the Circuit Court of Appeals in accordance with the contentions of appellants; wherefore this court has no jurisdiction of the case on appeal.

II. This case in the lower court did not involve a dispute or controversy as to the validity, construction

or effect of the Constitution of the United States upon the determination of which the result depended; wherefore the Supreme Court has no jurisdiction on this appeal to review the judgment and decree of said Circuit Court of Appeals.

III. Appellants having elected to appeal from the District Court to the Circuit Court of Appeals are bound by the decision on that appeal and cannot have the case again reviewed by appeal to the Supreme Court.

Respectfully submitted,

HAROLD E. JUDGE,
JOHN H. ROEMER,
R. M. CAMPBELL,
Counsel for Appellee.

ARGUMENT ON MOTION TO DISMISS APPEAL.

I.

STATEMENT.

This case is here on appeal from a decision of the United States Circuit Court of Appeals for the Eighth Circuit affirming the judgment of the United States District Court for the District of South Dakota. The action was brought in the District Court by appellee to restrain the County Commissioners and other county officials of Minnehaha County, South Dakota, from levying an assessment against the property of appellee under Chapter 5 of the South Dakota Revised Code, 1919, and amendments thereof, usually referred to as the South Dakota Drainage Act. The right to an injunction was asserted on two Federal grounds, one that the Drainage Act was invalid because violative of the Constitution of the United States, the other, that the assessment was so arbitrary and discriminatory as to constitute the taking of appellee's property without due process of law and to deprive appellee of the equal protection of the law (P. R. 79-80), and also upon the non-Federal ground that even if the statute were valid, the right to make an assessment did not exist under its terms.

The District Court held the Drainage Act valid but granted the injunction on other grounds asserted. The Circuit Court of Appeals expressly refused to decide the Federal questions and affirmed the lower court on the non-Federal questions upon which the decision of that court proceeded. With this appeal, appellants filed a petition for writ of certiorari to the Circuit Court of Appeals, which has been denied by the court.

The case is one of those in which the decision of the Circuit Court of Appeals is final under Judicial Code, Section 128, unless it involves some ground of Federal jurisdiction other than that of diversity of citizenship.

The bill of complaint in paragraphs I and II thereof alleges as a ground of Federal jurisdiction, the diversity of citizenship between the plaintiff therein, Northern States Power Company, a Minnesota corporation, and the defendants, who are residents and citizens of the State of South Dakota. (P. R. 4.)

In paragraph XVI of the bill there is an allegation of facts authorizing jurisdiction in the Federal Court upon the ground that the suit is one of a civil nature in which a law of the State of South Dakota is claimed to be in contravention of the Constitution of the United States. (P. R. 13.)

In the trial court, it was contended by the plaintiff, appellee here, that the drainage law of South Dakota was invalid because it contravened the Constitution of the United States. The appellants who were defendants below, in their answer specifically "allege that said suit does not really and substantially involve a dispute or controversy properly within the jurisdiction of this court, in that this suit is wholly based upon the alleged existence of a Federal question and diversity of citizenship, and that the amount sued for and the value of the special matter as alleged in said bill is not truly stated or alleged in food faith." (P. R. 24.) The defendants in the trial court, appellants here, specifically deny the allegations of paragraph XVI of the bill (P. R. 13) in which it was charged that the South Dakota Drainage Act was in contravention of the Constitution of the United States, and state that said allegations were made with the fraudulent purpose of imposing upon the jurisdiction of the court.

Throughout the trial of the case in the District Court, and in the appeal to the Circuit Court of Appeals, the appellants contended that the South Dakota Drainage Act was constitutional and valid. In this contention they were entirely successful in the District Court, the trial judge having held that the act was constitutional. (P. R. 88.)

In the Circuit Court of Appeals' opinion by Judge Kenyon, it is stated that the constitutional questions raised are grave, serious and doubtful, but that their determination is not necessary to the solution of the case—hence, under the well established rule that Federal courts will not pass upon the constitutionality of statutes unless it is absolutely necessary, the question is left aside. (*Risty, et al.* v. *Chicago, R. I. & P. Ry. Co.,* and five other cases, 297 Fed. 710.)

It is thus clear that both in the District Court and in the Circuit Court of Appeals, the question of the constitutionality of the South Dakota law was disposed of in accordance with the contentions of appellants. In both courts, the question was left aside; in the District Court, because the trial judge held the act was constitutional; in the Circuit Court of Appeals because that court found it was immaterial whether the act were constitutional or not.

What was actually done was to analyze the statute in the light of the record and to reach the conclusion that the County Commissioners, as drainage officials, were not authorized by the South Dakota law to do the things they were seeking to do. In other words, the courts construed the South Dakota statute and under their construction of it, found that the County Commissioners, appellants, had no authority in the statute for proceeding with the assessment against appellee.

II.

THE SUPREME COURT HAS NO JURISDICTION TO REVIEW THE JUDGMENT OF THE LOWER COURT ON THIS APPEAL BECAUSE THE CASE DOES NOT REALLY AND SUBSTANTIALLY INVOLVE A DISPUTE OR CONTROVERSY AS TO THE VALIDITY, CONSTRUCTION OR EFFECT OF THE CONSTITUTION UPON THE DETERMINATION OF WHICH THE RESULT DEPENDS.

The only ground of Federal jurisdiction considered by the Circuit Court of Appeals was that of diversity of citizenship. The allegations that the South Dakota law was unconstitutional and that the action of the drainage officers amounted to taking appellee's property without due process of law and to a deprivation of the equal protection of the law, were not essential to the result reached in the litigation.

We direct attention to the case of *Arbuckle* v. *Blackburn*, 191 U. S. 405, 48 L. Ed. 239, 24 S. C. R. 148, where this language appears:

> "In the present case the Circuit Court had jurisdiction on the ground of diverse citizenship; but it is now contended that jurisdiction also rested on the ground that the suit was one arising under the Constitution of the United States.
>
> The rule is firmly established that a suit does not so arise unless it really and substantially involves a dispute or controversy as to the effect or construction of the Constitution, upon the determination of which the result depends, and which appears on the record by a statement in legal and logical form, such as is required in good pleading. *Defiance Water Co.* v. *Defiance*, 191 U. S. 184, *ante*, 140; 24 Sup. Ct. Rep. 63, and cases cited."

In the case of *Empire State, etc. Mining Co.* v. *Hanley*, 195 U. S. 292, 49 L. Ed. 1056, 25 S. C. R. 691, this language occurs:

> "The decisions of the courts below did not turn

> on any Federal question. The circuit court held that Hanley had no title to the one-third interest because the Idaho statute relating to probate sales had not been complied with; the court of appeals, that Hanley was not entitled to the aid of a court of equity in respect of that interest, because of his conduct at the time of the transaction."

We think it may be said in the instant case, as was said by Mr. Chief Justice Fuller in the case last cited, that the decision of the Circuit Court of Appeals did not turn on any Federal question; in fact, there can be no question but that the language of the Chief Justice is pertinent. It is beyond cavil that the Federal questions pleaded here were not those upon the determination of which the final result depended.

The principle now being discussed is well stated in the case of *Shulthis* v. *McDougal,* 225 U. S. 561, 56 L. Ed. 1205, in the following language:

> "A suit to enforce a right which takes its origin in the laws of the United States is not necessarily, or for that reason alone, one arising under those laws, for a suit does not so arise unless it really and substantially involves a dispute or controversy respecting the validity, construction, or effect of such a law, upon the determination of which the result depends."

In the case of *Lovell* v. *Newman,* 227 U. S. 412, 57 L. Ed. 577, the discussion of this matter contained in *Shulthis* v. *McDougal, supra,* is repeated and approved; said quotation being followed by this question:

> "Does it, then, appear in the petition in the present case, in addition to averments of diverse citizenship, that the petitioner has asserted a ground of jurisdiction which 'really and substantially involves a dispute or controversy respecting the validity, construction, or effect of a law of the United States, and upon which his right to recover depends?' "

The question above states the problem to be solved in determining whether or not the Supreme Court has jurisdiction in a case brought there by direct appeal.

The justices of the Supreme Court say that in order to invoke the jurisdiction of Federal courts the petitioner must assert a ground of jurisdiction which "really and substantially involves a dispute or controversy respecting the validity, construction or effect of a law of the United States, upon the determination of which the result depends." That language means exactly what it says. It may be contended that the justices had in mind, in making and repeating the solemn assertion to which we have referred, the result of a decision upon the particular allegation of unconstitutionality without reference to the decision of the case where other issues are involved. Their opinions have not so limited the meaning of the language, however, but have made such broad assertion time and again. Not only has it been stated positively, but the same rule has been conversely laid down.

In the case of *Henningsen* v. *United States Fidelity and Guaranty Co.* 208 U. S. 404, 52 L. Ed. 547, 28 S. C. R. 389, Mr. Justice Brewer said, in denying a motion to dismiss:

> "A motion is made to dsimiss on the ground that the jurisdiction of the Circuit Court was invoked solely on the ground of diversity of citizenship of the parties, and hence the decree of the Circuit Court of Appeals was final. The motion must be overruled. Diversity of citizenship was, it is true, alleged in the bills, but grounds of suit and relief were also based on the statutes of the United States, as from the discussion of the merits will be seen. Those statutes entered as elements into the decision of the circuit court of appeals, and were necessary elements."

It cannot be said that the Constitution of the United States, or a Federal question, entered as an element into the decision of the Circuit Court of Appeals from which this appeal was taken. They did enter as elements in the case decided by Mr. Justice Brewer and were necessary elements. It was that fact which gave the Supreme Court jurisdiction in that case, and it must follow that if the Constitution or some Federal question had not entered as a necessary element in the case, the Supreme Court would have been without jurisdiction.

A Federal question to give jurisdiction to this court on appeal, must be essential to the disposition of the case. It must be so substantially fundamental that it cannot be set aside. The ends of justice must require its consideration and determination. In our judgment, jurisdiction to review this case on appeal does not exist here on the ground that Federal questions are involved, because those questions, as pleaded, do not really and substantially involve a dispute as to the validity, construction or effect of the constitution, upon the determination of which the result depends.

III.

APPELLANTS HAVING ELECTED TO APPEAL FROM THE DISTRICT COURT TO THE CIRCUIT COURT OF APPEALS ARE BOUND BY THE DECISION ON THAT APPEAL AND CANNOT HAVE THE CASE AGAIN REVIEWED BY APPEAL TO THE SUPREME COURT.

If appellants had the right to have the judgment of the United States District Court reviewed by the Supreme Court, it was essential for the exercise of such right that a direct appeal to that court be taken. While such direct appeal must be taken on jurisdictional grounds, it is settled that when so taken the Supreme

Court must review the whole case and decide all questions involved, both jurisdictional and nonjurisdictional.

Horner v. *United States,* 143 U. S. 570; 36 L. Ed. 266.

Burton v. *United States,* 196 U. S. 283; 49 L. Ed. 482.

Williamson v. *United States,* 207 U. S. 425; 52 L. Ed. 278.

Wilson v. *United States,* 232 U. S. 563; 58 L. Ed. 728.

Having elected, however, to take the case by appeal from the District Court to the Circuit Court of Appeals for review, the appellants are bound by the decision there.

This court held in *Robinson* v. *Caldwell,* 165 U. S. 359, 41 L. Ed. 745, and later in *Loeb* v. *Trustees of Columbia Township,* 179 U. S. 472, 45 L. Ed. 280, approved the doctrine, that "it was not the purpose of the judiciary act of 1891 to give a party who was defeated in a Circuit Court of the United States the right to have the case finally determined upon its merits both in this court and in the Circuit Court of Appeals." No amendment of the Judiciary Act referred to now indicates any such purpose or permits such right. *Ohio* v. *Swift & Co.* 260 U. S. 146, 67 L. Ed. 176.

In the case of *Cary Manufacturing Company* v. *Acme Flexible Clasp Company,* 187 U. S. 427, 47 L. Ed. 244, this language is used:

> "Although it is insisted that the judgment imposing the fine was a final judgment in a criminal matter, it is argued that it involved the denial of constitutional rights, and hence that this court has jurisdiction under Sec. 5 of that act; but it is settled that even if a party might be entitled to come directly to this court under that section, yet if he

does not do so, and carries his case to the circuit court of appeals, he must abide by the judgment of that court."

In *Ayers* v. *Polsdorfer*, 187 U. S. 427, 47 L. Ed. 314, it is said:

"Therefore, when the jurisdiction of the circuit court is invoked solely on the ground of diversity of citizenship, two classes of cases can arise, one in which the questions expressed in Section 5 appear in the course of the proceedings, and one in which other Federal questions appear. Cases of the first class may be brought to this court directly, or may be taken to the circuit court of appeals. But if taken to the later court they cannot then be brought here. Cases of the second class must be taken to the circuit court of appeals, and its judgment will be final. The case at bar falls under one or under the other of those classes."

IV.

THE FEDERAL QUESTIONS PLEADED HAVING BEEN DISPOSED OF IN ACCORDANCE WITH THE CONTENTIONS OF APPELLANTS CANNOT BE THE BASIS OF JURISDICTION ON APPEAL BY THEM.

We have already pointed out the manner in which the Federal questions were disposed of in the lower court. That disposition was in favor of appellants. They are now seeking to have the matter reheard in the Supreme Court on grounds which have already been disposed of in their favor and to their advantage. If the Supreme Court takes jurisdiction of this case it cannot render a decision on the Federal questions advanced by appellee that will be of any more benefit to appellants than was that of the Circuit Court of Appeals. If the Supreme Court passes on these questions at all, and its decision is to benefit appellants, the court will have to hold that

the South Dakota law was constitutional. Having so held, it must then go further and review the case upon grounds of jurisdiction which are not Federal in their nature so far as the questions at issue are concerned. If the Supreme Court says that the South Dakota act is constitutional and valid it must then begin at the very place where Mr. Justice Kenyon began after he had set the constitutional questions aside. There would be nothing left in the case except to analyze the South Dakota law and construe it in the light of the facts contained in the record in order to determine whether or not under that law the County Commissioners had the right to do what they were seeking to do in the matter of the assessment of benefits. This can be done where diversity of citizenship is the basis of Federal jurisdiction, as well as where a Federal question is pleaded. If the Supreme Court holds the South Dakota act unconstitutional, there will then be no occasion to review the decision of the Circuit Court of Appeals at all.

We think it is well established by the decisions of the Supreme Court that a litigant may not appeal from a decision in his favor. Referring again to the case of *Empire State* v. *Hanley*, 195 U. S. 292, 49 L. Ed. 1056, 25 S. C. R. 691, we find this language:

> "Appellants succeeded in their defense as to the one-third interest, and Hanley accepted the result on the second appeal. They now make a grievance of their own success, and ask that the supposed constitutional question as to the third interest only be made the basis of jurisdiction here, although, if the decree disposed of any such question, it was in their favor. In our opinion this cannot be permitted."

The language quoted is pertinent and apt in the instant case. Here the appellants succeeded in their defense as to the constitutionality of the law of South Dakota and hence there is no good reason why they

should be permitted to make a "grievance of their own success" any more than was true in the case from which the quotation is taken. The fact of the matter is that the sole purpose of the appeal is to get the Supreme Court to review the decision construing the South Dakota law and the only purpose that the allegation of unconstitutionality of the state law can possibly serve for the appellants is to give them access to the Supreme Court. Having succeeded in their contention that the law is valid, they cannot use the dispute as to its constitutionality, already disposed of in their favor, as a stepping stone to the Supreme Court in order to have another issue reviewed.

Until the Federal question involving its validity has been disposed of in their favor, it would be impossible for any court to hold with appellants in the construction of the South Dakota law. This question has already been disposed of in favor of appellants and they are not in position to have it reviewed. They have nothing in that regard of which to complain.

We call attention to the case of *Lampasas* v. *Bell*, 180 U. S. 276, 45 L. Ed. 527, 21 S. C. R. 228. The following paragraph is important both for the sententious way in which it expresses the law and for the distinguished authority by which that expression is supported:

> "We said in *Clark* v. *Kansas City*, 176 U. S. 114, 44 L. Ed. 392, 20 Sup. Ct. Rep. 284 (quoting from Cooley, Const. Lim. Sec. 196) that 'a court will not listen to an objection made to the constitutionality of an act by a party whose rights it does not affect, and * * * who has therefore no interest in defeating it.' That is, a legal interest in defeating it. The objection of unconstitutionality of a statute must be made by one having the right to make it, not by a stranger to its grievance. 'To this extent only is it necessary to go in order to secure and protect the rights of all persons against the unwarranted

> exercise of legislative power, and to this extent only, therefore, are courts of justice called on to interpose.' *Wellington, Petitioner,* 16 Pick. 87, 96, 26 Am. Dec. 631, 635."

If there was a grievance involved in the disposition of the Federal questions raised in the lower court, that grievance belonged to appellee, and appellants were strangers to it. Indeed, they were the direct beneficiaries of the disposition of those questions when they were set aside by the lower court.

In the case of *Loeb* v. *Trustees of Columbia Township,* 179 U. S. 472, 45 L. Ed. 280, it is asserted that under Revised Statutes, Section 709 (Judicial Code, Section 237), the Supreme Court "can review the final judgment of a state court upon writ of error sued out by the party who is denied a right, privilege or immunity specially set up or claimed *by him* under the Constitution or laws of the United States." The opinion points out, however, that Section 5 of the Circuit Court of Appeals Act (Judicial Code, Section 238) does not limit the right of review to the party making the claim, and says further:

> "In other words, if a claim is made in the circuit court, no matter by which party, that a state enactment is invalid under the Constitution of the United States, and that claim is sustained or rejected, then it is consistent with the words of the act, and, we think, in harmony with its object, that this court review the judgment at the instance of the unsuccessful party, whether plaintiff or defendant."

The claim that the South Dakota Drainage Law violates a provision of the Fourteenth Amendment to the Constitution of the United States was urged by appellee in the District Court. That claim was rejected and the contention of appellants in that regard was there expressly sustained. That ruling constituted ground for

review at the instance of appellee by direct appeal to the Supreme Court under Section 238 of the Judicial Code. *Louisville and Nashville Railroad Company* v. *Western Union Telegraph Company*, 234 U. S. 369, 34 Sup. Ct. 810, 58 L. Ed. 1356. But the ruling of the District Court on the question of the validity of the state law, did not constitute ground for review at the instance of appellants for the very sufficient reason that this question was decided in their favor. In their appeal to the Circuit Court of Appeals, the appellants had no grievance to complain of except the decision of the District Court to the effect that the action of the drainage officers was not warranted by the Drainage Act. The Drainage Act was held valid and treated as a valid law.

In the Circuit Court of Appeals, appellee again urged the Federal questions, but they were ignored by the court because their determination was not essential to the result. This disposition of those questions had exactly the same effect on the appellants contentions as a holding that the South Dakota act was valid would have had. They have no grievance in this respect on which to base an appeal and no adverse ruling on a Federal question upon which to predicate jurisdiction in the Supreme Court. The judgment of the Circuit Court of Appeals is final because it is based on no jurisdictional grounds except diversity of citizenship.

We desire to call attention to the case of *Anglo-American Provision Co.* v. *Davis Prov. Co.* 191 U. S. 376, 48 L. Ed. 228. Here, in discussing the language of Section 238 of the Judicial Code authorizing appeals to the Supreme Court "in any case in which the Constitution or law of a state is claimed to be in contravention of the Constitution of the United States," Mr. Justice

Holmes, speaking for the court in a unanimous opinion, says:

> "Those words are general in form, but they do not mean that whenever a party makes a case of that sort he may appeal directly to this court whenever the decision is against him, no matter on what grounds, although his contention about the state law is sustained. If a party comes into the circuit court alleging that a state law is unconstitutional, and the circuit court decides for him on that point, the mere fact that there was such a question in the case does not authorize him to appeal to this court on grounds that otherwise would not support an appeal. See *Lampasas* v. *Bell*, 180 U. S. 276, 45 L. Ed. 527, 21 Sup. Ct. Rep. 368. The present case illustrates the principle. The argument for the appellant is devoted not to any constitutional or jurisdictional point, but to an attempt to upset the decision of the circuit court upon the question, mainly of fact, as to the good faith, etc., of Weed in taking the assignment of the judgment. The provisions of Sec. 5 of the act of 1891 were not intended to be made an instrument for such attempts."

It would seem that there is no escape for appellants from the decision last cited. They did not go into the court below as plaintiffs, but they did go as defendants alleging and contending that the state law was constitutional. The lower courts, both of them, disposed of that point in favor of appellants, and the mere fact that such a question was pleaded in the case does not authorize them to have the decision reviewed on appeal. It is true that the final decision of the lower court was against appellants, but it was not upon the point of the constitutionality of the Drainage Act. No court could do more for them in the disposition of that point than has already been done.

This appeal should be dismissed, because no Federal

question in the case was decided or disposed of against appellants.

All of which is respectfully submitted.

SUPREME COURT OF THE UNITED STATES.

OCTOBER TERM, 1925

NO. 98

A. G. RISTY, ET AL., AS COUNTY COMMISSIONERS ET AL., APPELLANTS,

VS.

NORTHERN STATES POWER COMPANY, APPELLEE.

APPEAL FROM THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT

BRIEF OF APPELLEE

Northern States Power Company, plaintiff and appellee, filed its bill in the district court of the district of South Dakota, praying for an injunction. From a decree granting an injunction defendants and appellants appealed to the Circuit Court of Appeals of the Eighth Circuit, in which court the decree was affirmed. From the decision of the Circuit Court of Appeals defendants have appealed to this court.

This suit involves the constitutionality of the drainage ditch statutes of the state of South Dakota under both the federal and state constitutions, and also involves the regularity and validity of proceedings taken under the statutes. The facts out of which the suit arises are as follows:

STATEMENT OF THE CASE

The Big Sioux River flows from the north in a southerly direction west of the city of Sioux Falls to a point southwest of the city, thence easterly and thence northerly through the city to a point where it is intersected by the outlet of the drainage ditch or ditches in controversy. (For illustration, see Map, R. 225).

Appellee owns and operates an hydro-electric plant in the city of Sioux Falls operated partly by water power from the falls of the Big Sioux River and partly by steam power. This plant was constructed in the years 1907 and 1908 by its predecessor in interest, the Sioux Falls Light & Power Company, which company prior to the construction of the present plant owned and operated with the same water power, by means of a dam constructed some time prior to 1899, the electric plant formerly owned by the Cascade Milling Company. All of appellee's real property is of granite rock formation, the rock appearing at the surface of the ground without soil thereon, and no part of such property is or ever can be suitable for agricultural purposes. (R. 246-248).

In or about the years 1907 to 1909, appellant County Commissioners caused to be constructed what was then known as Drainage Ditch No. 1, having its origin at a point about three and one-half to four miles north of the city of Sioux Falls, and emptying into the Big Sioux River at a point north of and below appellee's hydro-electric plant. (R. 126-131, 245, 248).

While the proceedings for the construction of Drainage Ditch No. 1 were pending a petition was filed for the construction of what was first known as Ditch No. 2. Subsequently another petition was filed, seeking the extension of proposed Ditch No. 2, and praying that it be made a part of Ditch No. 1. Appellant County Commissioners finally, by resolution, established and caused to be constructed Drainage Ditch No. 2, having its origin at a point approximately fifteen miles north of the outlet of Ditch No. 1 on the east side of the Big Sioux River, and running thence in a southerly direction, intersecting the Big Sioux River at one point, and so close to the river at other points that the river subsequently cut into the ditch, and connecting with and emptying into Ditch No. 1 at its point of origin. (R. 131-138, 245).

Appellant County Commissioners, by resolution, determined that all of the property theretofore included within what they had determined to be the area of Drainage Ditch No. 1 was also benefited by Drainage Ditch No. 2; that the two ditches were mutually interdependent and should virtually be considered as one drainage system, and they assessed all of said property for the construction of both ditches. The system of drainage thus established was completed and paid for by assessment upon the property then deemed to be benefited which did not include any property lying south of the outlet of Ditch No. 1. No part of appellee's property or of the property of its predecessor in interest was included within the drainage area thus established; appellee was given no notice of any kind of the establishment of such drainage and no at-

tempt was made to include its property within the drainage area or assess it for any part of the cost of the drainage. (R. 127-129, 138-142).

As originally constructed, and after the connection of Drainage Ditches No. 1 and 2, the outlet of Drainage Ditch No. 1 consisted merely of a concrete apron hereinafter referred to as "spillway," extending from the lower terminus of Drainage Ditch No. 1 down over an abrupt slope to the Big Sioux River at a point below the falls of the river and as heretofore stated north of and below appellee's hydro-electric plant. In the year 1916, the volume of water passing through Ditches No. 1 and No. 2 washed out a portion of this concrete work with the result that the waters in the spillway were at that point uncontrolled and serious damage was threatened by the continued maintenance of the ditches in the absence of properly constructed works for the purpose of controlling and confining the waters at their outlet. It is conceded that with the ditches in the condition in which they were after the washing out of the spillway there was great danger that the Big Sioux River would be diverted from its course around the city of Sioux Falls and caused to flow through the ditches from the point of intersection some miles north of the city returning to the river at the point where the old spillway was located below the falls and below appellee's plant, thus threatening to seriously damage appellee's property, the water supply of the city of Sioux Falls, and many other properties and rights, and in fact, threatening to deprive appellee entirely of its water power. (R. 29-33).

It appears from the answer and the undisputed evidence that the appellant County Commissioners started work of some character to attempt to control the waters at the spillway and to prevent the threatened damage; that certain property owners within the area theretofore determined to be benefited by the drainage objected to this work and instituted suit in the state court to restrain the same; that thereafter a petiton was filed with the appellant County Commissioners seeking a change of the outlet of the Drainage Ditches No. 1 and No. 2 in such manner as to discharge the water from said ditches into what is known as Covell's Lake, situated in the northwesterly part of the city of Sioux Falls; that thereafter the owners of property within the drainage area as theretofore determined and the parties interested in the Covell's Lake project had numerous conferences with reference to the matter; that as a result of such conferences and as a compromise between said parties (there being no contention or proof that appellee was a party thereto) the proceedings held under the petition last referred to were abandoned and a petition known as the petition of F. L. Blackman and others was filed, which peti-

tion is entitled "Petition to Re-construct and improve Drainage Ditches No. 1 and No. 2 in Minnehaha County, South Dakota, and to construct a new spillway or outlet to said Drainage Ditches No. 1 and No. 2, and to pay therefor by an assessment upon the property, persons and corporations benefitted thereby." Upon this petition, confessedly filed and acted upon by the appellant Commissioners as a compromise between the owners of property within the drainage area and the promoters of the so-called Covell's Lake project, and not including appellee, the appellant Commissioners adopted a resolution providing for its hearing and caused notice of said hearing to be published. Appellee was not named in said notice; its hydro-electric plant and water rights were not referred to, and no part of its property was described. It contained nothing which could be construed as giving any notice whatever to it that any claim would be made of benefit to its property or that any attempt would be made to assess its property in such proceeding. (R. 29-33, 39, 43-65).

Upon the return day of such notice, appellant Commissioners adopted a resolution puporting to re-establish Drainage Ditches No. 1 and No. 2 under the name of Drainage Ditch No. 1 and 2, along the exact course of their previous construction and for the re-construction of the outlet or spillway. (R. 33, 52-55, 263-267).

Purporting to act under this resolution, appellant Commissioners caused Ditches No. 1 and No. 2 to be cleaned and otherwise repaired and caused the outlet or spillway thereof to be re-constructed, and pursuant to a resolution or resolutions thereafter adopted, without any notice to appellee, caused certain portions of the Big Sioux River to be straightened. The spillway was re-constructed under the cost plus plan without advertising for bids for its re-construction in accordance with the plans finally adopted, and warrants were issued for the cost of such work amounting, with interest, to approximately $300,000.00. (R. 34-37).

The first intimation contained in the record of any thought of assessment of or attempt to assess any part of appellee's property appears in a notice published in April, 1919, (Plaintiff's Exhibit A, R. 142-194) said notice being of a hearing upon the matter of equalization of benefits resulting from said Drainage Ditch No. 1 and 2 and in which certain tracts of real property owned by appellee were described and attempted to be apportioned benefits to the extent of a very few units. Appellant Commissioners did not at that time, however, attempt to assess the hydro-electric plant or water rights of appellee and such plant and rights were not referred to in the April, 1919, notice. Proceedings under this notice were abandoned by the appellant Commissioners. (R. 194, 203.)

Subsequently and in or about the month of June, 1921, appellant Commissioners adopted a resolution apportioning the benefits derived from said Drainage Ditch No. 1 and 2 and apportioned to appellee and to its hydro-electric plant, dam, property rights, and water rights benefits to the extent of 5,351.63 units, amounting, as will appear from a mathematical calculation, to approximately $50,000.00. This suit was instituted for the purpose of restraining appellants from proceeding further with the equalization of said purported benefits and from spreading an assessment upon appellee's property therefor. (R. 17-20, 37, 194, 208).

DISTRICT COURT'S DECISION

(R. 80-100, 282 Fed. 364)

The District Court did not agree with appellee's contention that the drainage statutes of the state of South Dakota were violative of the Fourteenth Amendment to the Constitution of the United States in that they do not provide for proper notice to, and right to be heard of, property owners and deprive them of their rights and property without due process of law, but correctly held that it acquired jurisdiction not only by virtue of diversity of citizenship but because the bill involved a real and substantial question under the Constitution of the United States and therefore proceeded to determine all the questions, (*Davis, Director General v. Wallace* 257 U. S. 478; 66 L. ed. 325) and found, in substance, as follows:

(1) That the situation disclosed by the evidence "presented no question of the drainage of agricultural lands" but rather that of maintenance of ditches No. 1 and No. 2 "and the prevention of the dangers threatened by the water that they were conducting down through these ditches, through this hill, into the river;" that the drainage of the agricultural lands would not have been interfered with if the spillway had not been re-constructed; that the people who constructed Ditches No. 1 and No. 2 originally were responsible for the threatened damage, and it was their duty to maintain the ditch, "and to stop the ravages of the water cutting into it and through it;" that what was done under the pretense of proceeding under the so-called Blackman petition was merely to maintain the ditch or ditches originally constructed and that in the attempt to include additional lands in the drainage area and assess them any portion of the cost of such maintenance, appellant Commissioners were acting entirely without authority of law, there being no provision in the statutes of the state of South Dakota "for the taking in of any other lands and

assessing them for the maintaining of a ditch after it has been constructed and the benefits of its building have been assessed."

(2) That the forming of the so-called new ditch was simply a pretense and a subterfuge "resorted to for the sole purpose of attempting to burden the plaintiffs and others with the cost of the maintenance of the ditches theretofore constructed."

(3) That § 8489 of the South Dakota Revised Code, 1919, with reference to invalid and abandoned proceedings had no application, the proceedings for the construction of old Ditches No. 1 and No. 2 never having been held void, set aside or abandoned; and

(4) That the proceedings of the appellant Commissioners in "assuming the right to constitute a new drainage district, calling it district No. 1 and 2, and to assess benefits to the property of the plaintiffs in so far as they are located in the city of Sioux Falls," were void.

The District Court further found:

(5) That even if it had found that the alleged new drainage district had been legally constituted and that the appellant Commissioners had the right to extend the benefits to property outside the drainage area as originally established, appellee would still have been entitled to the relief sought because "the proofs overwhelmingly bring the plaintiffs within the rule recently expressed *In re Thomas, et al v. Kansas City Southern Railway Co., et al.*" (277 Fed. 708, affirmed by this Court, 261 U. S. 481, 67 L. ed. 758) "in that the taxation that is imposed upon each of the plaintiffs is a much higher rate and upon a different basis than the tax upon land lying within the district," stating:

> "Even admitting that this was a genuine drainage ditch for the purpose of draining agricultural lands, under the circumstances outlined in the evidence, there is no reasonable ground upon which the action of the board could be predicated. * * * The Northern States Power Company was assessed $50,000.00, one-fifth of the entire expense although there is included in the pretended district agricultural land something like twenty miles in length and several miles in width. The injustice of this is apparent when it is noted that the record disclosed that it was located upon the rapids of the Sioux River, in the city of Sioux Falls, had been located there for many years. It was, therefore, entitled to the water that naturally flowed down the stream to the end that it might secure power requisite for the conduct of its business. * * * Even if there had been a valid establishment of a drainage ditch at the time and place in controversy, and even if

the Board of County Commissioners had jurisdiction, *there was an entire failure to present any evidence upon which any benefit could possibly be predicated against this plaintiff.* The engineer who pretended to work out the hypothetical benefit admitted that he was not a hydro-electric engineer, and therefore, not able to analyze and state the result of the different conditions of the water in the river. The suggestion applies with special force to the status of this plaintiff that the *amount of benefits were fanciful, exorbitant and arbitrary, with no possible appreciation in value of its property as a result of this improvement.*" (Italics are ours.)

(6) That the re-construction of the spillway without change of location and the repair of the ditch etc., "could not be viewed in the same light or as serving the same purpose as the construction of the original ditches" because the object and purpose of such work was not to drain agricultural lands but to prevent the damage threatened because of the original imperfect construction of the ditches and spillway; in other words, to prevent the destruction of the water supply of the city of Sioux Falls, the water power of appellee, etc., by means of the agency set in motion by the original construction, and that although such object and purpose might have constituted a public use the appellant Commissioners were acting without authority of law because the applicable state constitutional provision was not self-executing and the acts of appellants lacked the necessary legislative authority.

DECISION OF CIRCUIT COURT OF APPEALS (292 Fed. 710)

The Circuit Court of Appeals did not pass upon the Federal constitutional questions involved because, although finding them "grave, serious and doubtful," it deemed their determination not necessary "to the solution of the case," but in other respects it approved the decision of the district court and affirmed the decree restraining the assessment of appellee's property lying outside the drainage area as originally established.

SUMMARY OF ARGUMENT

PROPOSITIONS RELIED UPON BY APPELLEE AS SUSTAINING THE JUDGMENT APPEALED FROM.

1. The South Dakota drainage ditch statutes are violative of the Fourteenth Amendment to the Constitution of the United States and deprive one of rights, and property without due process of law in that they provide for the taxation of

property without giving the owner thereof proper notice and the right to be heard upon the question as to the validity and amount of the tax and as to whether or not such tax is in excess of the benefit.

2. Such statutes are likewise violative of the Fourteenth Amendment to the Constitution of the United States because they do not afford to all persons the equal protection of the laws and deprive persons of their rights and property without due process of law, in that they prescribe no definite standard for determining benefits and are "of such a character that there is no reasonable presumption that substantial justice generally will be done but the probability is that the parties will be taxed disproportionately to each other and to the benefit conferred." (*Kansas City Southern Ry. Co. v. Road Imp. Dist No. 6*, 256 U. S. 658, 65 L. ed. 1151.)

3. In this instance the application and administration of the laws in question by appellant Commissioners have been so arbitrary, discriminatory, and extensively oppressive as to result, if not restrained, in depriving appellee of its property without due process of law, and in depriving it of the equal protection of the laws in violation of the Fourteenth Amendment.

4. Appellant Commissioners in attempting to include appellee's property within the drainage area and assess it, acted without any authority of law, attempted in excess of their powers to create a burden upon appellee and a cloud upon the title to its property, and proceeded without right to do something not authorized by the law under which they purported to act, this being true for the following reasons:

(a) Because what they did constituted merely maintenance and repair of the ditches as originally constructed, and the statutes do not purport to give them any power or authority to enlarge the drainage district and assess for that purpose property not originally assessed, the maintenance statute clearly providing that assessments for maintenance and repairs shall be made upon the property and in the proportions originally assessed.

(b) Because the purported establishment of a new drainage ditch in the exact location of the old ditches and construction of a new spillway in the location of the old spillway was confessedly a mere scheme or subterfuge resorted to by appellant Commissioners for the purpose of enabling them to lessen the burden upon the property owners in the original drainage area, and to cast the greater part of it upon property owners not included within the drainage area or benefited by the drainage.

(c) Because it clearly appears from the record that the work for which the assessment is sought to be made, unless

it be treated as the repair and maintenance of the original ditches, was done, not for the purpose of draining agricultural land, but for the purpose of preventing damage to property that was threatened by the existence of the drainage theretofore established, and appellant Commissioners were not authorized by any law of the state of South Dakota to establish a drainage district or assess property for the cost of the accomplishment of any such object or purpose.

(d) No part of appellee's property sought to be assessed is or ever can be agricultural land. The law in question does not purport to authorize the assessment of any property other than agricultural land and the property of railroad companies.

5. It clearly appears from the record that appellee's property has derived no benefit whatever from the so-called drainage, the benefits sought to be charged to it being purely fanciful, speculative, arbitrary and out of all proportion to those sought to be charged to other properties, and not being benefits directly or indirectly derived from the drainage of agricultural lands.

ARGUMENT

I.

THE SOUTH DAKOTA DRAINAGE LAWS ARE VIOLATIVE OF THE FOURTEENTH AMENDMENT TO THE UNITED STATES CONSTITUTION.

Appellee contended in the lower courts and still contends that the statutes under which appellant Commissioners claim to have proceeded are in conflict with the Fourteenth Amendment to the Constitution of the United States and therefore void in that their enforcement will deprive persons of property without due process of law and deny to them the equal protection of the laws.

This is true because: the statutes provide no proper method for the organization of a drainage district; they do not provide for any determination that the cost of the proposed drainage will not exceed the benefit to be derived; they do not afford property owners the right to be heard at any time or place, before any tribunal, upon the questions as to whether or not such cost will exceed the benefit, as to whether or not their lands and property shall be included within the drainage district, and as to the amount and validity of the tax to be assessed against their property.

It must be conceded that when a legislature, for any purpose within its powers, creates a taxing district and provides that the property in such district under certain designated rules of procedure shall be assessed for the cost of certain pub-

lic work, such legislative determination is conclusive upon the question as to whether or not the property included within such district will be benefited by the improvement provided for and, with certain modifications hereinafter referred to, as to whether or not such benefit will be less than the cost, and upon such questions property owners would have no right to be heard, but the rule is different when such a determination is delegated by the legislature to a subordinate body. In that event, property owners are entitled to notice and hearing upon those questions.

Spencer v. Merchant, 125 U. S. 345, 31 L. ed. 763-768.

Fallbrook Irrigation District v. Bradley, 164 U. S. 112, 41 L. ed. 369-394.

Road Improvement District No. 2 v. Missouri Pacific R. Co., 275 Fed. 600.

The conclusion reached by the District Court that due process of law is afforded, provided an opportunity to be heard with reference to the amount of the tax is given the land owner before the assessment becomes a lien upon his property, is not applicable to the situation presented by this record, because in the state of South Dakota there has been no legislative declaration or finding as to the limits of the districts to be taxed for the purpose of, or with reference to the benefits to be derived by any property or district from, drainage.

This Court in *Fallbrook Irrigation District v. Bradley, supra*, stated the correct applicability of the rule announced in *Paulson v. Portland*, 149 U. S. 30-41, 37 L. ed. 637-641, cited by the District Court in support of its conclusion, saying:

> "It has been held in this court that the legislature has power to fix such a district for itself without any hearing as to benefits for the purpose of assessing upon the lands within the district the cost of a local public improvement. The legislature when it fixes the district itself is supposed to have made proper inquiry and to have finally and conclusively determined the fact of benefits to the land included in the district and the citizen has no constitutional right to any other or further hearing upon that question. The right which he thereafter has is to a hearing upon the question of what is termed the apportionment of the tax, i. e. the amount of the tax which he is to pay. *Paulson v. Portland*, 149 U. S. 30-41 (37: 637-641). But when as in this case the determination of the question of what lands shall be included in the district is only to be decided after a decision as to what lands described in the petition will be benefited and the decision of that question is submitted to some tribunal (the board of supervisors in this case) the parties whose lands are those included in the petition are entitled to a hearing upon the

question of benefits and to have the land excluded if the judgment of the board be against their being benefited. *Unless the legislature decide the question of benefits itself, the land owner has the right to be heard upon that question before his property can be taken.*" (Italics are ours)

The court also recognized the distinction sought to be made, in *Spencer v. Merchant, supra,* saying:

"When the determination of the lands to be benefited is entrusted to commissioners, the owners may be entitled to notice and hearing upon the question whether their lands are benefited and how much. But the legislature has the power to determine, by the statute imposing the tax, what lands, which might be benefited by the improvement, are in fact benefited; and if it does so, its determination is conclusive upon the owners and the courts, and the owners have no right to be heard upon the question whether their lands are benefited or not, but only upon the validity of the assessment, and its apportionment among the different parcels of the class which the legislature has conclusively determined to be benefited.

In *Road Improvement District No. 2 v. Missouri Pacific R. Co., supra,* the Circuit Court of Appeals for the Eighth Circuit said:

"But in the case in hand the legislature did not undertake itself to make the assessment on the property in this district, but it delegated that power to and imposed that duty upon the board of the district. And when the legislature delegates to a board or to commissioners the determination of the question what lands will be benefited, or what the amount of benefits to such lands will be, the inquiry becomes in its nature, judicial, in such a sense that property owners are entitled to a hearing, or an opportunity to be heard, after notice, before these questions are determined."

It is, therefore, only when there has been legislative determination as to benefits, in which the determination that the benefits equal or exceed the cost is necessarily involved, that the property owner's right to be heard is limited to the question as to the proportional amount and the validity of his tax. In all cases where the authority to determine such questions is delegated by the legislature to another body, jurisdiction cannot attach in such subordinate body unless the property owner, by requirment of the delegating statute, is given notice of and an opportunity to be heard upon the question of whether or not his property is or can be benefited by the improvement to an extent equal to or exceeding the cost thereof.

A statute without such a provision fails to afford due process of law and is void.

As stated by the District Court, the South Dakota drainage statutes differ from those of most other states in that they make no provision "for the organization, at the inception of the proceedings, of a drainage district with boundaries defined, organized after notice to all property owners within the district, and endowed by statute with certain powers consistent with the purpose for which the district is organized," and that no opportunity is given the property owner to be heard upon the question as to whether or not the benefits will equal or exceed the cost and as to whether or not the particular lands of the owner shall be included within the drainage district. It is because of the omission of these essential requirements that the statutes are unconstitutional.

By a constitutional provision of the state of South Dakota, hereinafter more specifically referred to, the drainage of agricultural lands is declared to be a public purpose and the legislature is authorized to provide therefor and to vest the corporate authorities of counties with power to construct drains "by special assessments upon the property benefited thereby according to benefits received." (State Constitution §6, Article XXI.)

The legislature enacted certain drainage laws, those applicable to this proceeding being found in §§ 8458 to 8491 of the South Dakota Revised Code, 1919, but in so doing merely attempted to delegate some of its powers to the county commissioners, and established certain rules of procedure. The constitutionality of these laws must be determined by the following excerpts from them, which excerpts contain all the provisions applicable to the questions under discussion and are here set out for the convenience of the court.

> § 8458. *Power of County Commissioners.* The board of county commissioners, at any regular or special session, may establish and cause to be constructed any ditch or drain; may provide for the straightening or enlargement of any watercourse or drain previously constructed, and may provide for the maintenance of such ditch, drain or watercourse whenever such ditch, drain or watercourse shall be conducive to the public health, convenience or welfare, or whenever the same shall be for the purpose of draining agricultural lands.
>
> § 8459. *Petition.* Such board shall act only upon a written petition signed by one or more owners of land likely to be affected by the proposed drainage. Such petition shall set forth the necessity for the drainage, a description of the proposed route by its initial and terminal points and its general course, or by its exact course in

whole or in part, and a general statement of the territory likely to be affected thereby. * * Such petition may be presented at any regular or special meeting of the board and, if sufficient in form, shall be ordered filed with the county auditor.

§ 8460. *Inspection of Proposed Route.* It shall be the duty of such board to act promptly upon all drainage petitions. Upon filing such petition the county auditor shall transmit a copy thereof to the state engineer, who, together with the board of county commissioners, shall as soon as practicable inspect the proposed route and, if in the opinion of such board and the state engineer it is necessary, the board shall cause a survey of the proposed drainage to be made by such competent surveyor as such board may select, but such survey shall be under the general supervision of the state engineer. Such survey shall primarily be for the purpose of aiding the board in determining the necessity of the proposed drainage, but may be a complete survey such as will be required for the construction of the proposed drainage and assessment of its cost, or as much less as the board may require. * * *

§ 8461. *Surveyor's Report—Notice of Hearing.* The surveyor shall report in writing to the board of county commissioners and his report shall be filed with the petition. After personal inspection or after the receipt of the surveyor's report the board shall determine the exact line and width of the ditch, if the same shall not be fixed in the petition, and shall file its determination with the petition. The board shall then fix a time and place for the hearing of the petition, and shall give notice thereof by publication at least once each week for two consecutive weeks in a newspaper of the county to be designated by the board, and by posting copies of such notice in at least three public places near the route of the proposed drainage. Such notice shall describe the route of the proposed drainage and the tract of country likely to be affected thereby in general terms, the separate tracts of land through which the proposed drainage will pass and give the names of the owners thereof as appears from the records of the office of the register of deeds on the date of the filing of the petition, and shall refer to the files in the proceeding for further particulars. Such notice shall summon all persons affected by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established and constructed, and shall summon all persons deeming themselves damaged by the proposed drainage or claiming compen-

sation for the lands proposed to be taken for the drainage to present their claims therefor at such hearing.

§ 8462. *Hearing on Petition.* At such hearing any person interested may appear and contest the statements of the petition and matters set forth in the surveyor's report and the finding of the board as to width and route. The petitioners in like manner may be heard in support of the petition. * * * When the board of county commissioners shall have fully heard and considered such petition and all matters in opposition to or in support of the same, it shall, if it finds the proposed drainage not conducive to the public health, convenience or welfare, or not needed or practicable for the purpose of draining agricultural lands, deny such petition. * * * If it finds the drainage proposed or any variation thereof conducive to the public health, convenience or welfare, or necessary or practicable for draining agricultural lands, it shall establish the drainage and shall assess the damages sustained by each tract of land or other property through which the same shall pass and the damages as compensation for the land taken for the route of such drainage. Any person interested may be heard in the matter of damages or compensation for land and the determination of the board of county commissioners shall be final unless an appeal therefrom, as provided in this article, shall be taken, failure to prosecute such appeal or to appear and contest an award of damages by the board to be deemed conclusively a waiver of any such damages or compensation for land taken or of any claimant's right to have the same assessed by a jury. Such drain shall be given a name and the proceedings thereafter taken shall be recorded and indexed in a book kept for that purpose in the auditor's office.

§ 8463. *Equalization of Benefits.* After the establishment of the drainage and the fixing of the damages, if any, the board of county commissioners shall fix the proportion of benefits of the proposed drainage among the lands affected, and shall appoint a time and place for equalizing the same. Notice of such equalization of proportion of benefits shall be given by publication at least once in each week for two consecutive weeks in a newspaper of the county, to be designated by the board, and by posting copies of such notice in at least three public places near the route of the proposed drainage. Such notice shall state the route and width of the drainage established, a description of each tract of land affected by the proposed drainage and the names of the owners of the several tracts of land as appears from the records of

the office of the register of deeds, at the date of the filing of the petition, and the proportion of benefits fixed for each tract of property, taking any particular tract as a unit, and shall notify all such owners to show cause why the proportion of benefits shall not be fixed as stated. Upon the hearing of the equalization of the proportion of benefits, the board of county commissioners shall finally equalize and fix the same according to benefits received. The proportion of benefits which any county, city, town or township may obtain by the construction of such drainage to highways or otherwise, and the benefits which any railroad company may obtain for its property by such construction, shall be fixed and equalized together with the proportion of benefits to tracts of land. Benefits to be considered in any case shall be such as accrue directly by the construction of such drainage or indirectly by virtue of such drainage being an outlet for connection drains that may be subsequently constructed.

§ 8464. *Assessments.* After the equalization of the proportion of benefits the board may make an assessment against each tract and property affected, in proportion to the benefits as equalized, for the purpose of paying the damages and the cost of establishment thus far incurred or to be incurred. * * * At the expiration of thirty days after the making of such assessment, a copy thereof certified by the county auditor shall be filed by him with the county treasurer, but before the same is filed a notice shall be given by the board of the time when the same will be so filed, by publication at least once in each week for two consecutive weeks in a newspaper in the county to be designated by the board and by posting copies of such notice in at least three public places near the route of such drainage. Such notice shall also contain a description of the property assessed, the name of the owner as it appears in such assessment and the amount of each assessment, together with the amount assessed against the county or any city, town, township or railroad company, and shall also give the date when the assessment will become delinquent, together with the amount of penalty which will then accrue and the date from which interest will begin to run.

From the time of filing such certified copy of assessment in the treasurer's office, the same shall be due, and payable and shall be valid and perpetual liens upon the respective tracts so assessed against all persons or governments except the state and the United States and, if not paid within ten days, a penalty of five per cent shall attach thereto and such assessment shall bear interest

from the date of the order of the assessment at six per cent per annum payable annually. * * * Assessments for drainage or installments thereof shall be enforced by the county treasurer by sale of the property at the annual tax sale. * * * The provisions of chapters 7, 8, 9, part 9 of this title shall apply to the enforcement of the lien of drainage assesments so far as such provisions are applicable * * *. Instead of making an annual assessment for the purpose of paying the damages allowed in any drainage proceeding and the costs of establishment and construction, the board of county commissioners may issue warrants payable only out of the assessments to be subsequently made, the same to bear interest at six per cent per annum, and may sell such warrants at not less than the face value thereof and shall with such money so raised pay any damages allowed and costs of establishment and construction. In making assessment for such drainage such warrants and the cost of issuing the same shall be included in the costs of the drainage.

§ 8467. *Assessments for Further Costs.* At any time after the damages arising from the establishment and construction of such drainage are paid and the lands for such drainage are taken, assessments may be made for further costs and expenses of construction. If the contractors are required and agree to take assessment certificates or warrants for their services, assessments need not be made until the completion of the work when an assessment shall be made for the entire balance of cost of construction, including the services of the board of county commissioners, surveyors and assistants, plans and profiles, publication and filing, and other fees, interest on bonds issued or to be issued and all expenses of every kind and nature that contribute to the establishment and construction of the drain, and notice of such assessment shall be given by the board of county commissioners in all respects as provided for the first assessment. And such assessment and the certificates issued thereon shall be in like manner perpetual liens upon the tracts assessed, interest-bearing and enforcible as such first assessment and certificates. The board of county commissioners may sell such assessment certificates at not less than par and thereby raise funds to defray the cost of establishment and construction. If there be no damages to be paid before taking the lands for such drainage, or if the damages have been paid by the proceeds of the sale of warrants, only one assessment need be made. In any case, in the discretion of the board, several assessments may be made as the work progresses. Assessments shall be paid to the

county treasurer and the money therefrom shall be paid by him to the holders of assessment certificates, or upon the order of the board of county commissioners for the purpose of the particular drainage.

§ 8469. *Appeals.* An appeal shall lie from any final order or determination of the board of county commissioners establishing or denying any proposed drainage; fixing damages occasioned by the taking of lands for drainage or caused by such drainage; fixing the proportion of assessments of benefits; or accepting any drainage, to the circuit court of the county in which such drainage is located, by any one deeming himself aggrieved by any such order or determination. * * * Upon an appeal from an assessment of benefits, the court or jury shall consider not only the relative benefits to the tract in regard to which the appeal is taken, with reference to the tract taken as a unit, but shall also consider the question as to whether the tract taken as a unit is benefited or not and, if benefited, to what extent.

§ 8474. *Further Powers of Board.* Where proceedings have been had for the establishment of a ditch, drain, levee, or straightening or enlarging of a natural watercourse under the law as heretofore existing, and the improvement has been established and constructed and assessments made upon the land benefited thereby, or upon any portion thereof, for the cost of such improvement, and where the assessment so made cannot for any reason be enforced, the board shall proceed as to all lands benefited by such improvement in the same manner as if the appraisement and apportionment of benefits had never been made, and it shall proceed in the manner provided in this article, using as a basis the entire cost of such improvement, and in the assessment of such benefits account shall be taken of the amount of assessments, if any, that have been paid by those benefited and credit therefor shall be given accordingly

It is clearly apparent from the foregoing statutes that the legislature has attempted to vest in the county commissioners the power to establish and construct a system of drainage without first doing any of the following things:

Creating and defining the boundaries of a drainage district;

Determining the approximate probable cost of the work;

Determining that the benefit to the property to be included within the district and assessed for the cost of the work will equal or exceed such cost.

The only finding the commissioners are required to make before proceeding with the work is that "the drainage pro-

posed or any variation thereof" is "conducive to the public health, convenience or welfare or necessary or practicable for draining agricultural lands" (§ 8462 South Dakota Revised Code). Upon such determination alone they are authorized to proceed, *without limit as to cost*, and fully complete the work without any notice whatever to property owners or any right given to property owners to be heard at any stage of the proceedings thereafter until the hearing provided for by § 8463, South Dakota Revised Code, upon the equalization of benefits.

Certainly such a proceeding cannot be held to constitute due process of law. A fundamental prerequisite necessary to the validity of a special assessment for benefits must be the determination that such benefits will equal or exceed the cost.

Village of Norwood v. Baker, 172 U. S. 269; 43 L. ed. 443.

Such question not having been determined by the legislature, due process of law demanded that the subordinate body to whom the entire matter of drainage construction and control was attempted to be delegated, should have been required to determine it and that such determination be made only after due notice and an opportunity to be heard given to all property owners whose property would eventually be subject to assessment. There is certainly as much reason for this as for the requirement that a property owner be heard upon the question as to whether or not his property was actually benefited.

It cannot be contended that it was the legislative intent that the commisioners, in determining whether or not the proposed drainage would be "practicable", should base such determination upon the relation of cost to benefit, because § 8460, *supra*, authorizes them to act upon a preliminary survey made merely for the purpose of aiding the board in determining the necessity of the proposed drainage, leaving it discretionary with them as to whether or not "a complete survey such as will be required for the construction of the proposed drainage and *assessment of its cost*" shall be made. In other words the statute purports to authorize the commissioners to establish the drainage without first determining either its cost or the resultant benefits. (Italics are ours)

It will be observed that the statutes provide for but two notices of hearing: that of hearing upon the original petition and surveyor's report in § 8461, and that upon the equalization of benefits in § 8463. The hearing provided for by § 8461 is merely, as we have stated, upon the sole question (exclusive of the question of damage in which we are not interested) as to whether or not the proposed drainage will be

conducive to the public health, convenience or welfare or necessary or practicable for draining agricultural lands.

The jurisdiction of the county commissioners over any particular piece of property, if acquired at all, must be acquired by virtue of the notice provided for in § 8461. The pertinent requirements of that notice are that it "shall describe the route of the proposed drainage and the tract of country likely to be affected thereby in general terms, the separate tracts of land through which the proposed drainage will pass, and give the names of the owners thereof * * * Such notice shall summon all persons affected by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established or constructed."

In the instant case, pursuant to this statute, the notice appearing in the record on pages 56-65, inclusive, was published. Appellee was not named in said notice nor its property described, nor was anything contained in the notice from which it might possibly infer that it was in any manner affected by the proceeding.

In this connection it is interesting to note that there is no evidence "that the tract of country likely to be affected by the establishment and construction of the said proposed drainage" described in general terms in the notice was selected or determined upon by any action of the board of commissioners. The resolution providing for the hearing (R. 51, 52), merely provides that notice be given "in accordance with" the statutes. This is followed by a purported resolution establishing the drainage (R. 52-55) and the only record we find having any reference to the tract of country "likely to be affected" is in the notice itself which never appears to have been acted upon by the board.

As to persons claiming damages to their property or compensation for the taking of it, the notice is sufficient as it describes the land through which the drainage is to pass and names the owners thereof. It may be fair to assume that all persons to whom such notice is given know whether or not they have a claim for damages but as to persons who are not named, whose property is not so described, and who may be affected by the proposed drainage, we contend that no adequate notice—no notice that would constitute due process of law—is given.

How can persons owning land some miles removed from the drainage ditch or parties such as appellee owning a hydro-electric plant situated upon rocky and non-agricultural land, know that in the judgment of the board their properties were or would be affected by the drainage? The statute does not require the naming of such persons but in general terms requires the notice to be addressed to all persons affected. Such

notice assumes that the persons affected either have been determined by the board or else it places upon such persons the making of that determination at their peril.

But for what purpose are they summoned before the board? Not that they may show that their property is not affected but that they may show cause why the drainage should not be established and constructed. They are not by this language given the opportunity to show cause why their property should not be included in the drainage area. If such persons are directed to show that their property is not benefited at all, the statute gives such permission to the persons affected only for the purpose of opposing the establishment and construction of the ditch.

If one owned a piece of land not agricultural in character and utterly impossible of being made agricultural land, not subject to overflow, and of such character that it would be impossible for water to collect or stand thereon, and such land were located on the river bank and some distance away from the drainage project, it would seem to be utterly absurd that a notice in the words of the statute should be binding on him so that if he failed to appear and contest the establishment and construction of the ditch his land would be subject to an assessment for benefits therefrom. If he did appear and contest the esablishment of the ditch, he would be told, in all probability, that his objection only went to the amount of benefits to be assessed against his property and would have to be urged at a subsequent hearing. But he would be in the drainage area and the ditch would be established as to him and as to his property. We do not believe that jurisdiction for such purpose could be obtained in that manner; yet that is exactly what is claimed in this case by appellants.

The only further notice provided for is that of hearing upon equalization of benefits (§ 8463). This hearing may be had at any time after the establishment of the drainage and the fixing of the damages and either before or after the completion of the work. In the instant case no notice of it was given until the work was completed. At this hearing nothing is determined except the proper apportionment of the benefits as between the various parties claimed to have been affected. The question as to the amount of the tax and its validity is not involved. Whether or not the total cost of the work is in excess of the total benefits is not a relevant question and is not determined. The only question at issue is whether or not the proportion of benefits theretofore fixed by the commissioners constitutes a fair distribution of the cost of the improvement as between the various properties.

Under this statute the commissioners proceed to determine what they think is the actual benefit to a tract of land,

calling such tract a unit. They then proceed to determine what they think is the actual benefit to all other tracts. Each of the amounts so arrived at is divided by the amount of the benefit to the unit and each tract is assessed the number of units ascertained as the quotient. It is readily apparent that in this proceeding the cost and therefore the actual amount of the assessment is not involved. The cost per unit may be many times the benefit per unit. Upon that question there is no hearing at any stage of the drainage proceedings. If this constitutes due process of law we submit that the term has become meaningless and that the constitution has lost its power to protect.

In *Martin v. District of Columbia*, 205 U. S. 135; 51 L. ed. 743, the statute under consideration required a jury to apportion the cost of a local improvement "according as each lot or part of land in such square may be benefited by the opening, widening, extending, or straightening of such alley." The court sustained the constitutionality of the act but sustained it only because it permitted "the interpretation that in any event the apportionment is to be limited to the benefit." The court said: "We think it apparent as was assumed by the court of appeals that the jury understood their duty to be to divide the whole cost among the landowners whether the benefit was equal to their share of the cost or not. It must be admitted that the language of the statute more or less lent itself to that understanding. * * * For this reason, the assessment must be quashed." The language of the South Dakota statute is quite different. It (§ 8464) provides that "after the equalization of the proportion of benefits the board may make an assessment against each tract or property affected in *proportion to the benefits as equalized*, for the purpose of paying the damages and the cost of establishment."

This language admits of but one interpretation when it is considered in connection with the provisions of § 8463. It clearly requires the board of county commissioners to first determine the proportion of actual benefits and then to assess the entire cost in such proportion. The question of whether or not the cost exceeds the benefits is never determined and has no effect whatever upon the assessment under the South Dakota statutes.

The further points relied upon in questioning the Federal constitutionality of the South Dakota drainage laws, and the constitutionality of the proceedings in this case are:

The statutes prescribe "no definite standard for determining benefits from proposed improvements;"

They are "of such a character that there is no reasonable presumption that substantial justice generally will be done but the probability is that the parties will be taxed disproportion-

ately to each other and to the benefit conferred," and

That their application and administration in this case have been so arbitrary, discriminatory and extensively oppressive as to result, if not restrained, in depriving appellee of its property without due process of law and in depriving it of the equal protection of the laws.

These propositions, which may be considered together, are supported by the following Federal decisions:

Gast Realty & Inv. Co. v. Schneider Granite Co., 240 U. S. 55: 60 L. ed. 523.

Kansas City Southern Ry. Co. v. Road Improvement District Number 6, 256 U. S. 658; 65 L. ed. 1151.

Yick Wo. v. Hopkins, 118 U. S. 356; 30 L. ed. 220.

Road Improvement District No. 2 v. Missouri Pacific Railroad Co. (C. C. A.) 275 Fed. 600, 604.

Village of Norwood v. Baker, 172 U. S. 269; 43 L. ed. 443.

Myles Salt Co. v. Iberia Drainage District, 239 U. S. 478; 60 L. ed. 392.

Abernathy v. Fidelity Nat. Bank & Trust Co. (D. C.) 274 Fed. 801.

Thomas v. Kansas City Southern Railway (C. C. A.) 277 Fed. 708 (affirmed by the Supreme Court, 261 U. S. 481; 67 L. ed. 758).

Board of Directors v. Pipe Line Co. 292 Fed. 474.

Thornton v. Road Imp. Dist. No. 1 (C. C. A.) 291 Fed. 518.

We deem it unnecessary to discuss the principles stated or quote further from the authorities cited in their support.

The important question is that of the application of these authorities to the South Dakota statutes and the acts of the commissioners as shown by this record.

So far as the statutes are concerned they prescribe absolutely no standard or rule for determining benefits. The county commissioners are simply told by the legislature to fix the proportion of benefits among the lands affected and that "benefits to be considered in any case shall be such as accrue directly by the construction of such drainage or indirectly by virtue of such drainage being an outlet for connection drains that may be subsequently constructed." (§ 8463, South Dakota Revised Code, 1919).

The statute of itself, however, is discriminatory in that it requires the county commissioners to fix with reference to "lands affected" the "proportion of benefits" and with reference to the property of railroad companies "the benefits." In the one case thus requiring the determination of a relative benefit and in the other of an actual benefit. If the benefits

should materially exceed the cost, the result of the discrimination would be most obvious.

In this connection, it is desired that the court have in mind the fact that no provision is made in § 8463 or any other part of the law for the fixing of benefits to and assessment of any property such as appellee's hydro-electric plant and water rights, and the appellant Commissioners in attempting to assess them have acted entirely without any color of right or authority. The statute was amended in this respect, in 1921, but the amendment was not in force at the time of the proceedings here complained of.

It is our contention that the law is unconstitutional because it fixes no standard or method for the determination of benefits; that its operation naturally results in the use of arbitrary and discriminatory measures, and that "there is no reasonable presumption that substantial justice generally will be done."

This contention is sustained by the conduct of the appellant Commissioners in this case. It clearly appears from the record that Drainage Ditches No. 1 and No. 2 were completely established, put in operation, and paid for several years prior to the institution of the proceedings here complained of, by assessment of the property then deemed to be benefited thereby and thus included within their drainage area, *no part of appellee's property being then thought to be affected;* that after all this had been done and while these ditches were presumably performing the function for which they had been constructed they became out of repair, the spillway or outlet washed out, and because the Big Sioux River forms what might be called a horse-shoe bend around the city of Sioux Falls, the opening end of the horse-shoe being connected by the drainage ditches, there was great danger after the washing out of the spillway, that the entire course of the river would be diverted from its channel through the cut-off of the ditch, thus destroying the water supply of the city of Sioux Falls, and the water power of the appellee and causing much other great damage; and the appellant Commissioners were naturally forced to the conclusion that something must be done—not to take care of the drainage, there being no evidence that it was being interfered with—but to prevent the machinery which they had set in motion for drainage purposes from destroying the rights and property of those not responsible for its existence. It likewise conclusively appears from the answer of the appellant Commissioners that the owners of property within the drainage area became much exercised, that various meetings were held, and that finally, pursuant to an agreement among such property owners and as a compromise measure, proceedings were started which result-

ed in the pretended establishment over exactly the same line as the ditches then constructed, of a new ditch to be known as Drainage Ditch No. 1 and 2. It is apparent that this aptly termed "subterfuge" was resorted to for the sole and only purpose of attempting to lay a foundation which would permit appellant Commissioners to assess the owners of the property and rights, the destruction of which was threatened by the existence of the then drainage project, a great proportion of the cost of the work necessary to be done in order to avoid the threatened injury, and thus lessen the burden upon the property owners responsible in the first instance for the drainage and who confessedly planned the scheme which the appellant Commissioners adopted "as a compromise."

It is evident that the entire proceeding was in bad faith, possibly not intentionally so upon the part of the commissioners, but so in fact. The proceedings of the commissioners were purely arbitrary and discriminatory.

All this of course has nothing to do with the method of assessment of proportion of benefits, but the appellant Commissioners proceeded to attempt to perform their alleged duties in that respect in the same arbitrary and discriminatory manner.

The evidence is conclusive that appellee owns no agricultural land which is sought to be assessed. The appellant Commissioners, pursuant to their scheme to aid the property owners up the river and already included in the drainage district, concluded that some plan should be worked out by which appellee might be compelled to pay approximately $50,000.00, or one-sixth of the cost of the entire work. Their imaginations not being sufficiently fertile, to enable them to visualize benefit to a water power plant by diverting water therefrom, they employed an engineer who finally reached the bald conclusion that because the ditch, operating as a river cut-off or flood water by-pass, might in flood time divert a portion of the flood waters of the river and prevent the portion thus diverted from running through appellee's wheels and into its tail race, and thus prevent its head from being lowered and its power thereby diminished, appellee was greatly benefited; and without any fixed basis for calculation, the appellant Commissioners, upon the report of the engineer, arbitrarily decided that appellee was benefited approximately $50,000.00, taking into consideration not only the theory of the engineer above stated but the alleged fact that appellee received some benefit because of a dam that the record shows had been constructed for the sole purpose of preventing the river from continuing to flow into the ditch and thus depriving appellee of the water power to which it was entitled. (R. 199-201, 206, 290, 291).

The situation thus created was bad enough. If the $50,-

000.00 sum, which the appellant Commissioners and the engineer, Rettinghouse, guessed at as approximately the value of appellee's benefits, had been divided by $25.00, the value of the benefit to the one acre unit, as testified to by the witness Risty, chairman of the appellant Commissioners (R. 199, 207, 208) the result of course would have been 2000 units, but the number of units actually apportioned to appellee as disclosed by Exhibit C (R. 19) is 5351.63.

Exhibit B attached to the complaint (R. 17) is admitted in the answer to be "an analysis of the resume or deduction drawn from the facts set out in the (engineer's) report, merely for the purpose of showing the results shown by the proportion of benefits recommended." It appears from Exhibit B, as well as from a mathematical calculation based upon the approximate cost of the work at the time and the number of units involved, that each of the 5351.63 units thus arbitrarily charged to appellee represents in money at least $9.50, the sum total of the charge against appellee's property being $50,840.49. Bearing in mind the fact that the value of the benefit to the one acre unit was determined to be $25.00, and that the actual charge against that unit, as the cost of producing the benefit, was $9.50, it is apparent that there has been no attempt to apportion benefits to appellee's property upon the same basis as that used in making the apportionment with reference to agricultural lands. Upon that basis, appellee's property, in order to warrant an apportionment of 5351.63 units to it, and an assessment of approximately $50,000.00, must have been actually benefited to the extent of $133,790.75, instead of approximately $50,000.00 as claimed.

On the other hand, if the total benefit to the appellee was approximately $50,000, then its proportion of the cost of the improvement would be approximately $19,000, being the ratio of $9.50, actual cost per unit to $25.00, actual benefit per unit.

Just how the appellant Commissioners arrived at the number of units apportioned to appellee is not shown by the record except by inference. The inference, however, is obvious and is that instead of attempting to determine how much, if any, appellee's property was benefited, appellant Commissioners arbitrarily concluded that it should pay approximately $50,000.00, amounting, as appears from Exhibit B (R. 17), to 16.5 per cent of the entire cost of the work, and fixed the units accordingly.

The mere recital of the foregoing is sufficient to disclose the arbitrary and discriminatory character of these proceedings, especially in view of the fact that the engineer employed admitted that he was not a hydro-electric engineer; that he did not know the capacity of the ditch except that he assumed that it was some 2600 to 3000 cubic feet per second; that he

did not know its capacity at the point where it was taking the waters out of the river; that he did not know how much of the water discharged by the ditch at the outlet was flood water, and how much was water drained from adjacent lands; in short, he admitted that he knew no facts whatever upon which to base his opinion with reference to the amount of the benefits. As to the probable increase of the head, it was based entirely upon the unwarranted and unsupported assumption that the ditch at flood times would carry 3000 cubic feet per second of the flood waters of the Big Sioux River, and so divert that amount of water that would not pass over appellee's dam and through its tail race. (R. 293, 294.)

The record, however, furnishes further conclusive proof that the appellant Commissioners in these proceedings were not acting pursuant to any definite standard for determining benefits. In March, 1919, they passed a resolution attempting to fix the proportion of benefits from the same work now under consideration and published a notice (Plaintiff's Exhibit A, R. 143-194). This proceeding was subsequently abandoned because of certain defects but it is of value in comparison with the proportion of benefits made in 1921 for approximately the same work, as illustrating the manner in which the law was attempted to be applied and as throwing light upon the query as to whether or not the attempted application of the law was arbitrary and discriminatory.

The chairman of the appellant board of county commissioners testified that the commissioners adopted the same method of determining the benefits in 1919 that they did in 1921 (R. 198). He further testified that he was not certain whether the approximate cost of each unit used in 1919 was $80.00 to $85.00 or $7.00 to $8.00 per acre, although in fairness to him as well as to the court we state that it appears from the record that the then unit was a ten-acre tract and as then used probably represented, as may be determined by a mathematical calculation, an approximate cost of about $80.00.

A comparison of the two resolutions, without other evidence, furnishes, as we have said, conclusive proof of the speculative and arbitrary application of the law. The proportion of benefits assessed to each of the railroad companies mentioned in the 1919 apportionment was several times less than its apportionment for the same benefit in 1921. In 1919 it appears from the notice in evidence (Plaintiff's Exhibit A, R. 143-194) that the assessment of the various railway companies then considered to be benefited was made purely upon a mileage basis; the mileage of each company is given in the notice and the several proportions of benefits assessed bear the same proportion to each other as the mileage of each com-

pany bears to that of the other. In arriving at the proportion of benefits for the same work two years later, it conclusively appears that the mileage was given very little consideration. In the proportion of benefits attempted to be made in 1919, the track, right of way, and bridges of the Great Northern Railway Company and the hydro-electric plant and water rights of the Northern States Power Company were given no consideration whatsoever, although now an attempt is made to proportion benefits to the Great Northern Railway Company to the amount of approximately $5,800.00, and to the Northern States Power Company, as we have said, to the amount of approximately $50,000.00.

If substantial justice was done in 1919, it certainly was not done in 1921, and if done in 1921, it was not done under the law as applied in 1919. The conclusion must necessarily follow and scarcely bears stating that the method employed for ascertaining the benefits was so speculative and arbitrary as, if not restrained, to deprive appellee of its property without due process of law and deny it the equal protection of the laws. The District Court was fully justified in reaching the following conclusion:

> "Referring to the testimony showing the manner of making assessments and the amount, in a general way: I think it fairly appears from the record in the case that the contention of the plaintiffs that the attempt to assess the property of these plaintiffs was an afterthought. It, in my judgment, is established that they could not be benefited. Even admitting that this was a genuine drainage ditch for the purpose of draining agricultural lands, under the circumstances outlined in the evidence, there is no reasonable ground upon which the action of the Board could be predicated. There is no pretense in this record that the railroad companies were treated like owners of agricultural lands. The discrimination is palpable, and the amount assessed simply an arbitrary assessment. These plaintiffs were not attempted to be assessed in any manner contemplated by the statute, for the payment of the costs of draining agricultural lands. The plaintiff, Chicago, Rock Island & Pacific Railway Company, is simply arbitrarily assessed Eight Thousand Dollars, in raising a total of Three Hundred Thousand Dollars. The Northern States Power Company was assessed Fifty Thousand Dollars, one-fifth of the entire expense although there is included in the pretended district agricultural lands something like twenty miles in length and several miles in width. The injustice of this is apparent when it is noted that the record disclosed that it was located upon the rapids of the Sioux River, in

the City of Sioux Falls, had been located there for many years. It was, therefore, entitled to the water that naturally flowed down the stream to the end that it might secure power requisite for the conduct of its business.

"The injury that was to be remedied by this improvement was one that had been caused by Drainage Ditch No. 1 and Drainage Ditch No. 2, one that could not have existed but for the establishment of those ditches. The duty to maintain these ditches involved the duty to repair the break from the banks of the river and the duty to prevent the taking of the water from the river, that would or should, naturally flow therein to plaintiff's benefit.

"Even if there had been a valid establishment of a drainage ditch at the time and place in controversy, and even if the Board of County Commissioners had jurisdiction, there was an entire failure to present any evidence upon which any benefit could possibly be predicated against this plaintiff. The engineer who pretended to work out the hypothetical benefit admitted that he was not a hydro-electric engineer, and therefore, not able to analyze and state the result of the different conditions of the water in the river. The suggestion applies with special force to the status of this plaintiff that the amount of benefits were fanciful, exorbitant and arbitrary, with no possible appreciation in the value of its property as a result of this improvement."

II

THE PROCEEDINGS OF APPELLANT COMMISSIONERS COMPLAINED OF AND SOUGHT TO BE RESTRAINED WERE NOT AUTHORIZED BY THE STATE LAW AND CONSTITUTED THE EXERCISE BY THEM OF PRETENDED AUTHORITY AND POWERS NOT VESTED IN THEM BY ANY STATUTE OF THE STATE.

This involves the consideration of the following questions: whether such proceedings were not a mere subterfuge for the purpose of attempting to force appellee and others whose property was not within the original drainage area to bear a large portion of the expense of maintaining and repairing the ditches already constructed; whether such proceedings were valid proceedings resulting in the establishment of new drainage; whether the work done under them was but the necessary work for the repair and maintenance of the ditches already constructed; whether if the proceedings were in good faith for the purpose of establishing a new ditch the actual purpose was drainage or some other public use; and whether in any event appellee's hydro-electric plant and water rights are subject to assessment. These various propositions are somewhat interwoven and will be treated together.

There is ample ground for the finding of the District Court that the situation existing in 1916 presented no question of the drainage of agricultural lands; that it presented no question other than the duty of the appellant Commissioners to maintain and repair the ditches theretofore constructed; that the attempted formation of the new ditch "was simply a pretense and that the plaintiff's pleading that it was a subterfuge is supported by the proofs, resorted to for the sole purpose of attempting to burden the plaintiffs and others with the cost of the maintenance of the ditches theretofore constructed."

It is not necesasry even to resort to the evidence to sustain these findings. The answer of appellant Commissioners is sufficient of itself. We refer particularly to paragraphs Ninth and Tenth (R., 29-33) and to the following allegation contained in paragraph Eight of the so-called affirmative defense: "and (defendants) further allege that the original petition for said drainage ditch, river cut-offs and spillway hereinbefore mentioned was a compromise between said petitioners therefor and others affected thereby as hereinbefore set forth" (R., 39).

The pleading that the proceedings were had "with the consent and aquiescence of this plaintiff" is not supported by any evidence.

The answer shows the situation to be exactly what we claim. The ditches had been constructed; they had become filled with mud and sand; the spillway had proven imperfect and inadequate; it had washed out with the result that there was imminent danger of the waters in the ditch, unless the spillway should be repaired and the waters properly controlled, causing great damage to property and rights outside the drainage area; appellant Commissioners at once commenced work to control the waters; certain property owners within the drainage area instituted an action to restrain them; these property owners conferred and as a result of such conferences a proceeding was commenced for the purpose of abandoning the spillway and establishing a new outlet connecting with what is know as Covell's Lake; further conferences were held resulting in an agreement that the Covell's Lake proceeding should be abandoned (and, as admitted by appellants in their answer *"the same were abandoned accordingly"*) and resulting in the further agreement "that a new petition should be filed and new proceedings instituted *for the re-establishment of said Drainage Ditches No. 1 and No. 2 and the re-construction and improvement thereof* and the re-establishment and the re-construction of the outlet to said ditches and for the establishment and construction of a new spillway to *properly control and take care of the waters flow-*

ing through said drainage ditches and for the enlargement of said drainage district," and that thereafter *"and in accordance with said agreement"* the petition, which is the alleged foundation for the proceedings in question, was filed as a "compromise between the said petitioners therefor and others affected thereby."

In view of the situation thus pleaded and also clearly shown by the evidence, the commissioners had but one duty. That was to proceed to repair and maintain the ditches, already constructed, so that they might continue to perform their functions without damage to property outside the area. They should have proceeded under § 8470, South Dakota Revised Code, 1919, which is as follows:

> "For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the landowners affected in the proportions determined for such drainage at any time upon the petition of any person setting forth the necessity thereof, and after due inspection by the board of county commissioners. Such assessments shall be made as other assessments for the construction of drainage, certificates may be issued thereon and such assessments and certificates shall be liens, interest-bearing, perpetual and enforcible, in all respects as original assessments and may be sold at not less than par by the board of county commissioners, turned over to persons contracting for such cleaning and maintenance, or may be collected directly by the board of county commissioners.

Under this section the cost should have been assessed and assessments made "upon the landowners affected in the proportion determined for such drainage." This was the only power the commissioners had.

There is no provision in the South Dakota statutes for extending the boundaries of a drainage area once determined and assessed, but it is contended that the proceedings were pursuant to the provisions of § 8489, South Dakota Revised Code, 1919, having reference to "Invalid or Abandoned Proceedings." Such contention is not tenable because the evidence clearly shows that the original proceedings had not been "enjoined, vacated, set aside, declared void, dismissed, or voluntarily abandoned." There was no pretense of abandoning the old ditches. It is claimed that the spillway was abandoned by the resolution adopted in the so-called "Covell's Lake" proceeding. Even if this were true it did not operate as an abandonment of the ditches, and appellants allege in their answer that the entire Covell's Lake proceeding was agreed to be abandoned and *was abandoned*. The withdrawal of the Covell's Lake proposition left the original ditches in existence,

unaffected by these abandoned proceedings.

The District Court was fully justified in its conclusions as follows:

"When this river cut through into the ditch, when the ditch became clogged in places and was not wide enough in others, when the spillway washed out by the force of the water they were conducting down the ditch, and the cutting of the bluff began and large areas of land were being washed away, and the other dangers were threatened, there was only one proposition presented to the Commissioners, and that was one of maintenance; was one of taking care of the water that they were conducting down these two ditches, No. 1 and No. 2.

"Instead of proceeding frankly to maintain the ditches they had established in the manner provided by statute; instead of carrying out the obligations they had assumed when they brought the water down through these ditches, and attempted to deliver it through this bluff into the river; instead of proceeding regularly under this statute to do that which it was their duty to do; instead of performing the obligation that they had assumed when they established the ditches, that of maintaining them, they proceeded to act upon the assumption that because they had conducted the water down into these ditches, and because of the inefficient manner in which they had constructed the ditches and built the spillway, and all of these dangers were threatened, therefore, the plaintiffs' and others in Sioux Falls were necessarily to be damaged. And, although a proper maintenance of these two ditches, No. 1 and No. 2, would stop the damage, would prevent any danger, the Commisioners evidently reasoned that because the plaintiffs and others in Sioux Falls were in danger, they must pay for the repair of these ditches. That could not be done by simply saying the ditches shall be repaired and the City of Sioux Falls, the plaintiffs, and others, shall pay for it, or pay a part of it, and therefore, they proceeded to do indirectly what it was conceded they could not do directly. In other words, they then began to look around and see what they would do in the way of taking care of the water and stopping these dangers.

"At first it was proposed to change the spillway and conduct the water down in a southerly direction, through a slough or lake, into the river west of the City, and save the great fall that is involved at the point where the water enters the river from the spillway northeast of the city.

"This was abandoned and they finally then pretended to act under a statute authorizing the abandonment of ditches. As a matter of fact there was no abandonment

in good faith. No attempt to abandon the ditches. In fact, the reading of the resolution shows it was simply that they abandoned the Spillway. That they filed a petition which was headed, 'To reconstruct and improve Drainage Ditches No. 1 and No. 2, Minnehaha County, South Dakota, and to construct a new spillway or outlet to said Drainage Ditches No. 1 and No. 2, and to pay therefor by asessment upon the property, persons and corporations benefited thereby.'

"This petition was filed in July, 1916, with the Board of County Commissioners. There had never been an abandonment of Ditch No. 1 and Ditch No. 2. There had been a pretended abandonment of the spillway. But the Commissioners proceeded then to construct a proper spillway on the identical location of the old one. In other words, no change whatever was made in the two ditches, No. 1 and No. 2, except to properly construct an efficient, adequate substantial spillway, and prevent the river cutting from its bed into the ditch, cleaning out the ditch and repairing it, changing the gates at the head of the ditch where the flood waters were taken from the river.

"Upon this petition, for this purpose, the Board of Commissioners assumed authority and power to re-christen this Ditch No. 1 and Ditch No. 2, and call it Ditch No. 1 and 2, and for the purpose of making these repairs and maintaining the old ditches under the new name, proceeded as if no ditch had been established, and as if the Ditches No. 1 and No. 2 were not in existence, and as if no obligation had been assumed by the drainage districts when they diverted the water down through the bluffs of the river, and proceeded to make the repairs and to reach out and say that the various plaintiffs were benefited. Instead of charging the repairs and maintenance of the ditches to those who were responsible for their construction under the provisions of the statutes above referred to, the Commissioners proceeded to assume the right and authority to constitute a new drainage ditch without the abandonment of the old ditches, with no thought of using new or different drainage in any way, except to maintain them and to perfect that which had been inefficiently constructed with no thought or purpose except to repair the damage that had already been done, and prevent future damage.

"Under these circumstances, I am of the opinion that the Commissioners were acting entirely without authority of law. There is no provision in the statutes of the State of South Dakota for the taking in of any other lands and assessing them, for the maintaining of a ditch

after it has been constructed, and the benefits of its building have been assessed.

"I am of the opinion that the forming of this new ditch was simply a pretense, and that the plaintiff's pleading that it was a subterfuge is supported by the proof, resorted to for the sole purpose of attempting to burden the plaintiffs and others with the cost of the maintenance of the ditches theretofore constructed.

"I am of the opinion that Section 8489 of said Revised Statutes, in regard to invalid and abandoned proceedings is not applicable to any situation such as existed here. That section has reference to the abandonment of a ditch that has been enjoined, vacated, set aside or declared void, and specifically provides for the re-establishment of a ditch over the same territory, and that the new ditch shall assume the expenses paid on the old ditch, and give credit for any payment made upon the old ditch by people benefited. No such proceeding was attempted to be followed in this case. The proceedings establishing old ditches No. 1 and No. 2 have never been held void, never been set aside, never been abandoned. They are in force today and are responsible for the manner in which the ditches were constructed and the damages that result from their negligence.

"Under these circumstances the Board of County Commissioners had absolutely no authority, no right or color of right, were not acting under the provision of any statute of the State when they assumed the right to reach out and attempt to assess the benefits for the repair and maintainence of said ditches against the property of the various plaintiffs. They were mere tresspassers, for the reason that no drainage Ditch No. 1 and 2 was ever established and has no existence.

"I am of the opinion that the proceedings of the Board of Commissioners in the repair and maintenance of these ditches, No. 1 and No. 2, by assuming the right to constitute a new drainage district, calling it District No. 1 and 2, and to assess benefits to the property of the plaintiffs, insofar as they are located in the city of Sioux Falls, are void."

The Circuit Court of Appeals, in its opinion in this case, quoted with distinct and emphatic approval the last two preceding paragraphs. (*Risty v. C. R. I. & P. Ry. Co.* 297 Fed. 710).

If it be contended that the new proceedings constituted anything more than the necessary maintenance and repair of the ditches then it must conclusively appear that such purpose or purposes consisted of the by-passing of the flood waters of

the Big Sioux River through the cut-off created by the ditch properly repaired and maintained and of preventing the threatened damage to the water supply of the city of Sioux Falls, appellee's water power, etc., and if this be true appellant Commissioners acted without authority or color of right because § 6 of Article XXI of the South Dakota State Constitution authorizing the drainage of lands "for any public use" has never been made effective by appropriate legislation.

This section is as follows: "The drainage of agricultural lands is hereby declared to be a public purpose and the legislature may provide therefor, and *may provide for the organization of drainage districts for the drainage of lands for any public use and may vest the corporate authorities thereof, and* the corporate authorities of counties, townships, and municipalities with power to construct levees, drains and ditches, and to keep in repair all drains, ditches and levees heretofore constructed under the laws of this state by special assessments upon the property benefited thereby according to benefits received." (Italics are ours).

The dual nature of this constitutional provision should be carefully observed. It first declares the drainage of agricultural lands to be a public purpose and that the legislature may provide therefor, and then declares that the legislature may also "provide *for the organization of drainage districts* for the drainage of lands for any public use." It is clear that the term "drainage districts" as so used contemplates a drainage district so organized as to constitute a corporate entity because the constitutional provision under consideration further provides for the vesting of certain powers in "the corporate authorities thereof."

It may be that the constitution authorizes provision to be made for the drainage of agricultural lands without the establishment of corporate drainage districts but it must be conceded that for the drainage of land for any other public purpose or use the legislature must first provide for drainage districts in such manner as to constitute such districts corporate entities, having corporate authorities who might be vested with the power to construct the drainage. There having been no such legislation, the only provision of the constitution that the legislature has attempted to make operative is that referring to the drainage of agricultural lands, and insofar as the ditches and spillway under consideration were constructed or purported to have been constructed for any purpose other than the drainage of agricultural lands, they were so constructed without any warrant of law whatsoever, and the entire proceeding is void under the State Constitution.

In construing this section of the state constitution, the Circuit Court of Appeals said: "We are satisfied that under

the South Dakota Constitution, section 6, art. 21, drainage of lands for any public use other than the drainage of agricultural lands, must be carried out by drainage districts, and no legislation at the time of these proceedings had been provided for the establishment of such drainage districts. Whichever way, therefore, the matter is viewed, the board was acting without legal authority in its apportionment of benefits and threatened assessment of taxes." (*Risty v. C. R. I. & P. Ry. Co.*, 297 Fed. 710, 717.)

III.

THE SOUTH DAKOTA DRAINAGE STATUTES DO NOT PURPORT TO AUTHORIZE THE ASSESSMENT OF PROPERTY SUCH AS APPELLEE'S HYDRO-ELECTRIC PLANT AND WATER RIGHTS FOR THE PURPOSE OF DRAINING AGRICULTURAL LANDS.

In this connection we ask the court to carefully consider and analyze § 8463 of the Revised Code of 1919, hereinbefore quoted. It requires the county commissioners to proceed as follows:

(a) After the establishment of the drainage and fixing of damages, to "fix the proportion of benefits of the proposed drainage *among the lands affected*, and to appoint a time and place for equalizing the same;"

(b) To give notice of such proportion of benefits and equalization of benefits by publication and posting;

(c) To state in the notice the route and width of the drainage, "a description of *each tract of land affected*," and the names of the owners of the "*several tracts of land*," and the proportion of benefits "*for each tract of property*," and to notify "*all such owners*" to show cause why the proportion of benefits shall not be fixed.

The foregoing is all that this section requires the county commissioners to do with reference to the question of equalization of benefits prior to the hearing. They are required to give notice only to the owners of each tract of land affected by the proposed drainage.

The section then further provides that upon the hearing, without any provision whatever for notice, the benefits (not the proportion of benefits) "which any railroad company may obtain for its property by such construction" and the proportion of benefits which any county, city, town or township may so obtain "shall be fixed and equalized *together with the proportion of benefits to tracts of land*."

It will be observed that no reference is made to any class of property except tracts of land, the highways of municipal corporations, and the property of railroad com-

panies, and that there is not included in the language of the statute anything which might possibly be construed to refer to property such as an hydro-electric plant or water rights; certainly neither is a "tract of land" or "tract of property" in the sense used in the statute. The word "tract" must be given significance, and could have no application at all used in connection with hydro-electric plants or water rights. It should further be borne in mind that the attempt here is to assess appellee because of the benefit not to any land it owns, but rather because of the fanciful claim that the operation of appellee's machinery and hydro-electric apparatus through the use of its water power will be rendered more efficient by the assumed by-passing of the flood waters through the ditch. This is neither a direct nor indirect benefit to a tract of land or a tract of property resulting from the drainage of agricultural lands.

It will further be observed that the statute provides for the giving of no notice except to "such owners" of the "several tracts of land."

In this connection, it will be of interest to note that the fact that § 8463, Revised Code, did not provide for the apportionment of benefits to property similar to that of appellee here sought to be affected has received legislative consideration.

§ 8463 was amended in the year 1921, the amendment becoming effective July 1st, 1921 (Chapter 194 South Dakota Session Laws 1921).

We quote the portion of the statute as amended relevant to the question under consideration, italicizing the new matter:

> "The proportion of benefits which any county, city, town or township may obtain by the construction of such drainage to highways or otherwise, and the benefits which any railroad company *or other corporation or property owner* may obtain for its property by such construction, shall be fixed and equalized together with the proportion of benefits to tracts of land."

Here is a clear recognition by the legislature that the phrase "tract of land" was not intended to include, and did not include property, such as is sought to be assessed in this proceeding.

It is quite evident from the addition of the words "or other corporation or property owner" that the legislature deemed such addition necessary in order to include property other than agricultural lands.

The statute, as so amended, is sufficiently comprehensive to include all classes of property, but if the amendment had been in force at the time of the proceedings here in

question, appellee, with reference to the question of notice and right to be heard, would be in the same position as railroad companies in that the statute, as hereinbefore suggested, does not purport to require notice of hearing upon the question of equalization of benefits to be given to anyone other than the owner of a tract of land, but upon the hearing requires the *"benefits"* to railroad companies, and other property owners to be "fixed and equalized together with the *proportion of benefits* to tracts of land."

IV.

APPELLEE'S PROPERTY HAS RECEIVED AND CAN RECEIVE NO BENEFIT EITHER DIRECT OR INDIRECT FROM THE SO-CALLED DRAINAGE.

The arbitrary, fanciful and speculative method resorted to by appellant Commissioners in determining that appellee's property was benefited has been discussed. The District Court's conclusion that it was not benefited at all is fully sustained by the record. Certainly it cannot be charged that benefit resulted from the construction of a dam built to prevent the water from the Big Sioux River from being diverted into the ditch and built because appellee objected to the diminishing of its water power because of such diversion (R., 283). The conclusions of the engineer Rettinghouse have no force because of his admission that he had absolutely no knowledge of the facts upon which he based his estimates and conclusions, and there being no proof in the record of the existence of such facts.

It appears from the uncontradicted testimony of the witness Link (R., 250-256) and from that of the witness Reed (R., 246-248) that appellee's plant was designed and constructed in such manner as to fully protect it from damage by any flood conditions, and that if the plant were to be re-constructed good engineering would not permit any consideration of the drainage ditch and spillway in designing it.

Further than this, even if the operation of appellee's plant might be rendered more efficient because of the by-passing of the flood waters of the river (which the record shows is not the fact) such benefit would not be a benefit derived directly or indirectly from the drainage of agricultural lands, and would not be an assessable benefit under the South Dakota statutes.

It certainly would not be a direct benefit. It is not contended that any of appellee's land is drained by the ditch. It is not contended that appellee received any benefit from the drainage of any other lands, the contention being simply

that the means resorted to for the drainage of agricultural lands benefits appellee by increasing the efficiency of its plant.

The statutory definition of benefits in force at the time of this proceeding was as follows: (§ 8463).

> "Benefits to be considered in any case shall be such as accrue directly by the construction of such drainage or indirectly by virtue of such drainage being an outlet for connection drains that may be subsequently constructed."

There is no contention that appellee is benefited "by virtue of such drainage being an outlet for connection drains that may be subsequently constructed," and such was the only indirect benefit for which the statute authorized the making of assessments in this proceeding.

The limitation thus placed upon "indirect benefits" received legislative consideration in the year 1921, § 8463 of the Revised Code having then been amended, the amendment becoming effective July 1st, 1921, and in no manner affecting this proceeding other than evidencing the legislative recognition of the necessity for the additional legislation.

The above definition of "indirect benefits" was amended in 1921 (Chapter 194 South Dakota Session Laws 1921) by the addition of the following language:

> "Indirect benefits accruing because of such drainage being an outlet for connection drains that have heretofore or may be hereafter constructed *or due to its improving public health, convenience or welfare* may be assessed against any drainage district, county or political subdivision affected thereby as a whole at the option of the board of county commissioners." (Italics are ours.)

It is apparent from this amendment that it is and has been the legislative interpretation and conclusion that direct benefits are only those benefits resulting directly to the owner of land from its drainage and not those to persons other than the owners of agricultural land because of a benefit other than drainage resulting from the operation of the drainage system.

V.

THE AUTHORITIES CITED BY APPELLANTS AND THE ARGUMENT MADE BY THEM IN SUPPORT OF THEIR CONTENTION THAT THE TRIAL COURT WAS WITHOUT JURISDICTION AND THAT THIS ACTION WAS PREMATURELY BROUGHT ARE NOT APPLICABLE TO THIS CASE.

If this action were one merely to restrain the enforcement and collection of a tax or special assessment, levied by a tribunal having power and jurisdiction to make such levy, and based upon some irregularity in the proceedings of such tribunal or involving only a dispute as to the amount of the tax many of appellant's contentions would be well founded.

But such is not the situation. A tribunal claimed to be acting beyond its jurisdiction and therefore without power passed a resolution attempting to proportion benefits to appellee which, as will appear from a mere mathematical computation, would result in the levying of taxes upon appellee's property to the amount of approximately $50,000.00; appellee was ordered to show cause before this tribunal why such tax should not be spread upon its property; appellee was not only threatened with the levying of such a tax but with the further and possibly more dangerous situation—that of having its property included within a drainage district, resulting in the extreme probability of its becoming involved in a project threatening to cause great and irreparable damage to property interests. The suggestion that under such circumstances it must first submit itself for a final determination of the questions involved to the tribunal having no jurisdiction, acting as it claims arbitrarily and without due process of law, we think has never received and never will receive the sanction of any court.

It has uniformly been held that courts of equity will intervene to prevent damage threatened by the acts of public tribunals beyond their jurisdiction and in excess of their powers. Mr. Justice Field recognized this in *Crampton v. Zabriskie*, 11 Otto 601; 25 L. ed. 1070, saying:

> "And from the nature of the powers exercised by municipal corporations, the great danger of their abuse and the necessity of prompt action to prevent irremediable injuries, it would seem eminently proper for courts of equity to interfere upon the application of the tax payers of a county to prevent the consummation of a wrong when the officers of those corporations assume in excess of their powers to create burdens upon prop-

erty holders. * * * The courts may be safely trusted to prevent the abuse of process in such cases."

The court acquired jurisdiction by virtue both of diversity of citizenship and the constitutional question involved. The amount in controversy cannot be questioned. Appellee is threatened with an assessment amounting to approximately $50,000.00, and its property will be so assessed upon its failure to show cause, before a tribunal having no power or jurisdiction, why a levy of that amount should not be spread. In addition to this is the great and irreparable damage that appellee is threatened with by having its property included within the drainage area. The action was not prematurely brought because appellee had the right at the time it instituted this action to have determined by a court of equity the question as to whether or not the appellant Commissioners were acting beyond their jurisdiction and without power, and whether their proceedings would result in depriving appellee of its property without due process of law.

It is asserted that appellee had a complete and adequate remedy at law but the remedy suggested is that appellee appear before the Board of County Commissioners and if dissatisfied appeal to the state courts. Such is not an adequate remedy. The remedy at law must be a remedy on the law side of the Federal court, not a remedy in the state courts of South Dakota.

Chapter 3, Simkins "A Federal Equity Suit."

United States Life Insurance Co. v. Cable, 39 C. C. A. 264.

We quote from the case last cited:

"It must, we think be conceded that the bill in this case alleges facts constituting a good cause of action in equity for the cancellation of the policy, unless the plaintiff has a full and adequate remedy at law for the same cause. A suit at law has been commenced in the state court of Illinois to recover upon the policy, and if it be an adequate remedy at law to turn the plaintiff over for litigation of its right in the state court under the circumstances set out in the bill, then the United States Circuit Court in equity should disclaim jurisdiction. But there are two reasons why we think the remedy thus open to the plaintiff, of having its rights determined in an action at law, does not meet the requirements of the rule: The first is that the plaintiff being a citizen of New York, and the defendant a citizen of Illinois, the plaintiff, under the constitution, has the right to come to the federal court for an adjudication. For a person entitled to litigate in the feder-

al court, it is not an adequate remedy at law to be invited into a state court by his antagonist to adjudicate his rights. * * * The remedy at law, in order to defeat the right to proceed in equity, should be full and adequate. It should be as practical and efficient to the ends of justice and its prompt administration as the remedy in equity. * * * In the federal courts it is well settled that the court will not turn a suitor in equity over to a remedy at law in the state courts, but only to the law side of the federal court."

The authorities cited in support of the contention that this suit was prematurely brought are easily distinguishable and their non-applicability is apparent.

We find it difficult, in the manner in which the brief of appellants is prepared, to locate all the authorities on which they rely as to any particular point and particularly as to the one now under consideration, but we call attention to the following cases cited by them, which are typical and which clearly demonstrate the fallacy of their position.

In *Western Union Telegraph Company v. Howe* (C. C. A.) 180 Fed. 44, there was no question of the jurisdiction of the taxing tribunal, and the court said: "The effect of an injunction would be to take away from the tax commission all powers of discretion and judgment in arriving at a fixed and proper valuation."

The contention here and the question that this court must decide is whether or not the tribunal assuming to levy the tax has any power whatsoever.

In *Keokuk & Hamilton Bridge Company v. Salm*, 258 U. S. 122, 66 L. ed. 496, there was again no question as to the jurisdiction or power of the taxing tribunal, and the court said:

> "*Before the suit was begun it had been decided that the taxing statute was valid; that the property was subject to taxation;* that it was assessable as real estate, and that the assessment should be made as was done by the county assessor and not by the state board of equalization. *The amount of the tax payable was, therefore, the only matter in controversy.*" (Italics are ours.)

In *Milheim v. Moffat Tunnel Improvement District*, 262 U. S. 710, 67 L. ed. 1194, chiefly relied upon by appellants, there was again no question of jurisdiction of the taxing body. Plaintiff's property there in question was included within a taxing district by the state legislature. The court said:

> "It is well settled, however, that if a proposed improvement is one which the state has authority to make

and pay for by assessments on property benefited the legislature in the exercise of the taxing power has authority to determine by the statute imposing the tax what lands may be and are in fact benefited by the improvement; and if it does so, its determination is conclusive upon the owners and the courts and cannot be assailed under the Fourteenth Amendment *unless it is wholly unwarranted and a flagrant abuse and by its arbitrary character is mere confiscation of the particular property.* * * * *The legislature not only provided for the assessment of the lands within the district but specifically declared that the tunnel established was of special benefit to such lands, and that the special benefits accruing to them are in excess of the cost of the tunnel and of the assessment provided for against them.*" (Italics are ours.)

Again we find no question as to the jurisdiction or power of the taxing body.

Although appellee bases its contention that this suit was not prematurely brought principally upon the claim that appellant commissioners acted entirely without jurisdiction, we believe, even if we should concede for the sake of argument that the law is constitutional; that appellant commissioners acted pursuant to its provisions up to the time of adopting the resolution fixing the apportionment of benefits; that jurisdiction was obtained to form the so-called drainage district, and that appellee's property if benefited might be included within the boundaries thereof, it would still follow that the commissioners did not in fact acquire jurisdiction over appellee and its property because the basis upon which they acted in attempting to affect appellee's property was so arbitrary, speculative and discriminatory as to deny due process of law.

The record in this case clearly discloses that appellant commissioners never at any time had before them any evidence showing or tending to show that appellee's property would be benefited at all by the construction of the so-called Drainage Ditch No. 1 and 2. This being true it must follow that their action in adopting the resolution apportioning the benefits, so far as appellee is concerned, was based upon no foundation in fact and was therefore merely arbitrary and furnishes no jurisdictional basis for requiring appellee to appear before the appellant board and show cause why such tentative assessment should not be made permanent.

IN CONCLUSION

Appellants rely chiefly upon the decision of the state court in the case of *Gilseth v. Risty*, 46 S. D. 374, 193 N. W.

132. The opinion in that case discloses the following situation: The constitutionality of the drainage laws was not in question; plaintiff was the owner of agricultural land within the drainage area of Drainage Ditches No. 1 and No. 2 as originally constructed; he was a party to the conferences alleged in this case to have taken place between the parties interested in the original ditch proceedings and which resulted in the filing of the petition "For the Re-establishment of Drainage Ditches No. 1 and 2;" he was present at the hearing upon that petition and took no appeal from the order of the commissioners purporting to establish the new drainage; his property, as we have said, was in the drainage area as originally established; he was one of the parties responsible for the original construction of the ditches in question and for their proper maintenance, and one of the parties for whose benefit appellant commissioners are attempting to assess appellee's property and that of others outside the original drainage area.

The court simply held that as to him, a party to the proceeding, the order establishing the drainage and subsequent orders from which he did not appeal became final. A careful analysis of the opinion discloses that the court finally based its conclusion upon questions of estoppel and lack of equity in favor of plaintiff. After reciting the situation practically as above stated, it said: "Appellant having stood by and seen all the work performed without protest, and having received all the benefits that could result therefrom, should not now be permitted to escape payment for the same. The relief asked by appellant is equitable in its nature but, because of the circumstances above shown, all the equities of the case are against appellant and in favor of the Board."

The situation in the instant case is obviously vastly different. No part of appellee's property was within the drainage area of Ditches No. 1 and No. 2, as originally established; appellee took no part in the proceedings here in question; it owns no agricultural land and has received and will receive no benefits from the work no matter what the purpose of it may have been. The plaintiff in the *Gilseth* case was one of the persons responsible for the existence of the ditches in the first instance, and, as the facts are disclosed by the state court's opinion, his property should be assessed for the cost of the work done for the purpose of preventing the threatened damage, regardless of whether or not such work was done under the guise of a new drainage proceeding.

The state court has never had before it for determination the question as to whether or not the drainage stat-

utes, in so far as they purport to authorize drainage proceedings for any purpose other than draining agricultural lands, are violative of the state constitution. In all cases in which the constitutionality of the statutes has been passed upon by that court, the only questions involved were those with reference to the drainage of agricultural lands, and the court very correctly held that such drainage might be provided for without the incorporation of drainage districts.

We confidently maintain not only that the conclusions of the District Court upon which its judgment was based and those of the Circuit Court of Appeals expressed in affirmance thereof are fully sustained by the record but that the judgment appealed from is also sustained because the South Dakota drainage statutes are violative of the Fourteenth Amendment to the Constitution of the United States in the particulars hereinbefore urged.

Respectfully submitted,

Brief For Respondent on Petition For Writ of Certiorari

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, [redacted] 1925

No. [redacted] 99

A. G. RISTY, ET AL, AS COUNTY COMMISSIONERS ETC. ET AL, PETITIONERS,

vs.

CITY OF SIOUX FALLS, SOUTH DAKOTA, RESPONDENT.

PETITION FOR WRIT OF CERTIORARI TO UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT.

CHARLES O. BAILEY,
ROY D. BURNS,
J. H. VOORHEES,
T. M. BAILEY,
Counsel for Respondent.

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1924

No. 455

A. G. RISTY, ET AL., AS COUNTY COMMISSIONERS ETC. ET AL, PETITIONERS,

vs.

CITY OF SIOUX FALLS, SOUTH DAKOTA, RESPONDENT.

BRIEF FOR RESPONDENT ON PETITION FOR WRIT OF CERTIORARI

The City of Sioux Falls, South Dakota, plaintiff in the District Court and respondent in this Court, brought its bill in the District Court for the District of South Dakota against A. G. Risty and others, as County Commissioners of Minnehaha county, South Dakota, defendants, praying for an injunction restraining the making of an assessment upon the property of respondent for the cost of the construction of certain drainage works. The holders of warrants issued in payment of expenses incurred in the drainage project became interveners in the suit. A decree was entered in the District Court in favor of the plaintiff in that Court and respondent in this Court, (282 Fed. 364). From this decree the defendants and the interveners in the District Court appealed to the Circuit Court of Appeals for the Eighth Circuit in which Court the decree of the District Court was affirmed (297 Fed. 710). The defendants and interveners in the District Court, appellants in the Circuit Court of Appeals, have taken an appeal to this Court and have also, as petitioners, filed in this Court their petition for a writ of certiorari.

The main ground upon which petitioners ask that this Court grant a writ of certiorari is that a conflict has arisen between the decisions of the Circuit Court of Appeals for the Eighth Circuit and the decisions of the Supreme Court of the State of South Dakota in a matter relating to the construction of a statute of the state of South Dakota; and petitioners pray for the granting of a writ of certiorari upon the strength of *Forsyth vs Hammond*, 166 U. S. 506.

Our reply to the contention of petitioners is that no conflict exists between the decision of the Circuit Court of Appeals in this case and the decisions of the Supreme Court of South Dakota.

This case involves the construction of the drainage ditch statute of South Dakota. In the Circuit Court of Appeals this statute was attacked by respondent as unconstitutional. The Circuit Court of Appeals deemed it unnecessary to pass upon this contention but decided the case upon the ground that the proceedings, had under the statute in the instance of the particular drainage project under consideration, were irregular.

In *Gilseth vs Risty*, 46 S. D. 374, the Supreme Court of South Dakota rendered a decision in a case between other parties, but involving the same drainage project. The records in the two cases were entirely different and the Supreme Court of South Dakota held that the plaintiff in the case before it was estopped by his own laches from complaining of irregularities in the proceedings. There was in that case no conflict with the holding of the Circuit Court of Appeals in the present case.

In none of the other South Dakota cases cited by counsel for petitioners is there involved the drainage ditch project in controversy in the present case or any of the questions involved in the present case which were resolved by the Circuit Court of Appeals in favor of respondent.

For the foregoing reasons we submit that no showing is made whereby a writ of certiorari should be issued under *Forsyth vs Hammond*, 166 U. S. 506.

The remaining points raised by counsel for petitioners are, we believe, best answered by the opinion of JUDGE KENYON in the Circuit Court of Appeals. We, therefore, append a copy of this opinion to this brief as being the most apt reply which we can make to the contentions of counsel for petitioners.

Respectfully Submitted,

CHARLES O. BAILEY,
ROY D. BURNS,
J. H. VOORHEES,
T. M. BAILEY,
Counsel for Respondent.

(297 FEDERAL REPORTER, 710)

A. G. RISTY, *et al*, as
County Commissioners, etc., *et al*,

vs.

CHICAGO, ROCK ISLAND & PACIFIC
RAILWAY COMPANY,
(*and five other cases*)

CIRCUIT COURT OF APPEALS, EIGHTH CIRCUIT

MARCH 18, 1924

OPINION OF THE COURT

Appeal from the District Court of the United States for the District of South Dakota; James D. Elliott, Judge.

Suits, by the Chicago, Rock Island & Pacific Railway Company, by the Chicago, Milwaukee & St. Paul Railway Company, by the Chicago, St. Paul, Minneapolis & Omaha Railway Company, by the Northern States Power Company, by the City of Sioux Falls, and by the Great Northern Railway Company, respectively, against A. G. Risty and others, as County Commissioners, and others. From decrees for plaintiffs (282 Fed. 364) the defendants in each case appeal. Affirmed.

In the year 1907 the board of county commissioners of Minnehaha county, S. D., acting under the drainage statutes of that state, established and had constructed a drainage ditch known as drainage ditch No. 1, bottom width of 40 feet, at an expense of $46,600. This ditch was north of Sioux Falls and ran first in a southerly direction from its initial point; thence easterly past the pumping station of the city of Sioux Falls; thence southeasterly about 1,000 feet to the Big Sioux river near the north limits of Sioux Falls. It passed through a ridge and descended approximately 100 feet in the terminal thousand feet. A spillway was constructed to carry the water down the descent. This ditch was approximately three miles in length, and there was a spur 670 feet long extending northwest into a bayou about 2,000 feet south of the initial point.

In 1910 the board of county commissioners established another drainage ditch known as drainage ditch No. 2, which extended north from the northern terminal of drainage ditch No. 1, for a distance of about 12 miles. This ditch likewise had a 40-foot bottom and was constructed at a cost of $81,106.19. These two ditches, making in fact one continuous ditch, drained certain agricultural lands, and traversed the land north of the city of Sioux Falls near the gravel bed from which the city obtained its water supply. It also passed near the state penitentiary lands and emptied into the Big Sioux river north of the falls in said river.

In the year 1916 there was a breaking of the river through the natural barrier into the bayou drained by the lateral branch. This, coupled with the large volume of water passing through these ditches, made it impossible for the spillway to carry the same, and it was washed out and destroyed. The waters therefore being uncontrolled descended from the steep bluff to the level of the Big Sioux river, and serious damage was threatened to various interests. There was danger that the Big Sioux river which flowed through the city of Sioux Falls would be diverted from its course and flow through these ditches cutting off the water supply of the city of Sioux Falls, injuring the Northern States Power Company, and depriving it of its water power.

The board of county commissioners attempted to devise some plan to reconstruct the spillway and to protect these various interests from the threatened damages.

April 8, 1916, certain parties filed a petition with the board of county commissioners asking that that portion of drainage ditch No. 1 containing the old spillway be closed and abandoned, and the course of said ditch extended in a southerly direction through Covell's Lake to the Big Sioux river; and said board did pass a resolution that said drainage ditch No. 1 be permanently closed above the present spillway or outlet thereof.

August 3, 1916, a petition of F. L. Blackman and other parties was filed entitled, "To Reconstruct and Improve Drainage Ditches Numbers One and Two in Minnehaha County, South Dakota, and to Construct a New Spillway or Outlet to said Drainage Ditches Numbers One and Two and to Pay Therefor by an Assessment upon the Property Persons and Corporations Benefited Thereby." This petition was transmitted by the board to the state engineer, and on August 14, 1916, a survey was ordered.

September 13, 1916, a report of the survey was made and filed by the engineer in charge. A resolution was thereupon adopted by the board fixing the line and width of said new proposed ditch in the exact location of old ditches No. 1 and No. 2, and providing for the time and place of hearing the petition. Notice was published for three successive weeks describing the route of the proposed drainage, and the tract of country likely to be affected thereby, in the general terms provided by the statute; also, the separate tracts of land through which the proposed ditch would pass, and the names of the owners of said tracts. Such notice informed all persons affected by the proposed drainage to appear at such hearing and show cause why the same should not be established. Upon the return date of the notice the commissioners adopted a resolution purporting to establish the so-called drainage ditch No. 1 and 2, and providing for the reconstruction of the spillway.

No appeal was taken from this order establishing the purported new project.

The commissioners then caused ditches No. 1 and No. 2 to be cleaned out, widened, deepened, and diked so as to increase the carrying capacity; caused the spillway to be reconstructed, and

certain portions of the Big Sioux river to be straightened. This work cost approximately $255,000, and drainage warrants were issued to be paid out of taxes assessed against the property determined to be benefited within the area of the purported new drainage ditch No. 1 and 2. The largest holders of these warrants are interveners in this action.

In April, 1919, notice was published of a hearing upon the matter of equalizing benefits resulting from said drainage ditch No. 1 and 2, and this was the first intimation that certain of appellees had that benefits might be assessed against them. The property of some of the appellees was not covered by the notice. However, the proceedings under this notice were abandoned.

June 10, 1921, appellant board by resolution fixed a proportion of benefits in units, which had been decided upon as a fair method of arriving at the same, on drainage ditch No. 1 and 2, and designated Monday August 1, 1921, at the office of the county auditor, as the time and place for hearing on the question of equalizing benefits, and caused notice of such hearing to be published as provided by the statute. Under the unit system adopted by the board upon recommendation of their engineer, the various appellees had units allotted against them as follows:

Chicago, Rock Island & Pacific Railway Company, out of a total of 32,569.62 units, 839.45.

Chicago, Milwaukee & St. Paul Railway Company, 1,681.

Chicago, St. Paul, Minneapolis & Omaha Railway Company, 839.45.

Northern States Power Company, 5,351.63.

Great Northern Railway, 613.85.

City of Sioux Falls, 3,147.95.

The amount due on warrants issued for this work at the time the actions were brought was about $300,000. The total units of benefit aggregate 32,549.62, so each unit of benefit amounts to slightly in excess of $9. If no changes had been made by the board, had they been permitted to proceed; the amounts charged against various appellees would have ranged from $50,000 against the Northern States Power Company to substantially $6,000 against the Great Northern Railway Company.

Appellees brought suit to restrain appellants from proceeding further with the equalization of said purported benefits and from levying any assessment upon their property to pay therefor. Some of the appellees had no property in original ditch district No. 1 and No. 2; others of appellees did have, and some difference is made in the contention of those not having property in the original ditch district and those who did have, but the issues in the main were the same as to all the parties.

All of the appellees contended in the trial court that the South Dakota drainage law was unconstitutional, violating the Fourteenth Amendment to the Constitution of the United States; that it also violated sections 2 and 3 of article 6 of the Constitution of the State of South Dakota. Some of the appellees contended

that the board exceeded its powers in what it attempted to do, in that the same was not for the drainage of agricultural lands, but being for other public purposes, could only be carried on by the corporate authority of drainage district entities established for that purpose, which had not been done, and that consequently the proceedings were void.

Others of the appellees contended that the proceeding seeking to establish drainage ditch No. 1 and 2 was a subterfuge to impose liability on new territory to pay for the maintenance of the former ditches, and that the proceedings were for maintenance and repair of the old drainage ditch and were not carried on as provided by section 8470 of the Code of South Dakota relating to assessments for the maintenance of drainage already established; that drainage ditch No. 1 and 2 was not a new ditch and not a new enterprise.

Further claim is made by the railroad appellees that the South Dakota drainage law is unconstitutional so far as respects assessments of railroad property, in that it provides for the giving of notice whatever of the apportionment and equalization of benefits to railroad companies.

All appellees claim that the attempted assessments upon their property are arbitrary, unjust and illegal, and constitute a discrimination so palpable and arbitrary as to amount to a denial of the equal protection of the law; and that the proceedings create a cloud upon their title.

It was the position of appellants, on the other hand, that the statutes referred to were constitutional; that the federal court in equity had no jurisdiction because there was a complete remedy at law; that there was no equitable question involved; no irreparable injury shown; no facts sufficiently pleaded to show any threatened cloud upon title; that the amount involved was not sufficient to give jurisdiction; that the bringing of the suit was premature; that ditch No. 1 and 2 was legally established as a new drainage project under the statute of South Dakota; and that the board of county commissioners had full jurisdiction to do each and every act which they performed.

The trial court held that section 8461 of the Reversed Statutes of South Dakota, being the statute particularly attacked as unconstitutional, gave sufficient notice and opportunity to be heard before an assessment became a lien against the property, and was constitutional. The court also held that the proceedings of the commissioners were proceedings for the maintenance of the original ditches No. 1 and No. 2; that there was no abandonment of the old ditches; that the formation of the new ditch was a pretense and subterfuge carried on for the purpose of compelling property outside of the original ditches No. 1 and No. 2 to share the burden of the repair and maintenance of these ditches, and held that the proceedings of the commissioners with relation to ditches No. 1 and No. 2, by attempting to constitute a new drainage district and calling it district No. 1 and 2, were void.

The court further found that the complaints presented a real and substantial question under the Constitution of the United States; that the amount involved was in excess of $3,000 exclusive of interest and costs, and that each complainant stated a case in his bill cognizable in equity in the federal court; and that there was no adequate remedy at law. Also found that diversity of citizenship existed as to all appellees, except as to the city of Sioux Falls; also, that the method of attempted assessment was discriminatory and arbitrary. The injunctions as prayed were granted.

N. B. Bartlett and E. O. Jones, both of Sioux Falls, S. D., for appellants.

A. B. Fairbank, of Sioux Falls, S. D. (Edward S. Stringer, Thomas D. O'Brien, and Alexander E. Horn, all of St. Paul, Minn., on the brief), for appellee Chicago, R. I. & P. Ry. Co.

C. O. Bailey, of Sioux Falls, S. D., and E. L. Grantham, of Aberdeen, S. D. (H. H. Field, of Chicago, Ill., and J. H. Voorhees, P. G. Honegger, T. M. Bailey, and C. O. Bailey, Jr., all of Sioux Falls, S. D., on the brief), for appellee Chicago, M. & St. P. Ry. Co.

C. O. Bailey, of Sioux Falls, S. D. (R. L. Kennedy, of St. Paul, Minn., and J. H. Voorhees, P. G. Honegger, T. M. Bailey, and C. O. Bailey, Jr., all of Sioux Falls, S. D., on the brief), for appellee Chicago, St. P., M. & O. Ry. Co.

Harold E. Judge, of Sioux Falls, S. D. (R. M. Campbell, of Chicago, Ill., on the brief), for appellee Northern States Power Co.

C. O. Bailey, of Sioux Falls, S. D. (Roy B. Marker, of Sioux Falls, S. D., on the brief), for appellee City of Sioux Falls.

Harold E. Judge, of Sioux Falls, S. D., for appellee Great Northern Ry. Co.

Before KENYON, Circuit Judge, and TRIEBER and DYER, District Judges.

KENYON, Circuit Judge (after stating the facts as above). It is earnestly contended by appellees that the entire South Dakota drainage law is unconstitutional, not only as violative of the due process clause of the Fourteenth Amendment of the Federal Constitution, but also sections 2 and 13 of article 6 of the South Dakota Constitution. The constitutional questions raised are grave, serious, and doubtful. Their determination is not necessary to the solution of these cases. Therefore, under the well-established rule that federal courts will not pass upon the constitutionality of statutes unless absolutely necessary, we leave the questions aside. Howat et al. v. State of Kansas, 258 U. S. 181, 42 Sup. Ct. 277, 66 L. Ed. 550; Weyman-Bruton Co. v. Ladd, 231 Fed. 898, 146 C. C. A. 94; Allen, U. S. Atty., v. Omaha Live Stock Commission Co. et al. (C. C. A.) 275 Fed. 1.

The original drainage ditches No. 1 and No. 2 were properly established for the drainage of agricultural lands. When the spillway washed out, the maintenance of the ditches was impaired. Not only that, but the situation was fraught with grave

consequence to many interests. The steep bluff was being torn away by the uncontrolled waters; the waterworks and water supply of the city of Sioux Falls, as well as the penitentiary lands of the state, were endangered. A not improbable result of the Big Sioux river breaking through the natural barrier into the lateral ditch would be the entire diversion of its waters from their natural channel causing them to flow through said ditches and empty into the river north of the city, leaving Sioux Falls with an intermittent dry river bed.

The board of county commissioners under these conditions took steps to remedy the situation, and upon petition filed stating its object in its caption as follows: "To Reconstruct and Improve Drainage Ditches Numbers One and Two in Minnehaha County, South Dakota, and to Construct a New Spillway or Outlet to Said Drainage Ditches Numbers One and Two and to Pay Therefor by an Assessment upon the Property, Persons and Corporations Benefited Thereby," proceeded to establish what is termed drainage ditch No. 1 and 2, Minnehaha county, S. D.

Appellees who have property within the area of the original drainage ditches, No. 1 and No. 2, insist that the proceedings established a new drainage ditch known as No. 1 and 2, which is also the position taken by appellants. Other appellees claim that the work was in truth and in fact a project for the repair of drainage ditches No. 1 and No. 2. The court held that the forming of the new ditch was a pretense and subterfuge resorted to for the purpose of attempting to burden appellees with the cost of maintenance of ditches theretofore constructed; that the commissioners did not act as by law provided for the maintenance and repair of the ditches; and that the proceedings attempting to establish the new drainage ditch were void. We think the court was correct in this holding. It clearly expressed the situation as follows:

"Under these circumstances the board of county commissioners had absolutely no authority, no right or color of right, were not acting under the provision of any statute of the state when they assumed the right to reach out and attempt to assess the benefits for the repair and maintenance of said ditches against the property of the various plaintiffs. They were mere trespassers, for the reason that no drainage ditch No. 1 and 2 was ever established and has no existence.

"I am of opinion that the proceedings of the board of commissioners in the repair and maintenance of these ditches, No. 1 and No. 2, by assuming the right to constitute a new drainage district, calling it district No. 1 and 2, and to assess benefits to the property of the plaintiffs, in so far as they are located in the city of Sioux Falls, are void. Entertaining this view, it follows that plaintiff's prayer for an injunction should be granted."

Record, p. 90, Case No. 6313.

The proceedings, regardless of how designated, were in fact for repair and maintenance, and were governed as to assessments to pay for the same by section 8470 of the South Dakota Statutes, which section is as follows:

"*Assessments for Maintenance.*—For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the landowners affected in the proportions determined for such drainage at any time upon the petition of any person setting forth the necessity thereof, and after due inspection by the board of county commissioners. Such assessments shall be made as other assessments for the construction of drainage, certificates may be issued thereon and such assessments and certificates shall be liens, interest-bearing, perpetual and enforceable, in all respects as original assessments and may be sold at not less than par by the board of county commissioners, turned over to persons contracting for such cleaning and maintenance, or may be collected directly by the board of county commissioners." Section 13, c. 98, 1905; section 13, c. 134, 1907.

There is no provision in this statute for the taking in of other lands to help bear the assessment of burdens created in maintaining the original drainage. This was the statute under which the board of county commissioners could have provided for payment of maintenance and repairs to the established ditches.

Section 8489 provides for a method of abandonment of drains under certain circumstances and the construction of new ones in the same location. Said statute is as follows:

"*Invalid or Abandoned Proceedings.*—If any proceeding for the location, establishment or construction of any drain under the provisions of a previous law has been heretofore enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned, or if any such proceeding or like proceeding under this article be hereafter enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned in consequence of any error, defect, irregularity or want of jurisdiction affecting the validity of such proceeding or for any cause, the board of county commissioners may nevertheless proceed to locate a drain or drains under the same or different names and in the same or different locations from those described in the invalid or abandoned proceedings under the provisions of this article. In case any new proceeding be had resulting in the location of a drain in the same or substantially the same location as that described in the invalid or abandoned proceeding, the board of county commissioners shall proceed to ascertain the real value of the services rendered, money expended and work done under such invalid, abandoned or dismissed proceeding, and the extent to which the same will contribute to the location, establishment or completion of such new drain. Such value shall be determined at a hearing upon the same notice as the equalization of benefits or assessments, and may be at the same time or at any other time, and the notice of such hearing may be a part of the notice of the hearing upon the equalization of benefits or assessments or separate therefrom, but the board shall in any case notify all persons interested to show cause why the determination of the board thereupon shall not be final. When finally fixed such value shall become a part

of the cost of the new drainage. No use shall be made by any board of county commissioners in the laying out or completion of any drain or ditch under this article of any map, chart, survey, or other work done under any former law or under this article without having paid therefor; and all sums allowed for any work or material or money expended under the provisions of any previous law or under this article shall be paid to the persons who have paid therefor in proportion to the amounts severally paid by such persons." Section 33, c. 134, 1907.

The proceedings establishing drainage ditches No. 1 and No. 2 have never been set aside or abandoned under this statute. It is true a small portion of old ditch No. 1 was abandoned by the resolution adopted in the Covell's Lake proceeding, but the ditches were in no way abandoned. The Covell's Lake proceeding was itself abandoned and the ditches were left as they originally were, so it is apparent that the action of the board was not taken under section 8489. Either the proceedings were to repair and maintain ditches already constructed, or they were to take care of a situation resulting from their imperfect or inadequate construction. By reason of the water of the river breaking through into the lateral threatening a change of the river's course and the possible destruction of state lands, a situation was presented, not with relation to the drainage of agricultural lands, but rather to the failure of the ditches, due to inadequate or imperfect construction, to carry the increased flow of water. In other words, the project, if an entirely new one, was not for the drainage of agricultural lands. The court said in his opinion:

"Pursuant to this provision of the Constitution, the Legislature of the state has provided for the drainage of agricultural lands; but nowhere is there any statutory enactment under which drainage districts may be formed for the drainage of lands 'for any public use.'"

We are satisfied that under the South Dakota Constitution, section 6, art. 21, drainage of lands for any public use other than the drainage of agricultural lands, must be carried out by drainage districts, and no legislation at the time of these proceedings had been provided for the establishment of such drainage districts. Whichever way, therefore, the matter is viewed, the board was acting without legal authority in its apportionment of benefits and threatened assessment of taxes.

Appellants challenge the jurisdiction of the court, claiming there was a plain, adequate, and complete remedy at law; that there was no equity in the bill; that action was premature, and that the necessary jurisdictional amount was not involved. These in their order.

It is fundamental that equity cannot give relief where there is a plain, adequate, and complete remedy at law. It is provided by the federal Judicial Code, Compiled Stat. 1918, § 1244, as follows:

"*Suits in Equity.*—Suits in equity shall not be sustained in any court of the United States in any case where a plain, ade-

quate, and complete remedy may be had at law. (R. S. § 723. March 3, 1911, c. 231, § 267, 36 Stat. 1163.)"

It must be a remedy as certain, complete, prompt, and efficient to attain the ends of justice as that in equity. Monmouth Inv. Co. et al. v. Means, 151 Fed. 159, 80 C. C. A. 527; McMullen Lumber Co. v. Strother et al., 136 Fed. 295, 69 C. C. A. 433; Morgan v. Beloit, City and Town, 74 U. S. (7 Wall.) 613, 19 L. Ed. 203; McConihay v. Wright, 121 U. S. 201, 7 Sup. Ct. 940, 30 L. Ed. 932; Tyler v. Savage, 143 U. S. 79, 12 Sup. Ct. 340, 36 L. Ed. 82; Boise Artesian Hot & Cold Water Co. v. Boise City, 213 U. S. 276, 29 Sup. Ct. 426, 53 L. Ed. 796; Greene, Auditor, et al., etc., v. Louisville & Interurban Railroad Co., 244 U. S. 499, 37 Sup. Ct. 673, 61 L. Ed. 1280, Ann. Cas. 1917E, 88; Coler et al. v. Board of Com'rs of Stanly County et al. (C. C.) 89 Fed. 257.

It must be a remedy on the law side of the federal court. A remedy in the state court that cannot be pursued in the federal court is not an adequate remedy. Sheffield Furnace Co. v. Witherow, 149 U. S. 574, 13 Sup. Ct. 936, 37 L. Ed. 853; Smyth v. Ames, 169 U. S. 466, 516, 18 Sup. Ct. 418, 42 L. Ed. 819; United States Life Ins. Co. in City of New York v. Cable, 98 Fed. 761, 39 C. C. A. 264; Brun et al. v. Mann, 151 Fed. 145, 80 C. C. A. 513, 12 L. R. A. (N. S.) 154.

The question is: Has party the adequate remedy at law in the federal court?

In Reagan v. Farmers' Loan & Trust Co., 154 U. S. 362, 391, 14 Sup. Ct. 1047, 1052 (38 L. Ed. 1014), the court said:

"Nor can it be said in such a case that relief is obtainable only in the courts of the state. For it may be laid down as a general proposition that, whenever a citizen of a state can go into the courts of a state to defend his property against the illegal acts of its officers, a citizen of another state may invoke the jurisdiction of the federal courts to maintain a like defense. A state cannot tie up a citizen of another state, having property rights within its territory invaded by unauthorized acts of its own officers, to suits for redress in its own courts. Given a case where a suit can be maintained in the courts of the state to protect property rights, a citizen of another state may invoke the jurisdiction of the federal courts."

It has been held that where the state statute provided an action at law against the county for the recovery of sums paid on account of invalid taxes that the same constitutes a plain, speedy, and adequate remedy at law. Union Pac. R. Co. v. Board of Com'rs of Weld County, Colo., 217 Fed. 540, 133 C. C. A. 392. The Supreme Court of the United States has held that the North Dakota statute permitting actions respecting title of the property or accruing on contract to be brought against the state the same as against a private person does not clearly allow an adequate remedy; and there, injunction restraining defendants from taking steps to enjoin certain taxes, was upheld. Wallace et al. v. Hines, Director General of Railroads, et al., 253 U. S. 66, 40 Sup. Ct. 435, 64 L. Ed. 782. There was no such proceeding as discuss-

ed in Union Pac. R. Co. v. Board of Com'rs of Weld County, Colo., supra, in the South Dakota statutes. The only remedy was to appear before the board of county commissioners (claimed by appellees to be acting without authority), and then appeal from their finding to the state court. Such was not the adequate remedy contemplated by the federal statute.

While the frequent exercise of equity jurisdiction is in staying the collection of taxes illegal in whole or in part, a suit in equity will not lie to restrain the assessment or collection of a tax on the sole ground that it is illegal. There must be special circumstances bringing the case under some recognized head of equity jurisdiction. The right to such equitable relief must be clear where it is asked to restrain the collection of a state tax.

In Hannewinkle v. Georgetown, 15 Wall. 547, 548 (21 L. Ed. 231), it is said:

"It has been the settled law of the country for a great many years, that an injunction bill to restrain the collection of a tax, on the sole ground of the illegality of the tax, cannot be maintained. There must be an allegation of fraud; that it creates a cloud upon the title; that there is apprehension of multiplicity of suits, or some cause presenting a case of equity jurisdiction."

In Union Pacific Railway Co. v. Cheyenne, 113 U. S. 516, 525, 526, 5 Sup. Ct. 601, 605 (28 L. Ed. 1098), the rule is clearly laid down by the court:

"It cannot be denied that bills in equity to restrain the collection of taxes illegally imposed have frequently been sustained. But it is well settled that there ought to be some equitable ground for relief besides the mere illegality of the tax; for it must be presumed that the law furnishes a remedy for illegal taxation. It often happens, however, that the case is such that the person illegally taxed would suffer irremediable damage, or be subject to vexatious litigation, if he were compelled to resort to his legal remedy alone. For example, if the legal remedy consisted only of an action to recover back the money after it had been collected by distress and sale of the tax-payer's lands, the loss of his freehold by means of a tax sale would be a mischief hard to be remedied. Even the cloud cast upon his title by a tax under which such a sale could be made, would be a grievance which would entitle him to go into a court of equity for relief. Judge Cooley fairly sums up the law on this subject as follows: 'To entitle a party to relief in equity against an illegal tax, he must by his bill bring his case under some acknowledged head of equity jurisdiction. The illegality of the tax alone, or the threat to sell property for its satisfaction, cannot, of themselves, furnish any grounds for equitable interposition. In ordinary cases a party must find his remedy in the courts of law and it is not to be supposed he will fail to find one adequate to his proper relief. Cases of fraud, accident or mistake, cases of cloud upon the title to one's property, and cases where one is threatened with irremediable mischief, may demand other remedies than those the common law can give, and these in proper cases, may be afforded

in courts of equity.' This statement is in general accordance with the decisions of this court as well as of many state courts."

See, also, Dows v. City of Chicago, 78 U. S. (11 Wall.) 108, 20 L. Ed. 65; State Railroad Tax Cases, 92 U. S. 575, 23 L. Ed. 663; Ogden City v. Armstrong, 168 U. S. 224, 18 Sup. Ct. 98, 42 L. Ed. 444; Pittsburgh, etc., Railway v. Board of Public Works of W. Va., 172 U. S. 32, 19 Sup. Ct. 90, 43 L. Ed. 354; Singer Sewing Mach. Co. v. Benedict, 229 U. S. 481, 33 Sup. Ct. 942, 57 L. Ed. 1288; Ohio Tax Cases, 232 U. S. 576, 34 Sup. Ct. 372, 58 L. Ed. 737.

In Keokuk & Hamilton Bridge Co. v. Salm et al., 258 U. S. 122, 42 Sup. Ct. 207, 66 L. Ed. 496, the alleged invalidity consisted in discriminatory overvaluation. There was no claim of absolute illegality in the assessment. Appellant had a remedy with the board of review to correct the assessment, and the court said that resort to the suit to prevent either a sale for an illegal tax creating a cloud upon title or other irreparable injury had no basis.

In Union Pacific R. Co. v. Board of Com'rs of Weld County, 217 Fed. 540, 133 C. C. A. 392, this court said with reference to the casting of a cloud upon real property creating an "equitable circumstance" that the remedy which the statute prescribes will dissipate any such cloud, and says:

"Those cases which hold that a cloud upon the title to real property affords a ground for equitable relief are not applicable, when the taxpayer is given the remedy of paying his taxes and recovering back any sum which the courts shall hold to have been illegally exacted."

There is no such provision in the South Dakota statute.

In Boise Artesian Hot & Cold Water Co. v. Boise City, 213 U. S. 276, 29 Sup. Ct. 426, 53 L. Ed. 796, it was held that equity should not enjoin the collection of a tax on the ground of cloud on title when the tax can only be collected in suit at law in which the defense of its illegality is open, and further it not appearing that the tax is a lien on any of complaint's property.

In Indiana Manufacturing Co. v. Koehne, 188 U. S. 681, 23 Sup. Ct. 452, 47 L. Ed. 651, certain assessments upon shares of stock in a corporation were involved. The court found that as there was no lien created on real estate there was no cloud on title.

It is well settled that an assessment that will put a cloud on titles gives rise to equitable jurisdiction unless there is an adequate remedy at law. Union Pacific Railway Co. v. Cheyenne, 113 U. S. 516, 5 Sup. Ct. 601, 28 L. Ed. 1098; Green, Auditor, et al., etc., v. Louisville & Interurban Railroad Co., 244 U. S. 499, 37 Sup. Ct. 673, 61 L. Ed. 1280, Ann. Cas. 1917E, 88.

Section 8463 of the South Dakota Statutes provides for the board of county commissioners fixing the proportion of benefits of proposed drainage among the lands affected.

Section 8464 provides for the board making an assessment against each tract and property affected, and this is collectible

by the treasurer's office. Clearly the assessment would create a cloud upon the title. Fixing the proportion of benefits being preliminary to the assessment and a part of the machinery of assessment, likewise, we think, creates a cloud upon the title and gives equity jurisdiction. Shelton v. Platt, 139 U. S. 591, 11 Sup. Ct. 646, 35 L. Ed. 273; Ohio Tax Cases, 232 U. S. 576, 34 Sup. Ct. 372, 58 L. Ed. 737; Hopkins et al. v. Walker et al., 244 U. S. 486, 37 Sup. Ct. 711, 61 L. Ed. 1270.

Was the case prematurely brought? It is claimed that inasmuch as the board of county commissioners had not assessed the taxes complained of consequently the suit is premature.

In Western Union Telegraph Co. v. Howe et al., 180 Fed. 44, 103 C. C. A. 398, it was held by this court that the suit was prematurely brought because the telegraph company did not pursue the remedy afforded by law to have its assessment corrected by the state board of equalization. That was not a case, however, where it was claimed that the entire proceedings were without authority and illegal, as is the case here. The jurisdiction to act was not questioned.

In Keokuk & Hamilton Bridge Co. v. Salm et al., 258 U. S. 122, 42 Sup. Ct. 207, 66 L. Ed. 496, the question involved was the amount of the tax. It was not claimed that the proceedings were illegal.

In the late case of Milheim et al. v. Moffat Tunnel Improvement District et al., 262 U. S. 710, 43 Sup. Ct. 694, 67 L. Ed. 1194, there was no question of jurisdiction of the taxing body as there is here. Plaintiff's property was by legislative act placed within the taxing district.

The proceeding here involved, being without authority, the situation is quite different from where the only question involved is the inequality of taxes levied by a board having jurisdiction to act. The actions, we are satisfied, were not premature.

Appellants urgently insist that it does not appear from the record that the amount in controversy, exclusive of interest or costs, exceeds the sum or value of $3,000, and that the statements in the various complaints of appellees so alleging are false, and stated with the fraudulent purpose of imposing upon the jurisdiction of the federal court; that no tax has in fact been assessed; that the apportionment of benefits is tentative and subject to correction; and that there is no way of determining what the amount of the assessment against the respective appellees would have been had the proceedings not been interrupted by the injunctions; and that there is in fact no sum whatsoever in controversy between the parties hereto.

It has been held that future, undetermined, unaccrued, or unspecified taxes cannot be taken into consideration to give jurisdiction; that the court cannot engage in speculation as to such taxes. Holt v. Indiana Manufacturing Co., 176 U. S. 68, 20 Sup. Ct. 272, 44 L. Ed. 374; New England Mortgage Security Co. v. Gay, 145 U. S. 123, 12 Sup. Ct. 815, 36 L. Ed. 646; Citizens' Bank

v. Cannon, 164 U. S. 319, 17 Sup. Ct. 89, 41 ... Ed. 451; Washington & Georgetown R. R. Co. v. District of Columbia, 146 U. S. 227, 13 Sup. Ct. 64, 36 L. Ed. 951. Also, that where there is a suit to enjoin collection of a tax the amount of the tax is the test of jurisdiction. Linehan Ry. Transfer Co. v. Pendergrass, 70 Fed. 1, 16 C. C. A. 585; Eachus v. Hartwell et al. (C. C.) 112 Fed. 564; Washington & Georgetown R. R. Co. v. District of Columbia, 146 U. S. 227, 13 Sup. Ct. 64, 36 L. Ed. 951; Board of Trustees of Whitman College v. Berryman et al. (C. C.) 156 Fed. 112; Citizen's Bank v. Cannon, 164 U. S. 319, 17 Sup. Ct. 89, 41 L. Ed. 451; City of Ottumwa, Iowa, v. City Water Supply Co., 119 Fed. 315, 56 C. C. A. 219, 59 L. R. A. 604.

It has also been held that where the complaint alleges the amount in controversy to equal the jurisdictional requirement and the contrary does not appear to a certainty from the evidence, that the jurisdiction will be sustained. Maffet v. Quine (C. C.) 95 Fed. 199; Von Schroeder v. Brittan (C. C.) 93 Fed. 9.

What is the situation here? Each one of the appellees is threatened with an assessment of more than $3,000. The Northern States Power Company is threatened with one of $50,000. And further, certain appellees who have no property within the original drainage districts No. 1 and No. 2 are brought into the district and made liable to further assessments for maintenance and repair of ditches. It appears from the record that the board of county commissioners had fixed against the different appellees the proportion of benefits on a unit basis. It is without question that the county commissioners have issued approximately $255,000 worth of warrants for this work, and that the amount due thereon is about $300,000. It is a matter then of mere mathematical calculation to arrive at the threatened assessment against each one of appellees.

Exhibit C is the notice to the various parties against whom proportions of benefits have been fixed. It provides as follows, to wit:

"All such owners and all persons interested are hereby notified and summoned to show cause at the time and place aforesaid why the proportion of benefits shall not be fixed as stated, and the said determination of said board made final."

If no action whatever were taken by appellees the amounts would be final, and under these circumstances we believe the amount in dispute in each case exceeds the jurisdictional requirement. The claim of amount is evidently made in good faith, and not for the mere purpose of giving the federal courts jurisdiction. We do not believe that where the board has passed a resolution fixing benefits which exceed the jurisdictional amount and are the basis of a proposed assessment, and which parties claim are fixed by the board without authority, that because said board may equalize the benefits or even find that no benefits exists the parties must wait until the final action of the board. It is suggested that the board may so equalize benefits that the jurisdictional amount will not be involved, but as the matter

stood when the case was brought each appellee was threatened with the levying of a tax for more than the jurisdictional amount, and some of the necessary steps had already been taken.

As the proportion of benefits had been fixed subject to change by the board only if appellees should convince them that their conclusion was erroneous, and in view of the claim in apparent good faith in each of the bills that the amount involved exceeded the jurisdictional amount, we hold, from a careful survey of the entire record, that the necessary amount existed in each case to give jurisdiction to the federal court.

All bills of complaint raise questions under the federal Constitution that are substantial and not merely colorable. Hence the court has jurisdiction exclusive of diversity of citizenship, which existed as to all appellees except the city of Sioux Falls, necessary amount being involved, to determine all questions in the record, and it has not lost jurisdiction by omitting to decide the constitutional ones. Silver et al., etc., v. Louisville & Nashville R. R. Co., 213 U. S. 175, 29 Sup. Ct. 451, 53 L. Ed. 753; Ohio Tax Cases, 232 U. S. 576, 34 Sup. Ct. 372, 58 L. Ed. 737; Louis. & Nash. R. R. Co. v. Finn, 235 U. S. 601, 35 Sup. Ct. 146, 59 L. Ed. 379; Greene, Auditor, et al., etc., v. Louis. & Interurban R. R. Co., 244 U. S. 499, 37 Sup. Ct. 673, 61 L. Ed. 1280, Ann. Cas. 1917E, 88.

Appellants plead estoppel against all of the appellees, and claim that appellees are not in position to maintain their actions, for the reason that as to some of the railroad companies the engineering departments have been in close touch with the drainage ditch proceedings; that some of them were assessed for benefits received upon the construction of the original drainage ditches in the same territory, received benefit thereby, and have not protested before the bringing of this action. As to some of the appellees it is claimed that their officers showed interest in the construction work and encouraged the board of commissioners to do the work; that some of the appellees, for instance, the Chicago, Milwaukee & St. Paul Railway Company, hauled men and materials used in the construction work, and stopped trains between stations to unload men and materials. As to the city of Sioux Falls, it is claimed by way of estoppel that under due authority the mayor and city auditor signed the petition for the project. There can certainly be no just claim of estoppel as to those appellees whose property was not within the area of the original drainage ditches No. 1 and No. 2. As to the other appellees, the decree related only to the property outside of the original assessment areas of drainage ditches No. 1 and No. 2. So we are to consider the situation as bearing on the question of estoppel only as to the property outside of the original assessment areas up to the time of the notice of the fixing of benefits. The various appellees as to such property had no notice, when the acts constituting the alleged estoppel took place, that the same was to be affected by the drainage construction or would be assessed for the cost thereof. Hence the claimed acts of agents and officers of appellees would not constitute estoppel. The situation

is quite different from that presented in Gilseth v. Risty (S. D.) 193 N. W. 132—at least as to all appellees except the city of Sioux Falls. We do not pass on the question of estoppel as to any appellees, as to assessments that may be made on their property within the original area of ditch No. 1 and ditch No. 2, for the purpose of maintaining such ditches.

Other questions are presented which we think are not involved in the determination of these cases.

The decree of the trial court in each case is affirmed.

Appellants,

vs

THE CITY OF SIOUX FALLS,
Appellee

APPEAL FROM THE CIRCUIT COURT OF APPEALS OF THE EIGHTH CIRCUIT.

BRIEF AND ARGUMENT FOR APPELLEE

The City of Sioux Falls, Plaintiff and Appellee, filed its bill in the District Court of the District of South Dakota praying for an injunction. From a decree granting an injunction the Defendants and Appellants appealed to the Circuit Court of Appeals of the Eighth Circuit, in which latter court the decree of the District Court was affirmed. From the decision of the Circuit Court of Appeals the defendants appeal to this Court.

This suit involves the constitutionality of the Drainage Ditch Statute of the state of South Dakota under both the federal and state constitutions and also involves the regularity and validity of proceedings taken under that statute. The facts out of which this suit arises, are, as follows:

STATEMENT OF FACTS

At the election in November, 1906, there was adopted an amendment to the constitution of South Dakota which is known as Section 6 of Article XXI of that constitution and which is as follows:

"§ 6. The drainage of agricultural lands is hereby "declared to be a public purpose and the legislature may "provide therefor, and may provide for the organization "of drainage districts for the drainage of lands for any "public use, and may vest the corporate authorities there- "of, and the corporate authorities of counties, townships "and municipalities, with power to construct levees, drains "and ditches, and to keep in repair all drains, ditches and "levees heretofore constructed under the laws of this "state, by special assessments upon the property bene- "fited thereby, according to benefits received."

The legislature of South Dakota has never enacted any law to carry into effect the powers, conferred upon it by the foregoing constitutional amendment providing for the organization of drainage districts, but has enacted, or attempted to enact various laws vesting the corporate authorities of the several counties of the state with power to construct levees, drains, and ditches and to keep the same in repair by special assessments upon the property benefited thereby.

The first drainage ditch enactment was Chapter 98 of the Session Laws of South Dakota, 1905, which was passed prior to the adoption of Section 6 of Article XXI of the South Dakota constitution. After the adoption of that section a new law was passed which is known as Chapter 134 of the Session Laws of South Dakota, 1907. The 1907 law was amended by Chapter 102 of the Session Laws of South Dakota, 1909. The 1907 law was further amended by Chapters 207 and 208 of the Session Laws of South Dakota, 1917. In 1919 the entire drainage law was recompiled and re-enacted as Sections 8458 to 8507, South Dakota Revised Code of 1919. Further amendments were enacted in 1919 which appear as Chapter 46 of the Session Laws of the First Special Session of the Sixteenth Legislature of South Dakota and by Chapters 193, 194, 195, 196, 197 and 198 of the Session Laws of South Dakota, 1921.

For the convenience of the court we are printing as Appendix A of this brief the portions of the South Dakota constitution, and as Appendix B the portions of the South Dakota laws which bear upon the questions at issue in this suit.

The Big Sioux river has its origin in a lake in the northeastern part of South Dakota and runs thence in a generally southerly direction, and in the eastern part of South Dakota, (of which state it is in places the boundary line) for about 100 miles and empties into the Missouri river at a point a short distance north of Sioux City, Iowa. In its course the Big Sioux river passes through the center of the city of Sioux Falls. It strikes Minnehaha county, in which Sioux Falls is situated, at its north line and flows in a generally southerly direction, but with many bends and curves, for a distance, in a straight line, of twenty-four miles, running in its course two and one-half miles west of the business center of the city of Sioux Falls and south to a point three miles south of the business center. It then flows in an easterly direction for about three miles and then turns north, running through the business center of the city of Sioux Falls and northerly to a point two miles from the business center. It then runs in an easterly direction for several miles when it again resumes its southerly course towards its junction with the Missouri river. The consequence is that at the city of Sioux Falls the river runs like an inverted letter "S," upon the bar of which Sioux Falls is situated.

From a point about five miles south of where the Big Sioux enters Minnehaha county it runs through a valley or flat from two to four miles in width until it reaches a point about three miles southwest of the business center of the city of Sioux Falls. From there on until it reaches the northeastern portion of the city the river is confined by high banks on either side and with no valley interposing between them.

There is comparatively little fall between the point where the Big Sioux river enters the flat about fifteen miles north of the city of Sioux Falls and the northeastern section of the city where the river passes over a series of falls of an aggregate height of more than one hundred feet. The result is that the level of the river bed, as it

passes over the falls in the northeastern portion of the city of Sioux Falls, is over one hundred feet below the level of the river at a point, four miles to the westward, where it passes to the west of the city of Sioux Falls.

About 1878, a dam was constructed for water power purposes across the Big Sioux river within the limits of the city of Sioux Falls a short distance above the falls and, between that dam and the falls, other dams were subsequently constructed, all of which were in existence long prior to any of the transactions out of which this suit arises. These dams for many years have been utilized, without complaint from any source, by the Northern States Power Company and its predecessors, as a source of water power, and upon the dams and power works several hundreds of thousands of dollars have been expended with the consent, express or implied, of the public authorities of Minnehaha county and of the city of Sioux Falls and of the property owners along the Big Sioux river.

The city of Sioux Falls, something over twenty years ago, located its municipal waterworks upon the flat north of the city, between the Big Sioux river where it flows in a southerly direction to the westward of the city and where it flows to the northward after it passes over the falls in the northeastern portion of the city. The flat where the waterworks are situated is a few feet higher than the level of the river bed to the westward of the waterworks plant and more than one hundred feet higher than the level of the river bed to the eastward. Between the two channels of the river (at this point about 3½ miles apart) there is an extensive gravel bed underlying the surface of the ground, which gravel bed is filled with water and is the source from which the city of Sioux Falls obtains its municipal water supply.

For many years, and from in fact shortly after the settlement of Minnehaha county in the late sixties and early seventies, complaints arose in regard to the flooding of the land in the valley of the Big Sioux river north of the city of Sioux Falls. The topography of the country along this valley being level and there being but little fall in the river bed for a distance of nearly thirty miles, between the north end of the flats and the falls of the Big

Sioux river, the surface waters, in times of freshets, would accumulate upon the flats and remain there for several days, and sometimes for weeks, before they gradually flowed off through the narrow river channel south of the city of Sioux Falls and through the city until they reached the falls. This situation was made still worse by the construction of the dam upon the river above the falls in 1878 which hindered still further the passage of the water along the river bed before it reached the falls. As the state of South Dakota became more and more densely settled in the counties along the Big Sioux river north of Minnehaha county, numerous drainage ditches were established, the effect of which was still further to accelerate the flow of surface water during freshets and to cause a still greater volume of water to accumulate upon the flats north of the city of Sioux Falls.

In December, 1907, the Board of County Commissioners of Minnehaha county, purporting to act under the authority of Chapter 134 Session Laws of South Dakota, 1907, established a drainage ditch known as Drainage Ditch No. 1. This ditch was some three miles in length and extended, from a point on the Big Sioux river below the falls, northward to a point on the flat north of the city of Sioux Falls. In 1910, the Board of County Commissioners, again purporting to be acting under the authority of Chapter 134 of the Session Laws of South Dakota, 1907, as amended by Chapter 102, Session Laws of South Dakota, 1909, established a second ditch, known as Drainage Ditch No. 2, which commenced at the north end of Drainage Ditch No. 1 and extended in a northerly direction for about twelve miles.

At the point Drainage Ditch No. 1 empties into the Big Sioux river below the falls it passed over a hill in a descent of about one hundred feet. The bottom of the ditch was covered along this descent with concrete, making a spillway through which the water accumulating upon the flats could run to reach the channel of the Big Sioux river below the falls.

Drainage Ditch No. 1 and Drainage Ditch No. 2 operated more or less successfully in draining the flats until the spring of 1916 at which time, during a somewhat heavy rainfall, the concrete bottom of Drainage Ditch No.

1, (or its spillway) washed out and the water began cutting a channel through the hill.

The fact that the concrete spillway had washed out did not in any manner decrease the efficiency of Drainage Ditch No. 1 and Drainage Ditch No. 2 as drainage propositions. In fact, the washout of the spillway made them still more efficient for draining purposes, and if they had been left alone they would very speedily have settled the question of drainage for the lands upon the flats. The effect of the washout was to open a passage for all of the water which accumulated upon the flats into the channel of the Big Sioux river below the falls and this channel was amply sufficient to have taken care of all of the water which ever accumulated upon the flats. In fact, it was a perfect success as a drainage proposition.

Unfortunately, while Drainage Ditch No. 1, after its spillway was washed out, succeeded in doing all in the way of drainage that the owners of the lands upon the flats desired to have done, it seriously affected other interests. If the water had been allowed to go without hindrance through the new channel it would, within a very short time, have diverted the entire course of the water in the Big Sioux river and would have formed a new channel for the river across the flats north of the city of Sioux Falls, in which channel all of the water coming down the river could have flowed into the channel below the falls without passing around and through the city of Sioux Falls and over the falls, thus cutting off about twelve miles of the river channel. The further effect would have been to destroy the waterpower formed by the dams across the Big Sioux river in the city of Sioux Falls above the falls, as the only water which would have flowed in the Big Sioux river channel through the city of Sioux Falls and over the falls would have been the water from Skunk creek, a tributary of the Big Sioux river, emptying into that stream south of the city of Sioux Falls. Another effect of allowing the river to run through its new channel would have been to destroy the municipal water plant of the city of Sioux Falls by draining the water from the gravel bed from which the city obtained its water supply.

After the spillway at the outlet of Drainage Ditch No. 1 had washed out in March, 1916, various plans were

proposed looking toward the control of the water which flowed through the ditch. Many conferences were had between the Board of County Commissioners and the representatives of the various interests affected. The Appellee was not represented at any of these conferences and never took any part in any manner in them or in the subsequent proceedings.

In October, 1916, the Board of County Commissioners took proceedings by which they attempted to establish a new ditch project which they named "Drainage Ditch No. 1 and 2." Thereafter, all proceedings with respect to Drainage Ditch No. 1 and with respect to Drainage Ditch No. 2 were abandoned and all subsequent work was done by the Board of County Commissioners upon the new project, "Drainage Ditch No. 1 and 2."

The Board of County Commissioners, after attempting to organize Drainage Ditch No. 1 and 2, proceeded to construct additional ditches, cut-offs, and dams in the flats above the city of Sioux Falls, and at the former outlet of Drainage Ditch No. 1, to construct a spillway, and other water retaining works for the purpose of controlling the flow of the water through the ditches. This work was done by the Board of County Commissioners without any regard to the requirements of the South Dakota drainage statutes and without having first had plans therefore prepared and approved by the state engineer. The most of the work was done by the board without letting a contract therefor and upon the cost-plus plan. The result was, that at the end of the construction period, the cost of the work done by the Board of County Commissioners upon Drainage Ditch No. 1 and 2 had amounted to a sum in excess of $250,000, of which upwards of $150,000 was expended upon the spillway and other water retaining works at the outlet of the ditch. For the amount expended, the Board of County Commissioners issued warrants upon the Drainage Ditch No. 1 and 2. These warrants were taken by the laborers and material men employed upon the construction work and were in most instances discounted to the local banks in Minnehaha county.

After a number of abortive attempts to levy an assessment for the purpose of raising the money to pay the warrants issued for the work done upon Drainage Ditch No.

1 and 2, the Board of County Commissioners, in June, 1921, adopted a notice of time and place for equalizing the proportion of benefits for the construction of the work on Drainage Ditch No. 1 and 2, in which notice the proportion of benefits assessed against Appellee was 3145.95 units out of a proposed total of 32549.62 units, upon the basis of which proportion the assessment against Appellee and its property would be in excess of $29,900.

The plaintiff and Appellee brought this suit to enjoin the making of any assessment upon its property for the work done upon Drainage Ditch No. 1 and 2. A temporary injunction was granted *pendente lite*. The defendants named in the bill were the Board of County Commissioners of Minnehaha County, the Auditor, and the Treasurer of that county. Subsequently, the various banks and other persons holding drainage ditch warrants filed a petition for leave to intervene in the suit. This petition was granted and answers were filed both by the defendants and by the intervenors. Upon the hearing of the suit upon its merits, a final decree was entered enjoining the Board of County Commissioners from making any assessment for the expense of the work done under the proceedings establishing Drainage Ditch No. 1 and 2. (Record pp. 86-88.) *Chicago, Rock Island & Pacific Railway Company vs Risty*, 282 Fed. 364.)

In its bill Appellee set up the facts concerning the construction of Drainage Ditches No. 1 and No. 2 and the subsequent construction of a spillway and attacked the constitutionality of the South Dakota Drainage Statute in the following allegations:

"That said purported statute of the state of South "Dakota 'Exhibit A' hereto, is unconstitutional and void, "in that the same is in violation of Section 2 of Article "VI, of the Constitution of the State of South Dakota, "and in that the same is in violation of the Fourteenth "Amendment of the Constitution of the United States; "that said Statute, 'Exhibit A', is further void and un- "constitutional in that the same provides no fixed and "determinable method or rule for the apportionment of "benefits upon the property and property owners situat- "ed within the drainage area, and especially in that said

"purported statute furnishes no fixed or determinable "basis for the apportionment of benefits upon the prop- "erty of railroad companies and other corporations, and "upon the property of municipal and quasi-municipal cor- "porations, and upon platted property in cities and vil- "lages. Said purported law, 'Exhibit A', is further un- "constitutional and void in that the same provides for an "assessment against property without the right of the "property owner to be heard thereon and without notice "of any character to the property owner; that if said ap- "portionment of benefits be made as threatened by the "said Board of County Commissioners of said Minnehaha "County, and as is provided in said notice, 'Exhibit C', "the same will constitute the taking of the property of "plaintiff and of the other property owner affected by "said notice without due process of law; that a cloud will "be placed upon the title of the plaintiff to its real prop- "erty situated within said drainage area affected by "said notice, 'Exhibit C' and that there will result a mul- "tiplicity of suits and that plaintiff and other property "owners affected will suffer irreparable injury." (Rec- ord, p. 13).

The bill also attacked the acts of the Board of County Commissioners of Minnehaha County in its proceedings relative to the construction of the spillway and other drainage works as being without jurisdiction on account of the unconstitutionality of the South Dakota Drainage Statute and also on account of such proceedings not being had in accordance with the provisions of the Statute. (Record, pp. 14-15). The apportionment of benefits made against the property of Appellee was further attacked as exorbitant, disproportionate to the assessment of other property and made upon an arbitrary and discriminatory basis. (Record, pp. 72-73).

In their answer, Appellants took issue upon the unconstitutionality of the South Dakota Drainage law and specifically set up the establishment by the Board of County Commissioners of a new ditch project under the title of "Drainage Ditch No. 1 and 2."

Upon the trial in the district court the issues involved were, under the pleadings:

1. The constitutionality of the South Dakota Drainage Ditch Statute.

2. The regularity of the proceedings of the Board of County Commissioners of Minnehaha county under the Statute.

3. The proper construction to be given to the provisions of the South Dakota Drainage Statute.

There was practically no dispute as to the facts out of which this suit arises. It was admitted by all parties to the controversy that originally the Board of County Commissioners of Minnehaha county had established two drainage ditches known respectively as Drainage Ditch No. 1 and Drainage Ditch No. 2. It was also conceded that after the spillway, at the outlet of Drainage Ditch No. 1, had been washed out, the Board of County Commissioners established a new ditch project known as Drainage Ditch No. 1 and 2.

This suit was one of six cases involving this same ditch project, but the positions taken by the plaintiffs in the various cases differed upon the proposition as to whether Drainage Ditch No. 1 and 2 was a new and independent proposition or whether it was merely a project for the maintenance and repair of Drainage Ditch No. 1 and Drainage Ditch No. 2 and consequently a continuation of those two propositions. In all of the six cases the contention of counsel for Appellants was that Drainage Ditch No. 1 and 2 was a new and independent proposition. This position was contested by plaintiffs in some of the cases who took the position that it was merely a maintenance and repair project. In the case at bar, the plaintiff (Appellee in this court) was content to coincide with the position taken by the defendants (Appellants in this court) and to base its right to an injunction upon a state of facts in which it conceded that Drainage Ditch No. 1 and 2 was a new and independent ditch proposition and not a continuation of the old Drainage Ditch No. 1 and Drainage Ditch No. 2.

In the District Court injunctions were granted to the plaintiffs in all the six cases, but in his opinion filed in the District Court, the District Judge took the position that Drainage Ditch No. 1 and 2 was merely a maintenance and repair project and a continuation of Drainage Ditch No.

1 and Drainage Ditch No. 2. (*Chicago, Rock Island & Pacific Railway Company vs Risty,* 282 Fed. 364).

While we contend in this court, as we did in the Circuit Court of Appeals, that the decree of the District Court was properly entered and should be affirmed, we do not act as the defenders of the decree upon the grounds upon which it was based by the District Judge. The decree was, in our view of the controversy, properly entered, but the same decree should have been entered had the court been of the opinion that Drainage Ditch No. 1 and 2 was an independent and original ditch proposition and not a continuation and repair project of Drainage Ditch No. 1 and Drainage Ditch No. 2. In this position we do not coincide with the views expressed by counsel for the Appellees in other of the six cases now before this court. We accept the position of counsel for the Appellants that Drainage Ditch No. 1 and 2 was an original and independent ditch proposition and upon that basis shall proceed with our argument in support of the decree of the District Court and the decision of the Circuit Court of Appeals.

An appeal was taken by the defendants and by the intervenors to the Circuit Court of Appeals for the Eighth Circuit, in which court the decree of the District Court was affirmed. *Risty vs Chicago, Rock Island & Pacific Railway Company,* 297 Fed 710. The defendants and intervenors then filed a petition in this Court for a writ of certiorari and, at the same time, took this appeal. The application for a certiorari was denied. *Risty vs City of Sioux Falls,* 266 U. S. 622. The case is now before this court upon the appeal.

The foregoing being the facts in this suit, we submit on behalf of the Appellee, the City of Sioux Falls, the following:

BRIEF AND ARGUMENT

I.

THE SOUTH DAKOTA DRAINAGE LAW IS IN VIOLATION OF THE FOURTEENTH AMENDMENT TO THE CONSTITUTION OF THE UNITED STATES AND IS THEREFORE UNCONSTITUTIONAL.

The first proposition which we desire to present for the consideration of the Court is that the entire South Dakota drainage law is unconstitutional, our contention being that it is in violation of the "due process of law" clause of the fourteenth amendment to the federal constitution. The consideration of this question involves an analysis of the provisions of the South Dakota drainage statute as it existed at the time the Board of County Commissioners of Minnehaha county attempted to establish Drainage Ditch No. 1 and 2 and did the work thereunder.

The first statutory step in the establishment of a drainage ditch is the filing of a petition. (§2, ch. 134, Laws of 1907; §8459, R. S. 1919). This petition must "set forth "the necessity for the drainage, a description of the pro- "posed route by its initial and terminal points and its "general course, or by its exact course in whole or in part, "and a *general statement of the territory likely to be "affected thereby"*. It will be noticed that in the petition, which is the initial and jurisdictional step in the for mation of a drainage ditch, it is not necessary to include a description of the property which will be affected and upon which assessments will be levied to pay the costs of the construction of the ditch. All that is required is a "general statement of the territory likely to be affected "thereby." The next step in the proceeding is for the County Auditor to transmit a copy of the petition to the State Engineer, who, together with the Board of County Commissioners is required to inspect the proposed route and "if in the opinion of the Board and the State Engi- "neer it is necessary," the Board of County Commissioners causes a survey of the proposed drainage to be made by a competent engineer, selected by the Board, but under the general supervision of the State Engineer. This survey is primarily for the purpose of aiding the Board in determining the necessity for the proposed drainage but

it may be a complete survey such as will be required for the construction of the drainage and the assessment of its cost. All this is within the jurisdiction of the Board of County Commissioners. The survey may extend to other lands than those affected by the proposed drainage for the purpose of determining the best practical method of draining the entire section of country of which the lands proposed to be drained, or a portion of them, are a part. (§ 3, ch. 134, Laws of 1907; § 1, ch. 102, Laws of 1909; §8460, R. S., 1919). While the survey may, at the option of the Board of County Commissioners, be a complete survey for the purpose of ascertaining all facts required for the construction of the proposed drainage and the assessment of its cost, such complete survey is not rendered obligatory by the statute and the Board of County Commissioners may have made only so much of the survey as may be necessary to determine the necessity for the proposed drainage.

After receiving the report of the surveyor, the Board of County Commissioners is required to determine the "exact line and width of the ditch, if the same shall not "be fixed in the petition, and shall file its determination "with the petition." The Board then fixes the time and place for the hearing of the petition and gives notice by publication in a newspaper for two weeks and by posting copies of the notice in three public places near the route of the proposed drainage. The notice "shall describe the "route of the proposed drainage and the tract of country "likely to be affected thereby in general terms, the sep- "arate tracts of land through which the proposed drain- "age will pass and give the names of the owners thereof "as appears from the records of the office of the Register "of Deeds on the date of the filing of the petition, and "shall refer to the files in the proceeding for further par- "ticulars." The notice shall also "summon *all persons* "*affected* by the proposed drainage to appear at such "hearing and show cause why the proposed drainage shall "not be established and constructed." (§ 4, ch. 134, Laws of 1907; § 2, ch. 102, Laws of 1909; § 8461, R. S. 1919). This notice is the only notice given to property owners prior to the establishment of a drainage ditch and is the only notice under which the Board can acquire jurisdic-

tion to make an assessment. The owners are named of the separate tracts of land through which the proposed drainage will pass but no description is given of the property *affected by the proposed drainage ditch or which will be assessed for the cost of the construction thereof.* The notice merely describes the route of the proposed drainage and the "tract of country likely to be affected thereby *"in general terms"* and then summons *"all persons af-"fected by the proposed drainage"* to appear at the hearing. A notice designating as the tract of country "likely "to be affected thereby in general terms" would be sufficient, if it named as such "tract of country" the entire county in which the drainage ditch is to be constructed. Nothing whatever is required in the notice by which any property owner, other than one owning land through which the ditch is to be constructed, is appr ised that he is affected or that his land will be assessed for the construction of the proposed drainage ditch. In fact, all that the South Dakota law requires is for the Board of County Commissioners of a South Dakota county to publish and post a general notice summoning "all persons affected" to appear at the hearing, in order to support an assessment, for the construction of the ditch, upon all of the real property situated within the county limits. There is absolutely nothing in the statutory notice to inform any property owner that he will be called upon to pay an assessment. After the ditch is constructed, the Board of County Commissioners is at liberty, under the South Dakota statute, to extend the assessment to all property in every direction up to the county boundary lines. If this be sufficient notice, then after it is given, the Board of County Commissioners has the power to assess for the cost of the construction of any ditch every acre of property within the county limits.

At the hearing upon the petition, the South Dakota statute kindly permits "any person interested" to appear and contest the statements of the petition and matters set forth in the surveyor's report and the finding of the Board as to the width and route of the proposed ditch. After the hearing, the County Board may establish the drainage ditch. (§ 5, ch. 134, Laws of 1907; § 3, ch. 102, Laws of 1909; § 8462, R. S. 1919).

After the establishment of the drainage ditch, the Board of County Commissioners "shall fix the proportion of benefits of the proposed drainage among the lands affected and shall appoint a time and place for equalizing the same." (§6, ch. 134, Laws of 1907; § 4, ch. 102, Laws of 1909; § 8463, R. S. 1919). There is no statutory requirement as to how soon after the establishment of the drainage ditch this shall be done and it is not necessary that it be done before the drainage project has been completed. It must be done before an assessment is made for the purpose of paying the cost of the establishment of the drainage project but the assessment, when made, includes all costs already incurred, or thereafter to be incurred. (§ 7, ch. 134, Laws of 1907; § 5, ch. 102, Laws of 1909; ch. 130, Laws of 1911; § 8464, R. S. 1919.)

The notice of equalization of proportion of benefits is given by publication once in each week for two consecutive weeks in a newspaper of the county and by posting copies of the notice in three public places near the route of the proposed drainage. The law requires that the "notice "shall state the route and the width of the drainage estab- "lished, a description of each tract of land affected by "the proposed drainage and the names of the owners of "the several tracts of land as appears from the records "of the office of the Register of Deeds, at the date of filing "of the petition, and the proportion of benefits fixed by "each tract of property, taking any particular tract as a "unit, and shall notify all such owners to show cause why "the proportion of benefits shall not be fixed as stated." (§ 6, ch. 134, Laws of 1907; § 4, ch. 102, Laws of 1909; § 8463, R. S. 1919). Here for the first time there is published a description of each tract of land "affected" by the proposed drainage and the names of the owners of such tracts. As in the case at bar, the work may have been completed and an expense of over a quarter of a million dollars incurred before the Board of County Commissioners determines what particular lands are "affected" by the proposed drainage and gives notice to the owners of such lands. A property owner for the first time notified that his land is "affected" by the proposed drainage has no right to object in any manner to the establishment of the drainage project. He has nothing to say in re-

gard to its manner or cost of construction; he has no voice in the selection of the particular tract of land taken as a unit; and all concerning which he can be heard is as to whether the proportion of benefits "shall not be fixed "as stated."

It is now too late for the property owner to escape. He is like a rat in a trap. All that he can do is to appear before the Board of County Commissioners and object to the proportion of benefits which has been assessed against him and ask to have that proportion reduced by raising the proportion of some other property owner. He is precluded from raising any question whatsoever as to the right to include his property within the drainage area. He has nothing to say as to the necessity for the drainage project or as to its manner of construction or its cost. Without any notice, either personal or constructive, his property has been included in the drainage area under the general proclamation of the Board of County Commissioners and he has no redress.

Theirs not to make reply,
Theirs not to reason why,
Theirs but to do and die,

even though

Someone had blundered.

The property owner cannot question the validity of the proceedings. All that is left for him to do is to pay.

Our contention is that the South Dakota drainage statute is in violation of the due process of law clause of the fourteenth amendment to the federal constitution for the reason that no opportunity is given a property owner, whose property is "affected" by the proposed drainage project, to appear prior to the doing of the work and the making of the assessment for the construction cost.

In support of the constitutionality of the South Dakota drainage statute, counsel for appellants have cited *Spencer vs. Merchant*, 125 U. S. 345. That case was decided by a divided court. The legislature of the state of New York had, by express enactment, determined that certain lands should be included within an assessment district in which the cost of the improvement was to be proportioned. The majority of the court held "that the deter-"mination of the territorial district which should be taxed

"for local improvement is within the province of legisla-
"tive discretion." The courts in this and a line of suc-
ceeding cases have made a clear distinction between cases in which a taxing district has been established by an act of the legislature and cases in which special assessments are to be made by some taxing body upon the property "beneficially affected" but not included within any taxing district established by legislative enactment. In the cases of taxing districts established by act of the legislature no notice need be given to the property owners of the inclusion of their property within the district, but a different rule applies in cases in which the taxing district is determined by the area of the land "beneficially affected."

Fallbrook Irrigation District vs Bradley, 164 U. S. 112, also cited by counsel in support of the constitutionality of the South Dakota drainage law, is, when carefully read, a strong authority against the constitutionality of the South Dakota statute. In the very elaborate opinion in this case the Court (p. 167) says:

"The legislature not having itself described the dis-
"trict, has not decided that any particular land would or
"could possibly be benefited as described, and, therefore,
"it would be necessary to give a hearing at some time to
"those interested upon the question of fact whether or
"not the land of any owner which was intended to be in-
"cluded would be benefited by the irrigation proposed. If
"such a hearing were provided for by the act, the de-
"cision of the tribunal thereby created would be sufficient.
"Whether it is provided for will be discussed when we
"come to the question of the proper construction of the
"act itself."

Later on in the opinion the court discusses the question whether the statute does provide for a hearing prior to the formation of the district and holds that under the provision of the statute under consideration and under the construction given it by the supreme court of California, by which state it was enacted, the right of hearing is given the property owner prior to the formation of the district. The court discusses the statute (pp. 170-172):

"We come now to the question of the true construc-
"tion of the act. Does it provide for a hearing as to
"whether the petitioners are of the class mentioned and

"described in the act and as to their compliance with the "conditions of the act in regard to the proceedings prior "to the presentation of the petition for the formation of "the district? Is there any opportunity provided for a "hearing upon notice to the land owners interested in the "question whetheir their lands will be benefited by the "proposed irrigation? We think the right to a hearing "in regard to all these facts is given by the act and that it "has been practically so construed by the Supreme Court "of California in some of the cases, above cited from the "reports of that court and in the case cited in the briefs "of counsel. We should come to the same conclusion from "a perusal of the act. The first two sections provide for "the petition and a hearing. The petition is to be signed "by a majority of the holders of title to lands susceptible "of one mode of irrigation, etc. This petition is to be pre-"sented to the board of supervisors at a regular meeting, "and notice of intended presentation must be published "two weeks before the time at which it is to be presented. "The board shall hear the same, shall establish and de-"fine the boundaries, although it cannot modify those de-"scribed in the petition, so as to except from the district "lands susceptible of irrigation by the same system of "works applicable to the other lands in the proposed dis-"trict, and the board cannot include in the district, even "though included in the description in the petition, lands "which shall not, in the judgment of the board, be bene-"fited by irrigation by said system.

"If the board is to hear the petition upon notice, and "is not to include land which will not, in its judgment, be "benefited by irrigation by the system, we think it fol-"lows as a necessary and a fair implication that the per-"sons interested in or who may be affected by the pro-"posed improvement have the right under the notice to "appear before the board and contest the facts upon which "the petition is based, and also the fact of benefit to any "particular land included in the description of that pro-"posed district.

"It is not an accurate construction of the statute to "say that no opportunity is afforded the landowner to test "the sufficiency of the petition in regard to the signers "thereof and in regard to the other conditions named in

"the act; nor is it correct to say that the power of the "board of supervisors is, in terms, limited to making such "changes in the boundaries proposed by the petitioners "as it may deem proper, subject to the conditions named "in the act.

"When the act speaks of a hearing of the petition, "what is meant by it? Certainly it must extend to a "hearing of the facts stated in the petition, and whether "those who sign it are sufficient in number and are among "the class of persons mentioned in the act as alone having "the right to sign the same. The obvious purpose of the "publication of the notice of the intended presentation of "the petition is to give those who are in any way interest-"ed in the proceeding an opportunity to appear before "the board and be heard upon all the questions of fact, "including the question of benefits to lands described in "the petition. As there is to be a hearing before the "board, and the board is not to include any lands which "in its judgment will not be benefited, the plain construc-"tion of the act is that the hearing before the board in-"cludes the question as to the benefits of the lands, be-"cause that is one of the conditions upon which the final "determination of the board is based, and the act cannot "in reason be so construed as to provide that while the "board is to give a hearing on the petition it must never-"theless decide in favor of the petitioners, and must estab-"lish and define the boundaries of the district, although "the signers may not be fifty, or a majority of the hold-"ers of title, as provided by the act, and notwithstanding "some other defect may become apparent upon the hear-"ing."

It will be seen in *Fallbrook Irrigation District vs Bradley* that the California statute differs from the South Dakota statute in that the petition must "particularly de-"scribe the proposed boundaries of such districts" and the petition itself must be published. After the petition is published and has been passed upon by the Board of Supervisors the question of the formation of the irriga-tion district is submitted to an election of the electors of the district who are also freeholders. (*Fallbrook Irriga-tion District vs Bradley*, 164 U. S. 112, pp. 116-117). These facts differentiate the statute passed upon in *Fall-*

brook Irrigation District vs Bradley from the South Dakota statute under consideration. Under the California statute the boundaries of the proposed district are fixed in the first instance and after they have been determined then the question of the formation of the district is put to a vote of the freeholder electors. We submit therefore, that the decision in *Fallbrook Irrigation District vs Bradley* is a distinct authority in favor of our position that the South Dakota drainage statute is unconstitutional. The court expressly determines in that case that notice must be given to the property owner of the formation of the district before his property can be included in it, and one of the requisites of notice is that the property owner be advised in some manner, either actually or constructively, that his land will be included within the limits of the proposed project.

Embree vs Kansas City Road District, 240 U. S. 242, is another case relied upon by counsel in support of the constitutionality of the South Dakota law. Here, again, is a case which we submit directly sustains our contention as to the invalidity of the South Dakota statute. The Court in the opinion (pp. 246-248) says:

"The district was not established or defined by the "legislature, but by an order of the county court made "under a general law. Whether there was need for the "district and, if so, what lands should be included and "what excluded was committed to the judgment and dis-"cretion of that court subject to these qualifications: "First, that the district should contain at least 640 acres "of contiguous land and be wholly within the county; sec-"ond, that the court's action should be invoked by a peti-"tion signed by the owners of a majority of the acres in "the proposed district, and, third, that public notice—con-"ceded to be adequate—should be given, by the clerk of "the court, of the presentation of the petition and the "date when it would be considered, and that owners of "land within the proposed district should be accorded an "opportunity to appear, either collectively or separately, "and oppose its formation. In this connection the statute "says: 'The court shall hear such petition and remon-" 'strance, and shall make such change in the boundaries " 'of such proposed district as the public good may re-

"'quire and make necessary, and if after such changes "'are made it shall appear to the court that such petition "'is signed or in writing consented to by the owners of "'a majority of all the acres of land within the district "'as so changed, the court shall make a preliminary order "'establishing such public road district, and such order "'shall set out the boundaries of such district as estab-"'lished . . . but the boundaries of no district shall be "'so changed as to embrace any land not included in the "'notice made by the clerk unless the owner thereof shall "'in writing consent thereto, or shall appear at the hear-"'ing and is notified in open court of such fact and given "'an opportunity to file or join in a remonstrance.' The "order actually made shows that four of the present plain-"tiffs, with three others, appeared in opposition to the "petition, recites that 'the court, after hearing and con-"'sidering said petition and said protests and remon "'strances and all evidence offered in support thereof, "'finds that the public good requires and makes necessary "'the organization, formation and creation of such pro-"'posed public road district . . . with boundaries as stated "'in said petition,' and sets out the boundaries of the "district as established.

"The sole purpose in creating the district, as the "statute shows, was to accomplish the improvement of "public roads therein—the particular roads to be desig-"nated by the district commissioners and an approving "vote of the land owners.

"As the district was not established by the legisla-"ture but by an exercise of delegated authority, there was "no legislative decision that its location, boundaries and "needs were such that the lands therein would be benefit-"ed by its creation and what it was intended to accom-"plish, and, this being so, it was essential to due process "of law that the land owners be accorded an opportunity "to be heard upon the question whether their lands would "be thus benefited. If the statute provided for such a "hearing, the decision of the designated tribunal would be "sufficient, unless made fraudulently or in bad faith. "*Fallbrook Irrigation District vs Bradley*, 164 U. S. 112, "174-175.

"Did the statute contemplate such a hearing? We

"have seen that it required that adequate public notice "be given of the presentation of the petition for the crea- "tion of the district and the time when it would be con- "sidered, made provision for the presentation of remon- "strances by owners of lands within the proposed district, "and directed that the petition and remonstrances be "heard by the county court, that the court make such "change in the boundaries 'as the public good may re- "'quire' and that the boundaries be not enlarged unless "the owners of the lands not before included consent in "writing or appear at the hearing and be given an oppor- "tunity to present objections. That a hearing of some "kind was contemplated is obvious, and conceded."

The case of *Soliah vs Heskin*, 222 U. S. 522, is strongly relied upon by counsel. That is a case arising under the North Dakota drainage law. The opinion at first glance would seem to support the contention of counsel for Appellants but an examination of the North Dakota statute, upon which the case arose, discloses the fact that the North Dakota law was not subject to the same objections which are urged against the South Dakota enactment. Under the North Dakota statute, a petition for the construction of the drain is filed with the board of drain commissioners. This petition designates the starting point and terminus and general course of the proposed drain. The board of drain commissioners then employs surveyors who prepare profiles, plans, and specifications of the proposed drain, an estimate of the cost thereof, and a map or plat of the lands to be drained in duplicate, showing the regular subdivisions thereof, one copy of which is filed in the office of the county auditor in the county in which the drain is proposed to be constructed and the other with the board of drain commissioners, subject to inspection. Upon the filing of the surveyor's report, the board of drain commissioners fixes a date and public place for hearing objections to the petitions and gives notice of such hearing. The notices must contain a copy of the petition and a statement of the date of filing of the surveyor's report and the date when the board will act upon the petition, must be signed by a majority of the members of the drainage board and "shall be sent by "registered mail to the last known address of each and

"every *owner of land which may be affected* by the pro-"posed drain." The North Dakota statute therefore requires that the names of "each and every owner of land "which may be affected" be determined and actual notice given these at the very inception of the project and this notice must be given by sending to each owner a copy of the petition and of a statement of the date of filing the surveyor's report and the date upon which the board will act upon the petition. That is a very different proposition from merely publishing notice "to all persons whose "property is affected" without first determining who are affected, as required by the South Dakota statute. The opinion in the case of *Soliah vs Heskin* must consequently be read in the light of the North Dakota statute which provides for the giving of notice at two stages of the proceedings to the property owner, first, a notice before the drainage district is formed, and, second, a notice when the assessment of benefits is made. The North Dakota statute provides exactly the thing for the want of which the South Dakota statute is unconstitutional.

Counsel for Appellants place great reliance upon the recent case of *Milheim vs Moffat Tunnel District*, 262 U. S. 710. That case is clearly to be distinguished from the case at bar. It is a case arising upon an assessment made in a taxing district, the limits of which had been fixed by act of the legislature of the state of Colorado. The supreme court held, following *Spencer vs Merchant*, 125 U. S. 345, and other similar cases, that the legislative authority of a state extends to the formation of taxing districts and that a state legislature can enact a law fixing the boundaries of a taxing district without giving notice to the owners of property included therein. That is an entirely different proposition from the one arising under the South Dakota drainage law and the decision of the supreme court in *Milheim vs. Moffat Tunnel District* is not an authority in support of the South Dakota statute which on its face does not attempt to form a taxing district by legislative enactment.

The case of *Voight vs Detroit City*, 184 U. S. 115, was cited by JUDGE ELLIOTT in his opinion deciding this case in the District Court. This case is one of a line of cases involving the making of special assessments in cities

for various municipal purposes. See also *St. Louis Land Company vs Kansas City,* 241 U. S. 419. In this line of cases the courts hold that cities organized under general laws or special acts of the legislature may impose special assessments under general statutes authorizing the levying of assessments in proportion to benefits. In all such cases, it is held by the courts, some opportunity must be given the taxpayer to be heard as to the proportion of the benefits to be assessed against his property but the property owner is not entitled to a hearing upon the question of the determination whether the improvements shall be made for which the special assessment is levied.

In the case of *Central of Georgia Railway Company vs Wright,* 207 U. S. 127, the Supreme Court held (quoting from the syllabus): "Due process of law requires "that opportunity to be heard as to the validity of the tax "and the amount of the assessment be given to a taxpay-"er, who, without fraudulent intent and in the honest be-"lief that it is not taxable, withholds property from tax "returns, and this requirement is not satisfied where the "taxpayer is allowed to attack the assessment only for "fraud and corruption."

In *Londoner vs Denver,* 210 U. S. 373, the Court, passing upon a Colorado statute, says:

"In the assessment, apportionment and collection of "taxes upon property within their jurisdiction the Con-"stitution of the United States imposes few restrictions "upon the States. In the enforcement of such restric-"tion as the Constitution does impose this court has re-"garded substance and not form. But where the legis-"lature of a State, instead of fixing the tax itself, com-"mits to some subordinate body the duty of determin-"ing whether, in what amount, and upon whom it shall "be levied, and of making its assessment and apportion-"ment, due process of law requires that at some stage "of the proceedings before the tax becomes irrevocably "fixed, the taxpayer shall have an opportunity to be "heard, of which he must have notice, either personal, by "publication, or by a law fixing the time and place of the "hearing. *Hager vs Reclamation District,* 111 U. S. 701; "*Kentucky Railroad Tax Cases,* 115 U. S. 321; *Winona &* "*St. Peter Land Co. vs Minnesota,* 159 U. S. 526, 537;

"*Lent vs Tillson,* 140 U. S. 316; *Glidden vs Harrington,* "189 U. S. 255; *Hibben vs Smith,* 191 U. S. 310; *Security* "*Trust Co. vs. Lexington,* 203 U. S. 323; *Central of* "*Georgia vs Wright,* 207 U. S. 127. It must be remem- "bered that the law of Colorado denies the landowner "the right to object in the courts to the assessment, upon "the ground that the objections are cognizable only by "the boards of equalization.

"If it is enough that, under such circumstances, an op- "portunity is given to submit in writing all objections to "and complaints of the tax to the board, then there was a "hearing afforded in the case at bar. But we think that "something more than that, even in proceedings for tax- "ation, is required by due process of law. Many require- "ments essential in strictly judicial proceedings may be "dispensed with in proceedings of this nature. But even "here a hearing in its very essence demands that he who "is entitled to it shall have the right to support his alle- "gations by argument however brief, and, if need be, by "proof, however informal. *Pittsburg &c Railway Co. vs* "*Backus,* 154 U. S. 421, 426; *Fallbrook Irrigation District* "*vs Bradley,* 164 U. S. 112, 171, *et seq.* It is apparent "that such a hearing was denied to the plaintiffs in error. "The denial was by the city council, which, while acting "as a board of equalization, represents the state. *Ray-* "*mond vs Chicago Traction Co.,* 207 U. S. 20. The as- "sessment was therefore void, and the plaintiffs in error "were entitled to a decree discharging their lands from "a lien on account of it."

In *Turner vs Wade,* 254 U. S. 64, the Court held (quoting from the syllabus) as follows:

"The Georgia Tax Equalization Act (Laws, 1913, p. "123 §§ 6-7), empowers the Board of County Tax Assess- "ors to assess property for taxation and requires it to "notify the taxpayer of changes made in his returns; it "gives him, if dissatisfied, the right to demand an arbitra- "tion, and provides that a majority of three arbitrators, "one appointed by him, one by the Board and the third by "the two so selected, shall fix the assessment; but the "arbitrators must render their decision within ten days "from the naming of the arbitrator by the board, other- "wise the Board's decision—i. e., its assessment—stands

"affirmed; and no notice is afforded the taxpayer before "the making of the Board's assessment, nor any oppor- "tunity to be heard concerning it save that before the "arbitrators. Held, that an assessment so made by the "Board of County Tax Assessors, increasing the valua- "tion returned by a property owner, without notice or "hearing, was without due process of law, where his rem- "edy by arbitration proved abortive because the arbitra- "tors, though agreeing that the assessment was excessive, "could no two of them unite on a new assessment before "the ten day limitation expired."

We contend that an examination of the decisions of this Court pertinent to this case discloses that the following principles of law have been laid down:

First: That "due process of law" requires that at some stage of the proceedings the taxpayer must have an opportunity to appear and be heard *both as to the validity of the tax and as to its amount.*

Second: That the state legislature possesses the authority, by direct legislative enactment, to establish taxing districts and to fix the boundaries thereof without notice to the property owners included within such district.

Third: That where, by direct legislative enactment, certain territory has been formed into a taxing district the taxing authorities of such district may impose special assessments upon the property situated within the taxing district, pursuant to powers conferred by the legislature upon the taxing authorities, without first giving the property owner an opportunity to be heard as to the necessity for the making of the improvement, but in such cases the taxpayer must be given an opportunity to be heard as to the amount of the tax which he is to be compelled to pay.

Fourth: That in cases in which a taxing area or district is not formed by direct act of the legislature but is formed for the making of some public improvement by special assessments upon the property contained in the area or district, by local officers through authority delegated to them by the legislature to act upon petition of property owners, it is *absolutely essential to the validity of the proceedings that notice be given to the property owners whose interests are affected before the taxing area or dis-*

trict can be formed, the work done, and a tax imposed. The notice is not necessarily a personal one and may be by publication *but a notice of some character is essential.*

Analyzing all of the cases upon the subject, there cannot be found a single case in which a law containing the provisions of the South Dakota drainage law has been sustained by the courts. In every instance in which a law has been held valid there was a positive requirement that notice should be given to the taxpayer of a hearing upon the question of the making of the proposed improvements. In every instance the property affected has been definitely determined before the hearing and the property owner has been advised in some manner that his property is included within the area upon which it is intended that a tax or asssesment be imposed.

Search the law reports through; there cannot be found a case in which a mere general notice directed to "all persons affected" has been held to be a sufficient notice to a property owner that his property is to be included within an assessment area.

The inequity of a law like that of South Dakota is well illustrated by the results of the proceedings of the Board of County Commissioners of Minnehaha county in the case at bar. Under a notice to "all persons affected" it is sought to assess for the construction of the works in Drainage Ditch No. 1 and 2 not only the area formerly assessed for the construction of Drainage Ditch No. 1 and for the construction of Drainage Ditch No. 2, but to assess also property situated several miles from any of the work done in Drainage Ditch No. 1 and 2 and miles away from any of the land in the area assessed for the original construction of Drainage Ditch No. 1 or of Drainage Ditch No. 2. Property, that could not by any possibility be drained by the work done in Drainage Ditch No. 1 and 2 and that could not even remotely be benefited by that work, was included in the assessment area, and under the notice there could have been included just as well any other property situate within the limits of the 800 square miles comprising Minnehaha county.

If the County Commissioners of Minnehaha county had been required by the South Dakota drainage law to obtain, in the first instance, a survey and plat of the pro-

posed drainage area, and then to notify, either personally or by mail, publication, or posting, the property owners interested in that area, their proceedings might have had a semblance of legality, but under the South Dakota statute no such procedure is required. The County Commissioners have before them the names of the property owners through whose lands the drainage ditch passes but neither the Board of County Commissioners nor any one else has the slightest idea of what lands will be assessed for the cost of the construction of the drainage ditch. The only notice that is given to anyone is the general notice to "all persons affected." After the drainage works are completed, then for the first time a survey is made for the purpose of ascertaining what lands are "affected" and shall be assessed. The County Commissioners fix the proportion of benefits and publish the notice which, for the first time, informs the property owner that his land is liable for the assessment. It is then too late to lock the barn door. The horse has already been stolen. The drainage project has been constructed, the cost incurred, and all that is left for the property owner to do is to pay his assessment and "look pleasant." We reiterate, that never has a law of this character been sustained by this Court. All decisions of this Court, cited in support of the constitutionality of the South Dakota statute, can be easily distinguished as they are all of them based upon facts and principles of law which are not found in this case.

The bill in this case attacked directly the constitutionality of the South Dakota Drainage Statute. In the District Court the District judge upheld the constitutionality of the statute but granted an injunction upon other grounds (*Chicago, Rock Island & Pacific Railway Co. vs Risty,* 282 Fed. 364). In the Circuit Court of Appeals JUDGE KENYON, in delivering the opinion of the Court, expressly avoided passing upon the constitutional questions involved and while he expressly admitted that these questions were very grave ones, he held that their determination was not necessary to the decision of the case in that court and affirmed on other grounds the decision of the District Court.

Upon this appeal in this court, the constitutionality of the South Dakota Drainage Statute is again brought

before the court by the averments of the bill and answers and by the evidence introduced upon the trial in the District Court and preserved in the record in this Court. The position taken by the Plaintiff and Appellant is, that the South Dakota Drainage Law is in violation of the provisions of the Fourteenth Amendment to the Constitution and while, as will be discussed in a later portion of our argument, we contend that the proceedings taken by the Board of County Commissioners of Minnehaha County were so irregular as to render them invalid even if the statute were constitutional, we now submit, that on account of the unconstitutional provisions of the South Dakota Drainage Law the Board of County Commissioners of Minnehaha County possessed no authority to make assessments against the property of Appellee for the purpose of defraying the costs of the construction of Drainage Ditch No. 1 and 2.

In concluding our discussion upon this branch of this case we submit that the South Dakota drainage statute is unconstitutional in that no notice to property owners is required before a drainage assessment area is established or the work constructed and consequently the statute is unconstitutional as authorizing the taking of property without due process of law, contrary to the fourteenth amendment to the federal constitution.

II.

THE SOUTH DAKOTA DRAINAGE LAW IS IN VIOLATION OF SECTIONS 2 AND 13 OF ARTICLE VI OF THE SOUTH DAKOTA STATE CONSTITUTION AND IS THEREFORE UNCONSTITUTIONAL.

We now come to the question of the constitutionality of the South Dakota drainage law under the provisions of the South Dakota State Constitution. Section 2 of Article VI of the South Dakota Constitution provides as follows:

"§ 2. No person shall be deprived of life, liberty or "property without due process of law."

Section 13 of Article VI of the South Dakota Constitution provides as follows:

"§ 13. Private property shall not be taken for public "use, or damaged without compensation * * * * *"

It will thus be seen that the South Dakota state constitution contains not only the due process of law clause contained in the fourteenth amendment to the federal constitution but also the just compensation clause contained in the fifth amendment to the federal constitution, thus making the provisions applicable to the state which by the fifth amendment are made applicable to the federal government.

The South Dakota drainage statute has a number of times been before the South Dakota supreme court for construction in various of its phases but the question as to the constitutionality of the statute, by reason of its failure to provide a notice to property owners before the assessment area is determined, has never been presented to the South Dakota supreme court or passed upon by that court. Shortly prior to the institution of the case at bar, a suit was commenced in the circuit court of Minnehaha county, South Dakota, by one Oluf O. Gilseth against the Board of County Commissioners of Minnehaha county and other persons, to restrain certain acts with relation to the making of an apportionment of benefits for the construction of the drainage works in controversy in the case at bar. Gilseth, the plaintiff in that case, was a property owner residing upon the flats north of the city of Sioux Falls upon whose land the County Commissioners were attempting to make an assessment. The South Dakota supreme court held that Gilseth was estopped by his actions with respect to the construction of the drainage works from objecting to an assessment to pay for their cost of construction, and the decision appears as *Gilseth vs Risty*, 46 S. D. 374. In the opinion of the majority of the Court, the Court says: "We do not understand that "appellant questions the constitutionality of the law un- "der which the said project was carried out." The Court thereupon proceeds to determine the case under the assumption that the law is constitutional and that the plaintiff, Gilseth, makes no attack upon it. In the dissenting opinion filed by one of the Judges of the Supreme Court of South Dakota in *Gilseth vs Risty*, the question of the constitutionality of the statute is discussed but the opinion

of the majority of the Court decides the case under the express reservation that the question of constitutionality is not involved.

The Supreme Court of South Dakota, in the case of *Evans vs Fall River County*, 9 S. D. 130, stated the law in that jurisdiction in the following language:

"Notice to the taxpayer is a jurisdictional matter, "and his right to be heard in opposition to an assessment, "or to the amount thereof, is vitally essential to the valid- "ity of every assessment. *Black, Tax Titles*, 488; 2 "*Blackw. Tax Titles*, 953; *Cooley, Tax'n*, 227; *County of* "*Santa Clara vs Southern Pac. R. Co.*, 18 Fed. 385; *Pow-* "*ers vs. Larrabee (N. D.)*, 49 N. W. 724; *Bank vs. Maher*, "9 Fed. 884."

From the foregoing citation it will be seen that the Supreme Court of South Dakota recognizes the doctrine laid down by the Supreme Court of the United States to the effect that in a special assessment proceeding the taxpayer must have the right, at some time or other, and in some manner or other, to be heard both as to the validity and as to the amount of the assessment.

The same argument which we have made relating to the unconstitutionality of the South Dakota drainage statute under the fourteenth amendment to the federal constitution applies with equal force to the statute considered in the light of the provisions of the South Dakota constitution.

We therefore contend that the South Dakota drainage law is unconstitutional under the constitution of that State for the reason that no notice is given the property owner of the proceedings precedent to the determination of the boundaries of the assessment area.

Counsel for Appellants argue that the proceedings had in the case at bar are valid for the reason that, as a matter of fact, the drainage notice did contain a description of the property sufficient to give notice to each property owner whose lands were affected. We do not by any means concede that the notice given was sufficient to apprise property owners that their lands were to be subject to assessment for the payment of the cost of the construction of the drainage project, but even if the Board of County Commissioners of Minnehaha county had pub-

lished a notice sufficient for that purpose it would not have helped the situation. The statute does not require any such notice to be published and is consequently unconstitutional. Validity cannot be injected into an unconstitutional and void statute by taking under it the proceedings which would have to be taken under a constitutional and valid status. The law being unconstitutional, all proceedings under it are invalid *ab initio*.

III.

THE LEGISLATURE OF SOUTH DAKOTA HAS NEVER EXERCISED THE AUTHORITY GRANTED TO IT BY SECTION 6 OF ARTICLE XXI OF THE SOUTH DAKOTA CONSTITUTION PROVIDING FOR THE ORGANIZATION OF DRAINAGE DISTRICTS.

To the proper determination of this case, there is necessary a consideration of just what of the powers granted to it by the South Dakota constitution the legislature of that state has attempted to exercise by the enactment of the South Dakota drainage statute. This involves an analysis of the exact phraseology of the constitutional provision under which the legislature obtained its power to act. Section 6 of Article XXI of the constitution constitutes that authority and is as follows:

"§ 6. The drainage of agricultural lands is hereby "declared to be a public purpose and the legislature may "provide therefor, and may provide for the organization "of drainage districts for the drainage of lands for any "public use, and may vest the corporate authorities there-"of, and the corporate authorities of counties, townships "and municipalities, with power to construct levees, drains "and ditches, and to keep in repair all drains, ditches and "levees heretofore constructed under the laws of this "state, by special assessments upon the property bene-"fited thereby, according to benefits received."

The first clause of the foregoing section declares that the drainage of agricultural lands is a public purpose, and gives the legislature power to "provide therefor." This clause is complete in itself and to determine its meaning and intent requires no aid from the remainder of the section.

The section then goes further and gives the legislature authority to "provide for the organization of drainage districts for the drainage of lands for any public use." This is a power conferred upon the legislature distinct and in addition to that contained in the first clause of the section. It gives the legislature authority to establish drainage districts for the purpose, not only of carrying into effect the power to drain agricultural lands, but for the purpose of carrying on any drainage project for "any public use."

As the section stands, when the first and second clauses are considered together, it appears that three things are provided for: (a) the drainage of agricultural lands is made a public purpose, (b) the legislature is given power to provide for the drainage of agricultural lands, and (c) the legislature is given power to provide for the organization of drainage districts for the drainage of land for any public use.

The constitutional section then continues giving to the legislature authority, (a) to vest the corporate authorities of drainage districts with power to construct levees, drains and ditches and keep in repair all drains, ditches and levees theretofore constructed under the laws of the state, by special assessments upon property benefited thereby, according to benefits received, and (b) to vest the corporate authorities of counties, townships, and municipalities with power to construct levees, drains and ditches and keep in repair all drains, ditches, and levees theretofore constructed under the laws of the state, by special assessments upon the property benefited thereby, according to the benefits received.

Throughout the entire section there appears a clear intent to authorize the legislature to proceed in matters respecting drainage of lands in either of two ways, (a) by the organization of drainage districts with corporate authorities, and (b) by empowering the corporate authorities of counties, townships and municipalities with power to enter upon and carry out drainage projects. It is not made obligatory upon the legislature to follow either system for the construction of drainage. The constitution gives the legislature the option to carry on drainage work by drainage districts organized as separate en-

tities, or to carry on the work through the regularly constituted authorities of counties, townships, and municipalities. The legislature of South Dakota, acting under the constitutional option given it by Section 6 of Article XXI of the constitution, has declined to provide for the organization of drainage districts as separate corporate entities, and has provided for the doing of all drainage work through the corporate authorities of the various counties, to-wit, the Board of County Commissioners, county auditor, county treasurer, and other county officers.

It follows that in the case at bar there was not and could not under the law have been formed any drainage districts. The drainage projects, known as Drainage Ditch No. 1, and Drainage Ditch No. 2, and Drainage Ditch No. 1 and 2, were all conceived and carried out by the county authorities of Minnehaha county under the constitutional provision giving the legislature the power to vest in the county authorities the power to construct levees, drains, ditches, etc. The legislature never attempted to exercise the power given it by the constitution to organize drainage districts, and the application of the term "district" to the assessment area of Drainage Ditch No. 1, Drainage Ditch No. 2, or Drainage Ditch No. 1 and 2 is a misnomer. That term is reserved by the South Dakota constitution for an entirely different sort of organization and should not be used in connection with a drainage project carried on by the Board of County Commissioners under the South Dakota statute.

The situation with respect to this matter was pointed out by Judge Elliott in his opinion upon the trial of this case in the District Court. *Chicago, Rock Island & Pacific Railway Company vs Risty*, 282 Fed. 364. In this opinion, Judge Elliott says, (p. 368): "Pursuant to this "provision of the constitution, the legislature of the state "has provided for the drainage of agricultural lands: "*but nowhere is there any statutory enactment under "which drainage districts may be formed for the drain-"age of lands 'for any public use.'*"

A further examination of the particular wording of Section 6 of Article XXI of the South Dakota constitution discloses the important bearing which the failure of

the legislature to exercise the authority of establishing drainage districts has upon the decision of the case at bar. The wording of the constitutional provision is that the legislature "may provide for the organization of drain-"age districts for the drainage of lands for any public use," and may vest "the corporate authorities thereof," etc. Eliminate the quoted words (which are the only ones in the section referring to drainage districts) from the section and the result would be that the section would read, "The drainage of agricultural lands is hereby de-"clared to be a public purpose and the legislature may "provide therefor, and may vest the corporate authori-"ties of counties, townships and municipalities with pow-"er to construct levees, drains, and ditches, etc."

In other words, the South Dakota legislature is given authority to carry on drainage projects either through the formation of drainage districts as corporate entities, or through the municipal authorities of the counties, townships, and municipalities, but while drainage "for "any public use" may be constructed through corporate drainage districts, drainage of lands for agricultural purposes only may also be carried on by the county, townships and other municipal authorities. The constitution nowhere gives the legislature power to provide that drainage for "any public use" other than the drainage of agricultural lands may be constructed by the county, township, or other municipal authorities. Drainage for any other public purpose must be constructed by districts specially organized therefor.

It consequently follows that the legislature of South Dakota cannot, under the provisions of the state constitution, authorize drainage projects, for other than agricultural lands, to be conducted by the county, township, or other municipal authorities. Such authorities may construct drainage projects for the drainage of agricultural lands, but for any other public purposes the works must be constructed by the corporate authorities of drainage districts established for that purpose.

While the legislature of South Dakota had the right, under the state constitution, to enact a law authorizing the Board of County Commissioners of Minnehaha county to construct a drainage project for the drainage of agri-

cultural lands, it could not, under the constitution, authorize the Board of County Commissioners to carry on any drainage project for any public use other than the drainage of agricultural lands.

It follows, therefore, that if Drainage Ditch No. 1 and 2 was initiated by the Board of County Commissioners of Minnehaha county for a purpose other than the drainage of agricultural lands, the Board exceeded their powers in constructing the dams, ditches, spillway, and other works in Drainage Ditch No. 1 and 2, for which Appellee is now asked to pay a proportionate part. The question whether Drainage Ditch No. 1 and 2 was a project for the drainage of agricultural lands or for some other purpose we will discuss in a separate section of this brief.

IV.

DRAINAGE DITCH NO. 1 AND 2 WAS NOT A PROJECT FOR THE DRAINAGE OF AGRICULTURAL LANDS, AND THE ACTION OF THE BOARD OF COUNTY COMMISSIONERS OF MINNEHAHA COUNTY IN ENTERING UPON THE PROJECT AND IN CARRYING IT ON WAS *ULTRA VIRES*.

We now come to the consideration of the question as to whether Drainage Ditch No. 1 and 2 was a project for the drainage of agricultural lands or for the carrying out of some other purpose. There are at this time before this court pending appeals in six cases involving Drainage Ditch No. 1 and 2, and there is a divergence of views of the Appellees in various of the six cases as to the status of the drainage proposition. In some of the cases, the Appellees contend that Drainage Ditch No. 1 and 2 was simply a continuation of Drainage Ditch No. 1 and of Drainage Ditch No. 2, and that the work was initiated and carried on by the Board of County Commissioners of Minnehaha county as a project for the repairing of Drainage Ditch No. 1 and of Drainage Ditch No. 2. In the case at bar, the position which we take is that Drainage Ditch No. 1 and 2 must be considered as an independent project entered upon by the Board of County Commissioners and that it is not a mere project for the re-

pair of Drainage Ditch No. 1 and of Drainage Ditch No. 2, and is not in any manner controlled by the original proceedings for the construction of the old ditches. We contend that Drainage Ditch No. 1 and 2 must be considered as if it were an entirely new proposition entered upon after the spillway at the outlet of Drainage Ditch No. 1 had been washed out in the spring of 1916.

In the bill in this suit, it is alleged that the Board of County Commissioners of Minnehaha county has spent a sum in excess of $255,000 in the construction of a spillway, dams, and retaining gates, "designed not for the "purpose of drainage of agricultural lands, but solely "for the purpose of controlling and retarding the flow "of water, through the outlet of said Drainage Ditches "No. 1 and No. 2 into the Big Sioux river for the pur-"pose of preventing a change in the channel of said river "and of preventing the drainage of the gravel bed through "which the said city of Sioux Falls obtains its water "supply." It is further alleged that less than five per cent of such money has been expended for any purpose legitimately connected with the construction and maintenance of Drainage Ditch No. 1 and of Drainage Ditch No. 2. The bill further sets up the alleged proceedings for the organization of Drainage Ditch No. 1 and 2.

The answer sets up the organization of Drainage Ditch No. 1 and 2 as a separate organization from Drainage Ditch No. 1 and Drainage Ditch No. 2, and the theory of Appellants is that Drainage Ditch No. 1 and 2 was a separate and independent organization and not a mere continuation of Drainage Ditch No. 1 and Drainage Ditch No. 2, and that its formation was compelled for the purpose of saving the water supply of the city of Sioux Falls, and preventing the change of the channel of the Big Sioux river, and the imperiling of the interests of various property owners.

The position of Appellants throughout this case has been that Drainage Ditch No. 1 and 2 was a new and separate organization. They have so pleaded, and with their allegations in this regard we have no contention to make. The Appellee in this case is satisfied to rest this proposition upon the allegations of the answer and to concede that Drainage Ditch No. 1 and 2 was a new or-

ganization and was entirely independent of the original ditches. As we have said, in others of the six cases tried at the same time and upon the same record as this case, the plaintiffs (Appellees in this court) contested the claim of the defendants and intervenors (Appellants in this court) that Drainage Ditch No. 1 and 2 was a new and independent proposition and contended that all of the work done by the Board of County Commissioners was done merely as a continuation of the work upon the original ditches, Drainage Ditch No. 1 and Drainage Ditch No. 2. JUDGE ELLIOTT, in his opinion filed in the District Court, arrived at the conclusion that Drainage Ditch No. 1 and 2 was not a new and independent organization but was simply a continuation of the old original ditches. *Chicago, Rock Island & Pacific Railway vs Risty*, 282 Fed. 364 (p. 374 *et seq*).

With due respect to the opinion of the learned District Judge (who evidently felt inclined to hold so as not to preclude the holders of the drainage ditch warrants from a right to recover the amount of their investments from the property owners within the original assessment area of the Drainage Ditch No. 1 and of Drainage Ditch No. 2), we respectfully submit, that under the allegations of the bill and answer in this case, and under the evidence contained in the record, Drainage Ditch No. 1 and 2 must be deemed to be a new and independent organization and must stand or fall as such. If it possesses no life of its own, life cannot be injected into it by treating it as a continuation of the old original ditch organizations.

It appears from the evidence in this case that after the outlet of Drainage Ditch No. 1 had been washed out in the spring of 1916, various plans were proposed for the controlling of the water so as to prevent the formation of a new river channel and the draining of the gravel bed, from which the city of Sioux Falls obtained its water supply. No changes in Drainage Ditch No. 1 and Drainage Ditch No. 2 were required for the purpose of draining agricultural lands in the flats north of the city of Sioux Falls. The two ditches were working beautifully, so far as that purpose was concerned. They formed a perfect, complete and satisfactory system for the drainage of the flats. The property owners in the

flats could not have asked for any drainage system more complete. The trouble was, that instead of draining too little, the ditches drained too much, and were too efficient in their operation. No change in them was required for any purpose connected with the drainage of agricultural lands. The only people interested were those who objected to the formation of a new channel for the Big Sioux river and who were interested in maintaining a water supply for the city of Sioux Falls. The change in the course of the river, if made, would have operated to destroy various industries dependent upon the water power at the dams south of the falls. It would also have prevented the flow of the water through the city limits, and would have forced the city of Sioux Falls to seek some other municipal water supply.

The Board of County Commissioners, after various plans had been considered and for one reason after another abandoned, finally formed a new organization under the name of Drainage Ditch No. 1 and 2, and went ahead and expended upwards of $250,000 in the construction of a spillway, retaining walls, retaining dams, ditches, etc. The greater part of the money was invested in a spillway, dam and retaining walls which were purposely intended to retard, rather than to accelerate the flow of the surface water which collected upon the flats north of the city of Sioux Falls, and which consequently were intended to hinder rather than to facilitate the drainage of the flats.

After $255,000 and over had been expended upon the spillway and other water retaining works, the Board of County Commissioners proceeded to make an apportionment of benefits upon the lands "affected" by the improvement. In the assessment area, the Board of County Commissioners included not only the territory which had been included in the assessment area of the original ditches, Drainage Ditch No. 1 and Drainage Ditch No. 2, but also included all of the lands and lots within a considerable distance on either side of the Big Sioux river between the south boundary of the property in the assessment areas of the original ditches, along the channel of the Big Sioux river for a distance of some nine miles, along where the river runs west and south of

the city of Sioux Falls and through the city, and up to a point a short distance north of Sioux Falls. The ostensible reason for the inclusion of all this additional territory was the alleged fact that the property along the river was subject to floods at the time of freshets which would be relieved by the construction of the spillway and other water retaining works. Upon the trial, it was shown that with the exception of a small tract of territory immediately south of the original ditch assessment areas, the remainder of the lands, for a space of eight or nine miles along the channel of the Big Sioux river, had never suffered from flood waters, excepting in the spring of 1881, and that the occasion for the flood in that year was not the collection of water upon the flats north of the city of Sioux Falls, but the forming of an ice gorge at a point in the river in the southeast portion of the city. There was consequently a total lack of any proof in the record that the territory, along the channel of the river and through the city of Sioux Falls attempted to be included in the assessemnt area, was in any manner affected, beneficially or otherwise, by the construction of the spillway and other water retaining works.

In addition, the Board of County Commissioners attempted to proportion "benefits" to the City of Sioux Falls, (this Appellee), the Northern States Power Company (owner of the waterpower on the Big Sioux river above the falls), and upon four railroad companies having railroad tracks and station grounds situated within the attempted assessment area. In the case of Appellee, and of two of the railroad companies sought to be assessed, property was owned both in the assessment areas of the original ditches and in the additional territory attempted to be included within the assessment area of Drainage Ditch No. 1 and 2. The Northern States Power Company and two of the railroads owned property only in the new territory and had no mileage or other property in the original assessment areas. In the decrees entered in the various railroad cases, the District Court enjoined the assessment of the railroad properties not included in the original assessment areas but reserved, without prejudice, the determination of the question whether the

railroad companies having land both in the original assessment areas and in the new assessment area should be held liable for an assessment upon its property in the original assessment area. In the case at bar the decree enjoined any assessment upon all of the property of Appellee.

The question therefore arises whether, under the record in this case, the Board of County Commissioners of Minnehaha county possesses authority to make any apportionment of benefits whatsoever, or any assessment upon any property whatsoever, for the cost of the construction of the works in Drainage Ditch No. 1 and 2. Our contention in this regard is as follows:

It is alleged by the defendants and Appellants in their answer, and Appellee admits it to be a fact, that Drainage Ditch No. 1 and 2 was a new and independent proposition and not a continuation of Drainage Ditch No. 1 and of Drainage Ditch No. 2, and cannot be considered as a proposition for the repair of the original ditches. It is a project which must stand or fall upon its own footing.

Under the evidence in this case, Drainage Ditch No. 1 and 2 was not a project for the drainage of agricultural lands but was a project for another "public use," to-wit, the preservation of the water flowage in the channel of the Big Sioux river and of the supply of water in the gravel bed from which the city of Sioux Falls obtains its water supply. Neither of these propositions involves the drainage of agricultural lands. Drainage Ditch No. 1 and Drainage Ditch No. 2 had completely accomplished the object of draining the flats north of the city of Sioux Falls. If those drainage works were damaging other property interests, the remedy for the persons interested was to have the ditches abated as nuisances. Instead of pursuing this course, the Board of County Commissioners of Minnehaha county entered upon the construction of an elaborate system of water retaining works by which the water, which was collected from the flats into Drainage Ditch No. 1 and Drainage Ditch No. 2, could be retained until it could be passed off gradually into the Big Sioux river. To have abated Drainage Ditch No. 1 and Drainage Ditch No. 2 as nuisances, would have been to permit

the water, accumlating upon the flats, to remain there until it could flow off through its natural channel around the bends in the Big Sioux river, the same as it did before Drainage Ditch No. 1 and Drainage Ditch No. 2 were constructed. Instead, however, of doing this, the Board of County Commissioners proceeded to construct a new water retaining system by which the water could be retained upon the flats until it could gradually be drawn off, partly through the natural channel of the river and partly through a restricted passageway formed by the spillway and its attendant retaining walls and dams. In other words, the Board of County Commissioners proceeded to spend $250,000 and over for the purpose of accomplishing the same object that could have been accomplished by damming up the original ditches and leaving the flats in the same condition that they were before the original ditches were constructed. While some evidence was introduced, tending to show that a portion of the water collecting upon the flats passed off through the spillway, it remained in the evidence almost uncontradicted that the situation in the flats above the city of Sioux Falls is as bad as it was before any drainage ditches were constructed.

From all of the evidence in the record in this case, it would appear that the construction of the spillway and other works, under the organization of Drainage Ditch No. 1 and 2, was not for the purpose of draining agricultural lands but was for an entirely different purpose. This is the conclusion to which JUDGE ELLIOTT came in his opinion in the District Court, and upon this subject JUDGE ELLIOTT says, *Chicago, Rock Island and Pacific Railway Company vs. Risty*, 282 Fed. 364 (p. 378):

"There is another and further suggestion: I am of "the opinion that this reconstruction of the old spillway "without change of location, the repair of the break from "the river into the ditch, the cleaning of the ditch, the "change of the headgates where the flood waters are "taken from the river, everything that was done under "this pretended establishment of a new ditch, could not "have been viewed in the same light or as serving the "same purpose as the construction of the original ditches,

"because the thing that caused the board of commis-
"sioners to take any action with reference to the condi-
"tion that then existed was the danger that existed be-
"cause of the conduct of the water down through these
"two drainage ditches to and through this spillway. The
"danger that was threatened was not that the agricultural
"lands would not be drained, but that immense damage
"was threatened, that the course of the river was to be
"diverted to this cut-off, that great areas of land were
"threatened to be cut away by this river 100 feet deep,
"and that the water supply of the city was threatened
"to be taken away because of this drainage ditch and
"this imperfect spillway, because the water was to be
"taken from the river and all of the benefits of the river
"for several miles, through and around the city of Sioux
"Falls, would be destroyed. The power of the Northern
"States Power Company would be destroyed, by taking
"the water from the river. If it had not been for those
"conditions, for these threatened dangers, no action would
"have been taken; the ditches would have continued to
"function as they had functioned before. If the spill-
"way had been properly constructed originally, and if it
"had not proven inadequate, there would have been no
"cause for any action by the board in the year 1916.
"Every consideration that impelled action by the board
"was some phase of the threatened danger by reason
"of the inadequate and imperfect construction of these
"two ditches. Neither of these considerations that in-
"fluenced the action of the board *had anything to do with*
"draining agricultural lands."

As has been shown, the legislature of South Dakota has never passed an act, putting into effect the authority vested by the constitution in the legislature to create drainage districts. As has also been shown, while drainage of agricultural lands can be carried on by county, township, and other municipal authorities, drainage for other "public uses" can only be constructed by drainage districts through their corporate authorities. It appearing from the record in this case that the work done under the organization of Drainage Ditch No. 1 and 2 was not for the purpose of agricultural lands but for other "public uses," it follows that the Board of County

Commissioners of Minnehaha county exceeded its authority in attempting to organize Drainage Ditch No. 1 and 2 and to construct the spillway and attendant works. Upon this proposition, JUDGE ELLIOTT, in his opinion, says:

"It may be said that to remedy these wrongs consti-
"tuted a public use, as referred to in the constitution of
"the state of South Dakota. Admitting that that is true,
"we are confronted with the proposition that there has
"been no legislation, conforming with the provisions of
"the constitution, authorizing the legislature to provide
"for the establishment of drainage districts and in the
"naming of officers with the powers therein referred to.
"If, therefore, any claim were made that the commis-
"sioners were acting under this authority, independent
"of the provision of law with reference to the drainage
"of agricultural lands, the answer is that the provision
"of the constitution is not selfexecuting, and that no leg-
"islation has been provided carrying this provision of
"the constitution into effect."

We therefore submit, that as the construction of the spillway and other attendant works was not a project for the drainage of agricultural lands, and as drainage for public uses other than the drainage of agricultural lands can, in South Dakota, only be carried on by the corporate authorities of drainage districts, and as the legislature of South Dakota has never authorized the organization of drainage districts with corporate authorities, all of the acts of the Board of County Commissioners of Minnehaha county, in attempting to organize Drainage Ditch No. 1 and 2, and in constructing the spillway and attendant works under such organization, were *ultra vires*, and that no apportionment of benefits or assessment for the cost of such construction can be made upon the property of Appellee.

V.

THE SOUTH DAKOTA DRAINAGE LAW IS UNCONSTITUTIONAL, SO FAR AS RESPECTS ASSESSMENTS OF THE PROPERTY OF APPELLEE, IN THAT IT PROVIDES FOR THE GIVING OF NO NOTICE WHATEVER OF THE APPORTIONMENT

AND EQUALIZATION OF BENEFITS TO MUNICIPALITIES.

In the preceding discussion of the South Dakota drainage law, we have considered the subject of the notice required by the statute to be given to property owners in general. We now desire to call the attention of the court to the provisions (or want of provisions) in the statute, relating to the notice to be given to railroad companies and to municipalities.

So far as concerns the statutory provisions relating to the notice to be given before a drainage project is entered upon by the Board of County Commissioners under the South Dakota drainage law, there is no difference as respects railroads, municipalities and other property owners. The only notice, as has been seen, is a general notice to all persons "affected" by the proposed drainage project.

When we come to the matter of the notice given for the equalization of benefits, a singular situation is presented by the provisions of the statute in, that while the law provides for the publication of a notice to the owners of land, there is no provision whatever for the publication of any notice to railroad companies and to municipalities.

The provisions respecting the notice to be given of the equalization of proportion of benefits is found in Section 8463, South Dakota Revised Code, 1919. This section was evidently originally drafted for the purpose of providing a method for the equalization of assessments upon agricultural lands. The method, provided by the statute, for arriving at the assessment and equalization of benefits, is to take some "particular tract as a unit" and then with this tract as a measuring stick to determine, in number of units, the benefits received by the remaining tracts of land. This system is one which is in its nature applicable to agricultural lands, but which cannot well be applied to other classes of property, such as railroads and the property of municipalities. In the case of railroads, the taking of a particular tract of land as the unit, or measuring stick cannot be made to work out successfully unless the taxing authorities are content to assess railroads merely by virtue of the railroad

ownership of the tracts of land comprised in the right of way within the assessment area. In other words, the only way in which the proportion of benefits to railroad property could be determined, under the system provided by the statute, would be to consider merely the area of the right of way and proportion benefits to it the same as to the other agricultural land within the assessment area. So too municipalities can only be assessed by virtue of the ownership of land within the assessment area.

Evidently the legislature, in enacting the South Dakota drainage law, was not satisfied to have railroad companies and municipal organizations pay assessments for the construction of drainage works upon the same basis as the owners of agricultural lands, and in enacting Section 8463, South Dakota Revised Code, 1919, after providing the method for the assessment of the proportion of benefits upon lands by selecting some particular tract as a unit, there was added to the Section (something in the nature of an afterthought) the clause, "the pro-"portion of benefits which any county, city, town or "township may obtain by the construction of such drain-"age to highways or otherwise, and *the benefits which "any railroad company may obtain for its property by "such construction,* shall be fixed and equalized together "with the proportion of benefits to tracts of land." No method of arriving at the assessment and equalization is provided by the statute. The "particular tract as a unit" system is selfevidently inapplicable in such cases but the legislature has provided nothing to take its place. The law gives the Board of County Commissioners the naked power to fix and equalize the proportion of benefits to counties, cities, towns, townships, and railroad companies, but provides no method upon which the assessment and equalization can be based.

The notice of equalization of proportion of benefits, provided by Section 8463, "shall state the route and "width of the drainage established, a description of each "tract of land affected by the proposed drainage and the "names of the owners of the several tracts of land as "appears from the records of the office of the Register of "Deeds, at the date of the filing of the petition, and the

"proportion of benefits fixed for each tract of property, "taking any particular tract as a unit, and shall notify "all such owners to show cause why the proportion of "benefits shall not be fixed as stated." This is a notice directed solely to the owners of tracts of land within the assessment area. It does not purport to be a notice to a county, city, town, township, or railroad company respecting the assessment or the equalization of proportion of benefits upon the property belonging to any of such organizations. The statute authorizes the Board of County Commissioners to assess the "proportion of benefits" which any county, city, town or township may obtain by the construction of drainage to highways or otherwise, but does not provide for the giving of any notice to the municipality affected.

The fact, however, remains that the legislature of South Dakota has made no provision whatever for the giving of notice to railroad companies, cities, towns, or townships, of the assessment or equalization of benefits supposed to be derived from the construction of the drainage works. It consequently follows that as far as railroad companies, counties, cities, towns, and townships are concerned, the statute provides for no notice whatever, at any stage of the proceeding, of the assessment or of the tax. Even if the South Dakota drainage statute should be held valid as far as respect the matter of notice to the owners of agricultural lands, it is clearly unconstitutional as to railroads and municipalities by reason of its failure to provide for any notice whatever at any stage of the proceedings. It clearly comes within the inhibition of the Fourteenth Amendment and within the doctrine laid down by the Supreme Court in numerous cases.

Central of Georgia Railway Company vs Wright, 207 U. S. 127,
Londoner vs Denver, 210 U. S. 373,
Soliah vs Heskin, 222 U. S. 522,
Turner vs Wade, 254 U. S. 64

The South Dakota drainage statute having failed to provide for the giving of any notice, at any stage of the proceedings prior to the time the tax becomes absolute,

to railroad companies or municipalities, any assessment or tax imposed upon each corporation or municipality under the statute is without due process of law and void.

VI.

THE ATTEMPTED ASSESSMENT UPON THE PROPERTY OF APPELLEE WAS ARBITRARY, UNJUST, AND ILLEGAL, AND CONSTITUTES A DISCRIMINATION SO PALPABLE AND ARBITRARY AS TO AMOUNT TO A DENIAL OF THE EQUAL PROTECTION OF THE LAW.

Under the proposed assessment of benefits, out of a total of 32,549.62 units there were assessed against Appellee 3145.95 units, upon which the assessment of Appellee would be in excess of $29,900. The methods used by the Board of County Commissioners in arriving at these figures is disclosed by the testimony of H. Rettinghouse, a civil engineer employed by the Board of County Commissioners to make a survey of the assessment area, and who made the computations contained in the assessment of benefits adopted by the Board. Mr. Rettinghouse was called by Appellants as a witness and upon the trial testified (Record pp. 271-280), as follows:

"We used this unit selected as one and compared "the other real estate with it. It was decided by the "Board that the acre in question was worth one hundred "dollars prior to the improvements and that it was "worth one hundred twenty-five dollars subsequent to the "improvements. Therefore the actual value of benefit "to the unit selected was twenty-five dollars. All the "agricultural land was assessed in relation to this unit. "Many of the lands were only 30 or 40 per cent depend-"ing upon the amount of benefit derived, as compared "with this unit, being one hundred per cent. There were "other lands that were as high as three hundred and fifty "per cent of this unit. I am familiar with the cost of "construction and upkeep of highways. In arriving at "the benefit to the highways within this drainage area "we estimated the benefit in this way. There is a certain "amount of annual maintenance necessary for any road, "and there is more than that amount under flood con-

"ditions. That is to say, a road that is periodically "flooded as against a road that never is flooded. The "difference in the estimated cost of maintenance was "capitalized, or represented the interest on a certain "sum of money, and we consider the capitalized portion "as a real benefit. We then, after obtaining that re- "sult after making a great many calculations, taking "into consideration the various locations, some of them "benefitted more than others.

"We divided the amount arrived at by the value of "the unit of $25, thereby obtaining the number of units "as a proportional benefit for these roads. The sum "we divided by the unit represented the capitalized value "to that part of the highway; we applied the same "method to the streets and highways of the City of "Sioux Falls. We did not apply the acreage basis to "the city property, excepting possibly the grounds where "the waterworks are located. In applying the benefit "to the unit and what the Board took into consideration "as elements of benefit to the Milwaukee Railway Com- "pany, we took into consideration the fact that in the "first place there were practically three elements. First "was the right-of-way on the acreage basis, which was "estimated in proportion to the adjacent lands. Second, "that it was possible to shorten or abandon certain "bridges. In order to determine the benefits derived "therefrom is simply a mathematical proposition. It "costs a certain amount of money each year in order "to maintain a bridge, whether it is a pile bridge or a "steel bridge. We know how long these structures will "last. We figure the cost of a bridge and divide it by "the number of years in order to get the amount that "is necessary to be expended each year for replace- "ment. Taking the amount in dollars and cents multi- "plied by the length of the bridge and divide that and "capitalize that at 7 per cent, which is the usual rate "of interest, and that determines the amount of benefit. "This is the second element. The third element is "the fact that by reason of the flooding of the territory "in which railroads are located, washouts often occur. "We obtained data and from my personal knowledge and "experience I have a very good idea what it costs to re-

"pair washouts periodically appearing and we estimated "as close as possible how much it would amount to every "year and capitalized that amount again.

"Again as an additional element, a road-bed is solid-"ified or made stronger by not being subject to floods. "A road-bed that is constantly or for great lengths of "time subjected to submersion is certainly weakened, "and again, so far as humanly possible, we figured the "amount of benefits in dollars and cents and after get-"ting all of these results or capitalized amounts, we di "vided that by twenty-five as our measure and determined "the number of units of benefit. That system and general "method and plan was used to determine the amount "of benefits that each railroad received from these "separate elements."

The statement of Mr. Rettinghouse, the engineer who made the assessment of benefits for the Board of County Commissioners of Minnehaha county, is upon its face sufficient to demonstrate the fact that in arriving at the proportion of benefits to be assessed against Appellee, the Board used as a basis for arriving at the assessment a method so wholly different from that used for ascertaining the contribution demanded of individual owners as necessarily to produce manifest inequality. The assessment was clearly upon a fanciful view of benefits to be derived by Appellee from the drainage project. The basis used was not authorized by any provision of the South Dakota drainage law but was evolved from the inner consciousness of the County Commissioners of Minnehaha county and of the civil engineer employed by them. The basis was so wholly different from that used for ascertaining the contribution demanded of individual owners as necessarily to produce manifest inequality. It constituted a discrimination so palpable and arbitrary as to amount to a denial of the equal protection of the law.

We do not deem it necessary to discuss this proposition at further length. In the recent case of *Kansas City Southern Railway Company vs Road Improvement District No. 6*, 256 U. S. 658, this Court has emphatically condemned similar methods of assessment.

We respectfully submit, that even if the South Da-

kota drainage were constitutional and there were no other valid objections to the proceedings of the Board of County Commissioners of Minnehaha County in the organization of Drainage Ditch No. 1 and 2, and in the construction work done thereunder, the assessment made upon Appellee cannot be sustained for the reason that it is so arbitrary and unjust and so confessedly founded upon a fanciful basis as to deprive Appellee of the equal protection of the law.

VII.

THE DISTRICT COURT POSSESSED JURISDICTION TO ENTERTAIN AND DETERMINE THIS SUIT.

Counsel for Appellants have filled a great portion of their brief with arguments upon objections to the jurisdiction of the District Court in this suit. We do not deem it necessary to take up these various objections and discuss them *seriatum*. The questions at issue, involving as they do the constitutionality under the Federal Constitution, together with the amount involved and the diversity of citizenship, are amply sufficient to sustain the jurisdiction of the court.

Counsel for Appellants strenuously contend that Appellee should have waited until after the Board of County Commissioners of Minnehaha county had finished the equalization of benefits before instituting this suit. This case is, however, not one in which any such delay of proceedings was necessary. The law, under which the Board of County Commissioners was proceeding, was unconstitutional. The Board was a trespasser from the very commencement of the assessment proceedings. After the Board of County Commissioners had committed one illegal act, in making the assessment of benefits, it was certainly not incumbent upon Appellee to wait before instituting legal proceedings until after the Board had committed further illegal acts. Jurisdiction to maintain a suit to restrain the commission of a tort becomes fixed as soon as the first tortuous step has been taken by the tort feasor. It is not necessary for the person injured

to wait until after the threatened damage has been completed. The Board of County Commissioners of Minnehaha county invaded the rights of Appellee when it made the assessment of benefits, and the right of action then became complete.

In our view of the issues involved in this case, the points which we have raised in the foregoing discussions in this brief are a sufficient answer to all questions concerning the jurisdiction of the court.

VIII.

APPELLEE IS NOT ESTOPPED BY ITS ACTS FROM MAINTAINING THIS SUIT.

In their brief, counsel for Appellants make a somewhat elaborate attempt to show that Appellee is estopped from maintaining this suit. It is conceded that Appellee is a municipal corporation. It further appears both from the pleadings and from the evidence that the washing out of the outlet to Drainage Ditch No. 1 in the spring of 1916 threatened to divert the water flowage in the Big Sioux river to a new channel which would cut off about nine miles of the natural river channel where it flows through the city of Sioux Falls, and would also operate to drain the gravel bed on the flats north of the city of Sioux Falls from which the city obtains its municipal water supply. It must consequently be conceded that the city of Sioux Falls was vitally interested from a municipal standpoint in the drainage situation in the areas drained by Drainage Ditch No. 1 and Drainage Ditch No. 2.

It also appears from the evidence in the case that on August 3, 1916, there was filed in the office of the city auditor of the City of Sioux Falls a certain petition signed by F. L. Blackman and other persons, and that this petition was signed by the mayor and city auditor of the city of Sioux Falls on its behalf. (Record pp. 41-46. 246-247.)

It further appears from the evidence that the Blackman petition, executed by Appellee by its mayor and city auditor, was the petition used by the Board of County Commissioners of Minnehaha county upon which they

based their proceedings in the organization of Drainage Ditch No. 1 and 2.

The contention of Appellants is that because Appellee was one of the petitioners who signed the Blackman petition, Appellee is estopped from making any complaint with respect to the establishment of Drainage Ditch No. 1 and 2, or objecting to the regularity of the proceedings taken by the Board of County Commissioners.

We concede the general principle of law that where a man asks to have a certain thing done he cannot afterwards complain because his request has been complied with. Our contention in this case is, however, that, under the record made upon the trial in the district court and now before this court, it does not appear that Appellee ever petitioned for or consented to the action taken by the Board of County Commissioners in establishing Drainage Ditch No. 1 and 2, and in constructing a spillway, retaining walls, dams, and other works under that organization.

A man may be estopped from complaining because the thing has been done which he has requested to be done, but there is no rule of law by which a man is estopped from objecting to the doing of an act which he has not requested, simply because he made a request that another and different act be performed. The mak ing of a request to a public officer, or board to perform a certain act within the scope of the official power of the officer, or board does not give carte blanche for the performance of the act in a wholly illegal manner. Public officials are to be presumed to act in accordance with the authority conferred by law upon them, and no one is bound to take notice of the fact that a public officer or board will act irregularly or illegally in any matter lawfully brought before him or it.

There is also a very clear distinction to be drawn between acts which constitute an estoppel as to an act to be done in the future and those which constitute an estoppel after full notice of the act having been done. A man, by accepting the benefits of an illegal act, may preclude himself from raising the question of the illegality of the act, but there is no principle of law by which a man is estopped from complaining of an illegal act to be

done in the future and, especially when the act alleged to constitute the estoppel is done without any knowledge of an intended illegal performance of a lawful duty.

If, after Drainage Ditch No. 1 and 2 had been organized and $255,000 expended by the Board of County Commissioners in the construction of the spillway, dams, retaining walls, and other works, Appellee had approved the acts of the Board of County Commissioners with full knowledge of their illegality, and had accepted the benefits of them, it might have placed itself in a position in which it would be estopped from objecting to the illegality of the acts of the Board of County Commissioners. No such situation appears in the record. The only estoppel proven is the signing of the Blackman petition on behalf of the Appellee. There is nothing in the record to show that Appellee by any act subsequent to the construction of the drainage works in Drainage Ditch No. 1 and 2 condoned the illegal acts of the Board of County Commissioners or in any manner estopped itself from complaining of them.

As a matter of fact, the Board of County Commissioners of Minnehaha County did not comply with the petition of Appellee and the other petitioners in the organization of Drainage Ditch No. 1 and 2. The petition is set out in full in the record. (Record pp. 43-46). This petition asked for the reconstruction and improvement of Drainage Ditch No. 1 and Drainage Ditch No. 2, and the construction of a spillway at the outlet of these ditches. The petition set forth in extenso the route of Drainage Ditch No. 1 and Drainage Ditch No. 2 and of the proposed additions thereto.

The Board of County Commissioners, on August 3, 1916, passed a resolution for the filing of the petition and the transmission by the county auditor of a copy to the state engineer. (Record pp. 46-47.) On August 14, 1916, The Board of County Commissioners adopted a resolution for a survey of the 'proposed drainage.' (Record p. 48.) On September 13, 1916, the Board passed a resolution 'fixing the exact line and width of ditch and fixing the time and place for hearing of petition.' On September 15, 1916, the Board made a 'drainage ditch notice' returnable October 2, 1916, (Record pp. 53-63)and on October 3,

1916, the Board adopted a resolution 'establishing Drainage Ditch No. 1 and 2.' (Record pp. 50-53.)

An examination of these proceedings of the Board of County Commissioners discloses the fact that the Blackman petition, which was the one signed by Appellee, was a petition to 'reconstruct and improve' Drainage Ditch No. 1 and Drainage Ditch No. 2, and to 'construct a new spillway or outlet to said drainage ditches.' It was not a petition for the organization of a new and separate ditch organization. All that Appellee and the other petitioners had in mind at the time the petition was signed was to have Drainage Ditch No. 1 and Drainage Ditch No. 2 repaired so that Drainage Ditch No. 1 at its outlet would not continue washing a new channel for the Big Sioux river through the bluff, thereby diverting the river flowage from its natural channel and draining the underlying gravel bed. There was no intention whatever upon the part of Appellee and the other petitioners to ask for the formation of a new, separate, and independent drainage organization.

In organizing Drainage Ditch No. 1 and 2, the Board of County Commissioners proceeded further than the Board was authorized to do by any petition which was before them for action. In signing the Blackman petition, Appellee had a right to rely upon the Board proceeding in a legal manner and had no notice of the fact that the Board, instead of acting under the petition and repairing Drainage Ditch No. 1 and Drainage Ditch No. 2, as requested in the petition, would attempt to organize an entirely new drainage proposition. Appellee is consequently not estopped from complaining of the action of the Board of County Commissioners in this regard.

The Blackman petition, as signed by Appellee and presented to the Board of County Commissioners, provided for the repair and improvement of Drainage Ditch No. 1 and Drainage Ditch No. 2. These ditches were organizations for the draining of agricultural lands, a purpose within the jurisdiction of the Board of County Commissioners. The proposition fathered by the Board in the organization of Drainage Ditch No. 1 and 2 was for an entirely different purpose and was intended for the protection of the various persons, corporations, and

municipalities interested in the preservation of the natural flowage of the Big Sioux river and in the conservation of the water supply in the gravel bed from which the city of Sioux Falls obtained its municipal water supply. This might be termed a 'public use' but under the South Dakota constitution drainage works for a public use other than the drainage of agricultural lands could only be carried on through the corporate authorities of a regularly organized drainage district. Such a project was beyond the powers of the Board of County Commissioners. In establishing Drainage Ditch No. 1 and 2 the Board of County Commissioners consequently acted ultra vires, and Appellee is not estopped from complaining of such action.

It will also be noticed that the Board of County Commissioners paid absolutely no attention to the request of the petitioners in the Blackman petition in establishing the drainage routes in Drainage Ditch No. 1 and 2, and the routes specified in the surveyor's report are different from those outlined in the petition, while the routes adopted by the resolution of the Board do not conform either to the routes specified in the petition or those outlined in the report of the surveyor. After Drainage Ditch No. 1 and 2 was formed and the Board of County Commissioners proceeded with the construction work, it relegated to the scrap pile the petition, the surveyor's report and the resolution establishing Drainage Ditch No. 1 and 2, and proceeded to construct ditches along lines entirely different from those set forth in either the petition, the surveyor's report, the drainage ditch notice, or the resolution establishing Drainage Ditch No. 1 and 2. All of these acts were without the consent of Appellee, and it can scarcely be said that it estopped itself from complaining of them because it signed the Blackman petition asking for making of repairs on Drainage Ditch No. 1 and Drainage Ditch No. 2.

A further answer to the estoppel plea is this: Under the South Dakota drainage law, no notice was required to be given Appellee until the assessment of benefits had been made. Up to that time, Appellee had no knowledge that its property, situated outside of the original assessment areas of Drainage Ditch No. 1 and of

Drainage Ditch No. 2, was 'affected' by the drainage construction, or would be assessed for the cost thereof. We do not concede that, under the South Dakota statute, any notice was ever given to Appellee that an assessment had been made upon its property for the statute, as had been seen, does not provide for the giving of any notice whatever to railroad companies or municipalities. If, however, it should be conceded, for the sake of argument, that the notice published by the Board of County Commissioners, after the assessment had been made, was a notice to Appellee, it was the first notice that Appellee had ever received. All of the acts under which an estoppel is claimed by Appellants were done during the time of the construction work and long prior to the making of the assessment of benefits and to the publishing of the equalization notice.

We respectfully submit that even if the acts set forth in the record were sufficient to constitute an estoppel upon the part of Appellee that such acts could not constitute an estoppel for the reason that, at the time they were done, Appellee had received no notice that its property within the new territory sought to be assessed was within the assessment areas of Drainage Ditch No. 1 and 2, and had no knowledge that an assessment was in contemplation. We deem it unnecessary to discuss the estoppel proposition at further length.

IX.

IN CONCLUSION

In the record of this case there is ample evidence of the greatest ignorance, ineffeciency, and extravagance upon the part of the Board of County Commissioners of Minnehaha county in the construction of the spillway, retaining walls, dams, and other works under the organization known as Drainage Ditch No. 1 and 2. Plans for the work were adopted and then the adoption rescinded. Plans and specifications for the construction of a spillway were obtained and bids advertised for and received for the construction in accordance with the plans. The bids were rejected upon the ground that they were too high, the plans were then thrown into the waste basket and contractors were employed to construct a spillway upon

the cost-plus plan, the contractors to receive compensation for the material and labor used and, in addition, a profit of nine per cent. The construction of the spillway was entered upon without any plans therefor being made, and the plans were drawn after the spillway had been completed, or practically completed. The cost of the spillway so constructed was approximately $150,000, or more than three hundred per cent of the amount of the bids which were rejected by the Board as being too high. The spillway and other works, when completed, have failed to accomplish successfully the drainage of the flats north of the city of Sioux Falls. The property owners in the flats are in practically the same, or possibly in a worse condition, than they were prior to the original construction of Drainage Ditch No. 1 and of Drainage Ditch No. 2. The works constructed, under the organization of Drainage Ditch No. 1 and 2, simply operate to retain the surface water upon the flats and not to drain it off. They are successful in preventing the diversion of the channel of the Big Sioux river and in preventing the draining of the gravel bed from which the city of Sioux Falls obtains its water supply. Those two objects have successfully been accomplished but the same results could have been attained by placing, at a trifling expense, earthwork dams in proper places along the course of Drainage Ditch No. 1 and of Drainage Ditch No. 2. The spillway and other works, as completed in Drainage Ditch No. 1 and 2, have operated to destroy the efficiency of the original ditches as drainage propositions, but have accomplished nothing that could not have been accomplished at a trifling expense by simply abandoning the old ditches and preventing the flow of water through the bluff and into the Big Sioux river below the falls.

The Board of County Commissioners of Minnehaha county, in the work done by them on Drainage Ditch No. 1 and 2, seem to have acted at haphazard and without any well defined plan of procedure. The one thing which they have accomplished successfully has been to expend upwards of $250,000 upon works which are useless as a drainage proposition, and, with interest, the entire indebtedness which has now accumulated is in excess of $300,000. The intervening Appellants, who hold

the drainage ditch warrants issued by the Board of County Commissioners of Minnehaha county upon Drainage Ditch No. 1 and 2, are certainly in an unfortunate position. That they are in a fair way to lose their investment is, however, no reason why Appellee, an "innocent bystander," should be "made the goat" and forced to pay for the errors, mistakes, and wild extravagances of the Board of County Commissioners of Minnehaha county. It was not through any fault of Appellee that Drainage Ditch No. 1 and 2 was organized and the spillway and other works constructed. It is in no manner responsible for the acts of the Board of County Commissioners or for the mistakes of judgment of the intervening Appellants, in investing in the warrants.

In conclusion, we submit, that for the reasons which we have hereinbefore set forth, the South Dakota drainage law is unconstitutional under both the federal and the state constitutions; that the proceedings under which Drainage Ditch No. 1 and 2 was organized were illegal and void; that the work done under such organization was without authority of law; that the attempted assessment upon the property of Appellee is founded upon a fanciful, arbitrary, and illegal basis; that the District Court possessed jurisdiction to hear and determine this suit; and that, for these and the other reasons hereinbefore set forth, the decree of the District Court and the decision of the Circuit Court of Appeals should be affirmed.

Respectfully submitted,

C. O. BAILEY,
J. H. VOORHEES,
T. M. BAILEY,
ROY D. BURNS,
Solicitors for Appellee.

APPENDIX A

PROVISIONS OF SOUTH DAKOTA CONSTITUTION

SECTION 2 OF ARTICLE VI.

§ 2. No person shall be deprived of life, liberty or property without due process of law.

SECTION 13 OF ARTICLE VI

§ 13. Private property shall not be taken for public use, or damaged, without just compensation as determined by a jury, which shall be paid as soon as it can be ascertained, and before possession is taken. No benefit which may accrue to the owner as the result of an improvement made by any private corporation shall be considered in fixing the compensation for property taken or damaged. The fee of land taken for railroad tracks or other highways shall remain in such owners, subject to the use for which it is taken.

SECTION 6 OF ARTICLE XXI

§ 6. The drainage of agricultural lands is hereby declared to be a public purpose and the legislature may provide therefor, and may provide for the organization of drainage districts for the drainage of lands for any public use, and may vest the corporate authorities thereof, and the corporate authorities of counties, townships and municipalities, with power to construct levees, drains and ditches, and to keep in repair all drains, ditches and levees heretofore constructed under the laws of this state, by special assessments upon the property benefited thereby, according to benefits received.

APPENDIX B

SOUTH DAKOTA DRAINAGE STATUTES

(NOTE: The section numbers at the beginning of each paragraph are those of the South Dakota Revised Code of 1919. The references at the end of each paragraph are to the Session Laws of the various years. The paragraphs as printed constitute the law as it stood at the time of the transactions involved in this suit.)

§ 8458. POWER OF COUNTY COMMISSIONERS. The Board of County Commissioners, at any regular or special session, may establish and cause to be constructed any ditch or drain; may provide for the straightening or enlargement of any watercourse or drain previously constructed, and may provide for the maintenance of such ditch, drain or watercourse whenever such ditch, drain or watercourse shall be conducive to the public health, convenience or welfare, or whenever the same shall be for the purpose of draining agricultural land. (§ 1, ch. 98, 1905; § 1, ch. 134, 1907).

§ 8459. PETITION. Such board shall act only upon a written petition signed by one or more owners of land likely to be affected by the proposed drainage. Such petition shall set forth the necessity for the drainage, a description of the proposed route by its initial and terminal points and its general course, or by its exact course in whole or in part, and a general statement of the territory likely to be affected thereby. The petition shall be accompanied by a bond with sufficient sureties to be approved by the county auditor, conditioned to pay all expenses incurred in case the board does not grant the petition or the same is denied on appeal. Such petition may be presented at any regular or special meeting of the board, and, if sufficient in form, shall be ordered filed with the county auditor. (§ 2, ch. 98, 1905; § 2, ch. 134, 1907).

§ 8460. INSPECTION OF PROPOSED ROUTE. It shall be the duty of such board to act promptly upon all drainage petitions. Upon filing such petition the county auditor shall transmit a copy thereof to the state engineer, who, together with the board of county commissioners shall as soon as practicable, inspect the proposed route and, if in the opinion of such board and the state engineer it is necessary, the board shall cause a survey of the proposed drainage to be made by such competent surveyor as such board may select, but such survey shall be under the general supervision of the state engineer. Such survey shall primarily be for the purpose of aiding the board in determining the necessity of the proposed drainage, but may be a complete survey such as will be required for the construction of the proposed drainage and

assessment of its cost, or as much less as the board may require. Such survey may extend to other lands than those affected by the proposed drainage for the purpose of determining the best practical method of draining the entire section of country of which the lands proposed to be drained, or a portion of them, are a part. For the purpose of inspection or surveys, the county commissioners, surveyors or their employes may enter upon any lands traversed by the proposed drainage or in their judgment likely to be affected thereby. The county auditor shall promptly furnish the state engineer with a copy of the surveyor's report mentioned in the succeeding section and of all maps and plans filed by such surveyor and also with a copy of such further files as the state engineer may ask for. In case the drainage is established the preparation of plans and specifications upon which the contract of construction is to be awarded and also the work of construction, shall be under the supervision of the state engineer. It shall be the duty of the state engineer to render such assistance and advice to the board of county commissioners in regard to such drainage as the duties of his office will permit and he shall be reimbursed by such board for his expenses incident thereto; provided, that in case of minor ditches the state engineer shall not be required to attend with the board of county commissioners at the first inspection, nor to perform subsequent services if in his judgment it shall not be necessary for him so to do. (§ 3, ch. 98, 1905; § 3, ch. 134, 1907; § 1, ch. 102, 1909).

§ 8461. SURVEYOR'S REPORT — NOTICE OF HEARING. The surveyor shall report in writing to the board of county commissioners and his report shall be filed with the petition. After personal inspection or after the receipt of the surveyor's report the board shall de termine the exact line and width of the ditch, if the same shall not be fixed in the petition, and shall file its determination with the petition. The board shall then fix a time and place for the hearing of the petition and shall give notice thereof by publication at least once each week for two consecutive weeks in a newspaper of the county, to be designated by the board, and by posting copies of such notice in at least three public places near the route

of the proposed drainage. Such notice shall describe the route of the proposed drainage and the tract of country likely to be affected thereby in general terms, the separate tracts of land through which the proposed drainage will pass and give the names of the owners thereof as appears from the records of the office of the register of deeds on the date of the filing of the petition, and shall refer to the files in the proceedings for further particulars. Such notice shall summon all persons affected by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established and constructed, and shall summon all persons deeming themselves damaged by the proposed drainage or claiming compensation for the lands proposed to be taken for the drainage to present their claims therefor at such hearing. (§ 4, ch. 98, 1905; § 4, ch. 134, 1907; § 2, ch. 102, 1909).

§ 8462. HEARING ON PETITION. At such hearing any person interested may appear and contest the statements of the petition and matters set forth in the surveyor's report and the finding of the board as to width and route. The petitioners in like manner may be heard in support of the petition. After full hearing the drainage may be established along the line set forth in the petition or in the finding of the board prior to the hearing, or the board may vary the route thereof, or its width, as deemed practicable or necessary. If the board deems it best to vary the route, or to materially change the initial or terminal points of such proposed drainage so that it will pass through other lands than those described in the notice of hearing, or to increase the width of lands to be taken for the proposed drainage, the board shall adjourn the hearing and give the owners of such lands notice as in case of the original hearing. No open ditch shall be constructed within the limits of any public highway except where the topography of the country makes such construction advisable and in such case the ditch shall be located at a sufficient distance from the center of such highway to permit a roadway of standard width being constructed. If the proposed drainage does not give sufficient fall to drain the lands sought to be drained or will not properly take care of the waters collected by

such drainage, the same shall be extended so as to secure the drainage or properly dispose of the water. The hearing in any such case shall be adjourned and notice given to all parties newly affected as in case of the original hearing. When the board of county commissioners shall have fully heard and considered such petition, and all matters in opposition to or in support of the same, it shall, if it finds the proposed drainage not conducive to the public health, convenience or welfare, or not needed or practicable for the purpose of draining agricultural lands, deny such petition, the petitioners to be jointly and severally liable for the costs of the proceeding, the same to be recovered in a civil action. If it finds the drainage proposed or any variation thereof conducive to the public health, convenience or welfare, or necessary or practicable for draining agricultural lands, it shall establish the drainage and shall assess the damages sustained by each tract of land or other property through which the same shall pass and the damages as compensation for the land taken for the route of such drainage. Any person interested may be heard in the matter of damages or compensation for land and the determination of the board of county commissioners shall be final unless an appeal therefrom, as provided in this article, shall be taken, failure to prosecute such appeal or to appear and contest an award of damages by the board to be deemed conclusively a waiver of any such damages or compensation for land taken or of any claimants right to have the same assessed by the jury. Such drain shall be given a name and the proceeding thereafter taken shall be recorded and indexed in a book kept for that purpose in the auditor's office. (§ 5, ch. 98, 1905; § 5, ch. 134, 1907; § 3, ch. 102, 1908; § 1, ch. 205, 1917).

§ 8463. EQUALIZATION OF BENEFITS. After the establishment of the drainage and the fixing of the damages, if any, the board of county commissioners shall fix the proportion of benefits of the proposed drainage among the lands affected, and shall appoint a time and place for equalizing the same. Notice of such equalization of proportion of benefits shall be given by publication at least once each week for two consecutive weeks in a newspaper of the county to be designated by the

board, and by posting copies of such notice in at least three public places near the route of the proposed drainage. Such notice shall state the route and width of the drainage established, a description of each tract of land affected by the proposed drainage and the names of the owners of the several tracts of land as appears from the records of the office of the register of deeds at the date of the filing of the petition and the proportion of benefits fixed for each tract of property, taking any particular tract as a unit, and shall notify all such owners to show cause why the proportion of benefits shall not be fixed as stated. Upon the hearing of the equalization of the proportion of benefits, the board of county commissioners shall finally equalize and fix the same according to benefits received. The proportion of benefits which any county, city, town or township may obtain by the construction of such drainage to highways or otherwise, and the benefits which any railroad company may obtain for its property by such construction, shall be fixed and equalized together with the proportion of benefits to tracts of land. Benefits to be considered in any case shall be such as accrue directly by the construction of such drainage or indirectly by virtue of such drainage being an outlet for connection drains that may be subsequently constructed. (§ 6, ch. 98, 1905; § 6, ch. 134, 1907; § 4, ch. 102, 1909).

§ 8464. ASSESSMENTS. After the equalization of the proportion of benefits the board may make an assessment against each tract and property affected, in proportion to the benefits as equalized, for the purpose of paying the damages and the cost of establishment thus far incurred or to be incurred. The cost of establishment shall include the costs of the service of the board of county commissioners, surveyors and assistants, plans and profiles, publication and filing, and other fees, interest on bonds issued or to be issued and all other expenses incurred or to be incurred that in any way contributed or will contribute to the establishment or construction of the drainage. At the expiration of thirty days after the making of such assessment, a copy thereof certified by the county auditor shall be filed by him with the county treasurer, but before the same is filed a notice shall be given by the board of the time when the same

will be so filed, by publication at least once each week for two consecutive weeks in a newspaper in the county to be designated by the board and by posting copies of such notice in at least three public places near the route of such drainage. Such notice shall also contain a description of the property assessed, the name of the owner as it appears in such assessment and the amount of each assessment, together with the amount assessed against the county or any city, town, township or railroad company, and shall also give the date when the assessment will become delinquent, together with the amount of penalty which will then accrue and the date from which interest will begin to run.

From the time of filing such certified copy of assessment in the treasurer's office, the same shall be due and payable and shall be valid and perpetual liens upon the respective tracts so assessed against all persons or governments except the state and the United States and, if not paid within ten days, a penalty of five per cent shall attach thereto and such assessment shall bear interest from the date of the order of the assessment at a rate not to exceed eight per cent per annum payable annually. Such assessment shall be paid to and received by the county treasurer and paid over to the holders of the assessment certificates or upon the order of the board of county commissioners. The board of county commissioners may issue separate assessment certificates against each tract assessed for the amount of the assessment thereon, and may sell the same at not less than par value with all accrued interest, or may contract to pay for the construction of such drainage with such assessment certificates or with warrants. Such assessment certificates shall refer to the record in the office of the county auditor of the order of assessment and of the filing of a copy thereof in the county treasurer's office, shall transfer to the holder all interest, claim, or right in or to such assessment, bear the same rate of interest, carry the lien of such assessment and be enforcible as provided by law. Assessments for drainage or installments thereof shall be enforced by the county treasurer by sale of the property at the annual tax sale, provided that no such assessment or installment thereof shall be included in the sale of any

given year unless the same shall have been delinquent on or before August first of each year. The provisions of Chapters 7, 8, 9, Part 9 of this title shall apply to the enforcement of the lien or drainage assessments so far as such provisions are applicable, except that a treasurer's deed issued upon a delinquent drainage assessment shall recite the fact that the title conveyed is subject to all the claims which the state or any political subdivision thereof may have thereon for annual taxes.

Whenever an assessmnet for drainage or an installment thereof has been made against any county, city, town or township, as provided in this chapter, the officers of such county, city, town or township, whose duty it is under the law to make the levy of taxes, shall at the time of the next annual tax levy after the making of such assessment make a levy for drainage purposes of such an amount as shall be necessary to pay such assessment, and return the same to the proper officers as provided by for the other taxes, and such levy and tax shall be enforced and collected in all respects as provided by law for other taxes; provided, that any surplus remaining in any fund at the close of any year may be used by any township to pay and apply on any drainage assessment, as provided herein; provided, further, that in unorganized townships the county commissioners shall be authorized to pay for drainage as provided herein out of any money belonging to such unorganized township, and each succeeding year a like levy shall be made by such authorities until the whole of such assessment for drainage is paid. Instead of making an annual assessment for the purpose of paying the damages allowed in any drainage proceeding and the costs of establishment and construction, the board of county commissioners may issue warrants payable only out of the assessments to be subsequently made, the same to bear interest at a rate not to exceed eight per cent per annum payable annually, and may sell such warrants at not less than the face value thereof and shall with such money so raised pay any damages allowed and cost of establishment and construction. In making assessment for such drainage such warrants and the cost of issuing the same shall be included in the costs of the drainage. (§ 7, ch. 98, 1905; § 7, ch. 134, 1907; § 5, ch. 102, 1909;

ch. 130, 1911, and as amended by § 1, ch. 46, Laws of Second Special Session of the Sixteenth Session of the Legislature of South Dakota 1920).

§ 8465. BIDS—SPECIFICATIONS—CONTRACTS. Whenever sufficient money shall have been collected the damages occasioned by the construction of such drainage and fixed as herein provided shall be paid and thereupon the board of county commissioners shall proceed to construct such drainage and shall let contracts for the construction of the same. Such contracts may require the contractors to take their pay in assessment certificates or in warrants to be thereafter issued. The contract may be for the construction of the entire drainage or for any portion thereof, and shall be let upon competitive bids, the board reserving the right to reject any and all bids. The lowest responsible and capable bidder shall be accepted but if any landowner affected be an equally low, capable and responsible bidder with a nonowner of the lands affected the former shall be preferred. When any contract shall be let the contractor shall give a bond in such sum as shall be approved by the board of county commissioners, conditioned for the faithful performance of his work and full completion of his contract to the satisfaction of such board. For the information of the contractors in bidding upon the proposed drainage, full plans and specifications shall be filed in the office of the county auditor. If in the judgment of the board of county commissioners the entire drainage or any part thereof can be constructed for less money than the amount of any bid submitted therefor, the board may cause such drainage to be constructed, hire the necessary labor and purchase all necessary material for such construction, without letting contracts therefor. Contracts for building bridges or culverts rendered necessary by the construction of such drainage may be let separately and after the drainage is completed. The cost of constructing such bridges or culverts shall be charged in the first instance as part of the cost of drainage and thereafter such bridges and culverts shall be maintained as part of the highway; provided, that the cost of removing, repairing, enlarging or replacing bridges and culverts already existing across the line of a proposed drainage ditch shall

not be charged as a part of the drainage. (§ 8, ch. 98, 1905; § 8, ch. 134, 1907; § 6, ch. 102, 1909; ch. 206, 1917).

§ 8466. BOARD MAY EXTEND TIME FOR COMPLETION OF CONTRACT. The board of county commissioners shall have power to grant a reasonable extension of time for the completion of any contract. When any contract shall not be finished within the time specified or to which it may be extended, such board may in its discretion at any time thereafter relet such unfinished portion of any part thereof after not less than five days' notice thereof to the lowest responsible bidder and shall take security as for the original contract. The cost of completing such parts, over and above the original contract price and the expense of notices and reletting, shall be collected by the board from the first contractor; provided, that in no case shall the board forfeit and annul a contract without five days' notice to the contractor, if found, and if not found then by written notice left at his last known place of residence in the county. (§ 9, ch. 98, 1905; § 9, ch. 134, 1907).

§ 8467. ASSESSMENTS FOR FURTHER COSTS. At any time after the damages arising from the establishment and construction of such drainage are paid and the lands for such drainage are taken, assessments may be made for further costs and expenses of construction. If the contractors are required and agree to take assessment certificates or warrants for their services, assessments need not be made until the completion of the work when an assessment shall be made for the entire balance of cost of construction, including the services of the board of county commissioners, surveyors and assistants, plans and profiles, publication and filing, and other fees, interest on bonds issued or to be issued and all expenses of every kind and nature that contribute to the establishment and construction of the drain and notice of such assessment shall be given by the board of county commissioners in all respects as provided for the first assessment. And such assessment and the certificates issued thereon shall be in like manner perpetual liens upon the tracts assessed, interest-bearing and enforcible as such first assessments and certificates. The board of county commissioners may sell such assessment certificates at not

less than par and thereby raise funds to defray the cost of establishment and construction. If there be no damages to be paid before taking the lands for such drainage, or if the damages have been paid by the proceeds of the sale of warrants only one assessment need be made. In any case, in the discretion of the board, several assessments may be made as the work progresses. Assessments shall be paid to the county treasurer and the money therefrom shall be paid by him to the holders of assessment certificates, or upon the order of the board of county commissioners for the purpose of the particular drainage. (§ 10, ch. 98, 1905; § 10, ch. 134, 1907; § 7, ch. 102, 1909).

§ 8468. ACCEPTANCE OF DRAINAGE BY BOARD. After the work of construction shall have been fully completed and approved by the state engineer, the drainage may be accepted by the board of county commissioners, by order duly made, and payment shall be made therefor unless in the discretion of the board of county commissioners agreement be made for the partial payments; provided, that final payment shall not be made until the expiration of thirty days after the acceptance of the work and in case an appeal has been taken from the order accepting such work final payment shall not be made until the determination of such appeal; provided, further, that no payment shall be made to any engineer whose employment has not been approved by the state engineer, and no payment shall be made upon any contract for the construction of any such drainage project, unless the same shall have been constructed under the supervision of the state engineer; and provided further, that nothing in this section shall apply to minor drainage projects. All claims for compensation or expenses for publishing legal notices or supervising the construction of any such drainage project including the per diem and the mileage of the county commissioners, shall be paid from the general fund of the county, and for all such payments the county treasurer shall reimburse the general fund from the assessments herein provided for. (§ 11, ch. 98, 1905; § 11, ch. 134, 1907; § 8, ch. 102, 1909; ch. 207, 1917).

§ 8469. APPEALS. An appeal shall lie for any final order or determination of the board of county com-

missioners establishing or denying any proposed drainage; fixing damages occasioned by the taking of lands for drainage or caused by such drainage; fixing the proportion of assessments of benefits; or accepting any drainage to the circuit court of the county in which such drainage is located by any one deeming himself aggrieved by any such order or determination. Written notice of such appeal shall be served upon the board of county commissioners and a bond conditioned to pay all the costs of such appeal, in case the contention of appellant be not sustained in some respect, shall be filed in the office of the clerk of courts, to be approved by him in such amount and with such sureties as he deems necessary. Upon the service of such notice and the filing of such bond, the county auditor shall transmit to the clerk of courts the petition and all other papers and records in the matter or certified copies thereof, when the convenience of the auditor's office would be seriously impaired by the transmission of the original records, and such matter shall be heard as an original action in the circuit court. No appeal shall operate as a stay of proceedings by the board of county commissioners, but the court may upon the taking of an appeal, for good cause shown issue an order staying the further proceedings by the board of county commissioners until the hearing and determination of such appeal. Before granting such stay, the court shall require an undertaking in sufficient amount and with sufficient surety to the effect that if the order appealed from be sustained the person upon whose motion the stay is granted shall pay all damages caused by the issuance of such order of stay. Any number of persons interested may join in the same appeal. Appeals shall be in all cases taken within thirty days from the making of the order or determination appealed from. If, on the trial of such action, it be determined that the drainage as petitioned for and established by order of the board is not conducive to the public health, convenience or welfare or is not necessary or practicable for the purpose of draining agricultural lands, the petitioners shall be jointly and severally liable for all the costs thus far incurred. If the contention of the appellant as to the amount of damages or proportion of benefits, the acceptance of the drain-

age, of the practicability of the drainage when the route thereof is varied by the county commissioners over the protest and objection of the petitioners, be sustained in whole or in part, the costs of such trial shall be part of the cost of the drainage. Upon an appeal from an assessment of benefits, the court of jury shall consider not only the relative benefits, to the tract in regard to which the appeal is taken, with reference to the tract taken as a unit, but shall also consider the question as to whether the tract taken as a unit is benefited or not; if benefited, to what extent. (§ 12, ch. 98, 1905; § 12, ch. 134, 1907; § 9, ch. 102, 1909).

§ 8470. ASSESSMENTS FOR MAINTENANCE. For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the landowners affected in the proportion determined for such drainage at any time upon the petition of any person setting forth the necessity thereof, and after due inspection by the board of county commissioners. Such assessments shall be made as other assessments for the construction of drainage, certificates may be issued thereon and assessments and certificates shall be liens, interest-bearing, perpetual and enforcible, in all respects as original assessments and may be sold at not less than par by the board of county commissioners, turned over to persons contracting for such cleaning and maintenance or may be collected directly by the board of county commissioners. (§ 13, ch. 98, 1905; § 13, ch. 134, 1907).

§ 8471. ASSESSMENTS PAID IN INSTALLMENTS. The owner of any tract of land against which an assessment for drainage is made, who shall, within thirty days after the making of such assessment, file with the county auditor an agreement in writing that in consideration of the right to pay his assessment in installments he will not make any objections to the illegality or irregularity of his assessment, if any there be, and will pay the same with interest as fixed by the board of county commissioners, shall have the privilege of paying such assessment in ten annual installments, interest payable annually. Assessment certificates shall not issue until after the expiration of the period of filing such agree-

ments with the county auditor, and when issued for assessments to be payable in installments may be issued in coupon form. The first installment shall be payable within ten days after a certified copy of the assessment has been filed, in the office of the county treasurer, and subsequent installments shall be payable one, two, three, four, five, six, seven, eight and nine years from the date of such assessment, respectively, with interest on the whole sum unpaid payable annually at maturity of the several installments. Such subsequent installments shall become delinquent after the expiration of thirty days from the time the same are payable and thereupon a penalty of five per cent shall attach thereto. Provided, that where bonds shall have been issued for the construction of such drainage, as provided in Section 8472, such assessments shall be made payable in installments sufficient to meet the payment on the bonds, as the same shall become due. Payments of assessments may at any time be received and full discharge thereof given by the county treasurer to any property holder, but after issue of bonds, such payment of assessments can be received only according to the terms of such bonds. (§ 14, ch. 98, 1905; § 14, ch. 134, 1907; § 10, ch. 102, 1909).

§ 8472. BOARD MAY ISSUE BONDS. The board of county commissioners, whenever it has ordered the establishment of any drainage, shall have authority by resolution to be spread upon its records, to provide for the issuance of bonds in such sums as may be necessary for the purpose of defraying the expenses incurred or to be incurred in obtaining the right of way or in locating or constructing any such drainage. Such word "expenses" shall be construed to mean and cover every item of cost of such drainage from its inception to its completion, such bonds to be payable only out of the funds to be derived from special assessments upon the lands benefited thereby. Such bonds shall bear interest at a rate not exceeding 7% per annum, payable annually and be payable not exceeding twenty years from issue. Such bonds shall be signed by the chairman of the board of county commissioners and countersigned by the auditor, who shall keep a record of all such bonds. Such bonds shall be issued for the benefit of the particular drainage,

numbered, recorded and indexed in the office of the county auditor, and shall in no case be issued for a sum exceeding the benefits to the lands affected by such drainage. The board of county commissioners shall have the power to negotiate such bonds at not less than par value, as it may deem best for the interest of all persons affected by such drainage, any premium received on such bonds to be credited to the fund of the particular drainage. Such bonds shall contain a recital that the same are issued pursuant to the authority of this article and that they are to be paid out of the funds to be obtained as herein provided. Assessments shall be made upon all of the lands benefited by such drainage for the payment of the principal and interest of such bonds when the same shall become due. Such assessments may be made by separate assessments for installments of interest and principal or in one proceeding with but one set of notices. When the assessments are finally fixed the same shall be certified to the county treasurer by the county auditor, and the money paid in thereon shall be received by the county treasurer and paid over to the holders of such bonds. Separate funds shall be kept by the treasurer for each drainage project, and no funds for one drainage project shall be applied to any other drainage. No county shall be liable for the payment of any bonds issued under this article, but such bonds shall be paid only out of the funds derived from the special assessments herein provided for. Such bonds may be made payable at such times as the board of county commissioners shall find for the best interests of the persons benefited by the drainage, and may be issued for all or any portion of the expenses of such drainage. (§ 15, ch. 98, 1905; § 15, ch. 134, 1907).

§ 8474. FURTHER POWERS OF BOARD. Where proceedings have been had for the establishment of a ditch, drain, levee, or straightening or enlarging of a natural watercourse under the law as heretofore existing, and the improvement has been established and constructed and assessments made upon the land benefited thereby, or upon any portion thereof, for the cost of such improvement, and where the assessment so made cannot for any reason be enforced, the board shall proceed as in all

lands benefited by such improvement in the same manner as if the appraisement and apportionment of benefits had never been made, and it shall proceed in the manner provided in this article, using as a basis the entire cost of such improvement, and in the assessment of such benefits account shall be taken of the amount of assessments, if any, that have been paid by those benefited and credit therefor shall be given accordingly. (§ 17, ch. 98, 1905; § 17, ch. 134, 1907).

§ 8475. DITCH OR DRAIN MAY BE DECLARED NUISANCE. Any ditch, drain or watercourse, which is now or may hereafter be constructed so as to prevent the sufrace and overflow water from adjacent lands from entering the same is hereby declared a nuisance and may be abated as such. (§ 18, ch. 98, 1905; § 18, ch. 134, 1907).

§ 8476. POWERS DEFINED. The powers conferred by this article for establishing and constructing drains shall also extend to and include the deepening and widening of any drains which have heretofore been or may hereafter be constructed, also to straightening, cleaning out and deepening the channels of creeks and streams and constructing, maintaining, remodeling and repairing levees, dykes and barriers for the purpose of drainage; and the board of county commissioners may relocate or extend the line of any drain if the same is necessary to provide a suitable outlet, and shall cause a survey thereof to be made, but no proceedings affecting the rights of persons or property shall be had under this section except upon notice and the other procedure prescribed herein for the construction of drains. (§ 19, ch. 98, 1905; § 19, ch. 134, 1907).

§ 8477. DRAINS UNDER CHARGE OF COUNTY COMMISSIONERS. All drains that have been constructed under any law of this state, or that may be constructed under the provisions of this article, shall, except as otherwise specifically provided, be under the charge of the board of county commissioners and be by it kept open and in repair. In all cases when any completed drain is or may be situated in more than one county, the care of the portion thereof lying within any county is assigned to the board of county commissioners of such county to be

kept open and in repair. The cost of such repairs shall in all cases be assessed, levied and collected in the same manner as provided in this article for the construction of drains originally and in all cases when no assessments of benefits shall have been made, the board of county commissioners having charge of such drain shall make such assessments. (§ 20, ch. 98, 1905; § 20, ch. 134, 1907).

§ 8478. BOARD MAY MAKE RULES AND REGULATIONS. The board of county commissioners may make such rules and regulations on the subject of drainage as it may deem proper, not inconsistent with the provisions of this article, and especially with regard to clearing out and keeping clear the channels of streams and the construction and maintenance of dams thereupon, with reference to their capacity for drainage. (§ 21, ch. 98, 1905; § 21, ch. 134, 1907).

§ 8482. DRAINS FOR TOWNS AND CITIES. The board of county commissioners shall have authority to establish drainage for or including the whole or any part of any city or incorporated town, including cities acting under special charter, as provided in this article, and it shall have the same authority with respect to the assessment of damages and benefits within such city or town as in other cases provided for in this article, and like notices to such city or town with respect to the establishment of such drainage and the apportionment and assessment of damages and benefits shall be given as is required by this article to be given to the owner of property damaged or benefited by the establishment or construction of such improvement. (§ 24, ch. 98, 1905; § 24, ch. 134, 1907).

§ 8485. COMPENSATION OF COUNTY COMMISSIONERS. The county commissioners shall receive for their services four dollars per day for the time actually spent by them in the performance of the duties of their offices under this chapter, publishers of newspapers shall receive for publishing legal notices the same fees as are allowed by law for publishing proceedings of the county commissioners; but the proceedings of the board of county commissioners when acting in any drainage matter under this article shall not be published as a part of its regular proceedings or at all. The county auditor shall charge a reasonable amount, to be fixed by the

board, for services, to be paid into the general fund of the county. Each county commissioner shall have power to administer any oath required in any drainage proceeding. (§ 27, ch. 98, 1905; § 27, ch. 134, 1907; § 11, ch. 102, 1909).

§ 8486. NOTICES, HOW SERVED. Notice by personal service, as of a summons in a civil action, may be given instead of by publication and posting in all cases where notice is provided for in this article. In any case where notice is required under the provisions of this article and any person affected by the drainage has not been notified, either by publication or personally, and a hearing has been had or determination made, such person may be notified personally or by publication and posting, to show cause at a time and place to be fixed by the board of county commissioners, and to make return or claim damages as in case of the original hearing. Any such omitted person may be brought in on such due notice at any stage of the proceeding, or after it has been otherwise concluded. The enforcement of any assessment shall not be enjoined for want of the notice provided for in this article, except pending an application to the board of county commissioners for the determination of such matters as to which any person deems himself not bound because of want of notice. (§ 28, ch. 134, 1907).

§ 8488. DEFECTS IN PROCEEDINGS DISREGARDED. Any defect or irregularity not affecting the substantial rights of parties interested, occurring in any drainage proceeding, shall be disregarded in any action seeking to avoid an assessment or cancel, annul or declare void any such proceeding. And in case the defect is substantial the court shall of its own motion determine the rights of the parties, validate the proceedings and assess the costs as justice may require, if the court shall find cause for such validation or such action should have been taken in the first instance and all parties interested are before the court. (§ 29, ch. 98, 1905; § 30, ch. 134, 1907).

§ 8489. INVALID OR ABANDONED PROCEEDINGS. If any proceeding for the location, establishment or construction of any drain under the provisions of a previous law has been heretofore enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned,

or if any such proceeding or like proceeding under this article be hereafter enjoined, vacated, set aside, declared void, dismissed or voluntarily abandoned in consequence of any error, defect, irregularity or want of jurisdiction affecting the validity of such proceeding or for any cause, the board of county commissioners may nevertheless proceed to locate a drain or drains under the same or different names and in the same or different locations from those described in the invalid or abandoned proceedings under the provisions of this article. In case any new proceeding be had resulting in the location of a drain in the same or substantially the same location as that described in the invalid or abandoned or dismissed proceeding, and the extent to which the same will contribute to the location, establishment or completion of such new drain. Such value shall be determined at a hearing upon the same notice as the equalization of benefits or assessments, and may at the same time or at any other time, and the notice of such hearing may be a part of the notice of the hearing upon the equalization of benefits or assessments or separate thereform, but the board shall in any case notify all persons interested to show cause why the determination of the board thereupon shall not be final. When finally fixed such value shall become a part of the cost of the new drainage. No use shall be made by the board of county commissioners in the laying out or completion of any drain or ditch under this article of any map, chart, survey, or other work done under any former law or under this article without having paid therefor; and all sums allowed for any work or material or money expended under the provisions of any previous law or under this article shall be paid to the persons who have paid therefor in proportion to the amounts severally paid by such persons. (§ 33, ch. 134, 1907).

IN THE

SUPREME COURT OF THE UNITED STATES.

OCTOBER TERM, 1924.

No. 456.

A. G. RISTY, ET AL., AS COUNTY COMMISSIONERS, ETC., ET AL., PETITIONERS

vs.

GREAT NORTHERN RAILWAY COMPANY, RESPONDENT.

STATEMENT AND BRIEF IN RESISTANCE OF PETITION FOR CERTIORARI

Believing that if the court is fully and correctly informed with reference to the questions involved in this case it will not deem such questions of sufficient importance or of such nature as to induce it to exercise its power in certiorari, we respectfully ask consideration of the following in resistance of the petition for certiorari filed therein.

STATEMENT OF CASE

The Big Sioux River flows from the north in a southerly direction west of the city of Sioux Falls to a point southwest of the city, thence easterly and thence northerly through the city to a point where it is intersected by the outlet of the drainage ditch or ditches in controversy.

Respondent owns and operates a line of railroad which enters the city of Sioux Falls from a northeasterly direction, extends south through the city, and runs thence southwesterly to the city of Yankton. The point on its line nearest to the drainage ditches hereinafter referred to is about one and one-

half miles south of their outlet, and south of what is hereinafter referred to as the spillway.

In or about the years 1907 to 1909, petitioners caused to be constructed what was then known as Drainage Ditch No. 1, having its origin at a point about three and one-half to four miles north of the city of Sioux Falls, and emptying into the Big Sioux River at a point one and one-half miles north of respondent's railroad.

While the proceedings for the construction of Drainage Ditch No. 1 were pending a petition was filed for the construction of what was first known as Ditch No. 2. Subsequently another petition was filed, seeking the extension of proposed Ditch No. 2, and praying that it be made a part of Ditch No. 1. Petitioners finally, by resolution, established and caused to be constructed Drainage Ditch No. 2, having its origin at a point approximately fifteen miles north of the outlet of Ditch No. 1 on the east side of the Big Sioux River, and running thence in a southerly direction, intersecting the Big Sioux River at one point, and so close to the river at other points that the river subsequently cut into the ditch, and connecting with and emptying into Ditch No. 1 at its point of origin.

Petitioners, by resolution, determined that all of the property theretofore included within what they had determined to be the area of Drainage Ditch No. 1 was also benefited by Drainage Ditch No. 2; that the two ditches were mutually interdependent and should virtually be considered as one drainage system, and they assessed all of said property for the construction of both ditches. The system of drainage thus established was completed and paid for by assessment upon the property then deemed to be benefited which did not include any property lying south of the outlet of Ditch No. 1. No part of respondent's property was included within the drainage area thus established; it was given no notice of any kind of the establishment of such drainage and no attempt was made to include its property within the drainage area or assess it for any part of the cost of the drainage.

As originally constructed, and after the connection of Drainage Ditches No. 1 and 2, the outlet of Drainage Ditch No. 1 consisted merely of a concrete apron hereinafter referred to as "spillway," extending from the lower terminus of Drainage Ditch No. 1 down over an abrupt slope to the Big Sioux River at a point below the falls of the river and as heretofore stated north of respondent's line of railroad. In the year 1916, the volume of water passing through Ditches No. 1 and No. 2 washed out a portion of this concrete work with the result that the waters in the spillway were at that point uncontrolled and serious damage was threatened by the continued maintenance of the ditches in the absence of properly constructed works for the purpose of controlling and confining the waters at their outlet. It is conceded that with the ditches

in the condition in which they were after the washing out of the spillway there was great danger that the Big Sioux River would be diverted from its course around the city of Sioux Falls and caused to flow through the ditches from the point of intersection some miles north of the city returning to the river at the point where the old spillway was located below the falls, thus threatening to destroy the water power of the Northern States Power Company, the water supply of the city of Sioux Falls, and seriously damage many other properties and rights.

It appears from the answer and the undisputed evidence that petitioners started work of some character to attempt to control the waters at the spillway and to prevent the threatened damage; that certain property owners within the area theretofore determined to be benefited by the drainage objected to this work and instituted suit in the state court to restrain the same; that thereafter a petition was filed with petitioners seeking a change of the outlet of the Drainage Ditches No. 1 and No. 2 in such manner as to discharge the water from said ditches into what is known as Covell's Lake, situated in the northwesterly part of the city of Sioux Falls; that thereafter the owners of property within the drainage area as theretofore determined and the parties interested in the Covell's Lake project had numerous conferences with reference to the matter; that as a result of such conferences and as a compromise between said parties (there being no contention or proof that respondent was a party thereto) the proceedings held under the petition last referred to were abandoned and a petition know as the petition of F. L. Blackman and others was filed, which petition is entitled "Petition to Reconstruct and improve Drainage Ditches No. 1 and 2 in Minnehaha County, South Dakota, and to construct a new spillway or outlet to said Drainage Ditches No. 1 and No. 2, and to pay therefor by an assessment upon the property, persons and corporations benefited thereby." Upon this petition, confessedly filed and acted upon by petitioners as a compromise between the owners of property within the drainage area and the promoters of the so-called Covell's Lake project, and not including respondent, petitioners adopted a resolution providing for its hearing and caused notice of said hearing to be published. Respondent was not named in said notice; its right of way, tracks, embankments and bridges were not referred to, and no part of its property was described. It contained nothing which could be construed as giving any notice whatever to it that any claim would be made of benefit to its property or that any attempt would be made to assess its property in such proceeding.

Upon the return day of such notice, petitioners adopted a resolution purporting to re-establish Drainage Ditches No. 1 and No. 2 under the name of Drainage Ditch No. 1 and 2,

along the exact course of their previous construction and for the re-construction of the outlet or spillway.

Purporting to act under this resolution, petitioners caused Ditches No. 1 and No. 2 to be cleaned and otherwise repaired and caused the outlet or spillway thereof to be re-constructed, and pursuant to a resolution or resolutions thereafter adopted, without any notice to respondent, caused certain portions of the Big Sioux River to be straightened. The spillway was re-constructed under the cost plus plan without advertising for bids for its re-construction in accordance with the plans finally adopted, and warrants were issued for the cost of such work amounting, with interest, to approximately $300,000.00.

The first intimation contained in the record of any thought of assessment of or attempt to assess any part of respondent's property appears in a notice published in April, 1919, said notice being of a hearing upon the matter of equalization of benefits resulting from said Drainage Ditch No. 1 and 2 and in which certain depot grounds owned by respondent were described and attempted to be apportioned benefits to the extent of a very few units. Petitioners did not at that time, however, attempt to assess the right of way, tracks, embankments and bridges of respondent and such right and property were not referred to in the April, 1919, notice. Proceedings under this notice were abandoned.

Subsequently and in or about the month of July, 1921, petitioners adopted a resolution apportioning the benefits derived from said Drainage Ditch No. 1 and 2 and apportioned to respondent and to its right of way, tracks, embankments and bridges benefits to the extent of 613.85 units, amounting, as will appear from a mathematical calculation, to approximately $5,800.00. This suit was instituted for the purpose of restraining petitioners from proceeding further with the equalization of said purported benefits and from spreading an assessment upon respondent's property therefor.

The district court acquired jurisdiction both by virtue of well pleaded federal questions and because of diversity of citizenship.

Respondent predicated its claim that the entire proceedings of petitioner commissioners were void upon the following contentions:

1. That the South Dakota drainage ditch statutes were violative of the Fourteenth Amendment to the Federal Constitution;

2. That the acts of the petitioners were so arbitrary and discriminatory as to deprive it of the equal protection of the laws, and that such acts were, therefore, in violation of the Federal Constitution;

3. That the acts of the petitioners in attempting to increase the drainage area of Drainage Ditches No. 1 and No. 2, and to assess respondent's property, not included in such area as originally established, were void because not done pursu-

ant to or authorized by any statutes of the state of South Dakota;

4. That the proceedings of petitioners in attempting to create a new drainage proposition and a new drainage area were a mere subterfuge resorted to by them pursuant to agreement between them and the owners of property in the original drainage area for the purpose of enabling them to assess respondent's property for the cost of such repair and maintenance of the original ditches as was necessary in order to enable them to function without damage to or destruction of the property and rights of respondent and others.

The district court decided that the South Dakota drainage statutes were not violative of the Fourteenth Amendment to the Federal Constitution, but found, in substance, as follows:

1. That the forming of the so-called new ditch was simply a pretense and subterfuge resorted to by petitioners for the sole purpose of attempting to burden respondent and others with the cost of the maintenance of the ditches theretofore constructed;

2. That the South Dakota statutes did not authorize the assessment of property not included within the drainage area of the ditches in question, as originally determined, for the maintenance of such ditches after they had been constructed and the benefits therefor had been assessed, and that the proceedings of the petitioners in so far as they purported to affect the property and rights of respondent were, therefore, void;

3. That the statutes of the state of South Dakota in so far as they purport to authorize drainage proceedings for any purpose other than the drainage of agricultural lands were in conflict with the constitutional provision of the state of South Dakota requiring the corporate organization of drainage districts as a condition precedent to drainage proceedings for any such other purpose, and further found that the proceedings in question, if treated as new proceedings resulting in the establishment of a new ditch, were void because the work done pursuant to such proceedings was not done for the purpose of draining agricultural lands, and that such proceedings were, therefore, not authorized by the state statutes or Constitution; and

4. That regardless of whether or not the alleged new drainage district had been legally constituted, respondent was entitled to the relief asked because of the arbitrary and discriminatory acts of petitioners, bringing respondent within the rule expressed in the case of *Thomas, et al. v. Kansas City Southern R. R. Co.*, 67 L. ed. 758.

C. R. I. & P. Ry. Co. v. Risty et al. 282 Fed. 364.

The Circuit Court of Appeals did not pass upon the Federal constitutional questions involved because, although finding them "grave, serious and doubtful," it deemed their determination not necessary "to the solution of the case," but in other respects it approved the decision of the district court,

and affirmed the decree restraining assessment of respondent's property lying outside the drainage area as originally established.

Risty et al. v. C. R. I. & P. Ry. Co. 297 Fed. 710.

BRIEF

We believe the foregoing statement, which in all respects is sustained by the record, is all that is necessary to present to the court in support of our suggestion that the importance and nature of the questions involved are not such as to demand the exercise of its power in certiorari. We desire, however, to briefly consider the proposition, apparently chiefly relied upon by petitioners, that the decision of the Circuit Court of Appeals has created a conflict between itself and the decisions of the Supreme Court of the State of South Dakota.

We assume that this court will not find that such conflict exists as to demand the exercise by it of the extraordinary power under consideration unless it clearly and conclusively appears: first, that the nature of the questions involved in this case is such that the decisions of the highest court of this state with reference to them will be regarded as authoritative by this court, and second, that such questions have been so decided by the state court as necessarily to foreclose respondent of such rights and remedies as the Federal courts have held it entitled to.

We shall not discuss the first of these two essentials because one of the questions involved, to-wit: as to whether or not the drainage statutes in so far as they purport to authorize drainage for a purpose other than the drainage of agricultural lands, are in conflict with the state Constitution, is of such nature, while the others are as clearly not. None of such questions, however, has been so passed upon by the Supreme Court of the state as to create any conflict.

The state court has never had before it for determination the question as to whether or not the drainage statutes, in so far as they purport to authorize drainage proceedings for any purpose other than that of draining agricultural lands, are violative of the state Constitution. In all cases in which the constitutionality of the statutes has been passed upon by that court the only questions involved were those with reference to the drainage of agricultural lands, and the court very correctly held that such drainage might be provided for without the incorporation of drainage districts.

The case of *Gilseth v. Risty*, 193 N. W. 132, decided after the decision of the district court in this case, is chiefly relied upon by petitioners as establishing the alleged conflict between the state and Federal courts. The opinion in that case discloses the following situation: plaintiff was the owner of agricultural land within the drainage area of Drainage Ditches No. 1 and No. 2 as originally constructed; he was a party to the conferences alleged by respondent in this case to have taken place between the parties interested in the original

ditch proceedings, which conferences resulted in the filing of the petition "for the re-establishment of Drainage Ditches No. 1 and 2;" he was present at the hearing upon that petition and took no appeal from the order of the county commissioners purporting to establish the new drainage; his property, as we have said, was in the drainage area as originally established and he was one of the parties responsible for the original construction of the ditches in question and for their proper maintenance, and one of the parties for whose benefit petitioners are attempting to assess respondent's property and that of others outside the original drainage area.

The court simply held that as to him, a party to the proceeding, the order establishing the drainage and subsequent orders from which he did not appeal, became final. A careful analysis of the opinion discloses that the court finally based its conclusion upon questions of estoppel and lack of equity in favor of plaintiff. After reciting the situation practically as above stated, it said: "Appellant having stood by and seen all the work performed without protest, and having received all the benefits that could result therefrom, should not now be permitted to escape payment for the same. The relief asked by appellant is equitable in its nature, but because of the circumstances above shown, all the equities of the case are against appellant and in favor of the board."

We submit that nothing that was actually decided in the *Gilseth* case is in conflict with the decision of the Circuit Court of Appeals with reference to the rights of respondent here. There is nothing in the *Gilseth* case which would preclude any able lawyer from conscientiously advising respondent that the questions upon which its rights depend have not been passed upon by the state court.

Respondent had no property within the original drainage area; it was not a party to the original proceedings; it was not named nor any of its property described or referred to in the proceedings resorted to for the purpose of enlarging the drainage area.

No constitutional question or question of the power to assess property outside the original drainage area was involved in the *Gilseth* case, and there could not have been a decision in that case, based upon the facts as disclosed by the opinion, that would even furnish any assistance to another court in determining respondent's rights here. The Federal courts, in seeking to avoid conflict, are certainly not obliged to follow the dicta of state courts or give any effect to unnecessary or unessential statements in their opinions.

We respectfully submit that the writ of certiorari should not be granted.

SUPREME COURT OF THE UNITED STATES.

OCTOBER TERM, 1925

No. 100

A. G. RISTY, ET AL., AS COUNTY COMMISSIONERS, ET AL., APPELLANTS

VS.

GREAT NORTHERN RAILWAY COMPANY, APPELLEE

APPEAL FROM THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT

BRIEF OF APPELLEE

Great Northern Railway Company, plaintiff and appellee, filed its bill in the district court of the district of South Dakota, praying for an injunction. From a decree granting an injunction defendants and appellants appealed to the Circuit Court of Appeals of the Eighth Circuit, in which court the decree was affirmed. From the decision of the Circuit Court of Appeals defendants have appealed to this court.

This suit involves the constitutionality of the drainage ditch statutes of the state of South Dakota under both the federal and state constitutions, and also involves the regularity and validity of proceedings taken under the statutes. The facts out of which the suit arises are as follows:

STATEMENT OF THE CASE

The Big Sioux River flows from the north in a southerly direction west of the city of Sioux Falls to a point southwest of the city, thence easterly and thence northerly through the city to a point where it is intersected by the outlet of the drainage ditch or ditches in controversy.

Appellee owns and operates a line of railroad which enters the city of Sioux Falls from a northeasterly direction, extends south through the city, and runs thence southwesterly to the city of Yankton. The point on its line nearest to the drainage ditches hereinafter referred to is about one and one-half miles south of their outlet, and south of what is hereinafter referred to as the spillway. Exhibit 1, appearing on pages 222-223 of the record, is a plat showing the location of its railroad over the area here in question; the location of its two bridges (numbered respectively 150.7 and 146.0) referred to in the record, and also the location of a portion of said drainage ditch or ditches including the spillway. (R., 220-225.)

In or about the years 1907 to 1909, appellant county commissioners caused to be constructed what was then known as Drainage Ditch No. 1, having its origin at a point about three and one-half to four miles north of the city of Sioux Falls, and emptying into the Big Sioux River at a point one and one-half miles north of appellee's railroad. (R., 124-129, 220-223.)

While the proceedings for the construction of Drainage Ditch No. 1 were pending a petition was filed for the construction of what was first known as Ditch No. 2. Subsequently another petition was filed, seeking the extension of proposed Ditch No. 2, and praying that it be made a part of Ditch No. 1. Appellant county commissioners finally, by resolution, established and caused to be constructed Drainage Ditch No. 2, having its origin at a point approximately fifteen miles north of the outlet of Ditch No. 1 on the east side of the Big Sioux River, and running thence in a southerly direction, intersecting the Big Sioux River at one point and so close to the river at other points that the river subsequently cut into the ditch, and connecting with and emptying into Ditch No. 1 at its point of origin. (R., 135, 136, 242.)

Appellant county commissioners, by resolution, determined that all of the property theretofore included within what they had determined to be the area of Drainage Ditch No. 1 was also benefited by Drainage Ditch No. 2; that the two ditches were mutually interdependent and should virtually be considered as one drainage system, and

they assessed all of said property for the construction of both ditches. The system of drainage thus established was completed and paid for by assessment upon the property then deemed to be benefited which did not include any property lying south of the outlet of Ditch No. 1. No part of appellee's property was included within the drainage area thus established; appellee was given no notice of any kind of the establishment of such drainage and no attempt was made to include its property within the drainage area or to assess it for any part of the cost of the drainage. (R., 127, 136-138.)

As originally constructed and after the connection of Drainage Ditches No. 1 and 2 the outlet of Drainage Ditch No. 1 consisted merely of a concrete apron hereinafter referred to as "spillway," extending from the lower terminus of Drainage Ditch No. 1 down over an abrupt slope to the Big Sioux River at a point below the falls of the river and as heretofore stated north of appellee's line of railroad. In the year 1916, the volume of water passing through Ditches No. 1 and No. 2 washed out a portion of this concrete work with the result that the waters in the spillway were at that point uncontrolled and serious damage was threatened by the continued maintenance of the ditches in the absence of properly constructed works for the purpose of controlling and confining the waters at their outlet, it being conceded that with the ditches in the condition in which they were after the washing out of the spillway there was great danger that the Big Sioux River would be diverted from its course around the city of Sioux Falls and caused to flow through the ditches from the point of intersection some miles north of the city returning to the river at the point where the old spillway was located below the falls, thus threatening to destroy the water power of the Northern States Power Company, the water supply of the city of Sioux Falls, and seriously damage many other properties and rights. (R., 28-32.)

It appears from the answer and the undisputed evidence that the appellant county commissioners started work of some character to attempt to control the waters at the spillway and to prevent the threatened damage; that certain property owners within the area theretofore determined to be benefited by the drainage objected to this work and instituted suit in the state court to restrain the same; that thereafter a petition was filed with the appellant county commissioners seeking a change of the outlet of the Drainage Ditches No. 1 and No. 2 in such manner as to discharge the water from said ditches into what is known as Covell's Lake, situated in the northwesterly

part of the city of Sioux Falls; that thereafter the owners of property within the drainage area as theretofore determined and parties interested in the Covell's Lake project had numerous conferences with reference to the matter; that as result of such conferences and as a compromise between said parties (there being no contention or proof that appellee was a party thereto) the proceedings held under the petition last referred to were abandoned and a petition know as the petition of F. L. Blackman and others was filed, which petition is entitled "Petition to Reconstruct and Improve Drainage Ditches No. 1 and No. 2 in Minnehaha County, South Dakota, and to construct a new spillway or outlet to said Drainage Ditches No. 1 and No. 2, and to pay therefor by an assessment upon the property, persons and corporations benefited thereby." Upon this petition confessedly filed and acted upon by the appellant commissioners as a compromise between the owners of property within the drainage area and the promoters of the so-called Covell's Lake project, and not including appellee, the appellant commissioners adopted a resolution providing for its hearing and caused notice of said hearing to be published. Appellee was not named in said notice; its right of way, tracks, embankments and bridges were not referred to, and no part of its property was described. It contained nothing which could be construed as giving any notice whatever to it that any claim would be made of benefit to its property or that any attempt would be made to assess its property in such proceeding. (R., 28-32, 38, 42-64.)

Upon the return day of such notice, appellant commissioners adopted a resolution purporting to re-establish Drainage Ditches No. 1 and No. 2 under the name of Drainage Ditch No. 1 and 2, along the exact course of their previous construction and for the re-construction of the outlet or spillway. (R., 32, 51-54, 260-264.)

Purporting to act under this resolution, appellant commissioners caused Ditches No. 1 and No. 2 to be cleaned and otherwise repaired and caused the outlet or spillway thereof to be re-constructed, and pursuant to a resolution or resolutions thereafter adopted, without any notice to appellee, caused certain portions of the Big Sioux River to be straightened. The spillway was re-constructed under the cost plus plan without advertising for bids for its reconstruction in accordance with the plans finally adopted, and warrants were issued for the cost of such work, amounting, with interest, to approximately $300,000.00. (R., 33-36.)

The first intimation contained in the record of any thought of assessment of or attempt to assess any part of

appellee's property appears in a notice published in April, 1919 (Plaintiff's Exhibit A, R., 141-192) said notice being of a hearing upon the matter of equalization of benefits resulting from said Drainage Ditch No. 1 and 2 and in which certain depot grounds owned by the appellee were referred to and attempted to be apportioned benefits to the extent of a very few units. Appellant commissioners did not at that time, however, attempt to assess the right of way, tracks, embankments and bridges of appellee and such right and property were not referred to in the April, 1919, notice. Proceedings under this notice were abandoned by the appellant commissioners. (R., 192, 201.)

Subsequently and in or about the month of June, 1921, appellant commissioners adopted a resolution apportioning the benefits derived from said Drainage Ditch No. 1 and 2 and apportioned to appellee and to its right of way, tracks, embankments and bridges benefits to the extent of 613.85 units amounting, as will appear from a mathematical calculation, to approximately $5,800.00. This suit was instituted for the purpose of restraining appellants from proceeding further with the equalization of said purported benefits and from spreading an assessment upon appellee's property therefor. (R., 16-19, 36, 37, 192, 206.)

DISTRICT COURT'S DECISION (R., 79-99)

The District Court did not agree with appellee's contention that the drainage statutes of the state of South Dakota were violative of the Fourteenth Amendment to the Constitution of the United States in that they do not provide for proper notice to, and right to be heard of, property owners, and deprive them of their rights and property without due process of law, but properly held that it acquired jurisdiction not only by virtue of diversity of citizenship but because the bill involved a real and substantial question under the Constitution of the United States, and therefore proceeded to determine all the questions; (*Davis, Director General v. Wallace*, 257 U. S. 478, 66 L. ed. 325) and found, in substance, as follows:

(1) That the situation disclosed by the evidence "presented no question of the drainage of agricultural lands" but rather that of maintenance of Ditches No. 1 and No. 2 "and the prevention of the dangers threatened by the water that they were conducting down through these ditches, through this hill, into the river;" that the drainage of the agricultural lands would not have been interfered with if the spillway had not been re-constructed; that the people who constructed Ditches No. 1 and No. 2 originally were responsible for the threatened damage, and it was their

duty to maintain the ditch, "and to stop the ravages of the water cutting into it and through it;" that what was done under the pretense of proceeding under the so-called Blackman petition was merely to maintain the ditch or ditches originally constructed and that in the attempt to include additional lands in the drainage area and assess them any portion of the cost of such maintenance, appellant commissioners were acting entirely without authority of law, there being no provision in the statutes of the state of South Dakota "for the taking in of any other lands and assessing them for the maintaining of a ditch after it had been constructed and the benefits of its building have been assessed."

(2) That the forming of the so-called new ditch was simply a pretense and a subterfuge "resorted to for the sole purpose of attempting to burden the plaintiffs and others with the cost of the maintenance of the ditches theretofore constructed."

(3) That § 8489 of the South Dakota Revised Code, 1919, with reference to invalid and abandoned proceedings had no application, the proceedings for the construction of old Ditches No. 1 and No. 2 never having been held void, set aside or abandoned; and

(4) That the proceedings of the appellant commissioners in "assuming the right to constitute a new drainage district, calling it district No. 1 and 2 and to assess benefits to the property of the plaintiffs in so far as they are located in the city of Sioux Falls" were void.

The trial court further found:

(5) That even if it had found that the alleged new drainage district had been legally constituted and that the appellant commissioners had the right to extend the benefits to property outside the drainage area as originally established, appellee would still have been entitled to relief sought because "the proofs overwhelmingly bring the plaintiffs within the rule recently expressed *In re Thomas, et al v. Kansas City Southern Railway Co., et al.*" (277 Fed. 708, affirmed by this Court, 261 U. S. 481, 67 L. ed. 758) "in that the taxation that is imposed upon each of the plaintiffs is a much higher rate and upon a different basis than the tax upon land lying within the district," stating:

> "As a matter of fact no direct benefits to the property of the railways within the city are shown. It is further shown that the benefits estimated upon the plaintiff's property were upon no standard that would probably produce results approximately the same as those upon the land in the drainage district. * * * Take the railroads, different plaintiffs, there is no pretense

that the basis used had any relation to that used in fixing the value upon the lands in the district. It is admitted that the basis was wholly different from that used for the ascertaining the contribution demanded of individual owners, and I find that such difference necessarily produces manifest inequality. There is an entire absence of the equal protection of the law that must be extended to all. * * * Even admitting that this was a genuine drainage ditch for the purpose of draining agricultural lands, under the circumstances outlined in the evidence, there is no reasonable ground upon which the action of the board could be predicated. There is no pretense in this record that the railroad companies were treated like owners of agricultural lands. The discrimination is palpable, and the amount assessed simply an arbitrary assessment. These plaintiffs were not attempted to be assessed in any manner contemplated by the statute, for the payment of the costs of draining agricultural lands."

(6) That the re-construction of the spillway without change of location and the repair of the ditch, etc., "could not be viewed in the same light or as serving the same purpose as the construction of the original ditches" because the object and purpose of such work was not to drain agricultural lands but to prevent the damage threatened because of the original imperfect construction of the ditches and spillway; in other words, to prevent the destruction of the water supply of the city of Sioux Falls, the water power of the Northern States Power Company, etc., by means of the agency set in motion by the original construction, and that although such object and purpose might have constituted a public use the appellant commissioners were acting without authority of law because the applicable state constitutional provision was not self-executing and the acts of appellants lacked the necessary legislative authority.

DECISION OF CIRCUIT COURT OF APPEALS

(292 Fed. 710)

The Circuit Court of Appeals did not pass upon the Federal constitutional questions involved because, although finding them "grave, serious and doubtful," it deemed their determination not necessary "to the solution of the case," but in other respects it approved the decision of the district court and affirmed the decree restraining the assessment of appellee's property lying outside the drainage area as originally established.

SUMMARY OF ARGUMENT

PROPOSITIONS RELIED UPON BY APPELLEE AS SUSTAINING THE JUDGMENT APPEALED FROM

1. The South Dakota drainage ditch statutes are violative of the Fourteenth Amendment to the Constitution of of the United States and deprive one of rights and property without due process of law in that they provide for the taxation of property without giving the owner thereof proper notice and the right to be heard upon the question as to the validity and amount of the tax and as to whether or not such tax is in excess of the benefits.

2. Such statutes do not provide for or require the giving of any notice whatsoever to railroad companies of hearing even upon the question of equalization of benefits nor afford them any opportunity to be heard upon the question of the amount or validity of the tax upon their properties.

3. Such statutes are likewise violative of the Fourteenth Amendment to the Constitution of the United States because they do not afford to all persons the equal protection of the laws and deprive persons of their rights and property without due process of law, in that they prescribe no definite standard for determining benefits and are "of such a character that there is no reasonable presumption that substantial justice generally will be done but the probability is that the parties will be taxed disproportionately to each other and to the benefit conferred." (*Kansas City Southern Ry. Co. v. Road Imp. Dist. No. 5*, 256 U. S. 658, 65 L. ed. 1151.)

4. In this instance the application and administration of the laws in question by appellant commissioners have been so arbitrary, discriminatory, and extensively oppressive as to result, if not restrained, in depriving appellee of its property without due process of law, and in depriving it of the equal protection of the laws in violation of the Fourteenth Amendment.

5. Appellant commissioners in attempting to include appellee's property within the drainage area and assess it, acted without any authority of law and attempted in excess of their powers to create a burden upon appellee and a cloud upon the title to its property, and proceeded without right to do something not authorized by the law under which they purported to act, this being true for the following reasons:

(a) Because what they did constituted merely maintenance and repair of the ditches as originally constructed, and the statutes do not purport to give them any power

or authority to enlarge the drainage district and assess for that purpose property not originally assessed, the maintenance statute clearly providing that assessments for maintenance and repairs shall be made upon the property and in the proportions originally assessed.

(b) Because the purported establishment of a new drainage ditch in the exact location of the old ditches and construction of a new spillway in the location of the old spillway was confessedly a mere scheme or subterfuge resorted to by appellant commissioners for the purpose of enabling them to lessen the burden upon the property owners in the original drainage area, and to cast the greater part of it upon property owners not included within the drainage area or benefited by the drainage.

(c) Because it clearly appears from the record that the work for which the assessment is sought to be made, unless it be treated as the repair and maintenance of the original ditches, was done, not for the purpose of draining agricultural lands, but for the purpose of preventing damage to property that was threatened by the existence of the drainage theretofore established, and appellant commissioners were not authorized by any law of the state of South Dakota to establish a drainage district or assess property for the cost of the accomplishment of any such object or purpose.

6. It clearly appears from the record that appellee's property has derived no benefit whatever from the so-called drainage, the benefits sought to be charged to it being purely fanciful, speculative, arbitrary and out of all proportion to those sought to be charged to other properties, and not being benefits directly or indirectly derived from the drainage of agricultural lands.

ARGUMENT

I.

THE SOUTH DAKOTA DRAINAGE LAWS ARE VIOLATIVE OF THE FOURTEENTH AMENDMENT TO THE UNITED STATES CONSTITUTION

Appellee contended in the lower courts and still contends that the statutes under which appellant commissioners claim to have proceeded are in conflict with the Fourteenth Amendment to the Constitution of the United States and therefore void in that their enforcement will deprive persons of property without due process of law and deny to them the equal protection of the laws.

This is true because: the statutes provide no proper method for the organization of a drainage district; they

do not provide for any determination that the cost of the proposed drainage will not exceed the benefit to be derived; they do not afford property owners the right to be heard at any time or place before any tribunal upon the questions as to whether or not such cost will exceed the benefit, as to whether or not their lands and property shall be included within the drainage district, and as to the amount and validity of the tax to be assessed against their property.

This is especially true with reference to railroad companies because the statutes *provide for assessment of their property without notice to them and a right to be heard even upon the question of the equalization or apportionment of benefits.*

It must be conceded that when a legislature, for any purpose within its powers, creates a taxing district and provides that the property in such district under certain designated rules of procedure shall be assessed for the cost of the benefit of certain public work, such legislative determination is conclusive upon the question as to whether or not the property included within such district will be benefited by the improvement provided for and, with certain modifications hereinafter referred to, as to whether or not such benefits will be less than the cost, and upon such questions property owners would have no right to be heard, but the rule is different when such determination is delegated by the legislature to a subordinate body. In that event property owners are entitled to notice and hearing upon those questions.

Spencer v. Merchant, 125 U. S. 345, 31 L. ed. 763-768.
Fallbrook Irrigation District v. Bradley, 164 U. S. 112, 41 L. ed. 369-394;
Road Improvement District No. 2 v. Missouri Pacific R. Co., 275 Fed. 600.

The conclusion reached by the District Court that due process of law is afforded, provided an opportunity to be heard with reference to the amount of the tax is given the land owner before the assessment becomes a lien upon his property, is not applicable to the situation presented by this record, because in the state of South Dakota there has been no legislative declaration or finding as to the limits of the districts to be taxed for the purpose of, or with reference to the benefits to be derived by any property or district from, drainage.

This court in *Fallbrook Irrigation District v. Bradley, supra*, stated the correct applicability of the rule laid down in *Paulson v. Portland*, 149 U. S. 30-41, 37 L. ed. 637-641,

cited by the District Court in support of its conclusion, saying:

> "It has been held in this court that the legislature has power to fix such a district for itself without any hearing as to benefits for the purpose of assessing upon the lands within the district the cost of a local public improvement. The legislature when it fixes the district itself is supposed to have made proper inquiry and to have finally and conclusively determined the fact of benefits to the land included in the district and the citizen has no constitutional right to any other or further hearing upon that question. The right which he thereafter has is to a hearing upon the question of what is termed the apportionment of the tax, i. e. the amount of the tax which he is to pay. *Paulson v. Portland*, 149 U. S. 30-41 (37: 637-641). But when as in this case the determination of the question of what lands shall be included in the district is only to be decided after a decision as to what lands described in the petition will be benefited and the decision of that question is submitted to some tribunal (the board of supervisors in this case) the parties whose lands are those included in the petition are entitled to a hearing upon the question of benefits and to have the land excluded if the judgment of the board be against their being benefited. *Unless the legislature decide the question of benefits itself the land owner has the right to be heard upon that question before his property can be taken.*" (Italics are ours.)

It also recognized the distinction sought to be made in *Spencer v. Merchant, supra*, saying:

> "When the determination of the lands to be benefited is entrusted to commissioners, the owners may be entitled to notice and hearing upon the question whether their lands are benefited and how much. But the legislature has the power to determine, by the statute imposing the tax, what lands, which might be benefited by the improvement, are in fact benefited; and if it does so, its determination is conclusive upon the owners and the courts, and the owners have no right to be heard upon the question whether their lands are benefited or not, but only upon the validity of the assessment, and its apportionment among the different parcels of the class which the legislature has conclusively determined to be benefited."

In *Road Improvement District No. 2 v. Missouri Pacific R. Co., supra*, the Circuit Court of Appeals for the Eighth Circuit said:

"But in the case in hand the legislature did not undertake itself to make the assessment on the property in this district, but it delegated that power to and imposed that duty upon the board of the district. And when the legislature delegates to a board or to commissioners the determination of the question what lands will be benefited, or what the amount of benefits to such lands will be, the inquiry becomes in its nature judicial, in such a sense that property owners are entitled to a hearing, or an opportunity to be heard, after notice, before these questions are determined."

It is, therefore, only when there has been legislative determination as to benefits, in which the determination that the benefits equal or exceed the cost is necessarily involved, that the property owner's right to be heard is limited to the question as to the proportional amount and validity of his tax. In all cases where the authority to determine such questions is delegated by the legislature to another body, jurisdiction cannot attach in such subordinate body unless the property owner, by requirement of the delegating statute, is given notice of and an opportunity to be heard upon the question of whether or not his property is or can be benefited by the improvement to an extent *equal* to or exceeding the cost thereof. A statute without such a provision fails to afford due process of law and is void.

As stated by the District Court, the South Dakota drainage statutes differ from those of most other states in that they make no provision "for the organization, at the inception of the proceeding, of a drainage district with boundaries defined, organized after notice to all property owners within the district, and endowed by statute with certain powers, consistent with the purpose for which the district is organized," and that no opportunity is given the property owner to be heard upon the question as to whether or not the benefits will equal the cost and as to whether or not the particular lands of the owner shall be included within the drainage district. It is because of the omission of these essential requirements that the statutes are unconstitutional.

By a constitutional provision of the state of South Dakota hereinafter more specifically referred to the drainage of agricultural lands is declared to be a public purpose and the legislature is authorized to provide therefor and to vest the corporate authorities of counties with power to construct drains "by special assessments upon the property benefited thereby according to benefits received" (State Constitution §6, Article XXI.)

The legislature enacted certain drainage laws, those applicable to this proceeding being found in §§ 8458 to 8491 of the South Dakota Revised Code, 1919, but in so doing merely attempted to delegate some of its powers to the county commissioners, and established certain rules of procedure. The constitutionality of these laws must be determined by the following excerpts from them, which excerpts contain all the provisions applicable to the questions under discussion and are here set out for the convenience of the court.

§ 8458. *Power of County Commissioners.* The board of county commissioners, at any regular or special session, may establish and cause to be constructed any ditch or drain; may provide for the straightening or enlargement of any watercourse or drain previously constructed, and may provide for the maintenance of such ditch, drain or watercourse whenever such ditch, drain or watercourse shall be conducive to the public health, convenience or welfare, or whenever the same shall be for the purpose of draining agricultural lands.

§ 8459. *Petition.* Such board shall act only upon a written petition signed by one or more owners of land likely to be affected by the proposed drainage. Such petition shall set forth the necessity for the drainage, a description of the proposed route by its initial and terminal points and its general course, or by its exact course in whole or in part, and a general statement of the territory likely to be affected thereby. * * * Such petition may be presented at any regular or special meeting of the board and, if sufficient in form, shall be ordered filed with the county auditor.

§ 8460. *Inspection of Proposed Route.* It shall be the duty of such board to act promptly upon all drainage petitions. Upon filing such petition the county auditor shall transmit a copy thereof to the state engineer, who, together with the board of county commissioners, shall as soon as practicable inspect the proposed route and, if in the opinion of such board and the state engineer it is necessary, the board shall cause a survey of the proposed drainage to be made by such competent surveyor as such board may select, but such survey shall be under the general supervision of the state engineer. Such survey shall primarily be for the purpose of aiding the board in determining the necessity of the proposed drainage but may be a complete survey such as will be required for the construction of the proposed drainage and assessment of its cost, or as much less as the board may require. * * *

§ 8461. *Surveyor's Report—Notice of Hearing.* The surveyor shall report in writing to the board of county commissioners and his report shall be filed with the petition. After personal inspection or after the receipt of the surveyor's report the board shall determine the exact line and width of the ditch, if the same shall not be fixed in the petition, and shall file its determination with the petition. The board shall then fix a time and place for the hearing of the petition, and shall give notice thereof by publication at least once each week for two consecutive weeks in a newspaper of the county, to be designated by the board, and by posting copies of such notice in at least three public places near the route of the proposed drainage. Such notice shall describe the route of the proposed drainage and the tract of country likely to be affected thereby in general terms, the separate tracts of land through which the proposed drainage will pass and give the names of the owners thereof as appears from the records of the office of the register of deeds on the date of the filing of the petition, and shall refer to the files in the proceeding for further particulars. Such notice shall summon all persons affected by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established and constructed, and shall summon all persons deeming themselves damaged by the proposed drainage or claiming compensation for the lands proposed to be taken for the drainage to present their claims therefor at such hearing.

§ 8462. *Hearing on Petition.* At such hearing any person interested may appear and contest the statements of the petition and matters set forth in the surveyor's report and the finding of the board as to width and route. The petitioners in like manner may be heard in support of the petition. * * * * * * * * * When the board of county commissioners shall have fully heard and considered such petition and all matters in opposition to or in support of the same, it shall, if it finds the proposed drainage not conducive to the public health, convenience or welfare, or not needed or practicable for the purpose of draining agricultural lands, deny such petition. * * * * * * If it finds the drainage proposed or any variation thereof conducive to the public health, convenience or welfare, or necessary or practicable for draining agricultural lands, it shall establish the drainage and shall assess the damages sustained by each tract of land or other property through which the same shall

pass and the damages as compensation for the land taken for the route of such drainage. Any person interested may be heard in the matter of damages or compensation for land and the determination of the board of county commissioners shall be final unless an appeal therefrom, as provided in this article, shall be taken, failure to prosecute such appeal or to appear and contest an award of damages by the board to be deemed conclusively a waiver of any such damages or compensation for land taken or of any claimant's right to have the same assessed by a jury. Such drain shall be given a name and the proceedings thereafter taken shall be recorded and indexed in a book kept for that purpose in the auditor's office.

§ 8463. *Equalization of Benefits.* After the establishment of the drainage and the fixing of the damages, if any, the board of county commissioners shall fix the proportion of benefits of the proposed drainage among the lands affected and shall appoint a time and place for equalizing the same. Notice of such equalization of proportion of benefits shall be given by publication at least once in each week for two consecutive weeks in a newspaper of the county, to be designated by the board, and by posting copies of such notice in at least three public places near the route of the proposed drainage. Such notice shall state the route and width of the drainage established, a description of each tract of land affected by the proposed drainage and the names of the owners of the several tracts of land as appears from the records of the office of the register of deeds, at the date of the filing of the petition, and the proportion of benefits fixed for each tract of property, taking any particular tract as a unit, and shall notify all such owners to show cause why the proporiton of benefits shall not be fixed as stated. Upon the hearing of the equalization of the proportion of benefits, the board of county commissioners shall finally equalize and fix the same according to benefits received. The proportion of benefits which any county, city, town or township may obtain by the construction of such drainage to highways or otherwise, and the benefits which any railroad company may obtain for its property by such construction, shall be fixed and equalized together with the proportion of benefits to tracts of land. Benefits to be considered in any case shall be such as accrue directly by the construction of such drainage or indirectly by virtue of such drainage being

an outlet for connection drains that may be subsequently constructed.

§ 8464. *Assessments.* After the equalization of the proportion of benefits the board may make an assessment against each tract and property affected, in proportion to the benefits as equalized, for the purpose of paying the damages and the cost of establishment thus far incurred or to be incurred. * * * At the expiration of thirty days after the making of such assessment, a copy thereof certified by the county auditor shall be filed by him with the county treasurer, but before the same is filed a notice shall be given by the board of the time when the same will be so filed, by publication at least once in each week for two consecutive weeks in a newspaper in the county to be designated by the board and by posting copies of such notice in at least three public places near the route of such drainage. Such notice shall also contain a description of the property assessed, the name of the owner as it appears in such assessment and the amount of each assessment, together with the amount assessed against the county or any city, town, township or railroad company, and shall also give the date when the assessment will become delinquent, together with the amount of penalty which will then accrue and the date from which interest will begin to run.

From the time of filing such certified copy of assessment in the treasurer's office, the same shall be due and payable and shall be valid and perpetual liens upon the respective tracts so assessed against all persons or governments except the state and the United States and, if not paid within ten days, a penalty of five per cent shall attach thereto and such assessment shall bear interest from the date of the order of the assessment at six per cent per annum payable annually. * * * * * * * * * Assessments for drainage or installments thereof shall be enforced by the county treasurer by sale of the property at the annual tax sale. * * * Instead of making an annual assessment for the purpose of paying the damages allowed in any drainage proceeding and the costs of establishment and construction, the board of county commissioners may issue warrants payable only out of the assessments to be subsequently made, the same to bear interest at six per cent per annum, and may sell such warrants at not less than the face value thereof and shall with such money so raised pay any damages allowed and costs of establish-

ment and construction. In making assessment for such drainage such warrants and the cost of issuing the same shall be included in the costs of the drainage.

§ 8467. *Assessments for Further Costs.* At any time after the damages arising from the establishment and construction of such drainage are paid and the lands for such drainage are taken, assessments may be made for further costs and expenses of construction. If the contractors are required and agree to take assessment certificates or warrants for their services, assessments need not be made until the completion of the work when an assessment shall be made for the entire balance of cost of construction, including the services of the board of county commissioners, surveyors and assistants, plans and profiles, publication and filing, and other fees, interest on bonds issued or to be issued and all expenses of every kind and nature that contribute to the establishment and construction of the drain, and notice of such assessment shall be given by the board of county commissioners in all respects as provided for the first assessment. And such assessment and the certificates issued thereon shall be in like manner perpetual liens upon the tracts assessed, interest-bearing and enforcible as such first assessment and certificates. The board of county commissioners may sell such assessment certificates at not less than par and thereby raise funds to defray the cost of establishment and construction. If there be no damages to be paid before taking the lands for such drainage, or if the damages have been paid by the proceeds of the sale of warrants, only one assessment need be made. In any case, in the discretion of the board, several assessments may be made as the work progresses. Assessments shall be paid to the county treasurer and the money therefrom shall be paid by him to the holders of assessment certificates, or upon the order of the board of county commissioners for the purpose of the particular drainage.

§ 8469. *Appeals.* An appeal shall lie from any final order or determination of the board of county commissioners establishing or denying any proposed drainage; fixing damages occasioned by the taking of lands for drainage or caused by such drainage; fixing the proportion of assessments of benefits; or accepting any drainage, to the circuit court of the county in which such drainage is located, by any one deeming himself aggrieved by any such order or determination. * * * Upon an appeal from an assessment of benefits, the court or jury shall consider not only the rela-

tive benefits to the tract in regard to which the appeal is taken, with reference to the tract taken as a unit, but shall also consider the question as to whether the tract taken as a unit is benefited or not and, if benefited, to what extent.

§ 8474. *Further Powers of Board.* Where proceedings have been had for the establishment of a ditch, drain, levee, or straightening or enlarging of a natural watercourse under the law as heretofore existing, and the improvement has been established and constructed and assessments made upon the land benefited thereby, or upon any portion thereof, for the cost of such improvement, and where the assessment so made cannot for any reason be enforced, the board shall proceed as to all lands benefited by such improvement in the same manner as if the appraisement and apportionment of benefits had never been made, and it shall proceed in the manner provided in this article, using as a basis the entire cost of such improvement, and in the assessment of such benefits account shall be taken of the amount of assessments, if any, that have been paid by those benefited and credit therefor shall be given accordingly."

It is clearly apparent from the foregoing statutes that the legislature has attempted to vest in the county commissioners the power to establish and construct a system of drainage without first doing any of the following things: creating and defining the boundaries of a drainage district: determining the approximate probable cost of the work, or determining that the benefit to the property to be included within the district and assessed for the cost of the work will equal or exceed such cost. The only finding the commissioners are required to make before proceeding with the work is that "the drainage proposed or any variation thereof" is "conducive to the public health, convenience or welfare or necessary or practicable for draining agricultural lands" (§ 8462 South Dakota Revised Code). Upon such determination alone they are authorized to proceed, *without limit as to cost,* and fully complete the work without any notice whatever to property owners or any right given to property owners to be heard at any stage of the proceedings thereafter until the hearing provided for by § 8463, South Dakota Revised Code, upon the equalization of benefits. *There is no requirement that railroad companies be given notice even of this hearing.*

Certainly such a proceeding cannot be held to constitute due process of law. A fundamental prerequisite necessary to the validity of a special assessment for bene-

fits must be the determination that such benefits will equal the cost.

Village of Norwood v. Baker, 172 U. S. 269, 43 L. ed. 443.

Such question not having been determined by the legislature, the subordinate body to whom the matter was attempted to be delegated, in order to afford due process of law, should have been required to determine it and such determination could be properly made only after due notice and an opportunity to be heard given to all property owners whose property would eventually be subject to assessment. There is certainly as much reason for this as for the requirement that a property owner be heard upon the question as to whether or not his property was actually benefited.

It cannot be contended that it was the legislative intent that the commissioners in determining whether or not the proposed drainage would be "practicable" should base such determination upon the relation of cost to benefit because § 8460, *supra*, authorizes them to act upon a preliminary survey made merely for the purpose of aiding the board in determining the necessity of the proposed drainage, leaving it discretionary with them as to whether or not "a complete survey such as will be required for the construction of the proposed drainage and *assessment of its cost" shall be made.* (Italics are ours.)

It will be observed that the statutes provide for but two notices of hearing, that of hearing upon the original petition and surveyor's report in § 8461, and that upon the equalization of benefits in § 8463, the hearing provided for by § 8461 being merely, as we have stated, upon the sole question (exclusive of the question of damage, in which we are not interested) as to whether or not the proposed drainage will be conducive to the public health, convenience or welfare or necessary or practicable for draining agricultural lands.

The jurisdiction of the county commissioners over any particular piece of property, if acquired at all, must be acquired by virtue of the notice provided for in § 8461. The pertinent requirements of that notice are that it "shall describe the route of the proposed drainage and the tract of country likely to be affected thereby in general terms, the separate tracts of land through which the proposed drainage will pass, and give the names of the owners thereof * * *. Such notice shall summon all persons affected by the proposed drainage to appear at such hearing and show cause why the proposed drainage should not be established or constructed."

In the instant case, pursuant to this statute, a notice

appearing in the printed record on pages 54-64, inclusive, was published. Appellee was not named in said notice nor its property described, nor was anything contained in the notice from which it might possibly infer that it was in any manner affected by the proceeding. On the contrary from the terms of the notice itself it was justified in assuming that it was not and would not be affected.

The notice after describing the "tract of country likely to be affected" and the separate tracts of land through which the proposed ditch would pass and stating the owners thereof, contained the following:

> "In addition to the above, notice is also given to Minnehaha County, Townships of Sioux Falls, Mapleton, Sverdrup, and Dell Rapids in said County and the City of Sioux Falls in said County on account of benefits to highways, bridges, parks and city waterworks plant in the said drainage area *and notice is also given to the Chicago, Milwaukee & St. Paul Railway Company, also to the Watertown & Sioux Falls Railway Company on account of the benefits to their rights of way within said drainage area.*"

The only railroad companies then thought by the appellant commissioners to be affected by the proceeding, being companies owning property included within the area of Drainage Ditches No. 1 and No. 2 as originally determined, were named in the notice. Certainly appellee had the right to assume that they were the only railroad companies in any manner sought to be affected.

In this connection it is interesting to note that there is no evidence "that the tract of country likely to be affected by the establishment and construction of the said proposed drainage" described in general terms in the notice was selected or determined upon by any action of the board of commissioners. The resolution providing for the hearing (R., 50) merely provides that notice be given "in accordance with" the statutes. This is followed by a purported resolution establishing the drainage (R., 51-54) and the only record we find having any reference to the tract of country "likely to be affected" is in the notice itself which never appears to have been acted upon by the board.

As to persons claiming damages to their property or compensation for the taking of it, the notice is sufficient as it describes the land through which the drainage is to pass and names the owners thereof. It may be fair to assume that all persons to whom such notice is given know whether or not they have a claim for damages but as to persons whose property is not so described and who may be affected by the proposed drainage, we contend that no

adequate notice—no notice that would constitute due process of law—is given.

How can persons owning land some miles removed from the drainage ditch or a party such as appellee owning and operating a line of railroad, no part of which is upon or in proximity to any of the land sought to be drained, know that in the judgment of the board their properties were or would be affected by the drainage? The statute does not require the naming of such persons but in general terms requires the notice to be addressed to all persons affected. Such notice assumes that the persons affected either have been determined by the board or else it places upon such persons the making of that determination at their peril. (In this instance, as hereinbefore stated, the board did determine and name in the notice the railroad companies affected, without including appellee. It is thus clearly apparent that the attempt to assess it, as stated by the District Court, was an "afterthought.")

But for what purpose are they summoned before the board? Not that they may show that their property is not affected but that they may show cause why the drainage should not be established and constructed. They are not by this language given the opportunity to show cause why their property should not be included in the drainage area. If such persons are directed to show that their property is not benefited at all, the statute gives such permission to the persons affected only for the purpose of opposing the establishment and construction of the ditch.

If one owned a piece of land not agricultural in character, with no possibility of its being made agricultural land, not subject to overflow, and of such character that it would be impossible for water to collect or stand thereon, and such land were located on the river bank and some miles away from the drainage project, it would seem to be utterly absurd that a notice in the words of the statute should be binding on him so that if he failed to appear and contest the establishment and construction of the ditch his land would be subject to an assessment for benefits therefrom. If he did appear and contest the establishment of the ditch, he would be told, in all probability, that his objection went only to the amount of benefits to be assessed against his property and would have to be urged at a subsequent hearing. But he would be in the drainage area and the ditch would be established as to him and as to his property. We do not believe that jurisdiction for such a purpose could be obtained in that manner.

The only further notice provided for is that of hearing upon equalization of benefits (§ 8463). This hearing may

be had at any time after the establishment of the drainage and the fixing of the damages and either before or after the completion of the work. In the instant case no notice of it was given until the work was completed. At this hearing nothing is determined except the proper apportionment of the benefits as between the various parties claimed to have been benefited. The question as to the amount of the tax and its validity is not involved. Whether or not the total cost of the work is in excess of the total benefits is not a relevant question and is not determined. The only question at issue is whether or not the proportion of benefits theretofore fixed by the commissioners constitutes a fair distribution of the cost of the improvement as between the various properties.

Under this statute the commissioners proceed to determine what they think is the actual benefit to a tract of land, calling such tract a unit. They then proceed to determine what they think is the actual benefit to all other tracts. Each of the amounts so arrived at is divided by the amount of benefit to the unit and each tract is assessed the number of units ascertained as the quotient. It is readily apparent that in this proceeding the cost and therefore the actual amount of the assessment is not involved. The cost per unit may be many times the benefit per unit. Upon that question there is no hearing at any stage of the drainage proceedings. If this constitutes due process of law we submit that the term has become meaningless and that the constitution has lost its power to protect.

In *Martin v. District of Columbia*, 205 U. S. 135; 51 L ed. 743, the statute under consideration required a jury to apportion the cost of a local improvement "according as each lot or part of land in such square may be benefited by the opening, widening, extending, or straightening of such alley." The court sustained the constitutionality of the act but sustained it only because it permitted "the interpretation that in any event the apportionment is to be limited to the benefit." The court said: "We think it apparent as was assumed by the court of appeals that the jury understood their duty to be to divide the whole cost among the landowners whether the benefit was equal to their share of the cost or not. It must be admitted that the language of the statute more or less lent itself to that understanding. * * * For this reason, the assessment must be quashed." The language of the South Dakota statute is quite different. It (§8464) provides that "after the equalization of the proportion of benefits the board may make an assessment against each tract or property affected *in proportion to the benefits as equalized*, for the pur-

pose of paying the damages and the cost of establishment."

This language admits of but one interpretation when it is considered in connection with the provisions of § 8463. It clearly requires the board of county commissioners to first determine the proportion of actual benefits and then to assess the entire cost in such proportion. The question of whether or not the cost exceeds the benefits is never determined and has no effect whatever upon the assessment under the South Dakota statutes.

THE STATUTES PROVIDE FOR THE ASSESSMENT OF RAILROAD PROPERTY WITHOUT ANY PROVISION FOR NOTICE TO ITS OWNERS AND A RIGHT TO BE HEARD EVEN UPON THE QUESTION OF THE EQUALIZATION OR APPORTIONMENT OF BENEFITS.

In this connection we ask the court to carefully consider and analyze § 8463 of the Revised Code of 1919, hereinbefore quoted. It requires the county commissioners to proceed as follows:

(a) After the establishment of the drainage and fixing of damages, to "fix the proportion of benefits of the proposed drainage *among the lands affected*, and to appoint a time and place for equalizing the same;"

(b) To give notice of such proportion of benefits and equalization of benefits by publication and posting;

(c) To state in the notice the route and width of the drainage, "a description *of each tract of land affected*," and the names of the owners of the "several tracts of land," and the proportion of benefits "*for each tract of property*," and to notify "all such owners" to show cause why the proportion of benefits shall not be fixed. (Italics are ours.)

The foregoing is all that this section requires the county commissioners to do with reference to the question of equalization of benefits prior to the hearing, and with reference to notice.

The section then further provides that upon the hearing, without any provision whatever for notice, the benefits (not the proportion of benefits) "which any railroad company may obtain for its property by such construction" and the proportion of benefits which any county, city, town or township may so obtain "shall be fixed and equalized *together with the proportion of benefits to tracts of land*." (Italics are ours.)

It will be observed that notice is required to be given only to the owners of the "several tracts of land." This is so plain as to scarcely admit of argument. That the right of way, embankments, bridges, and other property (not agricultural land) of railroad companies were not deemed to have been included within the term "tract of land" or

"tract of property" is clearly evidenced by the fact that the legislature found it necessary to make and made in the latter part of § 8463 special provision for ascertaining "the benefits which any railroad company may obtain for its property by such construction," and for equalizing the same "together with the *proportion of benefits to tracts of land.*" This provision is entirely superfluous if such property should be held to be included within the meaning of "a tract of land" as such term is used in the preceding portion of the statute providing for the fixing of proportion of benefits and giving of notice and in fact is inconsistent with such interpretation.

It is therefore clearly apparent that the statute purports to authorize the commissioners to determine the benefit to railroad property and assess the same without any notice or the giving of any opportunity to be heard.

The further points relied upon in questioning the Federal constitutionality of the South Dakota drainage laws and the constitutionality of the proceedings in this case are:

The statutes prescribe "no definite standard for determining benefits;"

They are "of such a character that there is no reasonable presumption that substantial justice generally will be done but the probability is that the parties will be taxed disproportionately to each other and to the benefit conferred," and

That their application and administration in this case have been so arbitrary, discriminatory and extensively oppressive as to result, if not restrained, in depriving appellee of its property without due process of law and in depriving it of the equal protection of the laws.

These propositions, which may be considered together, are supported by the following Federal decisions:

Gast Realty & Investment Co. v. Schneider Granite Co., 240 U. S. 55, 60 L. ed, 523.

Kansas City Southern Ry. Co. v. Road Improvement District Number 6, 256 U. S. 658, 65 L. ed. 1151.

Yick Wo v. Hopkins, 118 U. S. 356, 30 L. ed. 220;

Road Improvement District No. 2 v. Missouri Pacific Railroad Co. (C. C. A.) 275 Fed. 600, 604.

Village of Norwood v. Baker, 172 U. S. 269; 43 L. ed. 443.

Myles Salt Co. v. Iberia Drainage District, 239 U. S. 478, 60 L. ed. 392.

Abernathy v. Fidelity Nat. Bank & Trust Co. (D. C.) 274 Fed. 801.

Thomas v. Kansas City Southern Railway (C. C. A.) 277 Fed. 708 (affirmed by the Supreme Court, 261 U. S. 481, 67 L. ed 758.

Board of Directors v. Pipe Line Co., 292 Fed. 474.

Thornton v. Road Imp. Dist. No. 1 (C. C. A.) 291 Fed. 518.

We deem it unnecessary to discuss the principles stated or quote further from the authorities cited in their support.

The important question is that of the application of these authorities to the South Dakota statutes and the acts of the commissioners as shown by this record.

So far as the statutes are concerned they prescribe absolutely no standard or rule for determining benefits. The county commissioners are simply told by the legislature to fix the proportion of benefits among the lands affected and that "benefits to be considered in any case shall be such as accrue directly by the construction of such drainage or indirectly by virtue of such drainage being an outlet for connection drains that may be subsequently constructed." (§ 8463, South Dakota Revised Code, 1919).

The statute of itself, however, is discriminatory in that it requires the county commissioners to fix with reference to "lands affected" the "proportion of benefits" and with reference to the property of railroad companies "the benefits." In the one case thus requiring the determination of a relative benefit and in the other of an actual benefit. If the benefits should materially exceed the cost, the result of the discrimination would be most obvious.

It is our contention that the law is unconstitutional because it fixes no standard or method for the determination of benefits; that its operation naturally results in the use of arbitrary and discriminatory measures, and that "there is no reasonable presumption that substantial justice generally will be done."

This contention is sustained by the conduct of the appellant commissioners in this case. It clearly appears from the record that Drainage Ditches No. 1 and No. 2 were completely established, put in operation, and paid for several years prior to the institution of the proceedings here complained of, by assessment of the property then deemed to be benefited thereby and thus included within their drainage area, *no part of appellee's property being then thought to be affected;* that after all this had been done and while these ditches were presumably performing the function for which they had been constructed they became out of repair, the spillway or outlet washed out, and because the Big Sioux River forms what might be called a horse-shoe

bend around the city of Sioux Falls, the opening end of the horse-shoe being connected by the drainage ditches, there was great danger, after the washing out of the spillway, that the entire course of the river would be diverted from its channel through the cut-off of the ditch, thus destroying the water supply of the city of Sioux Falls, and the water power of the Northern States Power Co., and causing much other great damage; and the appellant commissioners were naturally forced to the conclusion that something must be done—not to take care of the drainage, there being no evidence that it was being interfered with—but to prevent the machinery which they had set in motion for drainage purposes from destroying the rights and property of those not responsible for its existence. It likewise conclusively appears from the answer of the appellant commissioners that the owners of property within the drainage area became much exercised, that various meetings were held, and that finally, pursuant to an agreement among such property owners and as a compromise measure, proceedings were started which resulted in the pretended establishment over exactly the same lines as the ditches then constructed of a new ditch to be known as Drainage Ditch No. 1 and 2. It is apparent that this aptly termed "subterfuge" was resorted to for the sole and only purpose of attempting to lay a foundation which would permit appellant commissioners to assess the owners of the property and rights the destruction of which was threatened by the existence of the then drainage project, and the owners of other property outside the drainage area, as originally established, a great proportion of the cost of the work necessary to be done in order to avoid the threatened injury, and thus lessen the burden upon the property owners responsible in the first instance for the drainage and who confessedly planned the scheme which the appellant commissioners adopted "as a compromise."

It is evident that the entire proceeding was in bad faith, possibly not intentionally so upon the part of the commissioners but so in fact. The proceedings of the commissioners were purely arbitrary and discriminatory.

All this of course has nothing to do with the method of assessment of proportion of benefits, but the appellant commissioners proceeded to attempt to perform their alleged duties in that respect in the same arbitrary and discriminatory manner.

Appellee owns no agricultural land which is sought to be assessed. Its property in question consists of its station grounds in the city of Sioux Falls and a portion of its right of way, embankment, and bridges, all confessedly out-

side the drainage area as originally established. (R., 18, 19, 224.)

Appellant commissioners in determining the proportion of benefits to the various tracts of land and the alleged benefit to the property of appellee proceeded as follows. They employed an engineer, one Herman Rettinghouse, to make a topographical survey of the district he thought might be included within the drainage area for the purpose of preparing a map and furnishing data to the board that would enable it to fix the benefits. (R., 281-282.) This engineer selected one acre of agricultural land as a unit. Appellant commissioners decided that the acre so selected was worth $25.00 more after than it was before the construction of the drainage, thus determining that the value of the benefit to the unit was $25.00. All the agricultural land was assessed in relation to the unit and in the same manner (R., 278, 284, 285). In determining the alleged benefit to the railroad and other property not agricultural lands, an entirely different method was used. We quote from the testimony of the engineer, Rettinghouse:

"I am familiar with the cost of construction and upkeep of highways. In arriving at the benefit to the highways within this drainage area, we estimated the benefits in this way. There is a certain amount of annual maintenance necessary for any road and there is more than that amount necessary under flood conditions. That is to say, a road that is periodically flooded as against a road that never is flooded. The difference in the estimated cost of maintenance was capitalized, or represented the interest on a certain sum of money, and we considered the capitalized portion as a real benefit. * * * We divided the amount arrived at by the value of the unit of $25.00, thereby obtaining the number of units as a proportional benefit for these roads. The sum we divided by the unit represented the capitalized value to that part of the highway; we applied the same method to the streets and highways of the city of Sioux Falls. We did not apply the acreage basis to the city property, excepting possibly the grounds where the water works are located. In applying the benefit to the unit and what the board took into consideration as elements of benefit to the Milwaukee Railway Company, we took into consideration the fact that in the first place there were practically three elements. First was the right-of-way on the acreage basis, which was estimated in proportion to the adjacent lands; second, that it was possible to shorten or abandon certain bridges. In order to determine the bene-

fits derived therefrom is simply a mathematical proposition. It costs a certain amount of money each year in order to maintain a bridge, whether it is a pile bridge or steel bridge. We know how long these structures will last. We figure the cost of a bridge and divide it by the number of years in order to get the amount that is necessary to be extended each year. Taking the amount in dollars and cents multiplied by the length of the bridge and divide that and capitalize that at seven per cent, which is the usual rate of interest, and that determines the amount of benefit. This was the second element. The third element is the fact that by reason of the flooding of the territory in which railroads are located, washouts often occur. We obtained data and from my personal knowledge and experience I have a very good idea of what it costs to repair washouts periodically appearing and we estimated as close as possible how much it would amount to every year and capitalized that amount again. Again as an additional element, a roadbed is solidified or made stronger by not being subject to floods. A roadbed that is constantly or for great lengths of time subjected to submersion is certainly weakened, and again, so far as humanly possible we figured the amount of benefits in dollars and cents and after getting all of these results or capitalized amounts, we divided that by 25 as our measure and determined the number of units of benefit. That system and general method and plan was used to determine the amount of benefits that each railroad received from these separate elements." (R., 285-286.)

He further testified that appellee had 2.4 acres of right-of-way considered benefited; also "one-fifth of a mile of track, two bridges protected, and 315 feet approximately of bridge that might be abandoned," and that these items were benefited because the drainage ditch in his opinion diverted a certain estimated amount of the flood waters of the Big Sioux River from the river (R., 286-288).

C. T. Charnock, appellant commissioner, testified:

"In assessing the railroads, we took the land that the railroad companies owned into consideration first, then the railroad itself, and then the culverts and bridges. The acreage that the railroad companies owned was only one element taken into consideration, and it was all assessed upon the unit plan. We took in the mileage but mileage was not the only element taken into consideration. We did not use the valuation of the railroads but we used the valuation of the benefits that

we thought the railroads would receive from it. The board went over the proposition with the engineer and he figured out the method to use and it was approved by the board. *We accepted his figures.* The engineer figured the proportion of bridges that could be saved by diverting the water through the spillway, and that was computed in dollars and cents, and divided by 25, which made so many units. The whole system was figured on that plan. All of the different elements of benefit were figured up and added together. The engineer showed us what benefits this would be, what it would amount to, and that is the way we handled it, by the $25.00 unit, the same as we did the farms. It was all figured out for us on paper." (R., 279-280.)

It appears from the evidence of C. M. Bassett (R., 224-226) that the engineer, Rettinghouse, based his estimate of benefits to appellee upon the conclusion that because of the existence of the drainage appellee could shorten one of its bridges approximately 323 feet and he apparently attempted to figure and capitalize the saving in maintenance.

It is quite apparent that no uniformity of assessment could possibly result from the use of the methods resorted to. The proportion of benefit if any sustained by the railroad companies to that sustained by the agricultural lands could not possibly be ascertained. The method resorted to was so lacking in foundation, so vague, indefinite, speculative, arbitrary, and discriminatory as certainly not to afford due process of law.

This is especially true in view of the fact that the record contains not a word of evidence tending to show that the property of appellee is or was affected in the slightest degree by the existence of the drainage system. The engineer, Rettinghouse, based his opinion as to benefits upon the assumption that the ditch, acting as a flood water by-pass, would divert a certain estimated amount of the flood waters of the river and prevent them from being carried by the river past the city of Sioux Falls and down to appellee's right-of-way and bridges in question, but he admitted, upon cross-examination, that he was not a hydro-electric engineer; that he did not know the capacity of the ditch except that he assumed that its capacity was some 2600 to 3000 cubic feet per second; that he did not know its capacity at the point where it was taking the waters out of the river; that he did not know how much of the water discharged by the ditch at the outlet was flood water or how much was water drained from adjacent lands. (R., 289-290.) In short, he admitted that he knew no facts whatever upon which to base his opinion with reference

to the amount of the benefits. Such opinion was based entirely upon the unwarranted and unsupported assumption that the ditch would carry 2600 to 3000 cubic feet per second of the flood waters of the Big Sioux River.

The record, however, furnishes further conclusive proof that the appellant commissioners in these proceedings were not acting pursuant to any definite standard for determining benefits. In March, 1919, they passed a resolution attempting to fix the proportion of benefits from the same work now under consideration and published a notice (Plaintiff's Exhibit A, R., 141-192). This proceeding was subsequently abandoned because of certain defects but it is of value in comparison with the proportion of benefits made in 1921 for approximately the same work as illustrating the manner in which the law was attempted to be applied and as throwing light upon the query as to whether or not the attempted application of the law was arbitrary and discriminatory.

The chairman of the appellant board of county commissioners testified that the commissioners adopted the same method of determining the benefits in 1919 that they did in 1921 (R., 196). He further testified that he was not certain whether the approximate cost of each unit used in 1919 was $80.00 to $85.00 or $7.50 to $8.00 per acre, although in fairness to him as well as to the court we state that it appears from the record that the then unit was a ten-acre tract and as then used probably represented, as may be determined by a mathematical calculation, an approximate cost of about $80.00.

A comparison of the two resolutions without other evidence furnishes, as we have said, conclusive proof of the speculative and arbitrary application of the law. The proportion of benefits assessed to each of the railroad companies mentioned in the 1919 apportionment was several times less than its apportionment for the same benefit in 1921. In 1919 it appears from the notice in evidence (Plaintiff's Exhibit A, R., 141-192) that the assessment of the various railway companies then considered to be benefited was made purely upon a mileage basis; the mileage of each company is given in the notice and the several proportions of benefits assessed bear the same proportion to each other as the mileage of each company bears to that of the other. In arriving at the proportion of benefits for the same work two years later, it conclusively appears that the mileage was given very little consideration. In the proportion of benefits attempted to be made in 1919, the track, right-of-way, and bridges of the Great Northern Railway Company and the hydro-electric plant and the water rights of the

Northern States Power Company were given no consideration whatsoever, although now an attempt is made to proportion benefits to the Northern States Power Company to the amount of approximately $50,000.00, and, as we have said, to the Great Northern Railway Company to the amount of approximately $5,800.00.

If substantial justice was done in 1919, it certainly was not done in 1921, and if done in 1921, it was not done under the law as applied in 1919. The conclusion must necessarily follow and scarcely bears stating that the method employed for ascertaining the benefits was so speculative and arbitrary as, if not restrained, to deprive appellee of its property without due process of law and deny it the equal protection of the laws. The District Court was fully justified in reaching the following conclusion:

> "As a matter of fact no direct benefits to the property of the railways within the city are shown. It is further shown that the benefits estimated upon the plaintiff's property were upon no standard that would probably produce results approximately the same as those upon the land in the drainage district. * * * Take the railroads, different plaintiffs, there is no pretense that the basis used had any relation to that used in fixing the value upon the lands in the district. It is admitted that the basis was wholly different from that used for ascertaining the contribution demanded of individual owners, and I find that such difference necessarily produces manifest inequality. There is an entire absence of the equal protection of the law that must be extended to all. Referring to the testimony showing the manner of making assessments and the amount in a general way: I think it fairly appears from the record in the case that the contention of the plaintiffs that the attempt to assess the property of these plaintiffs was an afterthought. It, in my judgment, is established that they could not be benefited, even admitting that this was a genuine drainage ditch for the purpose of draining agricultural lands, under the circumstances outlined in the evidence, there is no reasonable ground upon which the action of the board could be predicated. There is no pretense in this record that the railroad companies were treated like owners of agricultural lands. The discrimination is palpable, and the amount assessed simply an arbitrary assessment. These plaintiffs were not attempted to be assessed in any manner contemplated by the statute, for the payment of the costs of draining agricultural lands."

II.

THE PROCEEDINGS OF APPELLANT COMMISSIONERS COMPLAINED OF AND SOUGHT TO BE RESTRAINED WERE NOT AUTHORIZED BY THE STATE LAW AND CONSTITUTED THE EXERCISE BY THEM OF PRETENDED AUTHORITY AND POWERS NOT VESTED IN THEM BY ANY STATUTE OF THE STATE.

This involves the consideration of the following questions: whether such proceedings were not a mere subterfuge for the purpose of attempting to force appellee and others whose property was not within the original drainage area to bear a large portion of the expense of maintaining and repairing the ditches already constructed; whether such proceedings were valid proceedings resulting in the establishment of new drainage; whether the work done under them was but the necessary work for the repair and maintenance of the ditches already constructed; and whether if the proceedings were in good faith for the purpose of establishing a new ditch the actual purpose was drainage or some other public use. These various propositions are somewhat interwoven and will be treated together.

There is ample ground for the finding of the District Court that the situation existing in 1916 presented no question of the drainage of agricultural lands; that it presented no question other than the duty of the appellant commissioners to maintain and repair the ditches theretofore constructed; that the attempted formation of the new ditch "was simply a pretense and that the plaintiff's pleading that it was a subterfuge is supported by the proof, resorted to for the sole purpose of attempting to burden the plaintiffs and others with the cost of the maintenance of the ditches theretofore constructed."

It is not necessary even to resort to the evidence to sustain these findings. The answer of appellant commissioners is sufficient of itself. We refer particularly to paragraphs Ninth and Tenth (R., 28-32) and to the following allegation contained in paragraph VIII, of the so-called affirmative defense "and (defendants) further allege that the original petition for said drainage ditch, river cut-offs and spillway hereinbefore mentioned was a compromise between said petitioners therefor and others affected thereby as hereinbefore set forth" (R., 38).

The pleading that the proceedings were had "with the consent and acquiescence of this plaintiff" is not supported by any evidence.

The answer shows the situation to be exactly what

we claim. The ditches had been constructed; they had become filled with mud and sand; the spillway had proven imperfect and inadequate; it had washed out with the result that there was imminent danger of the waters in the ditch, unless the spillway should be repaired and the waters properly controlled, causing great damage to property and rights outside the drainage area; appellant commissioners at once commenced to work to control the waters; certain property owners within the drainage area instituted an action to restrain them; these property owners conferred and as a result of such conferences a proceeding was commenced for the purpose of abandoning the spillway and establishing a new outlet connecting with what is known as Covell's Lake; further conferences were held resulting in an agreement that the Covell's Lake proceeding should be abandoned (and, as admitted by appellants in their answer *"the same were abandoned accordingly"*) and resulting in the further agreement "that a new petition should be filed and new proceedings instituted *for the re-establishment of said Drainage Ditches No. 1 and No. 2 and the reconstruction and improvement thereof* and the re-establishment and the re-construction of the outlet to said ditches and for the establishment and construction of a new spillway to *properly control and take care of the waters flowing through said drainage ditches and for the enlargement of said drainage district*," and that thereafter "*and in accordance with said agreement*" the petition, which is the alleged foundation for the proceedings in question, was filed as a "compromise between the said petitioners therefor and others affected thereby."

In view of the situation thus pleaded and also clearly shown by the evidence, the commissioners had but one duty. That duty was to proceed to repair and maintain the ditches already constructed, so that they might continue to perform their functions without danger to property outside the area. They should have proceeded under § 8470, South Dakota Revised Code, 1919, which is as follows:

> "For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the land owners affected in the proportions determined for such drainage at any time upon the petition of any person setting forth the necessity thereof, and after due inspection by the board of county commissioners such assessments shall be made as other assessments for the construction of drainage, certificates may be issued thereon and such assessments and certificates shall be liens, interest-bearing, perpetual and enforcible, in all respects as original as-

sessments and may be sold at not less than par by the board of county Commissioners, turned over to persons contracting for such cleaning and maintenance, or may be collected directly by the board of county commissioners."

Under this section the cost should have been assessed and assessments made "upon the landowners affected in the proportion determined for such drainage." This was the only power the commissioners had.

There is no provision in the South Dakota statutes for extending the boundaries of a drainage area once determined and assessed, but it is contended that the proceedings were pursuant to the provisions of § 8489, South Dakota Revised Code, 1919, having reference to "Invalid or Abandoned Proceedings." Such contention is not tenable because the evidence clearly shows that the original proceedings had not been "enjoined, vacated, set aside, declared void, dismissed, or voluntarily abandoned." There was no pretense of abandoning the old ditches. It is claimed that the spillway was abandoned by the resolution adopted in the so-called "Covell's Lake" proceeding. Even if this were true it did not operate as an abandonment of the ditches and appellants allege in their answer that the entire Covell's Lake proceeding was agreed to be abandoned and *was abandoned.* The withdrawal of the Covell's Lake proposition left the original ditches in existence, unaffected by these abandoned proceedings.

The District Court was fully justified in its conclusion as follows:

"When this river cut through into the ditch, when the ditch became clogged in places and was not wide enough in others, when the spillway washed out by the force of the water they were conducting down the ditch, and the cutting of the bluff began and large areas of land were being washed away, and the other dangers were threatened, there was only one proposition presented to the commissioners, and that was one of maintenance; was one of taking care of the water that they were conducting down these two ditches, No. 1 and No. 2.

"Instead of proceeding frankly to maintain the ditches they had established in the manner provided by statute; instead of carrying out the obligations they had assumed when they brought the water down through these ditches, and attempted to deliver it through this bluff into the river; instead of proceeding regularly under this statute to do that which it was their duty to do; instead of performing the obligation that they had as-

sumed when they established the ditches, that of maintaining them, they proceeded to act upon the assumption that because they had conducted the water down into these ditches, and because of the inefficient manner in which they had constructed the ditches and built the spillway, and all of these dangers were threatened, therefore, the plaintiffs, and others in Sioux Falls, were necessarily to be damaged. And, although a proper maintenance of these two ditches No. 1 and No. 2, would stop the damage, would prevent any danger, the Commissioners evidently reasoned that because the plaintiffs and others in Sioux Falls were in danger, they must pay for the repair of these ditches. That could not be done by simply saying the ditches shall be repaired and the City of Sioux Falls, the plaintiffs, and others, shall pay for it, or pay a part of it, and therefore, they proceeded to do indirectly what it was conceded they could not do directly. In other words they then began to look around and see what they would do in the way of taking care of the water and stopping these dangers.

"At first it was proposed to change the spillway and conduct the water down in a southerly direction, through a slough or lake, into the river west of the City, and save the great fall that is involved at the point where the water enters the river from the spillway northeast of the city.

"This was abandoned and they finally then pretended to act under a statute authorizing the abandonment of ditches. As a matter of fact there was no abandonment in good faith. No attempt to abandon the ditches. In fact, the reading of the resolution shows it was simply that they abandoned the spillway. That they filed a petition which was headed, 'To reconstruct and improve Drainage Ditches No. 1 and No. 2, Minnehaha County, South Dakota, and to construct a new spillway or outlet to said Drainage Ditches No. 1 and No. 2, and to pay therefor by assessment upon the property, persons and corporations benefited thereby.'

"This petition was filed in July, 1916, with the Board of County Commissioners. There had never been an abandonment of Ditch No. 1 and Ditch No. 2. There had been a pretended abandonment of the spillway. But the Commissioners proceeded then to construct a proper spillway on the identical location of the old one. In other words, no change whatever was made in the two ditches, No. 1 and No. 2, except to properly construct an efficient, adequate, substantial spillway, and

prevent the river cutting from its bed into the ditch, cleaning out the ditch and repairing it, changing the gates at the head of the ditch where the flood waters were taken from the river.

"Upon this petition, for this purpose, the Board of Commissioners assumed authority and power to re-christen this Ditch No. 1 and Ditch No. 2, and call it Ditch No. 1 and 2, and for the purpose of making these repairs and maintaining the old ditches under the new name, proceeded as if no ditch had been established, and as if the Ditches No. 1 and No. 2 were not in existence, and as if no obligation had been assumed by the drainage districts when they diverted the water down through the bluffs to the river, and proceeded to make the repairs and to reach out and say that the various plaintiffs were benefited. Instead of charging the repairs and maintenance of the ditches to those who were responsible for their construction under the provisions of the statutes above referred to, the Commissioners proceeded to assume the right and authority to constitute a new drainage ditch without any abandonment of the old ditches, with no thought of using new or different drainage in any way, except to maintain them and to perfect that which had been inefficiently constructed, with no thought or purpose except to repair the damage that had already been done, and prevent future damage.

"Under these circumstances, I am of the opinion that the Commissioners were acting entirely without authority of law. There is no provision in the statutes of the State of South Dakota for the taking in of any other lands and assessing them, for the maintaining of a ditch after it has been constructed, and the benefits of its building have been assessed.

"I am of the opinion that the forming of this new ditch was simply a pretense, and that the plaintiff's pleading that it was a subterfuge is supported by the proof, resorted to for the sole purpose of attempting to burden the plaintiffs and others with the cost of the maintenance of the ditches theretofore constructed.

"I am of the opinion that Section 8489 of said Revised Statutes, in regard to invalid and abandoned proceedings is not applicable to any situation such as existed here. That section has reference to the abandonment of a ditch that has been enjoined, vacated, set aside or declared void, and specifically provides for the re-establishment of a ditch over the same territory, and that the new ditch shall assume the expenses paid on

the old ditch, and give credit for any payment made upon the old ditch by people benefited. No such proceeding was attempted to be followed in this case. The proceedings establishing old ditches No. 1 and No. 2 have never been held void, never been set aside, never been abandoned. They are in force today and are responsible for the manner in which the ditches were constructed and for any damages that result from their negligence.

"Under these circumstances the Board of County Commissioners had absolutely no authority, no right or color of right, were not acting under the provision of any statute of the State when they assumed the right to reach out and attempt to assess the benefits for the repair and maintenance of said ditches against the property of the various plaintiffs. They were mere trespassers, for the reason that no drainage Ditch No. 1 and 2 was ever established and has no existence.

"I am of the opinion that the proceedings of the Board of Commissioners in the repair and maintenance of these ditches, No. 1 and No. 2, by assuming the right to constitute a new drainage district, calling it District No. 1 and 2, and to assess benefits to the property of the plaintiffs, insofar as they are located in the city of Sioux Falls, are void."

The Circuit Court of Appeals, in its opinion in this case, quoted with distinct and emphatic approval the last two preceding paragraphs. (*Risty v. C. R. I. & P. Ry Co.*, 297 Fed. 710.)

If it be contended that the new proceedings constituted anything more than the necessary maintenance and repair of the ditches then it must conclusively appear that such purpose or purposes consisted of the by-passing of the flood waters of the Big Sioux River through the cut-off created by the ditch properly repaired and maintained and of preventing the threatened damage to the water supply of the city of Sioux Falls, the water power of the Northern States Power Company, etc., and if this be true appellant commissioners acted without authority or color of right because § 6 of Article XXI of the South Dakota State Constitution authorizing the drainage of lands "for any public use" has never been made effective by appropriate legislation.

This section is as follows:

"The drainage of agricultural lands is hereby declared to be a public purpose and the legislature may provide therefor, and *may provide for the organization of drainage districts for the drainage of lands for any public*

use, and may vest the corporate authorities thereof, and the corporate authorities of counties, townships and municipalities, with power to construct levees, drains and ditches, and to keep in repair all drains, ditches and levees heretofore constructed under the laws of this state, by special assessments upon the property benefited thereby according to benefits received." (Italics are ours.)

The dual nature of this constitutional provision should be carefully observed. It first declares the drainage of agricultural lands to be a public purpose and that the legislature may provide therefor, and then declares that the legislature may also "provide *for the organization of drainage districts* for the drainage of lands for any public use." It is clear that the term "drainage districts" as so used contemplates a drainage district so organized as to constitute a corporate entity because the constitutional provision under consideration further provides for the vesting of certain powers in "the corporate authorities thereof."

It may be that the constitution authorizes provision to be made for the drainage of agricultural lands without the establishment of corporate drainage districts but it must be conceded that for the drainage of land for any other purpose or use the lgeislature must first provide for drainage districts in such manner as to constitute such districts corporate entities, having corporate authorities who might be vested with the power to construct the drainage. There having been no such legislation, the only provision of the constitution that the legislature has attempted to make operative is that referring to the drainage of agricultural lands, and insofar as the ditches and spillway under consideration were constructed or purported to have been constructed for any purpose other than the drainage of agricultural lands, they were so constructed without any warrant of law whatsoever, and the entire proceeding is void under the state constitution.

In construing this section of the state constitution, the Circuit Court of Appeals said: "We are satisfied that under the South Dakota constitution § 6, Article XXI., the drainage of agricultural lands must be carried out by drainage districts, and no legislation at the time of these proceedings had been provided for the establishment of such drainage districts. Whichever way, therefore, the matter is viewed, the Board was acting without legal authority in its proportionment of benefits and threatened assessment of taxes." (*Risty v. C. R. I. & P. Ry. Co.*, 297 Fed. 710, 717.)

It should be borne in mind in this connection that appellants claim no possibility of any benefit to appellee's prop-

erty other than that they say will be derived because of the by-passing of the flood waters of the river through the ditch cut-off. The origin of the ditch is approximately fifteen miles north of the city of Sioux Falls. Its outlet is approximately one and one-half miles north of any point upon appellee's railroad. The situation will be readily ascertained by reference to Great Northern Exhibit 1 (R., 222). The tract of country originally included within the area and drained by the ditch lies entirely north of any part of appellee's property and, as has been suggested, the claim of benefit to the property not in the original area and lying south of the ditch is based solely upon the alleged diversion of the water from the river at a point or points north of Sioux Falls and carrying it through the ditch and emptying it into the river through the spillway, thus preventing a certain amount of the waters of the river from being carried by the river around the city and back to the outlet of the spillway. As stated before, the record contains no foundation in fact for this theory, and if such is the purpose of the ditch that purpose is not the drainage of agricultural land.

III.

APPELLEE'S PROPERTY HAS RECEIVED NO BENEFIT EITHER DIRECT OR INDIRECT FROM THE SO-CALLED DRAINAGE

The arbitrary, fanciful and speculative method resorted to by appellant commissioners in determining that appellee's property was benefited has been discussed. The trial court's conclusion that it was not benefited at all is fully sustained by the record—particularly by the undisputed evidence of the witnesses C. M. Bassett and Thomas Simpson.

Mr. Bassett testified:

"I have been a civil engineer 24 years; I am assistant engineer of the Great Northern Railway Company; I have been in its engineering department 9 years; at the present time I have jurisdiction of the entire Sioux City Division, including all of Minnehaha County, South Dakota; I have been in charge of that Division since the spring of 1916; during that period of time I have made frequent trips to Sioux Falls, and over the lines throughout Minnehaha County; for two years 1916-17 I was in Sioux Falls practically all the time; since then I have been here practically every week. I am familiar with what is known as drainage ditch Number 1 and 2, and the spillway; I am also assistant engineer of the Watertown and Sioux Falls Railroad company; its line is located along the ditch for about 3½ miles; every spring

I have been to the spillway; then I have been over the entire line of the ditch and looked at the various headworks and retaining dams; the line of the Great Northern enters the city of Sioux Falls from a northeasterly direction at a point about a mile and a half from the mouth of the spillway; that is the nearest point on the line of the Great Northern to the mouth of the spillway; the course of the line of the Great Northern as it goes through the city of Sioux Falls and around south of the city and down through Section 31 is as follows:
We enter in a northeasterly direction and then through town we go practically north and south and then we swing southeasterly (southwesterly) towards Yankton. * * * I am familiar in a general way with the channel and banks of the Big Sioux River from a point near our bridge in the City of Sioux Falls; the North bridge down to and through Section 31; to the south of town the banks of the river are well defined; there is a deep channel there and the river is confined to that channel, through town there is a greater chance; the channel is wider and the banks are not so steep; as you go further north the channel again deepens and it is confined, the valley is narrowed considerably south of town. * * * Basing my answer upon my knowledge of drainage ditch No. 1 and 2, the spillway, the location and construction of the tracks, bridges and embankments of the Great Northern Railroad Company, and my knowledge of the waters in the Big Sioux River, in my opinion no benefit results to such right-of-way, tracks, bridges, embankments or station grounds from drainage ditch No. 1 and 2 including the spillway; no part of the right-of-way, tracks or bridges within the area in question to my knowledge have ever been flooded by the waters of the Big Sioux River; we have a plan drawn up for a new steel bridge at bridge 146 which provides for shortening of fifty feet of that bridge and putting in deck girders which are much lower and nearer the water; we considered that owing to the fact that we are lowering the steel we would have to provide practically the same opening we have there now; in planning to shorten the bridge fifty feet we did not take into consideration the existence of the drainage ditch; the present height of the track on this bridge above what I understand to be the high water mark of the Big Sioux River, according to our best record is eleven feet; if I were planning to construct new bridges in question on the Great Northern, or to rebuild them, in determining the sizes of the openings from an engineer-

ing standpoint, I would not take into consideration the existence of drainage ditch No. 1 and 2, because my observation has been that before when the spillway went out in 1916, and the water conditions have been just the same; I consider there is great danger as the spillway constructed now of its going out, and there is danger that they will have to close the ditch and turn the water back into the original channel; I would not take it into consideration even if the ditch and spillway were working at capacity; I don't think it takes enough water out of the river to make any material difference; I would plan new openings without considering the ditch and considering the highest possible water in the river; I would consider it bad engineering to plan otherwise. * * * Along the right of way south of town we have an embankment about 1800 feet long; bridge 150-7; it is about 16 feet deep; side slopes approximately one and one-half to one, approximately fifteen feet high; the toe is protected in some places with rip rap, and it is now overgrown with grass and weeds; that embankment is so constructed as to withstand any possible flood conditions in this neighborhood." (R., 220-228.)

Mr. Simpson testified:

"I have lived in Sioux Falls twenty-seven years; I am general agent of the Great Northern Railway Company at Sioux Falls, and have been its agent for twenty-seven years; I am familiar with the line of the Great northern included within the area in question here in Section 16, 27, and 31; during such twenty-seven year period no part of the tracks, bridges or right-of-way of the Great Northern Railway within that area has been flooded; we have had no trouble during that period of time from high water; the station of the Great Northern is east of the river; I have lived on the west side of the river twenty-seven years; the depot has been located where it is now approximately fifteen years; during that time I have crossed the Big Sioux River several times a day and I have not observed any appreciable difference in the flow of the Big Sioux River before and after the construction of the spillway." (R., 228-229.)

Under the title "As to Benefits" on pages 47 and 48 of Appellants' Brief, we find the following statement: "Mr. Bassett testified for plaintiff that on the Watertown & Sioux Falls line, a part of the Great Northern system, they are flooded just south of the city pumping plant and at the top of the hill, that there the water comes out of the ditch

and comes over the track and has done so every year since witness has been in Sioux Falls. This water gets to be probably six inches over the top of the track and stands in there sometimes for probably ten days."

"At times water has been high enough around the penitentiary where the Great Northern track runs to flood its track some inches of water every year."

There is no evidence in the record to support the conclusion that the Watertown & Sioux Falls line was a part of the Great Northern system, nor is there any evidence that there is a Great Northern track running around the penitentiary. The evidence counsel evidently had in mind in making the statements referred to appears on pages 220 to 228 of the record. The witness Bassett testified that he was assistant engineer of the Great Northern Railway Company and also assistant engineer of the Watertown & Sioux Falls Railroad Company (R. 220-221); also that the water had been high enough "up around the penitentiary where the *Watertown* track goes to flood its tracks some inches of water every year."

The Watertown & Sioux Falls Railroad Company is not a party to this suit and there is no question of benefit or damage to its property involved herein. The testimony referred to, as to the flooded condition of its property, is not relevant to the issue as to whether or not the property of the Great Northern Railway Company sought to be assessed has received benefit.

IV.

THE AUTHORITIES CITED BY APPELLANTS AND THE ARGUMENT MADE BY THEM IN SUPPORT OF THEIR CONTENTION THAT THE TRIAL COURT WAS WITHOUT JURISDICTION AND THAT THIS ACTION WAS PREMATURELY BROUGHT ARE NOT APPLICABLE TO THIS CASE.

If this action were one merely to restrain the enforcement and collection of a tax or special assessment, levied by a tribunal having power and jurisdiction to make such levy, and based upon some irregularity in the proceedings of such tribunal or involving only a dispute as to the amount of the tax many of appellants contentions would be well founded.

But such is not the situation. A tribunal claimed to be acting beyond its jurisdiction and therefore without power passed a resolution attempting to proportion benefits to appellee which as will appear from a mere mathematical computation would result in the levying of taxes upon appellee's property to the amount of approximately

$5,800.00; appellee was ordered to show cause before this tribunal why such tax should not be spread upon its property; appellee was not only threatened with the levying of such a tax but with further and possibly more dangerous situation—that of having its property included within a drainage district, resulting in the extreme probability of its becoming involved in a project threatening to cause great and irreparable damage to property interests. The suggestion that under such circumstances it must first submit itself for a final determination of the questions involved to the tribunal having no jurisdiction, acting as it claims arbitrarily and without due process of law, we think has never received and never will receive the sanction of any court.

It has uniformly been held that courts of equity will intervene to prevent damage threatened by the acts of public tribunals beyond their jurisdiction and in excess of their powers. Mr. Justice Field recognized this in *Crampton v. Zabriskie*, II Otto 601, 25 L. ed. 1070, saying:

> "And from the nature of the powers exercised by municipal corporations, the great danger of their abuse and the necessity of prompt action to prevent irremediable injuries, it would seem eminently proper for courts of equity to interfere upon the application of the tax payers of a county to prevent the consummation of a wrong when the officers of those corporations assume in excess of their powers to create burdens upon property holders. * * The courts may be safely trusted to prevent the abuse of process in such cases."

The court acquired jurisdiction by virtue of both diversity of citizenship and the constitutional question involved. The amount in controversy cannot be questioned. Appellee is threatened with an assessment amounting to approximately $5,800.00, and its property will be so assessed upon its failure to show cause, before a tribunal having no power or jurisdiction, why a levy of that amount should not be spread. In addition to this is the great and irreparable damage that appellee is threatened with by having its property included within the drainage area. The action was not prematurely brought because appellee had the right at the time it instituted this action to have determined by a court of equity the question as to whether or not the appellant commissioners were acting beyond their jurisdiction and without power, and whether their proceedings would result in depriving appellee of its property without due process of law.

It is asserted that appellee had a complete and adequate remedy at law but the remedy suggested is that appellee appear before the Board of County Commissioners

and if dissatisfied appeal to the state courts. Such is not an adequate remedy. "The remedy at law must be a remedy on the law side of the Federal court, not a remedy in the state courts of South Dakota."

Chapter 3, Simkins "A Federal Equity Suit."

United States Life Insurance Co. v. Cable, 39 C. C. A. 264.

We quote from the case last cited:

"It must, we think be conceded that the bill in this case alleges facts constituting a good cause of action in equity for the cancellation of the policy, unless the plaintiff has a full and adequate remedy at law for the same cause. A suit at law has been commenced in the state court of Illinois to recover upon the policy, and, if it be an adequate remedy at law to turn the plaintiff over for litigation of its rights in the state court under the circumstances set out in the bill, then the United States Circuit Court in equity should disclaim jurisdiction. But there are two reasons why we think the remedy thus open to the plaintiff, of having its rights determined in an action at law, does not meet the requirements of the rule: The first is that the plaintiff being a citizen of New York, and the defendant a citizen of Illinois, the plaintiff, under the constitution, has the right to come to the Federal court for an adjudication. For a person entitled to litigate in the Federal court, it is not an adequate remedy at law to be invited into a state court by his antagonist to adjudicate his rights. * * * The remedy at law, in order to defeat the right to proceed in equity, should be full and adequate. It should be as practical and efficient to the ends of justice and its prompt administration as the remedy in equity. * * * In the federal courts it is well settled that the court will not turn a suitor in equity over to a remedy at law in the state courts, but only to the law side of the federal court."

The authorities cited in support of the contention that this suit was prematurely brought are easily distinguishable and their non-applicability is apparent. We find it difficult, in the manner in which the brief of appellants is prepared, to locate all the authorities on which they rely as to any particular point, and particularly as to the one now under consideration, but we call attention to the following cases cited by them which are typical and which clearly demonstrate the falsity of their position.

In *Western Union Telegraph Company v. Howe* (C. C. A.) 180 Fed. 44, there was no question of the jurisdiction of the taxing tribunal, and the court said: "The effect of

an injunction would be to take away from the tax commission all powers of discretion and judgment in arriving at a fixed and proper valuation.

The contention here and the question that this court must decide is whether or not the tribunal assuming to levy the tax has any power whatsoever.

In *Keokuk & Hamilton Bridge Company v. Salm*, 258 U. S. 122, 66 L. ed. 496, there was again no question as to the jurisdiction or power of the taxing tribunal, and the court said:

> *"Before the suit was begun it had been decided that the taxing statute was valid; that the property was subject to taxation;* that it was assessable as real estate, and that the assessment should be made as was done by the county assessor and not by the state board of equalization. *The amount of the tax was, therefore, the only matter in controversy."* (Italics are ours.)

In *Milheim v. Moffat Tunnel Improvement District*, 262 U. S. 710, 67 L. ed. 1194, chiefly relied upon by appellants, there was again no question of jurisdiction of the taxing body. Plaintiff's property there in question was included within a taxing district by the state legislature. The court said:

> "It is well settled, however, that if a proposed improvement is one which the state has authority to make and pay for by assessments on property benefited, the legislature in the exercise of the taxing power has authority to determine by the statute imposing the tax what lands may be and are in fact benefited by the improvement; and if it does so, its determination is conclusive upon the owners and the courts and cannot be assailed under the Fourteenth Amendment *unless it is wholly unwarranted and a flagrant abuse and by its arbitrary character is mere confiscation of the particular property. * * * The legislature not only provided for the assessment of the lands within the district but specifically declared that the tunnel established was of especial benefit to such lands, and that the special benefits accruing to them are in excess of the cost of the tunnel and of the assessments provided for against them."* (Italics are ours.)

Again we find no question as to the jurisdiction or power of the taxing body.

Although appellee bases its contention that this suit was not prematurely brought principally upon the claim that appellant commissioners acted entirely without jurisdiction, we believe, even if we should concede for the sake of argument that the law is constitutional; that appellant

commissioners acted pursuant to its provisions up to the time of adopting the resolution fixing the apportionment of benefits; that jurisdiction was obtained to form the so-called drainage district, and that appellee's property if benefited might be included within the boundaries thereof, it would still follow that the commissioners did not in fact acquire jurisdiction over appellee and its property because the basis upon which they acted in attempting to affect appellee's property was so arbitrary, speculative and discriminatory as to deny due process of law.

The record in this case clearly discloses that appellant commissioners never at any time had before them any evidence showing or tending to show that appellee's property would be benefited at all by the construction of the so-called Drainage Ditch No. 1 and 2. This being true it must follow that their action in adopting the resolution apportioning the benefits, so far as appellee is concerned, was based upon no foundation in fact and was therefore merely arbitrary and furnishes no jurisdictional basis for requiring appellee to appear before the appellant board and show cause why such tentative assessment should not be made permanent.

IN CONCLUSION

Appellants rely chiefly upon the decision of the state court in the case of *Gilseth v. Risty*, 46 S. D. 374, 193 N. W. 132. The opinion in that case discloses the following situation: The constitutionality of the drainage laws was not in question; plaintiff was the owner of agricultural land within the drainage area of Drainage Ditches No. 1 and No. 2 as originally constructed; he was a party to the conferences alleged in this case to have taken place between the parties interested in the original ditch proceedings and which resulted in the filing of the petition "For the Re-establishment of Drainage Ditches No. 1 and 2;" he was present at the hearing upon that petition and took no appeal from the order of the commissioners purporting to establish the new drainage; his property, as we have said, was in the drainage area as originally established; he was one of the parties responsible for the original construction of the ditches in question and for their proper maintenance, and one of the parties for whose benefit appellant commissioners are attempting to assess appellee's property and that of others outside the original drainage area.

The court simply held that as to him, a party to the proceeding, the order establishing the drainage and subsequent orders from which he did not appeal became final. A careful analysis of the opinion discloses that the court finally based its conclusion upon questions of estoppel and

lack of equity in favor of plaintiff. After reciting the situation practically as above stated, it said: "Appellant having stood by and seen all the work performed without protest, and having received all the benefits that could result therefrom, should not now be permitted to escape payment for the same. The relief asked by the appellant is equitable in its nature but, because of the circumstances above shown, all the equities of the case are against appellant and in favor of the Board."

The situation in the instant case is obviously vastly different. No part of appellee's property was within the drainage area of Ditches No. 1 and No. 2, as originally established; appellee took no part in the proceedings here in question; it owns no agricultural land and has received and will receive no benefits from the work no matter what the purpose of it may have been. The plaintiff in the *Gilseth* case was one of the persons responsible for the existence of the ditches in the first instance, and, as the facts are disclosed by the state court's opinion, his property should have been assessed for the cost of the work done for the purpose of preventing the threatened damage, regardless of whether or not such work was done under the guise of a new drainage proceeding.

The state court has never had before it for determination the question as to whether or not the drainage statutes, in so far as they purport to authorize drainage proceeding for any purpose other than draining agricultural lands, are violative of the state constitution. In all cases in which the constitutionality of the statutes has been passed upon by that court, the only questions involved are those with reference to the drainage of agricultural lands, and the court very correctly held that such drainage might be provided for without the incorporation of drainage districts.

We confidently maintain not only that the conclusions of the district court upon which its judgment was based and those of the Circuit Court of Appeals expressed in affirmance thereof are fully sustained by the record but that the judgment appealed from is also sustained because the South Dakota drainage statutes are violative of the Fourteenth Amendment to the Constitution of the United States in the particulars hereinbefore urged.

Respectfully submitted,

F. G. DORETY,
St. Paul, Minnesota.

HAROLD E. JUDGE,
Sioux Falls, South Dakota.
Solicitors for Appellee.

SUPREME COURT OF THE UNITED STATES.

Nos. 95 to 100.—October Term, 1925.

95	A. G. Risty et al., as County Commissioners et al., Appellants, *vs.* Chicago, Rock Island & Pacific Railway Company.	Appeal from the United States Circuit Court of Appeals for the Eighth Circuit.

99	A. G. Risty et al., as County Commissioners et al., Appellants, *vs.* City of Sioux Falls.	
100	A. G. Risty et al., as County Commissioners et al., Appellants, *vs.* Great Northern Railway Company.	

[March 1, 1926.]

Mr. Justice Stone delivered the opinion of the Court.

Separate suits were brought by the several appellees, in the United States District Court for South Dakota, to enjoin the County Commissioners, the Auditor and the Treasurer of Minnehaha County, South Dakota, from making any apportionment of benefits or assessments of costs affecting the property of the several appellees, for the construction or repair of a drainage system in the area within the county embraced in a project known as "Drainage Ditch No. 1 and 2".

In all of the suits, except No. 99, there was diversity of citizenship. In each it was alleged that an amount in excess of the jurisdictional requirement was in controversy, and in each it was alleged that proceedings purporting to be had under the South Dakota drainage statutes, with respect to the lands of the appellees, were unauthorized and void, and that those statutes and proceedings denied to appellees due process of law and the equal protection of the laws, in contravention of the Constitution of the United States. The suits were tried together and a decree was given for the plaintiffs by the District Court. 282 Fed. 364. The Circuit Court of Appeals for the Eighth Circuit, on appeal, affirmed the decree, 297 Fed. 710, and the cases are brought here on appeal. Jud. Code, §§ 128, 241, before Act of February 13, 1925. *Greene* v. *Louisville & Interurban R. R. Co.*, 244 U. S. 499, 508. Petition for certiorari was denied, 268 U. S. —.

The two courts below agree as to all material facts. We accordingly consider them here only so far as is needful to pass on questions of law. *United States* v. *State Investment Co.*, 264 U. S. 206, 211.

In 1907 the Board of County Commissioners of Minnehaha County, acting under the constitution and laws of the state, established "Drainage Ditch No. 1," extending from a point north of the city of Sioux Falls, thence south, and then to the east of Sioux Falls, three miles in all, to the Big Sioux River, into which it emptied. From the main ditch, a spur ditch was extended northwest to a point near the Big Sioux River, which from that point passes to the southwest and thence flows east, forming a loop about the principal part of the city of Sioux Falls, and finally flows through the city on its easterly side in a northeasterly direction.

In 1910 the Board of County Commissioners established drainage ditch No. 2, extending northerly from the north terminus of ditch No. 1 for a distance of twelve miles. The two ditches thus formed one continuous ditch, draining agricultural lands lying to the north of the city. Both ditches, and the assessment districts in connection with them, are conceded to have been lawfully established.

In 1916 the river broke through its banks into the area drained by the spur ditch, and uniting with the flood water flowing from the river through ditch No. 2, flooded the main ditch, No. 1, washed out and destroyed a spillway on ditch No. 1, and in its uncontrolled flow to the river caused extensive damage. There was danger that the river by its flow through the ditch would be diverted from its natural course, cutting off the city's water supply and causing other damage to the city and to individuals.

In August, 1916 a proceeding was instituted by petition to the Board of County Commissioners, purporting to be pursuant to statute, "to reconstruct and improve drainage ditches numbers one and two . . . and to pay therefor by an assessment upon the property, persons and corporations benefitted." This proceeding resulted in resolutions of the Commissioners purporting to establish "Drainage District No. 1 and 2" and providing for the construction of the proposed ditch. The location fixed for it however, was identical with that of the old ditches No. 1 and No. 2. The County Commissioners then caused the previously established ditch No. 1 and ditch No. 2 to be diked, cleaned out, and widened and deepened at certain points; the river to be straightened, and the spillway to be reconstructed so as to continue and safeguard the flow of water through ditch No. 1 and ditch No. 2. The cost was approximately $255,000.

Proceedings were then had by the County Commissioners for the assessment of benefits to defray the expenses thus incurred. The assessments of benefits were extended to areas not embraced in the assessment districts of ditch No. 1 and ditch No. 2, as previously established, and resulted in the assessment of benefits now complained of, made against all the appellees, some of whom did and some of whom did not own land within the area originally assessed for the establishment of ditch No. 1 and ditch No. 2. When the present suits were commenced, notice had been given to the appellees of a tentative assessment of benefits to their land, and of a proceeding to be had to equalize benefits before final assessments for the cost of construction.

Both courts below found that the drainage ditch No. 1 and 2 was not a new project, but was in fact identical with the previously established ditches No. 1 and No. 2; that no new or additional drainage was established, and that the only purpose of the proceedings was to provide for the maintenance and repair of the previously established ditches by assessing the cost on tracts not included within the area originally assessed for their construction. For these reasons, among others, both courts held that the proceedings had by the Board of County Commissioners to apportion and assess benefits on land outside the original drainage districts were unauthorized and void under the statutes of South Dakota. In this we think they were right.

Section 8458 of the South Dakota Revised Code of 1919 provides that the Board of County Commissioners "may establish and cause to be constructed any ditch or drain; may provide for the

straightening or enlargement of any water course or drain previously constructed, and may provide for the maintenance of such ditch, drain or watercourse . . ."

Section 8476 provides that the powers conferred for establishing and constructing drains "shall also extend to and include the deepening and widening of any drains which have heretofore been or may hereafter be constructed", and that no proceedings shall be had under this section "except upon notice and the other procedure prescribed herein for the construction of drains."

The procedure prescribed by the South Dakota statutes embraces two distinct schemes or methods for carrying into effect the authority of the Board of County Commissioners. The one relates exclusively to the establishment and construction of proposed drainage; the other to assessments for further costs and maintenance of drainage already established. With reference to the establishment of proposed drainage, it is provided that the Board shall act only on petition of a landowner affected by the "proposed drainage" (§ 8459) and upon the filing of the petition the Board shall cause the "proposed route" of the drainage to be inspected and, if necessary, surveyed. (§ 8460.) It is required to hold a hearing on notice describing the proposed drainage (§ 8461), and after hearing the drainage "may be established" in accordance with the petition or the findings of the Board (§ 8462). After the establishment of the drainage, the Board is required to determine "the proportion of benefits of the proposed drainage", and to fix a time and place for equalization of benefits, on notice describing the land affected by the "proposed drainage"; and to state the proportion of benefits fixed for each tract, benefits being considered "such as accrue directly by the construction of such drainage or indirectly by virtue of such drainage being an outlet for connection drains which may be subsequently constructed." (§ 8463.) Following equalization of benefits as prescribed, the Board is authorized to make an assessment against each tract, "in proportion to benefits as equalized", for the purpose of paying damages and the cost of establishment, which are stated to include all the expenses "incurred or to be incurred that in any way contributed or will contribute to the establishment or construction of the drainage." All assessments are made perpetual liens upon the tracts assessed. (§ 8464.)

The only provisions contained in the statutes for equalization of benefits are those found in the sections referred to, which have to do with the establishment of proposed drainage. By § 8477 all

drains, when constructed, are in charge of the Board of County Commissioners, who are made responsible for keeping them open and in repair. The statutory provisions which deal with assessments for further costs of construction and for maintenance are found in §§ 8467 and 8470, the material portions of which are printed in the margin.* It will be observed that there is no provision for the assessment or equalization of benefits in connection with the procedure provided in those sections for assessing for further costs of construction and maintenance. No such provision is required; for by the express terms of § 8467 the procedure for making assessments for the additional cost of construction is like that provided for the first assessment for construction (§ 8464) after the equalization of benefits has been had under § 8463; and by § 8470 assessments for maintenance are to be made "upon the land owners affected in the proportions determined for such drainage." Both sections clearly contemplate that assessments for additional construction and for maintenance are to be made upon those lands which are already embraced within the drainage project, and on which the proportion of benefits has been determined by equalization proceedings had after the establishment of the original project.

The statutes of South Dakota contain no provision for assessing the cost of reconstruction or maintenance of an existing drainage project except in the two sections last referred to, and they make

*§ 8467. Assessments for Further Costs. At any time after the damages arising from the establishment and construction of such drainage are paid and the lands for such drainage are taken, assessments may be made for further costs and expenses of construction. If the contractors are required and agree to take assessment certificates or warrants for their services, assessments need not be made until the completion of the work when an assessment shall be made for the entire balance of cost of construction . . . and notice of such assessment shall be given by the board of county commissioners in all respects as provided for the first assessment. And such assessment and the certificates issued thereon shall be in like manner perpetual liens upon the tracts assessed, interest-bearing and enforcible as such first assessment and certificates. . . . In any case, in the discretion of the board, several assessments may be made as the work progresses. . . .

§ 8470 For the cleaning and maintenance of any drainage established under the provisions of this article, assessments may be made upon the landowners affected in the proportions determined for such drainage at any time upon the petition of any person setting forth the necessity thereof. . . . Such assessments shall be made as other assessments for the construction of drainage, certificates may be issued thereon and such assessments and certificates shall be liens . . . in all respects as original assessments. . . .

no provision for assessing such costs upon lands not embraced within or assessed in connection with the drainage as originally established. Whether the cost of construction work actually done on ditch No. 1 and ditch No. 2 and involved in this litigation be regarded as additional costs of construction or as cost of maintenance, or partly one and partly the other, there is no statutory authority for assessing that cost on lands not included in the original drainage district.

By § 8489 it is provided that "If any proceeding for the location, establishment or construction of any drain . . . has been . . . voluntarily abandoned . . . for any cause, the board of county commissioners may nevertheless . . . locate a drain . . . under the same or different names and in the same or different locations from those described in the . . . abandoned proceeding under the provisions of this article." But the original proceedings for the establishment and construction of ditch No. 1 and ditch No. 2 were not abandoned, and the proceedings had for levying the assessments now in question were not framed or conducted on that theory. They were consequently without authority in law and could not affect the rights of appellees.

While there are expressions in the opinion in *Gilseth* v. *Risty*, 46 S. D. 374, decided after these suits were begun, which, standing by themselves, might be regarded as supporting the view that the proceedings now in question were authorized by the statutes of South Dakota, the court clearly rested its decision upon other grounds. It is the duty of the federal courts, in suits brought in or removed to the districts courts, to decide for themselves all relevant questions of state law, and while they will follow the decisions of state courts as to the interpretation of a state statute, we do not think that the case of *Gilseth* v. *Risty, supra,* so clearly or decisively passed upon the question here involved as to control our decision. *Kuhn* v. *Fairmont Coal Co.*, 215 U. S. 349; *Barber* v. *Pittsburgh, &c. Railway,* 166 U. S. 83, 99; and see *Edward Hines Yellow Pine Trustees* v. *Martin,* 268 U. S. —.

As our decision in these cases turns on the construction and application of the state law, we do not pass upon the constitutional questions raised. See *Bohler* v. *Calloway,* 267 U. S. 479, 489; *Chicago, G. W. Ry.* v. *Kendall,* 266 U. S. 94, 97-98. They are, however, questions of substance and sufficient to give the court juris-

diction to pass on the whole case. *Greene* v. *Louisville & Interurban R. R. Co., supra; Chicago, G. W. Ry.* v. *Kendall, supra; Bohler* v. *Calloway, supra.*

The objections to the exercise of equity jurisdiction in these cases require no extended comment. When the appellees filed their bills, the drainage project had been completed and construction warrants had been issued for the work done; benefits apportioned to the lands of the appellee had been tentatively fixed and notice of a hearing for the equalization of benefits had been given. The steps next in order after the hearing would have been the assessment of costs of construction and the filing of copies of the assessment with the County Treasurer, which would have established a lien on the property assessed. (§ 8464.) As the principal ground for appellees' suits was the invalidity of the whole proceeding and not merely inequality in apportionment of benefits, and as the effect of the proposed equalization would have been to bring the lands of appellees into the newly established drainage district and subject them to future assessments for construction costs and for maintenance, the threatened injury was imminent and the suits were not premature. The assessment, if made, would have established a lien on the appellees' property which would be a cloud on title—to say nothing of the fact that the effect of the pending proceeding would have been to subject their property to future assessments; hence the case was one for equitable relief unless there was a plain and adequate remedy at law. *Ohio Tax Cases*, 232 U. S. 576; *Shaffer* v. *Carter*, 252 U. S. 37, 46; *Chicago, B. & Q. R. R.* v. *Osborne*, 265 U. S. 14. The remedy by appeal to the state court under § 8469 does not appear to be co-extensive with the relief which equity may give. In any event, it is not one which may be availed of at law in the federal courts, and the test of equity jurisdiction in a federal court is the inadequacy of the remedy on the law side of that court and not the inadequacy of the remedies afforded by the state courts. *Smyth* v. *Ames*, 169 U. S. 466; *Chicago, B. & Q. R. R. Co.* v. *Osborne, supra.*

It does not appear that the state law affords a remedy by payment of the assessment and suit to recover it back, which, if it exists, can be availed of in the federal courts, *Singer Sewing Machine Co.* v. *Benedict*, 229 U. S. 481, 486, or that such remedy, if available, would not entail a multiplicity of suits. It is not suggested that § 6826 of the state code, which permits suits to recover taxes and forbids injunctions to restrain their collection, has any application

to assessments for drainage. In *Gilseth* v. *Risty, supra,* the Supreme Court of the state evidently did not deem that section applicable as it did not rely upon it in denying relief. The legal remedy under the state law being uncertain, the federal court has jurisdiction in equity to enjoin the assessment. *Dawson* v. *Kentucky Distilleries Co.,* 255 U. S. 288.

The objection that it was not shown that these cases involve the jurisdictional amount is unsubstantial. The court below found that the amount due on outstanding construction warrants was approximately $300,000 and that the tentative apportionment of benefits, if undisturbed, would result in assessments for amounts ranging from $6,000 to $50,000 against the lands of the appellees. As the substantial basis of the suits was want of jurisdiction in the Board of County Commissioners to make the apportionment and assessment, we think the jurisdictional amount was necessarily involved.

Appellees are not estopped to seek the relief which was granted because of any relations which they may have had to the proceedings or to the construction work which had been carried on before notice of the tentative apportionment of benefits. The decrees of the District Court, which remain undisturbed, enjoin the assessments and further proceedings only so far as they affect lands lying outside of the original assessment areas of ditch No. 1 and ditch No. 2. As none of the appellees could have had any notice of the proposal to assess lands lying outside of these areas, until the published notice of the apportionment of benefits, their previous conduct cannot estop them from seeking the relief granted. Other objections were made to the decrees below, but they are not of sufficient gravity to require notice here.

There is no diversity of citizenship in No. 99, the appellee in that case being the city of Sioux Falls, a South Dakota municipal corporation. Nor was any substantial federal question raised by the bill of complaint in that suit. The power of the state and its agencies over municipal corporations within its territory is not restrained by the provisions of the Fourteenth Amendment. *Trenton* v. *New Jersey,* 262 U. S. 182; and see *Pawhuska* v. *Pawhuska Oil Co.,* 250 U. S. 394. The decree in that case must therefore be reversed, and the cause remanded with directions to dismiss the plaintiff's bill.

No. 99 reversed and remanded.
Nos. 95, 96, 97, 98 and 100 affirmed.
